The course was from off the club house, leaving black buoys 1 and 3, Tom Moore's Rocks and Tinker's Island on starboard, bell buoy on the outer breakers off Pig Rocks and Halfway Rock on port; Cat island on starboard, and black buoys 3 and 1 on port to judge's line; ten miles: limit, four hours.

There was a promise of rain on Friday night, and a moderate N E. wind in the morning, holding when the race started at 2 o'clock. Catspaw took the start, with Alpha, Exile and Freak near her, the first incident of the day being the parting of Freak's bobstay, sending her home before the race had fairly begun. The course out of the harbor was by the wind, the sheets were started for the run to Pig Rocks, Thrush taking third place from Vanessa and then second place from Catspaw, the times at the mark being:

| | | | |
|---|---|---|---|
| Alpha | 2 38 00 | Reaper | 2 40 20 |
| Thrush | 2 38 30 | Pyxie | 2 40 50 |
| Catspaw | 2 38 40 | Tadpole | 2 41 12 |
| Vanessa | 2 38 50 | Spurt | 2 41 40 |
| Exile | 2 39 27 | | |

On the first of the windward leg to Halfway Rock Alpha gained a long lead on the fleet, but after a little time the breeze dropped, finally dying away entirely and leaving the fleet scattered about, not one reaching the Rock. Reaper came nearest to it, but even she found that the time was too late for her to make the race within the allotted limit, and she with the rest withdrew. The race in the cat class was between Magpie and Madge, Koorali being a poor third. The race was finally postponed to Tuesday, when all will start again.

## Savin Hill Y. C., July 30.

SAVIN HILL, MASS.—BOSTON HARBOR.

THE second championship race of the Savin Hill Y. C. was sailed on Saturday, the wind being moderate from S.E. at the start, dying out to a calm before the finish. The times were:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| **SPECIAL CLASS.** | | | |
| Romance, Loring Sears | | 1 46 11 | . . . |
| **FIRST CLASS.** | | | |
| Mildred G, Loring Sears | 23.02 | 2 12 52 | 1 50 33 |
| Annie Maud, F. O. Vegehlan | 27.04 | 2 18 40 | 1 57 12 |
| Anemone, J. Shaw | | Withdrew. | |
| **SECOND CLASS** | | | |
| Arab, W. Scott | 19.01 | 2 00 31 | 1 33 34 |
| Siko, J. H. McBeth | 19.08 | 2 05 32 | 1 38 18 |
| **THIRD CLASS.** | | | |
| Circe, P. N. Conway | | Withdrew. | |
| Marchioness, C. E. Hodges | 16.01 | 2 03 36 | 1 32 33 |
| **FOURTH CLASS.** | | | |
| Midget, W. H. Besarick | 12.03 | 1 44 00 | 1 15 17 |
| Margaret, S. Warr | | Withdrew. | |

## Hull Y. C., July 30.

HULL, MASS.—BOSTON HARBOR.

THE absence of a part of the Hull Y. C. fleet at Marblehead made a small entry list for the fifth club race on Saturday. The wind was moderate at the start, dying out before the finish. The times were:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| **THIRD CLASS—21 TO 2 FT. L.W.L.** | | | |
| Beatrice, J. Cavanagh | Not meas. | 1 56 37 | . . . |
| White Fawn, A. E. Jones | 20.11 | 2 02 12 | 1 38 23 |
| Moondyne, W. H. Shaw | Not meas. | 2 12 22 | . . . |
| Gypsy, A. C. Drinkwater | 28.08 | Withdrew. | |
| **SIXTH CLASS—LESS THAN 16FT. L.W.L.** | | | |
| Mab, John Shaw | 17.02 | 1 27 49 | 1 02 00 |
| Primrose, H. M. Faxon | 17.11 | 1 28 52 | 1 03 50 |
| Don, W. H. Shaw | 20.03 | Withdrew. | |

The judges were John R. Chadwick, Com. J. J. Souther, J. Foster Clark, Wm. E. Sheriffs and Edward K. Friend.

## The Yachting Situation at Chicago.

CHICAGO, Ill., July 25.—It is something of a mistake to think the water sports of the Great Lake region as in their infancy, or as not having reached an advanced stage of development. It is true that this development has been retarded, and will always be to some extent retarded by causes lying in the natural conditions of the country. It may be held back further by the fact that the country of the Great Lakes is still practically new, and its men still busy. Time will change much of this, and has already changed much of it. There is a large body of men living along the thousands of miles of shore line on these inland seas who know and enjoy the capabilities of a sailing craft. In no section of the country is canoeing growing so rapidly as here, and to say that the water lovers of Cleveland, Detroit, Chicago, and many others of the larger lake ports will not own yachts and sail them and race them and enjoy them, is to convey an impression founded on mistake.

So far from yachting being a new sport in Chicago, it is to the contrary an old sport, and one which has seen its best days, or rather days better than those of the present. The outlook for the future is more encouraging than for years back. In regard the yachting situation, past and present in Chicago, the Chicago *Times* of July 22 has the following sensible appropriate remarks:

"Chicago is to have a yachting revival. Time was when it had a couple of as energetic and sportsmanlike yacht clubs as any city. At all events there has been a decadence in yacht sailing for many years past. From time to time there were faint attempts to re-establish good clubs, but up to the present little or no success attended the efforts. Ten years ago some of the older members of clubs, almost forgotten, got together and the result was that temporary success crowned their intentions to make Chicago a yachting port. For a little while only though, for squabbles arose over expenses connected with regattas, and the men who loved the sport for the sport itself, and not for what money their was in it, got tired of the wrangling and soon dropped out. Many of the yachtsmen of that day were practical sailors, men like Commodore John Prindiville, who loved the sailing for itself alone. The fame achieved in such yachts as Frolic, Annie L. Carey, Fleetwing, Ina and Viking excited the envy of men of wealth. These latter entered with zest in to the pastime, but their ambition was for honors in the regattas. Yachting was popular then and the prize winners were considerably envied. But there were men also in the old clubs that never won a prize, and the fact did not lessen their ardor for the pastime one jot; on the contrary, it was constantly spurring them to greater efforts in building or finding better and faster yachts than the ones that failed to win a prize for them.

"Thousands, and for that matter, tens of thousands, of dollars were spent by the men of the time referred to in the purchasing or building of crack yachts. But it was not very long until the lucer-loving ones entered the field, and the true sports and owners found themselves competing against hired hands for the prizes of the regattas. The races deteriorated into a mere money-making business, and the old bloods changed their courses and went off on cruises by themselves.

"Although there were yachts and yacht racing here as far back as twenty years ago, it was not until 1876 that a regularly arranged race was held. It came off June 15 of that year, and the popularity of the affair was attested by the thousands of persons who lined the shore of the lake wherever a vantage point was to be found from which to see the race.

"The entries in that regatta were: Fleetwing, commanded by T. M. Bradley, commodore of the club; Frolic, Capt. John Prindiville, chairman of the regatta committee; Lucy, E. C. Band; Peri, John F. Quiggs; Zephyr, W. E Barnum; Dawn, William Dean; Lulu, William E. Miller; Annie L. Carey, William F. Higgie, vice-commodore of the club; Lincoln, Capt. Fergus; Naiad, R. B Ellerton.

"It was, however, when the Ina, a cutter yacht built at Cape Vincent, Canada, was brought down here by her Canadian owners that the greatest possible interest was created. The Ina was 37ft. on the keel, 14ft. beam, and 5ft. depth of hold. She was matched to race the Frolic and $2,000 was staked on the result. The Frolic won, but the result was not satisfactory to either yacht owner and a second contest was arranged. In this trial the Ina came in first, but on account of an error made in rounding a stakeboat the judges gave the decision in favor of Frolic. Great excitement resulted over the decision, and all sorts of unfair play were alleged against the Chicagoans by the Ina's people and lots of other Canadians. The papers of that period had columns about the trouble every day for nearly a week, so great was the interest manifested in the decision. As the race was not satisfactory to the Ina's owner, he immediately issued another challenge to the Frolic for any amount from $2,500 to $10,000 a side.

"Interest in yachting slackened considerably from 1876 to 1882, when a sort of revival again occurred and was maintained for a couple of years. In August, 1882, a famous cruise was made to Milwaukee in the teeth of a big gale. Although about a dozen yachts, among them the Countess of Dufferin and the Peri, started out, only five of them finished the voyage to the Cream City. The Idler was the first to make her appearance there, and was closely followed by the Wasp, the Viking, Thistle and Cora, in the order named. The Countess of Dufferin, the famous schooner yacht which had been brought from Cobourg, Ont., and the Peri were among the yachts that returned to this port after tasting the weather outside the harbor. The Countess, which was built by Cuthbert to beat everything in the shape of a yacht on sea or lake, now lies a forgotten hulk in the Michigan Basin. The Idler is owned by John Cudahy, and at present is at Mackinaw. She was built by George Steers, of New York, and bought by Capt. Prindiville in 1879. Two years ago she was completely overhauled and $25,000 expended in remodeling her under the supervision of the captain. She is said to be now in as good condition as she ever was. The Wasp, which was built for Capt. Prindiville in 1882, now has her moorings at Cleveland. She is owned by ex-Mayor Gardner, of that city. The Wasp was built on the same lines as the Greyhound, formerly the Annie Cuthbert.

"It might be interesting for yachtsmen of the present day to know who the pioneers of the sport were in Chicago. In 1875 the officers of the Chicago Yacht Club were: Com., John Prindiville; Vice-Com., T. M. Bradley; Rear-Com., W. F. Higgie; Sec'y, C. E. Kremer; Treas., Louis Wahl; Meas., W. W. Bates. Executive Committee: William C. Lyon, John A. Farrow, John Q. Fergus, Thomas E. Miller, W. H. Barnum. Regatta Committee: W. H. McHenry, Arthur C. Ducat, F. W. S. Brawley, W. F. Wentworth, E. C. Band

"As has been stated at the outset, there is a big revival of yachting on hand, and lovers of the sport predict that Chicago will soon again be a yachting port of no mean importance. The Columbia Yacht Club may well be given the credit as pioneers in the movement."

E. H.

## Plymouth Y. C., July 30.

PLYMOUTH, MASS.—PLYMOUTH HARBOR.

THE Plymouth Y. C. made an attempt to sail its annual regatta on July 29, but after one round the race was postponed until the following day, the wind falling to a calm. On Saturday the wind was strong N.E. at the start, but shifted to easterly and died out before the finish, though the large fleet of starters completed the course. The times were:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| **FIRST CLASS—CATBOATS.** | | | |
| Ariel, H. H. Sears | 21.07 | 2 30 52 | 1 57 47 |

| Minnie B., Israel Keith | 16.00 | Withdrew. | |
| Mignon, Damon Bros | 16.25 | Disqualified. | |

Mignon was disqualified for fouling Two Stars.

### The Loss of the Wanderer.

THE schooner yacht Wanderer, of Erie, Pa., was lost in a squall on the night of July 24 off Dunkirk, N. Y. She was being brought to Erie after rebuilding and recanvasing in Buffalo.

One of her men, Louis Granzow of Dunkirk, died from exposure while clinging to her main boom, which he and another sailor, Stack, her only other hand, had cut away before she foundered, they not being sighted until late on the following Wednesday. Stack was unconscious when rescued. The yacht was 50ft. over all, and the property of Bacon & Co. Stack's story is:

"We left Dunkirk Sunday morning about 11 o'clock," he said, "and between 9 and 10 o'clock at night we had reached a point between Barcelona and North East. I left the wheel in charge of the boy Granzow while I went into the cabin for a bite to eat. While I was below the squall struck us, throwing the yacht over on her side. I ran up and began to make things snug as best I could. The yacht had an iron keel of six ton in weight and carried six ton of iron ore as ballast. You can imagine how the wind blew, when the boat ran along on her side with the keel out of water, and the wind so strong that the weight of the keel and ballast could not right her again. It was dark as pitch, and we could not see where we were, or what our danger was only as the lightning flashed. I told Louis to get his shoes off as quick as he could, for we would soon be in the water. He didn't want to lose his shoes, but I compelled him to throw them overboard. Then we took off our oil skins, and cut the sail off. Then we cut away the main boom and lashed ourselves to it. We had hardly finished doing this when the Wanderer capsized and sank. We floated all night, with the waves washing over us, and with the small boom, only a few inches thick, it was hard work to keep afloat on the heavy sea."

### Jamaica Bay.

THE annual race of the Jamaica Bay yachts, for a sweepstakes of $150, was sailed on Saturday over a 10-mile course, the wind being light S.W. at start, freshening as the race progressed. Aurora parted her throat halliards when in third place, finishing last in consequence. The times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Selfish | 2 51 15 | 5 16 25 | 2 25 10 | 2 36 26 |
| H. H. Adams | 2 50 35 | 5 28 49 | 2 38 14 | 2 38 33 |
| Lady Glenmore | 2 53 40 | 5 40 08 | 2 46 28 | 2 44 20 |
| Aurora | 2 52 47 | 5 39 18 | 2 48 31 | 2 47 55 |
| Ours | 2 52 11 | 5 29 45 | 2 37 34 | 2 37 12 |
| Unknown | 2 50 10 | 5 28 59 | 2 38 14 | 2 38 14 |

Selfish takes $125 and H. H. Adams $25. The judges were Daniel Brinsley and W. Tillotson. Dr. O'Donohue was timekeeper.

### Brooklyn Y. C., July 30.

BATH BEACH—GRAVESEND BAY.

THE Brooklyn Y. C. sailed a race for catboats on Saturday, the two prizes being presented by a member of the club. The wind was light, making the race a drift. Duphen was disqualified for poling over the line. The times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| B. Q | 4 49 56 | 6 45 30 | 1 55 34 | 1 56 34 |
| Sappho | 4 45 54 | 6 50 54 | 2 04 00 | 2 02 49 |
| Duphen | 4 56 59 | Disqualified. | | |
| Edda D | 4 50 32 | 6 46 10 | 1 55 48 | 1 54 28 |
| Eddys | 4 47 42 | Withdrew. | | |

## YACHT NEWS NOTES.

The Yapewi Aquatic Club, which was formed this summer at Bordentown, N. J., on the Delaware, has just completed a two-story club house on the river front, which will be opened in the near future. The building is 24×50ft., with an 8ft. verandah on the river end. The officers are: Pres., H. S. Watson; Vice-Pres., J. Hartley; Purser, C. E. Burr; Captain, J. H. Longstreet; Mate, L. W. Wiese; Directors—E. Haas, T. D. Landon, F. J. Potter. The word aquatic was used because the members are of such diversified tastes; the captain owns the famous catamaran Duplex and the 40ft. cabin steam launch May (this is the launch which was at the A. C. A. camp last year, and is now away on the usual summer cruise in the same latitude again), and among the members are sloops, canoes, St. Lawrence skiffs, duckers, batteaux, etc.; besides some are fishermen, bathers, etc. Yapewi (Yah pay-wee) was the Indian name for the bluff on which Bordentown is situated.—CAZIQUE.

On the night of July 26 the three-masted schooner Everett Webster, of Philadelphia, loaded with coal for Boston, ran over the wreck of the Alva, damaging the yacht very badly. The schooner sustained serious injuries, leaking badly and was towed to harbor. The hull of the yacht is reported as nearly cut in two. The Merritt Wrecking Co. secured the ship's safe, but the tug Rescue returned to Staten Island on Saturday. Mr. Vanderbilt has been in consultation with wreckers and has decided to abandon all attempts to raise the yacht, and she will be sold at auction as she lies this week. The steamer H. F. Dimock is at Boston with her bows partly stove in.

Harpoon was hauled out at Lawley's on Friday of last week, to prepare for the New York cruise. Messrs. Adams, her present owners, have been members of the club for some years, so that she will be eligible to all races. She is now carrying a heavy metal board, an iron framework filled with lead. Her rather short overhang carries a light outrigger of angle-iron, some 2ft. long, on which is a short traveler for the single outer block of the main sheet, giving a lead similar to the Herreshoff yachts. She is in fine condition above deck, but the bottom is not as smooth as Wasp and Gloriana.

In a race between Druid, Scorpion and Phantom, of the Lincoln Park Y. C., of Chicago, July 30, the course was estimated to be 14 miles long. The actual time of making it was 2h. 4m. 50s. for the Druid and 2h. 8m. 45s. for the Phantom. The time allowance given the Phantom on account of the Druid being 6ft. 8in. longer reduced the Druid's lead to 1m. 4s. The Viking was the winner of the pennant in the second class.

Sippican Y. C. has set dates for two more club races on Aug. 17 and Sept. 7. Championship cups will be awarded in each class to the yachts winning two of the three races, July 23, Aug. 17 and Sept. 7. In case of a tie between three yachts the sail-off will be held Sept. 14. Tee races are open only to members of the club. John Gorham Palfrey, William H. Davis and G. Griswold Van Rensselaer, regatta committee.

Wee-Winn, Miss Winifred Sutton's 5-rater, arrived on Saturday at Southampton, from Messrs. Herreshoff's yard. She is a beautiful piece of workmanship, built of pine, with oak and white cedar fittings, and is sloop-rigged. She sailed her first race at Bembridge on Monday, Mr. Cochrane steering her, and won easily, beating Semibreve, Idono, Jeanie, Pique and Otokesan.—*Field.*

## Canoeing.

### FIXTURES.

AUGUST.

4-25. A.C.A. Meet, Willsborough Pt
5. New York, Bensonhurst
6. Springfield, Cup, Springfield.
15-20. A. C. A. Meet, race week, Willsborough Point.
27. Rochester, 4th Trophy Race, Irondequoit Bay.

### A. C. A. Membership.

THE following gentlemen have applied for membership in the A. C. A.: Eastern Division—H. J. Bardwell, W. Chapman Brown, Wm. M. Raynolds, J. L. Wyckoff, John F. Chase, Holyoke, Mass, Northern Division—W. L. Germaine, Ottawa. Central Division—Walter Weatheroy, Des Moines, Iowa; Andrew Tromblee, Port Henry, New York; R. C. Black, Pelham Manor, N. Y.; Warren N. Goddard, New York.

## CANOE NEWS NOTES.

The following item, from the *Toronto Globe* of July 26, betrays an astonishing amount of ignorance concerning the American Canoe Association, of which many Toronto canoeists have been members for over ten years: "Com. Weinett in Town.—Com. Weinett, of the United States Canoe Association, is in the city en route to the Canadian annual canoe meet. He is the guest of the Toronto Canoe Club, the members of which entertained the commodore at dinner last night at McConkey's. After dinner an adjournment was made to the canoe club house, where many pleasant hours were spent."

The New York C. C. will hold its annual regatta on Labor Day off the club house at Bensonhurst. Arrangements are in progress for a large regatta, open to all canoeists.

Those who have promised prize flags are requested to send them to Com. C. V. Winne, A. C. A. Camp, Willsborough Point, N. Y.

## *Rifle Range and Gallery.*

### THE REVOLVER CHAMPIONSHIP.

THE first challenge shoot for the Winans Trophy and the Amateur Revolver Championship of the United States took place at the St. Marks Place Gallery, in this city, on the afternoon of Wednesday, Aug. 3. Dr. Louis Bell was challenged by George F. Jantzer, who stood third in the opening shoot for the trophy. At that shoot the score of Dr. Bell in his 18 record shots was 17.52in., while Mr. Jantzer's string was 20.40in. The challenge match was fired under the same conditions as the initial contest: Any revolver, any ammunition, 20yds., 5 rounds of 6 shots each, 3 best rounds to count for the score. The men have been ardently at work in practice since the match was decided on several weeks since. Dr. Bell has been busy at outdoor work on the Walnut Hill range near Boston, while Jantzer has taken his practice in the home galleries and on the outdoor summer range of the New York Pistol Club. The match of Wednesday passed off in a quiet way with the shooting editor of FOREST AND STREAM present as referee. The same revolvers as used in the opening shoot were employed, Dr. Bell firing a .44cal S. & W., while Mr. Jantzer used a .38cal. of same make. The scoring was very poor, indeed, and the uncertainties of revolver work were well illustrated. There was some smoke in the gallery between shooter and target, but a great deal more "buck fever" at the shooting end of the 20yds.

Only four strings of 6 shots each were fired, and in each of his strings Dr. Bell managed to get off the 5-inch disk. Mr. Jantzer did the same on two strings, and the other two measure about 8½ and 6½in. respectively, giving him an average of over 22in. in 18 shots. President Oehl, of the New York Pistol Club, was ready with a challenge, and it is likely that during September Jantzer will be called upon to meet a fellow member of the New York Club.

In the opening shoot for the trophy where Dr. Bell led the field, the record shot by shot score stood:

| DR. LOUIS BELL. | | | GEORGE F. JANTZER. | | |
|---|---|---|---|---|---|
| 1st string. | 2d string. | 3d string. | 1st string. | 2d string. | 3d string. |
| .15 | .72 | .40 | 1.00 | 1.07 | .85 |
| 1.34 | .44 | .25 | 1.64 | .48 | .90 |
| .50 | 1.75 | .68 | 1.28 | 1.42 | 1.35 |
| .86 | 1.63 | .80 | 2.48 | .90 | 1.40 |
| 1.70 | .95 | 1.15 | .01 | .50 | 2.30 |
| 1.04 | 1.06 | 2.10 | 1.01 | 1.00 | .75 |
| 5.59 | 6.55 | 5.38 | 7.48 | 5.37 | 7 55 |
| Total | | 17.52in. | Total | | 20.40in. |

### New Jersey Rifle Shooting.

[*Specially Reported for Forest and Stream.*]

MILLER RIFLE CLUB, Hoboken, N. J., Captain Richard W. Dewey. Wednesday, July 27. The following scores were made tonight in the regular weekly shoot of the above club, high scores were the rule. The conditions were 10 shots, off-hand, 25-ring target, possible 250:

| | | | | | |
|---|---|---|---|---|---|
| G Schlicht | 241 | L Sohl | 235 | R Zoch | 230 |
| D Miller | 238 | J Carragher | 234 | F Landolt | 228 |
| E Fischer | 238 | F Brandt | 234 | W Rogers | 227 |
| J H Kruse | 237 | H F Meyer | 232 | J J Devitt | 208 |
| D Peters | 236 | F Kloepping | 232 | F Kammel | 206 |
| A Meyns | 236 | W Forkel | 230 | F Dunsteadt | 204 |
| F Lieli | 236 | | | | |

The members are greatly pleased over the choice made by a committee appointed some time ago to find new headquarters for the club, and the one selected, which is situate 423 Washington street, Hoboken, suits them to a T.

The defeat given the "All Secaucus" team on the 200yd. range, two weeks ago, was no surprise to the many followers of the Millers. Although only two of the former team were present, they could not have won, as the last three men had to make 225 average to win the match. Dave Miller with his 214, George Schlicht with 215 and August Meyns with 217 proved that at least three were in shooting trim.

The match arranged between the Hoboken and Hansa Rifle Clubs, to take place at headquarters of both clubs, Third and Adams streets, Hoboken, last Friday evening, has fallen through. The Hansas sent word that their membership has dwindled down lately and they therefore could not get a good enough team together capable of making a fair score, so as to stand a chance with the Hoboken's team. It will soon be a case of exit Hansa Rifle Club.

The Lady Miller Rifle Club were notified by their President, Mrs. Alson Stadler, that the weekly shoots of the club will be discontinued until the fall. The handsome silver card basket, which was offered for competition until two weeks ago, has been won by Miss Miller. Quite a number of the members are decidedly in favor of continuing the shooting through the summer, and if what they say goes for anything it will be resumed in a short time.

The Friday Night Club held their annual fishing excursion recently. An efficient committee had the matter in hand and the result was many took in the affair.

The Union Hill Schuetzen Corps, Captain John Engle, held their annual picnic and festival at the Union Hill Schuetzen Park last Monday and Tuesday.

Samuel Anthony and P. M. McCollough decided a fifty-shot match between them at Thurk's ranges, Hoboken, last Monday afternoon, with this result:

| | | | | | |
|---|---|---|---|---|---|
| S P Anthony | 239 | 233 | 242 | 240 | 236—1190 |
| P M McCollough | 236 | 232 | 232 | 235 | 230—1165 |

"Billy" Dilger led in the scores of the Hoboken Rifle Club last Monday evening, with a total of 240. The other scores were rather poor. The light-haired "Capt. Bill" is feeling good over his good target.

### Cincinnati Rifle Association.

CINCINNATI, O., July 31.—The Cincinnati Rifle Association held its regular shoot at its range and made the scores as appended. Conditions 200yds. off-hand at the standard American target:

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Glindele | 82 | 80 | 76 | Simon | 71 | 69 | 69 | Topf | 65 | 61 | 61 |
| Best | 74 | 71 | 70 | Stegner | 69 | 67 | 65 | Drube | 75 | 73 | 73 |
| Weinh'im'r | 72 | 71 | 66 | Wellinger | 75 | 73 | 72 | Brumbach | 76 | 78 | 75 |
| Hanck | 64 | 66 | 59 | Payne | 78 | 76 | 74 | Speth | 81 | 76 | 75 |

### Denver Riflemen.

DENVER, July 25.—The following is the standing of the various members of the Denver Rifle Club:

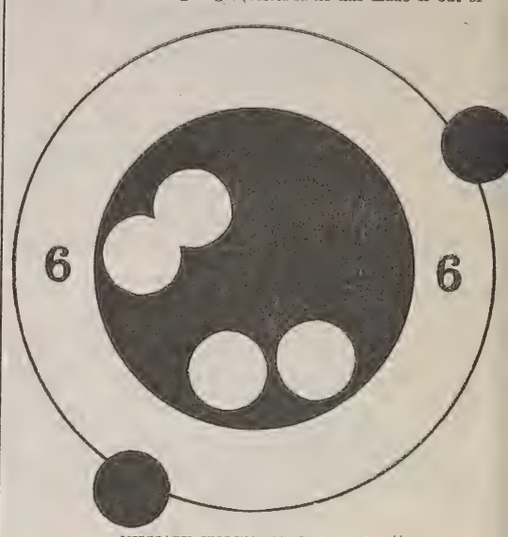
At mid range, medal match, 500yds., possible 500 points: Chamberlain 485, Dean 473, Peterson 468, Frazer 466, Bell 462.

Standing at 200yds., championship off-hand match, possible 1,000 points: Adamson 851, Peterson 838, Schoyen 750, Dow 727, Gilbers 725

### New Jersey State Rifle Association.

AT the recent annual meeting of the New Jersey State Rifle Association the following officers were elected for the ensuing term: President, Gov. Leon Abbott; Vice-Presidents, R. S. Green, E. J. Anderson, J. J. Toffey, Gen. J. W. Sewell, Col. A. R. Kuser, James Smith, Jr., Gen. J. W. Plume, Gen. W. S. Stryker, Col. G. B. M. Harvey, Col. J. M. Van Valen, Col. J. C. Owens, R. B. Reading, Wm. Hayes, J. L. Kuser, Gen. G. E. P. Howard; Treasurer, Gen. B. W. Spencer; Secretary, Col. J. M. Van Cleef; Statistical Officer, Col. J. M. Van Valen; Superintendent of Range, Capt. J. M. Bodwell; Executive Officer, Gen. B. W. Spencer. A reduction was made in the dues from $10 to $2 per annum. Any officer or member of the National Guard of New Jersey may become a member.

### The Elcho Shield.



In the recent competition for the Elcho shield at Bisley five perfect scores, 875 each, were made. Four of them were at 800yds, by members of the English Eight, the team total reaching 579 out of 600 at that range. Capt. Millner, of the Irish team, made a 75 at 900yds. Capt. Lamb, of the English team, made the highest individual aggregate (319) in the possible 325.

### Revolver Work at Bisley.

BISLEY, July 17.—The first week's shooting is over. The revolver competition as well as the "running deer" and "running man" keep open till July 23.

At the revolver competitions Mr. Walter Winans has kept his lead in all twelve competitions except at the 50yds. military (Series IV.), in which Mr. Joynt has one point more. The 50yds. is a range at which Mr. Winans has not yet had more than a few entries, as he wishes to finish the short ranges first.

At the military sliding target (Series I.) he has made 40 out of

MILITARY SLIDING TARGET—SCORE 40.

a possible 42, which is practically certain to win it. At the military rapid firing, six shots in twelve seconds, he has 38, which is also about a certainty for first prize.

Mr. Winans does not intend to shoot any more in these two competitions, unless in the very unlikely event of their being beaten. Herewith are full size diagrams of these two scores. He used a patent military front sight of his own invention. He intends to try and make good scores in the other two military competitions, and then take gallery ammunition for the target revolver competitions.

The event of the week in off-hand work was the way in which Mr. Winans captured the running man prize.

A few minutes before lunch on Friday, having ten minutes to spare, he thought he would have a few shots at the "running

MILITARY RAPID FIRING TARGET—SCORE 38.

man" Hillhouse cup competition. He has not shot before at the "running man" for years. His rifle not being handy he borrowed one he had never shot before. He started straight into competition without any sighting shots, and greatly to his surprise made a score five points above that of Mr. Ellicott, the usual winner of the "running man" competition, and has most likely won the cup, as Mr. Ellicott considers it useless to try to beat the score.

The first shot hit the "man's" chest, and all the remaining five were in his heart or chest. The figure runs at a 5-minute gait at 110yds. distance. The rifle was a .4cal. double barrel by Purdey, the contest calling for either Martini or hunting rifle.

The Winans cup has been won by Capt. Edge.

A pistol maker here in camp is making a good business in selling Smith & Wesson revolvers, of which he has imported a batch, by going round and saying "Who wants a Smith & Wesson revolver exactly like that with which Mr. Walter Winans has made his wonderful score this morning?" They are selling like hot cakes, and he has had to send for a fresh supply, as all the revolver shots want them.

### Massachusetts Rifle Association.

BOSTON, July 30.—The Massachusetts Rifle Association held its weekly shoot at its range to-day. The attendance was good and a few fine scores were made. George R. Russell made 33 and 32 with a Springfield military rifle. Below are the scores made today, distance 200yds., standard American target, and all being re-entry matches:

All-Comers' Off-Hand Match.

| | | | | | |
|---|---|---|---|---|---|
| *G R Russell | 33 | E H Comey | 26 | A S White | 21 |
| F Daniels | 29 | A Law | 24 | M T Day | 23 |
| B E Hunter | 28 | J B Hobbs | 24 | | |

All-Comers' Rest Match.

| | | | | | |
|---|---|---|---|---|---|
| S Wilder | 112 | A H Ballard | 101 | A S Hunt | 87 |
| J Francis | 109 | S Jackson | 100 | L Ames | 84 |
| H L Willard | 106 | B E Hunter | 96 | | |
| M T Day | 103 | G E Emmons | 91 | | |

Eagle Badge Pistol Match, 50yds.

| | | | | | |
|---|---|---|---|---|---|
| L Bell | 88 | L H Greene | 85 | A G Stevens | 81 |
| J B Fellows | 88 | O Moore | 85 | J B Hobbs | 78 |

All-Comers' Pistol Match, 50yds.

| | | | | | |
|---|---|---|---|---|---|
| S C Sydney | 93 | L R Avoy | 81 | B E Hunter | 75 |
| M F Day | 83 | A G Stevens | 78 | | |
| C P Moss | 81 | D N Winn | 77 | | |

* Military rifles.

## A Bisley Target Device.

*Editor Forest and Stream:*

The 100yds. range for hunting rifles (at a stationary target) has been put at the extreme west of the ranges under shelter of a hedge on a bank, which runs the entire length of the range.

This is a great improvement on last year, as then it was alongside the "running deer," in a windy part of the grounds.

The secretary, Col. MacKinnon, has invented a very ingenious arrangement at this range for showing if two bullets have gone through the same hole. The targets for the hunting rifles have always been cardboard discs a foot in diameter, with a 3in. bullseye, having a 2 in. "carton." This disc is sent down from the firing point after the shooter's name is written on it and he fires 7 shots in the single-barrel competition and 8 shots in the double-barrel rifle competition before marking.

As may be imagined, bullets often cut into the same hole, one of the rules being that nobody may tell the shooter where his shots have hit till he has fired all his shots.

Col. MacKinnon's invention is intended to overcome this difficulty. He has a band of paper on two rollers (like a "Kodak" film), which is stretched out behind the target so that bullets after they go through the target go through this paper, and after each shot a slight turn by cogwheels from the markers' butt rolls up the paper half an inch on one roller, taking it the same amount off the other roller.

The idea is that if two shots go through one hole on the target, they will be in separate holes on the paper behind and registered two hits.

Even with this apparatus it is possible for three hits on the target to appear as only two, as follows: Suppose the first shot is a plumb center, the next half an inch to the right of plumb center, this second shot will make a separate hole in the target but will go through the same hole as the first in the paper behind, because this latter has moved half an inch to the right after the first shot was fired.

Now if the third shot is again plumb center, there will be only two bullet holes in the target, No. 1 and No. 3 being in the same hole, and there will also be only two holes in the paper behind, No. 1 and No. 2 being in one hole and No. 3 an inch to the left, therefore a man putting three hits in the bullseye would only be credited with two. Of course this is a very unlikely thing to happen, and in practice Col. MacKinnon's invention ought to be a great success.

LONDON.

## Miss Leale, Riflewoman.

LONDON, July 18.—In the rifle shooting at the Bisley meeting to-day Miss Leale took part in the contest for the *Graphic* prize. She attracted much attention by her shooting. She handled her rifle in a businesslike manner, and, amid rousing cheers, scored 24 out of a possible 35. Revell, of Canada, and two others made the full score.

# Trap Shooting.

All ties divided unless otherwise reported.

### FIXTURES.

**If you want your shoot to be announced here send in notice like the following:**

Aug. 6-7.—Sheboygan Gun Club tournament, Sheboygan, Wis.
Aug. 9-11.—Arkansas State Sportsmen's tournament, at Hot Springs, Ark.
Aug. 9-12.—Pennsylvania State Sportsmen's Association's annual tournament, Reading, Pa. Walter D. Eiler, Sec'y.
Aug. 9-12.—West Point Gun Club tournament, West Point, Miss.
Aug. 10-11.—Chadwick's tournament, at Marmont, Ind.
Aug. 10-11.—Big Four Gun Club tournament, at Burlington, Ia.
Aug. 10-12.—Missouri State Amateur Association tournament, at Lexington, Mo. Added purses. Address G. A. Sturges, Sec'y.
Aug. 14.—Lincoln Gun Club tournament, Alameda Point, Cal.
Aug. 15.—Live pigeon tournament, at Mt. Pleasant, Pa.
Aug. 17-18.—Dixie Gun Club tournament, at Pensacola, Fla.
Aug. 17-18.—Gaillard Gun Club tournament, Natchez, Miss.
Aug. 18-20.—Highland Gun Club tournament, Des Moines, Ia.
Aug. 19.—California State Shooting Association tournament, Concord, Cal.
Aug. 23-24.—Hackettstown Gun Club tournament, at Hackettstown, N. J.

Oct. 18-20.—Highland Gun Club annual fall tournament, at Des Moines, Iowa.
Oct. 19-20.—Somerville Gun Club tournament, Somerville, N. J.
Nov. 23-26.—Milwaukee (Wis.) tournament, targets and live birds.

## DRIVERS AND TWISTERS.

The South Side Gun Club, of South Norwalk, Conn., has decided to hold a badge contest during the months of August and September. A badge costing $25 or $30 will be put up as the trophy, to be shot for every Saturday during the months named, at twenty-five birds per man, and at the end of the time specified to become the personal property of the man having won it the greatest number of times. The contest will be open only to Connecticut shooters.

* * *

The Belfast Rifle, Rod and Gun Club had a shoot at their new grounds on July 26, with the following score: Healey 19, Coombs 14, Decrow 10, Tuttle 13, Weshe, 6, out of twenty-five clay pigeons. Some new members were admitted to the club, and the following officers elected: Pres., Ralph H. Howes; Vice Pres., Horace Chenery; Sec. and Treas., Charles R. Coombs; Capt., John Healey; Directors, Geo. E. Johnson, Fred White and Will Weshe.

* * *

The Rockville (Md.) Rod and Gun Club has arranged for a grand clay pigeon tournament on its grounds the 25th and 26th of August. The contests are open to all and a number of expert shots are expected. The business men of Rockville and Washington have donated numerous costly merchandise prizes, and these, as well as money prizes, will be shot for. The grounds are almost in town and possess every advantage.

* * *

The gun club of the Fayetteville, N.Y., held its first shoot on July 26. In the first match George Ebeling and Edward Snook each scored 8 out of 10. In the second Robert Flattery made 7 out of 10, and Mr. Dunham 5 out of 10. In the third F. W. Strong was first, and M. S. Pratt second. Robert Flattery took the next by making 14 out of 15; Charles Pratt made 9 out of 15,

The Niles (Mich.) Gun Club elected the following officers on July 27: President, George Rough; Secretary, E. F. Woodcock; Treasurer, Charles Julius; Field Captain, Wm. Vanderbeck. On the same day the club shoot was held at Dowagiac Creek, Charles Julius breaking 27 out of 30 targets. The club will hold a big tournament this month.

* * *

James L. Smith informs us that the tournament of the Hackettstown (N. J.) Gun Club, announced for Aug. 30 and 31 and Sept. 1, will be held on Aug. 23 and 24, as the New London Gun Club has taken the dates formally claimed by the Hackettstown club. The latter club announced its dates early last spring. Only targets will be used.

* * *

The announced match between Mitchell and Brewer is off. Mitchell says he is anxious to shoot a match at 100 live birds with C. F. Barnes, of Wheeling, W. Va., for $100 a side, gun below elbow until bird is on the wing. At the Johnson City shoot he stated that he had written to Mr. Barnes, but received no reply.

* * *

A big tournament will be held at Milwaukee, Wis., on Nov. 23 to 26 inclusive. The principal events will be at live birds. The entries will be high, so that fat pots are assured. The shoot will be managed by Richard Merrill, president; A. H. Chapman, vice-president and E. P. Thomas, secretary.

* * *

At the annual meeting of the Kirtland (Ohio) Gun Club, the following officers were elected: J. H. Schneider, President; C. H. North, Vice-President; J. Loomis, Secretary; George Auer, Treasurer; W. F. Bell, Captain, and A. Berger and T. Packard, Trustees.

* * *

The Arkansas State shoot, to be held at Hot Springs next week, promises to be a big affair. The most important event will be the State team shoot, to take place on the 11th, the conditions being 20 bluerocks per man, four men to a team.

* * *

Harry Matz, president of the Reading Shooting Association, says his club will erect a house for the exclusive use of the cashier and the press representatives. Don't forget to make carbon copies of all scores, Mr. Matz!

* * *

Chadwick's mid-summer tournament will be held at Culver's Park (Lake Maxinkuckee), Marmont, Ind., an Aug. 10 and 11. The shooting will be at artificial targets. Two purses of $40 each will be shot for.

* * *

The following scores were made at the weekly shoot of the Trojan Gun Club at Troy, N. Y., on July 26: A. A. Young 69, L. Butler 45, M. Gemmill 49, W. W. Turner 57, E. R. Dederick 62, G. W. Gemmill 60.

* * *

E. J. Brown, F. B. Porter and Thomas Baldwin are arranging for a big tournament to be held at Quincy, Ill., the last week in August. Live birds and targets will be used and $1,000 in prizes offered.

* * *

At the badge shoot of the Rockville (Md.) Gun Club on July 25 Edward West took premier honors with a score of 45 out of 50; Harry Hurley was second with 40, James Viers breaking 39.

* * *

Harry E. Smith, the young expert of the Newark Gun Club, and Allen Willey, editor of the Hartford (Conn.) *Globe*, are matched for a shoot at 100 live birds each.

* * *

Billy Wagner of the Capital City Gun Club of Washington, D. C., will manage the shoot at Rockville, Md., on August 25 and 26.

* * *

The Lynn Fish and Game Protective Association has been incorporated under the laws of Massachusetts.

* * *

Horace B. Darby is making a great reputation for the trap and trigger department of the Albany *Argus*.

* * *

C. W. Budd is president, G. E. Cowen secretary, and A. C. Miller treasurer of the Highland Gun Club, of Des Moines, Ia.

* * *

The next shoot of the Connecticut Shooting League will be held on the Bristol Gun Club grounds in East Bristol.

* * *

Harry Thurman says he will guarantee that no cabs will be upset on Penn Mountain during the Reading tournament.

* * *

All the Interstate tents will be pitched on the club grounds at New London during the Keystone tournament.

* * *

Joe Hunter has been sent to the mountains by his physician's orders. Hence his non-appearance at Johnson City.

* * *

The Knoxville Gun Club will have three days' shooting at targets and one day at live pigeons next May.

* * *

A. W. DuBray, Parker Bros.' popular traveling man, will probably make a a trip to Canada this season.

* * *

Maryland and the District of Columbia should send teams of ten men each to the New London tournament.

* * *

E. D. Fulford will be at the Pennsylvania State shoot to defend the individual championship which he won last year.

* * *

The eighth monthly shoot of the Union Gun Club will be held at Springfield, N. J., to-day.

* * *

A live pigeon shoot will be held at Mt. Pleasant, near Glen Carbon, Pa. on August 15.

* * *

Pennsylvanians should not forget that their State shoot will be held at Reading next week.

* * *

At the badge shoot of the Washington (N. J.) Gun Club on July 22 J. L. Smith was the winner.

* * *

Three days' shooting at Johnson City, Tenn. and not a 90 per cent. clip cut out on any day.

* * *

The Baker (N. Y.) Gun Company, is putting up an iron building at Batavia, N. Y.

* * *

A team match is likely to occur in the near future between the Baltimore and Standard gun clubs.

* * *

The several Pennsylvania gun clubs will hold forth in tents during the State shoot at Reading.

* * *

Enoch Miller says he will have plenty of good, lively birds at his tournament on Aug. 17 and 18.

* * *

Jack Parker's new handicap has caught the fancy of Michigan shooters.

* * *

The Newark Gun Club will hold its monthly shoot at John Erb's next Thursday.

* * *

The "Big Four" intend to "spread" themselves during the coming Interstate shoot at Auburn.

* * *

Neaf Apgar has been under the weather for some time, but is slowly getting into condition.

* * *

Two shoots in New Jersey and one in Connecticut were announced for the same dates.

* * *

Reading will be the Mecca for sportsmen next week.

* * *

A big crowd of Jerseymen will be at Reading next week.

* * *

Don't forget Reading on Aug. 9, 10, 11 and 12.

O. H. TOWNSEND.

## The Le Mars Tournament.

LE MARS, Iowa, July 28.—The three days' trap tournament of the Le Mars Gun Club was a pronounced success in every particular. The weather was warm and sultry on the first and second days, but to-day was cool and pleasant. The attendance was fairly good and the management was perfectly satisfied. Among the visitors were Abbett and Arff from Charter Oak; E. W. Bird of Fairmont, Minn.; Asland of Mitchell, Dak.; Baer, Campbell and Fritchell of Moville; Lyon, Brock, Gorman and Williams of Sioux City; Hon. J. G. Smith and Henry Durant of Algara; Steinburg and Sundstrom of Bancroft; Eddington of Sheldon; Slocum of Pringham; Todrick of Staunton, Neb.; H. J. and E. D. Trotter of Kingsley; John Georgeson of Kelley; G. E. Hughes of Fonda and C. W. Budd of Des Moines.

*The First Day's Shoot.*

A citizens' purse of $50 was added to the stake in event No. 6 on the third day. Fifty Peters cartridges were added as fifth prize in event No. 8 on the first day, No. 3 on the second day, and Nos. 2 and 7 on the third day.

## Glenmore Rod and Gun Club.

The first shoot for the new medal by the members of the Glenmore Rod and Gun Club took place at Dexter Park, L. I., on Wednesday, July 27. Each man shot at seven birds, the usual club handicap. A. Eppig, R. Phister, Jr., and C. Englebrecht tied with seven each; the last named won the medal, R. Phister, Jr., withdrawing on the shoot off. Sweepstake shoots followed; the first, L. Eppig had to pay for the birds; J. T. Van Wicklen and M. Hayden divided the second; A. Eppig and C. Englebrecht also divided:

| | | | |
|---|---|---|---|
| L Eppig | 2010000—2 | M Hayes | 2010111—5 |
| A Eppig | 1111222—7 | J J Van Wick | 1011001—4 |

## Shooting for the Renault Prize.

HOLLYWOOD, N. J., July 29.—The live pigeon shoot for the Renault prize took place this afternoon on the grounds of the Hollywood Shooting Club, 30yds. rise, one miss and out, entrance free. The prize was given this year by George Renault. There were nine entries, as follows:

Dr. Wilson, Frederick Hoey, R. Muser, George Work, W. C. Floyd Jones, J. S. Williams, Capt. Money, L. S. Thompson and W. B. Thompson. Work and Floyd Jones were tied for first, killing twelve straight birds. They divided the prize.

## Garfield Gun Club.

CHICAGO, Ill., July 30.—Garfield Gun Club, of this city, has a peculiar method of establishing club shooting dues. No charge whatever is made to members for the targets they shoot, but the total club account for targets with the dealers is balanced monthly, and a per capita assessment is levied to cover the same. Thus every member, whether he shoot much or little, pays the same amount for shooting each month. At first sight this might seem unfair, but in the result it does not seem so. In two years Garfield Club shooting assessments have only been $20 in all, and the average monthly assessment in the best shooting season is about $1, certainly not a very high tax. This gives all the profit to the shooters, and it encourages the shooter to come out and shoot, if for no other reason than to get the worth of his money back. As a club this organization seems very well united and harmonious, and there is no grumbling over the arrangement. Garfield Club has a very high average attendance, this running for each shooting day about 50 per cent. of the membership. Today there were nearly as many shooters at the club's pleasant West Side grounds as you will see in the average tournament, there being 28 entries in the club medal shoot, and a very spirited representation in the practice shoots. The Ladies' Aid Society of the Central Presbyterian Church served a good lunch. Saturday afternoon at this club is very much a ladies' day, and to see the ladies and children about gave the place an air novel for a shooting ground, but one of decidedly agreeable impression.

Last Saturday Garfield Club accepted the invitation of the Northwestern Gun Club to shoot a friendly match, 8 men teams, 25 targets per man, on the Northwestern grounds at Avondale, and went over 20 strong, the Garfield Club team consisting of Messrs. Coppernol, Richards, O'Brien, Hicks, Tefft, Bortree, Brown and S. Palmer. The total score was: Northwestern Gun Club 118 Garfield Gun Club 145. A return match will probably soon be shot on the grounds of the winning team.

Mr. M. R. Bortree, well-known as the city game warden of Chicago, is now serving his second term as president of Garfield Club, and the present portly and obliging secretary, Mr. Brown, will doubtless have several more terms if he keeps his present gait. This seems to be a shooting club that shoots.

Garfield Club classifies its members, A, B and C; A class, all over 65; B class, all between 55 and 65; C class, all under 55. The average is obtained from five different shoots of the shooter's record. Following is the score of to-day's medal shoot, three medals, A. B and C, 20 U. S. pigeons:

| | | | |
|---|---|---|---|
| Cop | 11001111110111000001—12 | Grubbs | 11111011111111001111—17 |

| | | Campbell | 01101111101111111111—16 |

Messrs. Steck and Bowers shot off the 20 tie at 5 birds, and Mr. Steck missing his last bird, Mr. Bowers won the A class medal. Mr. Brown won the B class medal, and Mr. Drake the C class.

E. HOUGH.

## Canadian Trap Shooters.

TORONTO, July 23.—The Toronto Shooting and Game Protective Association held an interesting shoot this afternoon at Stark's grounds. The targets were live blackbirds, which make excellent sport owing to their rapid and erratic flight. The prizes, given by the president of the club, were gold and silver watches for first and second place respectively:

| | | | |
|---|---|---|---|
| Charles | 21112111111111—13 | Gooch | 11011100111121—12 |
| McDowall | 21121101111111—14 | Bovel | 10011011101010—9 |
| Caldwell | 12111211101111—14 | Mander | 00021001012110 — 8 |

Ties at 14, 21yds. rise:

| | | | |
|---|---|---|---|
| McDowall | 11112—5 | Caldwell | 21112—5 |

Ties at 5, 24yds. rise:

| | | | |
|---|---|---|---|
| McDowall | 10201—3 | Caldwell | 11122—5 |

*July 27.*—The members of the Owl Gun Club held their semi-annual shoot for the Moore cup at Stark's Athletic Grounds this afternoon. Owing to the bad weather the attendance was not large, but those who were present had a good time and witnessed some very close shooting.

## Shooting at Utica.

UTICA, N. Y., July 29.—The regular shoot of the Oneida County Sportsmen's Association was held here to-day in the rain, with a strong westerly wind that bothered the boys in "getting on" to the targets. In event No. 1, at 25 targets, for club prizes, Elliott and Booth tied on clean scores each. In No. 2, same conditions, for the club badge, Hunter made a clean score.

No. 1, club prizes:

| | |
|---|---|
| Elliott | 1111111111111111111111111—25 |
| Hunter | 1111111111101101111111111—23 |

## The Kansas City Cup.

KANSAS CITY, July 28.—The quarterly shoot for the Kansas City cup, representing the local wing-shot championship, took place at the shooting park, and despite the showers and threatening weather a dozen of the crack local trap-shooters competed for the trophy. The conditions of the cup shoot are 25 single birds under American Shooting Association rules, entrance money the price of the birds. J. Lee Porter, who won the trophy at the last shoot, made a gallant fight to retain it and compelled Champion Elliott to kill 34 straight birds to win the race.

The cloudy weather and occasional showers made the birds somewhat slow in taking to wing, but this handicapped the shooter also, particularly on dark birds, and the scores made were very creditable to the shooters. J. A. R. Elliott, Lee Porter and Oscar W. Cogswell all shot in grand form, but the work of Jas. A. Bolen, who is matched to shoot against Elliott Saturday for the *American Field* cup, was a disappointment, as he made the tail-end score, losing 9 out of 25. He was shooting a strange gun, however, and may be able to put up a different race against Elliott on Saturday afternoon.

Elliott and Porter killed their 25 straight, and the match between them was an exciting one from start to finish. In the shoot-off Elliott grassed his birds clean and neat, while Porter did considerable "slobbering," and his 32d bird, although hit hard, fluttered out of bounds. Oscar Cogswell, of the Independence Club, was their most formidable opponent, staying right up with the procession until his 17th bird, which fell dead out of bounds. That was the only one he missed, but it cost him all the chance he had for the cup. Fred Maegley lost his 6th and 10th birds, but finished strong, killing his last 15 straight. J. B. Burrell, W. Kearns and Walter S. Halliwell also shot well, each scoring 22 dead birds, and Kearns had a straight score until the 17th bird, when he fell back and lost two more dead out of bounds. W. V. Rieger killed 21, George Oliver and A. A. Mulligan 20. A. L. Bennett 19 and J. A. Bolen 16. The score:

WHITFIELD.

## Whipple and Kinnan.

KANSAS CITY, July 29.—A. A. Whipple and E. W. Kinnan shot a 50 bird race at the Shooting Park this morning. The weather was cloudy but the birds proved to be an average lot of flyers. The race was an exciting one throughout. Kinnan got off in the lead in the first half, but Whipple took a bracer and finished strong, killing his last 21 birds straight. The score:

*Trap score type—Copyright, 1892, by Forest and Stream Publishing Co.*

| | 0102022221100110201111122—40 |

## Elliott and Bolen.

KANSAS CITY, July 30.—James A. R. Elliott successfully defended the *American Field* cup for the tenth consecutive time, at the Kansas City Shooting Park, his opponent being James A. Bolen, also of this city. Elliott was in grand form and lost only one bird out of the 50, a big white one that was hit behind, but strong enough to carry the load back to the pigeon house. Bolen commenced losing birds pretty early in the race and grassed but 40 out of the 50. He made some great kills however, during the match and was enthusiastically applauded a number of times. The weather was pleasant and there was a good crowd out. The birds were an exceptionally good lot for this season of the year, but one bird out of the hundred requiring flagging, A. H. Piett of Topeka, Kan., refereed the match, and James Whitfield was the official scorer.

A specially interesting feature of the match was the retrieving by James A. Bolen's handsome setter dog, Glad's Sport, by Pray's Gladstone out of Guess II. This was a very enjoyable part of the afternoon's sport, and made the match go much smoother and faster than it would have gone with boys gathering the birds, the shoot being over in fifty minutes after it was started.

Elliott used his 12-gauge Greener gun, 7lbs. 4oz., and shot 4drs. of American wood powder in each load with 1¼oz. of Tatham's chilled No. 6 shot in the right barrel and No. 7 in the left in Eley's shells.

Bolen shot a 12-gauge L. C. Smith weighing 7lbs. 14oz., and his loads were 3 3-16drs. of Schultze powder and 1 3-16oz. of Tatham's chilled No. 7 shot in each barrel in Eley cases. Two of Bolen's lost birds fell dead out of bounds. His best run was 18, in the middle of the race.

The cup now becomes Elliott's personal property, he having successfully defended it for two years. Elliott first won the cup from George C. Beck, of Indianapolis, Ind., Aug. 4, 1890. In that match he killed 47 out of 50, while Beck scored but 43. One of Elliott's last birds fell dead out of bounds, and two of Beck's got away after being hard hit. Elliott lost his first bird and then made a run of 39, and during the match killed 27 with the use of one barrel only.

Samuel Gay, Jr., of Glenhall, Ind., was the next candidate for the cup, and he shot a grand race against Elliott here on Aug. 25, 1890. The score at the close of the race was a tie, each having grassed 47 out of 50. Elliott's work was the best, however, the 3 lost by him falling dead out of bounds. In the shoot-off at 10 extra birds, Elliott made a straight score, while Gay lost two, making the grand total of the score at 60 birds 57 to 55 in favor of Elliott.

James E. Haggerty, of St. Louis, was the next victim, being defeated in this city on Oct. 27 by a score of 48 to 47. In that race Elliott made runs of 24 and 23 straight.

Wm. B. Crosby, of O'Fallon, Ill., then challenged the champion, and Elliott beat him in hollow style on Nov. 24, 1890, by a score of 48 to 39. Elliott killed 28 straight, and out of the two birds lost one fell dead out of bounds. Crosby was handicapped with a poor gun, shooting under and behind the birds he lost.

Elliott was then given a rest, his next race being a second attempt by James E. Haggerty, of St. Lois to beat him. Haggerty did not make as good a showing as in his former match, being beaten by a score of 48 to 45, Elliott finishing strong by killing his last 28 birds straight. This match took place Feb. 23, 1891.

Charles W. Budd, of Des Moines, Ia., a former holder of the trophy, was the next challenger, and he was beaten April 13, 1891, by a score of 49 to 46. Elliott killed 31 straight from the opening of the match, his lost bird being a hard right-quartering driver.

William B. Crosby then essayed to down the champion again in July of 1891, and the race was a grand one. Elliott killed 50 straight, while Crosby scored 48, and of the two birds one fell dead out of bounds.

A. W. Wiley, the champion of California, familiarly known as "Bruner," was the next seeker after Elliott's scalp, and he met with defeat on August 17, 1891, by a score of 47 to 45, all of Elliott's lost birds falling dead just outside the boundary flags.

The next aspirant for the championship honor was E. D. Fulford, the Pennsylvanian, who created such a sensation by defeating the famous Capt. Jack Brewer in a series of matches in the East. Fulford had beaten Brewer by phenomenal scores, but he was clearly outclassed when he met Elliott. He came here several days in advance of the date set for the shoot, April 30, and practiced faithfully on the Kansas City grounds, but he was beaten easily by a score of 46 to 43. Both started off like amateurs in that race, Elliott losing three out of the first five and Fulford four. From that out it was a good race, Elliott shooting in perfect form, and killing 37 straight on the tail end of the race. The score in detail:

## Dexter Park Trap Shooting League.

THE attendance at the third meeting of the Dexter Park Trap Shooting League, held at Dexter Park on Friday, July 29, was not quite as large as at the previous meetings. The hot weather and other attractions was the cause. The Wanreganis did not put in an appearance with their team, and the Crescents shot with six men only. Everything passed off very pleasantly, but the extreme heat affected the birds and shooters considerably. The Glenmores made the best scores with 92, their old rivals, the Parkways, being second with 88; the Emerald and Unknown coming next with 84 each, the Linden Grove slightly improving their position by scoring 80. The Unknowns still lead in the aggregate score by one bird, the Emeralds being second, Glenmores third and Parkways fourth. The scores:

## Worcester Shooters.

WORCESTER, Mass., July 28.—The nineteenth trophy shoot of the Worcester Sportsmen's Club was contested at Coal Mine Brook this afternoon. There was a good field of contestants and quite a number of spectators at the grounds. The scores were in the main very fair. In class A Crompton scored the largest number of points, but, as he had not challenged, the first place went to the next highest competitor. Henry and Davis tied with 14 each, and in the shoot-off Henry won, scoring 8 to his opponent's 6. In class B Larkin won without much effort. In class C Parker and R. C. Walls tied. Walls won in the shoot-off, scoring 7 to Parker's 6. The scores follow at 20 birds each:

| Class A. | | | |
|---|---|---|---|
| Crompton | 18 | Davis | 14 |
| Henry | 14 | Howe | 12 |
| Class B. | | | |
| Larkin | 16 | Fuller | 12 |
| A L Gilman | 14 | Harvey | 11 |
| C Forehand | 13 | Divoll | 11 |
| C Doane | 12 | A W Walls | 9 |
| | | Dr Gabeler | 9 |
| | | J M Harris | 9 |
| | | Webber | 8 |
| | | Crosby | 6 |
| Class C. | | | |
| R C Walls | 13 | Williams | 10 |
| W Parker | 13 | White | 10 |
| | | McClellan | 7 |

Only six more trophy shoots remain to be contested. The standing in the different classes up to date is as follows, the number of times each contestant has won the cup being given after his name: Class A, W. L. Davis 6, Howe 5, Henry 3, W. D. Gilman 1. Class B, A. L. Gilman 5, C. Doane 4, C. Forehand 3, Larkin 3, Webber 1, Walls 1, Kinney 1, Knowles 1. Class C, R. C. Walls 6, Parker 6, McClellan 4, Robinson 2, Day 1.

## New York German Gun Club.

THE members of the New York German Gun Club held an extra day's shoot at targets at Dexter Park, on Tuesday, July 26. Only six members were present, and the veteran shooter Sam Lyons joined with them in the fun. The competition was for a gold medal for target shooting, 20 birds each, 18yds. rise. P. Garms, Jr., won the medal with 15. Several team shoots followed at 5 birds each, the losing team to pay for the birds. The scores:

| | | | |
|---|---|---|---|
| Garms, Jr. | 11101111111111001001—15 | Dannefel-Frazer | 01001011011001111001—11 |
| Wilorook | 10001101111100011010—10 | Sauter | 00000000001100011101— 6 |
| Thomford | 01010000110100111100— 9 | Lyons | 10001111111111011111—16 |

Team shoots, losers to pay for birds:

| | | | |

## The Atlantic Rod and Gun Club.

THE regular monthly shoot for the Newton diamond badge was held at the West End grounds, Coney Island, by the Atlantic Rod and Gun Club on Thursday, July 28. Nineteen members competed, at 10 birds each, club handicap. D. Monsees and R. Dwyer tied with 10 each; the former won on the fourth round of the shoot-off. A long race took place for the second money, which was won by H. Balzer. The scores:

| | | | |
|---|---|---|---|
| C E Morris | 1021111111— 9 | W Boyd | 1202101101— 7 |
| D Monsees | 1121122121—10 | C A Sykes | 1112121102— 9 |

| W F Sykes | 1102121112— 9 | | |

## Shooting in California.

OAKLAND, Cal., July 24.—The main season trap shoot of the Monaco Club was held at the Oakland racetrack yesterday afternoon. Some exceptionally good shots were made by the contestants, the regular match ending in three ties, between Robinson, Slade and Haas, who killed 11 birds each and divided first money. The following was the score:

| | | | |
|---|---|---|---|
| Fay | 0221102122211—10 | "Randell" | 2110212221211—11 |
| Haas | 0122211211—11 | "Worth" | 1111210121111—10 |
| Robinson | 1210111210110 | Barney | 1210202212102— 9 |
| "Slade" | 2012111212—11 | | |

Still better shooting was done in the pool shoot, when the highest score made on the grounds for some seasons past was made. Slade and Robinson again tied with 12 birds each to their credit, which is the highest possible number. Below is the score:

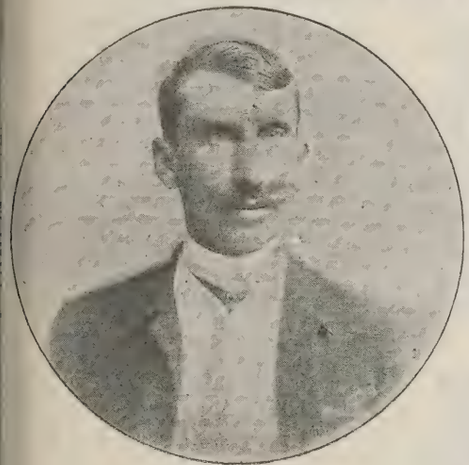
| | | | |
|---|---|---|---|
| Haas | 1211122201l—11 | Robinson | 1211111211l—12 |
| Fay | 0122212121l—12 | Randell | 1120120001l— 8 |
| Slade | 1112121212l—12 | Barney | 1220122101l—10 |

## Rome vs. Utica.

ROME, N. Y., July 26.—A delegation of the Oneida County Sportsmen's Association had a shoot at Rome yesterday. The scores were, Utica: Gates 22, Hicks 17, Mizner 18, Knowlton 23, Dexter 21, Kilbourne 24, Mayhew 24, Wheeler 19, R. H. Smith 15, Pfeiffer 16, Elliot 22, Cummings 18. Rome: Hauk 18, Wordwin 18, Rayland 18, A. H. Gahley 18, Scleicher 16, Betson 17, Bingham 22, Kingsley 15, Runnington 21, Fellon 20, Worden 13, Lamb 20; totals, Utica 234, Rome 219.

## Peekskill vs. White Plains.

WHITE PLAINS, N. Y., July 27.—A pigeon match for the championship of Westchester county was shot on the Westchester County Fair Grounds this afternoon between the Peekskill Gun Club and the White Plains Gun Club. The match was 100 live birds a side, 30yds. rise, Hartingham rules, for $100.



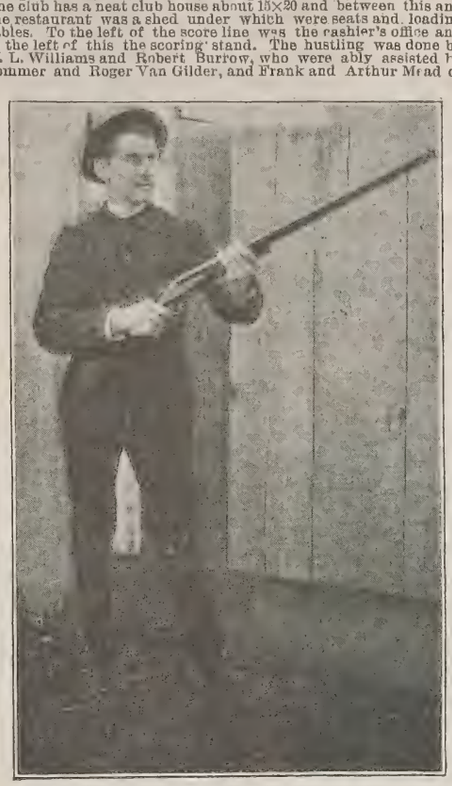
White Plains—Halpin 22, Ward 22, T. Ward 20, Wm. Ward 20.
Peekskill—Pierce 22, Gerrie 18, Halstead 21, Raymond 12.
Judges—L. C. Platt and C. Everingham. Referee—Wm. Wesley.

## In the East Tennessee Valley.

Those people who are imbued with the idea that the life of a newspaper man is one of unalloyed pleasure should have accompanied the writer on his trip from New York to the tournament of the Johnson City (Tenn.) Gun Club. Leaving the Metropolis on Tuesday, July 26, when the mercury was making frantic efforts to climb through the top of the tube, having to choose between the evils of sweltering with closed windows or smothering with them open was by no means a pleasant experience. On Tuesday night it was so intolerably close as to preclude any possibility of sleeping. Wednesday was hotter even than Tuesday, the thermometer in Washington marking 95 degrees. All along the line from Shenandoah Junction to Johnson City the dust rose in clouds, and owing to the numerous twisting and turning of the track it was impossible to find "a shady side" of a car for any length of time. On Wednesday evening there was a very heavy shower, lasting for an hour or more, but after this had passed away the heat was as intense as before. The route has been so often described that it is unnecessary to say more than that if there is any section of the country which offers more diversified attractions in the way of scenery than does the East Tennessee Valley the writer would like to see it.

Arriving at Johnson City the writer found at the Hotel Carnagie a goodly number of sportsmen all equipped and eager for the battle at the traps. There was William Tell Mitchell, the well-known live pigeon and target expert, field shot, dog breeder, trainer and handler and all around good fellow, who had traveled from Lynch Station, Va., just for fun; "Billy" Wagner, Washing on's most expert target breaker, who is shooting a champion's race this season, and worrying all the boys; Dr. S. W. Rhea, mayor of Tennessee, Bristol one of the best shots and most popular sportsmen in the State, and one who would "rather shoot than eat;" J. J King and Dr. W. H. Hicks, fellow-townsmen of Mayor Rhea, and both good shots; R E L. Gilman, the slim-built, auburn-haired youth from Greensboro, N. C., which town he says will give a cracking good shoot on Aug. 23 and 24; Arthur W. Du Bray, Parker Bros.' popular Southern salesman, who makes myriads of friends by his genial manner, bright conversation and habit of putting in a good word for every gun in the market regardless of make; J. W. Todd, J. S. Carson and G. A. Howell, all the way from Charlotte, N. C., which town Howell says is possessed of a club of "shooters" every one of whom puts in full time during a tournament; J. L. Fonda, of Cincinnati, O., who looks after the Western and Southern interests of the Clark Thread Co., of Newark, N. J.; S. P. Morris, another of Bristol's enthusiasts; and last but not least we come to the bright galaxy of expert enthusiasts from the Knoxville Gun Club, Roger H. and Sommer Van Gilder; Chas. B. Ross, the "youth with the auburn complexion," who carries a horseshoe for luck; Thomas J. Eldridge, F. Morris, Alderman John W. Connor, the Mead brothers, Arthur E. and Frank S., and A. F. Smith. They are the bright luminaries of the shooting world in their section, and while they are always willing to do a lion's share of the work in running a tournament they also do what is better still—shoot in every event from start to finish, and never utter a complaint if unfortunate enough to be shut out of a pot.

Johnson City is situated in one of the most fertile agricultural and rich mineral regions of the East Tennessee Valley, and is



SECRETARY J. A. HARTNER.
Baltimore Gun Club.

surrounded by remarkably fine scenery. The town proper has a typical Southern aspect with its rambling buildings, but on the outskirts some fine modern buildings of stone and brick. The Hotel Carnagie, which stands on a rise of ground about a mile from the city proper is a model building, costing about $90 000. Directly opposite this are the depots—passenger and freight—of the "Three Cs" road, these being built of brown stone. This road when completed is expected to prove a boon to the city, opening up an entirely new country. The population of the city is 5,000, but it is steadily growing, the trend being toward the section where the above hotel and depots are located. During 1890 there were 63 buildings erected, and since that time there have been 400 dwellings put up. Its altitude is 1 650ft. above sea level, the average temperature being about 56 in the spring, 74 in summer; 57 in fall and 39 in winter, an annual mean of about 56.50. The Roan Mountain, 6,394ft. in height, is 23 miles east of the city and on the summit of this is the Cloudland Hotel, the highest human habitation east of the Rocky Mountains. North of the Hotel Carnagie is an immense steel plant, which while representing an outlay of $150,000, has stood idle for a year awaiting the completion of the "Three Cs" road. With its natural facilities aided by Northern capital the town has a great future in store. One of its premier attractions will be a public park comprising 60,000 acres, contributed by individuals and corporations.

The shooting grounds of the Johnson City Gun Club are situated about a mile from the Hotel Carnagie, and are reached by a finely equipped electric road run by a Thomson-Houston plant. Cars run every twenty minutes to and from the grounds. About a quarter of a mile beyond the shooting grounds is a fine little sheet of water known as Lake Watausee, which is surrounded by a heavy woodland, affording a cool retreat. On Tuesday and Friday evenings of each week the Johnson City Brass Band gives concerts in the pavilion at this lake. The shooters all went out to enjoy the music on last Friday evening.

When the shoot opened on Thursday morning there were about twenty-five shooters present for the initial event. The local men were conspicuous by their absence, Messrs. H. L. Williams and R. Burrow being the only club members to shoot through the programme. The weather was intensely hot, there being scarcely a breath of air until near evening. The shooting was at bluerock targets, thrown from expert traps by North's electric pull, and from start to finish these worked well. It was expected that the attraction of $500 added money, with additional valuable prizes of merchandise, would draw at least half a hundred shooters, but about one-third of this number failed to materialize. For one thing I can vouch, and that is, that just so long as clubs, no matter where situated, state in their programmes that the obnoxious "expert" rule will be enforced, just so long will the "spenders" remain at home, saving money by so doing. I was informed by members of the home club that had the Northern shooters appeared they would have been shown the same consideration previously accorded them at Knoxville; but after the shoot was opened was rather a late hour to make any such announcement, particularly when the shooting world had been told that the programme would be carried out as printed. The club that imposes the "expert" rule on a shooter commits an injustice to the shooter and injures its own prospects as well.

On the opening day the targets were not thrown in accordance with the rules, some not reaching over 5ft. from the ground at any point in their flight. This, coupled with the fact that just in the line of fire is a dense woodland, the ground sloping upward to this from the traps, made the shooting rather difficult, so that the average were not up to the usual standard. The first event was shot from known traps and known angles, the sliding scale being used in succeeding events. One set of five traps were used, and these were kept in steady use all day. The shooters were served with an abundant lunch at the restaurant on the grounds. To the right of the line of traps was a grand stand which afforded them shade between events, an entrance fee of ten cents was charged to this, shooters and all being obliged to "see the captain." The club has a neat club house about 15×20 and between this and the restaurant was a shed under which were seats and loading tables. To the left of the score line was the cashier's office and to the left of this the scoring stand. The hustling was done by H. L. Williams and Robert Burrow, who were ably assisted by Sommer and Roger Van Gilder, and Frank and Arthur Mead of

PRESIDENT E. C. HALL.
Baltimore Gun Club.

the Knoxville contingent. All of these Knoxville people are master-hands at working the "hustle-act," and they made their work tell from the moment they took hold. Had it not been for their assistance the programme would not have been completed before dark.

The shooting, as I have said, was extremely difficult on account of the dark foreground, and none of the men were able to pull our good averages, Wagner being high with 89.41, breaking 152 out of the 170 targets shot at. The next high man was Mayor Rhea, who broke 144; Sommer Van Gilder getting 143 and W. T. Mitchell 141. All of these men are good for 90 per cent. or better under reasonable conditions, but here they did not seem able to do their usual good work. The table of averages given will show that the poor showing was not on account of any "fluking" by an individual, but that it obtained with all hands.

The asterisk (*) preceding a score denotes that the score was made shooting from known trap, at unknown angles.

The club added $155 to the purses on this day. The events were as follows: No. 1. 15 singles, $2 entry; No. 2, 15 singles, $2 entry,

CAPTAIN J. A. WILLIAR
Baltimore Gun Club.

$20 added; Nos. 3, 5 and 9 same as No. 2: No. 6, 25 singles, $3 entry, $35 added; Nos. 4 and 8, 20 singles each, $3 entry, $20 added:

*The Second Day*

opened much cooler than Thursday, although it was still warm enough to answer all practical purposes. There was just breeze

DR. S. J. FORT ("PICUS").
Baltimore Gun Club.

enough to make the targets take slightly erratic flights and to temper the edges of the sun's rays. The work began promptly at 9 o'clock, the attendance being about the same as on the opening day. About 10:30 there came up a shower and at noon there was another, the weather being delightful after this. On the previous evening it had been stated that the club members were complaining of the short attendance and that they were inclined to cut down the shoot to two days, as otherwise they would be sure losers. This brought forth expressions of indignation from every one of the men, many of whom had traveled long distances in order to take part in the sport, the main attraction being the announcement that $500 would be added to the purses "by the Johnson City Gun Club." This announcement should in honor have bound the club to run a three-days' shoot according to the programme no matter if only half a dozen men entered the events. It was finally decided that the programme should be continued for the full three days, but the members also decided to cut down the added money just one-half on the second day. Instead of $155, guaranteed on honor, only $77.50 was added to the purses. It was naturally supposed that the club was sure of $500 when it guaranteed to "add" that amount, but it transpired that the club had been unable to secure that amount and consequently it adopted the suicidal course of violating its promise, a procedure which will tend to keep shooters away from future events run under its management. With fifteen members on its roll there was no good reason for the breaking of a promise of this kind, as a pro rata assessment on its members would have been merely a nominal sum. The cut-down was made, however, despite the well-founded protests of those who had the interests of the club at heart. On Friday evening the club members held a conference and came to their senses, announcing that on Saturday the programme would be carried through as published. This was a most sensible conclusion and it is to be regretted that they did not look far enough ahead to keep their promise on the second day.

The shooting on the opening day was extremely difficult. The targets, however, were thrown in conformity with the rules as to height and distance. As on the previous day no one reached 90 per cent., Wagner again leading the van with 88 82, breaking 151 out of 170 targets. Harry Williams was his nearest opponent with 144 breaks, Todd scoring 143. The events and amounts added were as follows: Nos. 1, 7 and 10, 15 singles, $2 entry; Nos. 2, 3, 5 and 9, 15 singles, $2 entry, $10 added; Nos. 4 and 8, 20 singles, $10 added; No. 6, 25 singles, $17.50 added. Below is a table of scores and averages:

*The Third Day*

was cool and clear until 10:30, when a heavy shower set in, lasting for a half hour. Then there was a clear spell for an hour, another downpour and a very warm spell until a few minutes before 4 o'clock, when down came the rain again and drove all hands to shelter. A number of shooters had got away early in the morning and at noon a few more departed. The regular programme was shot out as printed, a dozen men shooting in all the events. Roger Van Gilder braced up and won first average on 88 23, A. W. DuBray making 84.11, Sommer Van Gilder 83.53, A. F. Smith 82.94, E. L. Gilmer 80.50, and W. T. Mitchell 80 per cent. The events were as follows: Nos. 1, 7 and 10, 15 singles, $2 entry; Nos. 2, 5, 8 and 9, 15 singles, $2 entry, $20 added; Nos. 4 and 8, 20 singles, $3 entry, $20 added; No. 6, 25 singles, $3 entry, $20 added. The results are here shown in tabulated form:

A Parker hammerless gun was presented to the management to be disposed of as they saw proper. This was drawn for and won by E. A. Mead, of Knoxville, Tenn. C. H. Townsend.

## Boston's Trap Shooters.

Wellington, Mass., July 30.—The closing contest in the merchandise match took place to-day at the grounds of the Boston Shooting Association. The prizes were articles of silverware and the conditions of the match were the best six scores out of 10 to count, at 15 singles and 5 pairs. Stanton won the first prize in class A with a score of 141 out of a possible 150.

## Fond du Lac Gun Club.

Fond du Lac, Wis., July 23.—The regular shoot of the Fond du Lac Gun Club took place to-day, each member shooting at 25 targets. The scores were: W. F. Keating 22, A. R. Keating 21, F. Hurlburt 19, F. McLain 17, Wm. Anderson 16, B. Amory 15, L. Trelivan 13, L. Erhart 11.

## Big Tournament at Battle Creek.

Battle Creek, Mich., July 14.—The first tournament of the Michigan State Trap-Shooters was held in this city July 12 and 13. The Parker handicap and Michigan League's classification which was adopted at Lansing, was used throughout the shoot and worked to the entire satisfaction of all contestants. The attendance was not as large as anticipated, but withal the shoot was an exceedingly pleasant one and enjoyed by all participants. * This is the first tournament held by the Battle Creek Gun Club in which professionals were not absolutely barred, and all enjoyed having the experts in line under a handicap which placed them on an equal footing with less skillful but equally ambitious shooters.

The targets used were the reliable bluerocks, thrown from pitted traps, with the Paul North pull and John Parker, of Detroit, to see that the targets were sent off in style.

The weather on both days was all that could be asked, being cool and clear. Following are the scores:

*First Day.*

Event No. 1, 10 singles (all shooting under amateur rules): Parker 10, Halladay 8, Nichols 6, Woodworth 5, Schilling 9, Holt 9, Howes 8, Hopkins 10, Carpenter 7, Osgood 7, Melchoir 5, White 5, Hubbard 5, Crowell 9.

No. 2, 10 singles: Experts—Parker 9, Hopkins 9. Semi-Experts—Crowell 8, Schilling 10, Holt 9. Amateurs—Nichols 9, Haliday 9, Osgood 8, Melchoir 3, Woodworth 6, Hubbard 5, Carpenter 10, Howes 7.

No. 3. 10 singles: Experts—Schilling 9, Carpenter 7. Semi-Experts—Parker 8, Hopkins 9, Holt 7, Nichols 7, Halladay 9. Amateurs—Osgood 8, Crowell 10, Weickgenant 6, Woodworth 6, Howes 6, Hubbard 8.

No. 4, 10 singles: Experts—Crowell 8. Semi-Experts—Hopkins 10, Halladay 8, Schilling 10. Amateurs—Nichols 8, Woodworth 7, Parker 10, Weickgenant 7, Hubbard 4, Howes 9, Holt 8, Carpenter 9, Osgood 9.

No. 5, 20 singles: Experts—Hopkins 12, Parker 19, Schilling 13. Semi-Experts—Carpenter 14, Osgood 11. Amateurs—Woodworth 10, Halladay 18, Crowell 19, Nichols 19, Weickgenant 12, Holt 16, Howes 15, Hubbard 12, Andrus 12.

No. 6, 20 singles: Experts—Andrus 15. Semi-experts—Nichols 18, Parker 20, Crowell 18. Amateurs—Hallady 15, Hopkins 19, Carpenter 14, Howes 17, Holt 14, Schilling 19, Woodworth 5, Melchoir 5.

No. 7, 20 singles: Experts—Parker 20. Semi-experts—Hopkins 19, Schilling 17. Amateurs—Nichols 15, Carpenter 15, Halladay 19, Crowell 18, Stacy 13, Holt 15, Osgood 17, Searles 17, Andrus 18, Howes 14.

No 8, 20 singles: Expert—Parker 18. Semi-expert—Halladay 17, Hopkins 18. Amateurs—Nichols 16, Searles 15, Waruf 19, Osgood 16, Crowell 20, Weickgenant 10, Schilling 18, Andrus 18, Carpenter 18, Holt 17.

No. 9, 15 singles: Experts—Crowell 13. Semi-experts—Parker 11, Waruf 14. Amateurs—Searles 8, Stacy 10, Howes 9, Halladay 12, Schilling 13, Nichols 14, Carpenter 10, Osgood 8, Hopkins 12, Andrus 14, Weickgenant 9, Holt 11.

No. 10, 15 singles: Experts—Waruf 9, Nichols 11, Andrus 13. Semi-experts—Crowell 15, Schilling 13. Amateurs—Wood 12, Barringer 10, Searles 14, Parker 15, Woodworth 8, Halladay 13, Carpenter 13, Hewes 10, Hubbard 10, Hopkins 14, Stacy 10, Holt 12.

No. 11, 15 singles: Experts—Parker 11, Crowell 11. Semi-experts—Searles 14, Hopkins 14. Amateurs—Nichols 15, Waruf 13, Melchoir 7, Woodworth 7, Halladay 13, Holt 12, Schilling 13, Carpenter 13, Stacy 11, Andrus 14, Howes 11, Metcalf 12.

No. 12. 15 singles: Experts—Nichols 12. Semi-experts—Searles 14, Andrus 14, Hopkins 12. Amateurs—Carpenter 13, Hubbard 9, Parker 15, Crowell 15, Melchoir 7, Waruf 12, Metcalf 12, Holt 7, Halladay 13, Schilling 10, Howes 14, Stacy 8, Wharton 13, Gauthier 10.

In the evening a meeting of the Michigan League was called at the Williams House parlors and shooters classified for entrance in the medal race of the following day, the classification to stand until changed by the League. After a thorough discussion on each name, members were assigned to their respective classes and all appeared satisfied.

A letter to the League from Mr. E. E. Thresher, of Kalamazoo, whose gun exploded recently while trap-shooting, mutilating his left hand in a frightful manner, was read and resolutions of sympathy were adopted and wired to him at his home in Kalamazoo. In the letter referred to Mr. Thresher said: "Although suffering from a painful wound, the cause of which is enough to make almost any man afraid of a gun, I still expect the time to come when I shall be able to trot in the hottest company of the expert ranks." It is needless to add that all the Michigan shooters will be only too pleased to see him face the traps again.

A number of applications for membership in the League were presented and the applicants admitted to membership. The meeting then adjourned and your correspondent was unable to get the exact scores made for the balance of the evening, but from reports the next morning all seemed to have enjoyed themselves unless it was Sid Crowell, who, so John Parker says, was troubled with frigid extremities and had to retire early.

*Second Day.*

No. 1, 10 singles: All shooting under amateur rules—Bush 9, Parker 10, Gauthier 5, Searles 9, Waruf 10, Wright 10, Cooley 6, Crowell 9, Hopkins 9, Wharton 10, Schilling 7, Howes 7, Woodworth 6, Nichols 8, Holt 8.

No. 2: Experts—Wright 8, Waruf 9, Parker 8, Wharton 8. Semi-experts—Andrus 8, Carpenter 7, Crowell 10, Hopkins 9. Amateurs—Rennick 9, Nichols 9, Gauthier 7, Bush 8, Cooley 9, Searles 7, Halladay 7, Woodworth 5, Johnson 7, Howes 10, Schilling 10, Holt 9.

No. 3, 10 singles: Experts—Crowell 8, Howes 3, Shilling 8. Semi-experts—Rennick 5, Waruf 10, Nichols 9. Amateurs—Cooley 5, Holt 6, Woodworth 7, Bush 8, Gauthier 5, Searles 7, Parker 10, Wharton 7, Wright 8, Halladay 10, Carpenter 8, Stacey 6, Andrus 8.

No. 4, medal race emblematic of individual State championship, 25 single targets, each man:

No. 12, 15 singles: Experts—Crowell 11, Waruf 12, Halladay 11, Parker 13. Semi-Experts—Carpenter 9. Amateurs—Wright 14, Cooley 15, Schilling 14, Holt 15.

Henry Waruf, of Kalamazoo, and S. A. Crowell, of Hastings, tied for best average. J. R. Parket, of Detroit, won second best average.

The next meeting of the League will be held at Grand Rapids, July 26 and 27, and following this the League will meet at Kalamazoo on Aug. 10 and 11. Sam A. Howes, Sec.

## Shooting at 110 in the Shade.

Watertown, N. J., July 27.—On account of an unfortunate chain of circumstances, intense heat, railroad accidents, etc., it was deemed advisable to postpone the Interstate shoot which was to have been held at Watertown, July 26, 27 and 28, so in order to entertain the shooters who had come to participate in this shoot, sweepstake shooting was indulged in for two days which kept the boys in good spirits and gave them all the shooting they cared for. The thermometer climbed out of sight at 110 in the shade.

Among those in attendance we noticed "Uncle Dan" Lefever with his new ejector, which of course works to perfection; Geo. Mosher at the Hunters Arms Co., also with the ejector Smith gun; M. F. Lindsley, christened "Wood Pulp," in his usual pleasant mode, with a jolly word for everyone; Geo. Luther, and last but not least, H. A. Penrose, who in a shoot is invaluable and always hustling in the right spot, and the new Keystone targets under his management were thrown through the two days with a breakage of only two in delivery. The officers of the club, Messrs. Paddock, O'Connor, Tallett and Ayres, were in attendance, doing all in their power to give the visitors a good time.

The grounds are very pleasantly situated about a mile from the heart of the city and are easy of access, being reached by omnibuses once every half hour.

The scores as will be seen, were very good considering the extreme heat:

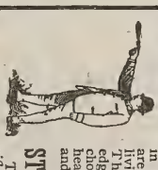
**J. F. MARSTERS, 51, 53 & 55 Court St., Brooklyn, N. Y.**

## SOMETHING FOR NOTHING



Beware of those who offer you a dollar for ninety cents; you are sure to get the worst of it in the long run.

Our rule is to trade even. We have no goods to sell at cost, or below; no goods on which we do not make a fair profit; no cut prices, few bargains; no second-hand or shop-worn articles. Can we secure any of your business on the good, old-fashioned, value-received plan. Our goods and ways are dependable. Your money is never beyond recall. Will you look into it? If our prices are low enough, we ought to have some of your trade.

**Montgomery Ward & Co., 111 to 116 Michigan Ave., Chicago**

## STEVENS Rifles and Pistols.

*Rifles for Ladies, Boys and Men*

**STEVENS PISTOLS,** in several models, are used by the best living pistol shots. Their acknowledged superiority makes them the chosen arms of the experts. Light and heavy, plain or elaborately finished and in various calibres.

**STEVENS POCKET RIFLES.** The most compact rifles made. Will shoot with the greatest accuracy at various distances. These arms are carried by Anglers, Bicyclists, Hunters and Tourists.

Send for a catalogue and special circular describing the latest triumphs in modern firearms.

Address

331-333 BOWERY, BET. 2d & 3d STREETS.

NEW YORK, July, 1892.

Our "**ONDINA**" all Havana tobacco **NEW YORK made** cigar, our world-renowned "**MEPHISTO**" and all other finer grades of cigars made by us are superior in many ways to those made in the tropics. In addition to all the tobacco markets of the earth to which we have access, New York City always commands the best of every material as well as labor. **OUR** New York factory is a perfectly ventilated, clean abode. No sort of uncleanliness is permitted, and our cigars, therefore, are not liable to contain matters other than tobacco, and smokers may confidently and safely use our cigars, not needing a mouth-piece or a cigar holder to prevent unpleasant consequences. **To protect consumers from imposition, every "MEPHISTO" cigar is banded.**

D. HIRSCH & COMPANY.

## The New Nitro Powder Loader.

It has met with such a success that we advise sportsmen who load their own shells with these powders to send for one without delay. It gives a uniform and steady pressure in loading high grade paper shells with Nitro Powders, and is the only rammer from which the most satisfactory results can be obtained. The wads are all seated properly, and it is so constructed that a pressure equal to 19lbs. is required for every shell loaded. Send 60 cents for sample. Our catalogue mailed to any address on receipt of 6 cents in stamps.

For sale by all dealers.

**THE BRIDGPORT GUN IMPLEMENT CO.,**
**313½ Broadway,**
NEW YORK.

## The Best Paper Shell on the Market.

## Fishing "Up Salt River."

ASSURED of good fishing up Salt River, a defeated political candidate, who is so blest as to have a taste for angling, may find in such piscatorial possibilities some mitigation of the sorrows of exile to that saline stream.

Both Benjamin Harrison and Grover Cleveland are fishermen; before each looms up the alternative of going to the White House or departing hence "up Salt River;" and each of them may be presumed to be interested in the fishing outlook there.

With its customary enterprise the FOREST AND STREAM has undertaken to secure reliable information on this point. A special and well qualified correspondent has been detailed to investigate and report on Salt River's fishing resources. The result of his investigations will be printed next week, and we need not assure Mr. Harrison and Mr. Cleveland that they will find in their FOREST AND STREAM of Aug. 18 even more of interest than in the ordinary issues; and to all political candidates of lesser note, who may not be among our regular readers, we submit the wisdom of placing an order with their dealers for that number.

### *PAN-ANGLICAN SPORT.*

THE proposition has been made and favorably received for a periodical meeting for contests in athletic sports in a grand pan-Britannic and all-English-speaking gathering. The idea of the scheme is to bring together in a national festival, probably every four years, all the sport-loving English-speaking people. Suggestions are now in order for a programme of sports; and tentatively running, rowing and cricket have been placed on the list. The Canadians urge lacrosse and the Americans will probably be heard from with a hint that baseball is worthy of a place on the roll of sports. When each and every English colony and offshoot have been heard from, and their special sport offering accepted, there will be a reasonable prospect that each will go off a victor in at least one number on the programme. This plan would simply string together a number of foregone conclusions. The mother country ought to put the champion cricket eleven in the field. Canada ought to carry off the honors at lacrosse and the United States may be depended upon to capture the baseball record. Rowing is in large measure a restricted sport, and there are large sections of the country, particularly in the United States, where facilities for rowing are wanting. It is even in some respects more restricted by locale than even yachting.

Field athletics fill the bill admirably for the young, but there is the older sportsman, what of him? Anglo-Saxon blood, whether in British or American veins, never ceases to carry to every finger tip a love of sport. Strapped to the saddle, the one-legged Englishman will follow the hounds, and with only one arm, or supported by a crutch, he may be seen taking a pop at the live birds as they leave the trap. The gun is distinctly the mark of the English-speaking sportsmen. In rifle shooting and in shotgun work the blue Saxon eye is far and beyond all others the eye of the true marksman, and wherever an English-speaker is located he has his firearm by his side; he is ever ready to listen to its pleasant bang and note the perfect target score or game dropped in its track.

To have a pan Anglican sport gathering and omit powder burning from the list of contests, would be a grave error. With it on the bill in any or all of its forms, the veterans would come forward to rank with or outrank the youngsters. Instead of the young men only displaying their ability and prowess, a place would be found for the more mature sport-lovers, and this means the active interest and co-operation in the scheme of a very influential majority of the sport-pursuing people of both hemispheres.

### *A BISLEY WHINE.*

WITH the close of the Bisley meeting comes a curious sort of whine anent the revolver work. As readers of our revolver reports are aware, Mr. Walter Winans by his remarkable skill with the revolver has had things pretty much his own way in all the revolver competitions. There is no question about the fairness with which he holds his place, but his skill and prominence made him the mark for the following sling in a paragraph of the *Evening News and Post*, of London, on July 25:

> It can scarcely be maintained that the object of keeping up revolver competitions at the annual meeting of the National Rifle Association is to provide a little pocket money for an American millionaire who enjoys exceptional facilities for acquiring skill with the pistol, and retaining it by constant practice. There are seven revolver competitions at Bisley reported in Saturday's results; Mr. W. Winans won two, tied with the winner in a third, and was second in the remaining four; he drew a total of £26 10s. in prizes. Mr. C. E. Haig won two of the events, tied with Mr. Winans in a third, and was second in a fourth, drawing £17 in prizes. These two gentlemen, in fact, collared all the prize money given for the seven revolver events, except £12, which was divided among three other competitors. If the object of the competition is to encourage ordinary Volunteers to improve their skill with the pistol, it is obvious that the money is being wasted.

Is this British pluck and fair play? If the Volunteers do not like the fact that an American revolver in the hands of an American leads the field, they have the very simple resort of so improving their own skill as to force Mr. Winans back on the prize list. There surely is not going to be a repetition of the small-bore record, where Americans jumped, made the weapons, cultivated the teams and set the record in long-range work at a point where all the years of practice by British teams have not been able to land them. If Mr. Winans is to be barred off the English revolver butts because he shoots too well, let that fact be plainly stated, and let the English shots, civilian and military, squarely confess their incompetency as revolver shots. Don't whine; "either shoot or shut up."

### *THE TILEFISH REDISCOVERED.*

IN 1879, about 75 miles south of Newport, R. I., this large and beautiful new fish was taken for the first time in American waters, and was described by members of the U. S. Fish Commission. Until 1882 it continued plentiful, and had become famous for its readiness to take the hook and its excellent food qualities. Then it disappeared and was thought by many to have been swept out of existence by a sudden and fatal change of water temperature in its habitat, but now, after a lapse of ten years, Commissioner McDonald has succeeded in finding it on the old grounds during an investigation with the tilefish as its special object in the schooner Grampus. It is hoped now that definite information of the habits and migrations of this handsome species will result in great benefit to the public.

### *SNAP SHOTS.*

THE offer by the World's Fair Commission of a prize for the best collection of native birds has considerably stirred up some of the newspapers. The fear is expressed that this offer will greatly stimulate the destruction of our birds by inducing boys everywhere to kill them in the hope of securing the prize. This alarm is probably groundless. No one but a very young child would imagine that in the few months between now and May 1, 1893, a collection of North American birds could be made which would successfully compete for the prize. It will be awarded without doubt to some museum collection or to some professional collector, and the collection which wins it will be the fruit of years of work and thousands of dollars of expense.

The public holiday proclaimed by President Harrison for Oct. 21 next will commemorate the completion of 400 years since Columbus discovered America; also of 2 years, 3 months and 16 days since Game Protector Kidd discovered the serving of illicit July woodcock by the Delmonico establishment of New York city; also of periods of various durations from the several occasions on which District Attorney Nicoll discovered new excuses for not bringing the Fifth avenue law-breaker to trial.

It is a common defect in amateur photographs that if a human being is included the face is turned toward the camera, at which the eyes stare. Thus in a photograph of three persons fishing, with rods extended over the water, all three are staring hard at the camera as if if sitting for a full-face picture. The artistic qualities of scores of pictures have been spoiled in this way. A lake view with a man or woman, back to camera, looking out over the water, is decidedly better than the same scene with the man or woman full face to the camera.

A correspondent writes: "I am more and more impressed with the excellence of the amateur photographs you are reproducing in the FOREST AND STREAM series." Much interest is taken in the collection; and we appreciate the co-operation of those who have already contributed to make the competition a success. Several correspondents have requested copies of the printed slip giving details and conditions, to hand to their photography friends who are not readers of this journal. We shall be happy to supply these slips to any one who will make such use of them. The contest is open to all.

As a dealer in game, Col. Bond, of Chicago, must be conversant with the vagaries of nomenclature applied to game birds, and he might here find abundant ammunition for putting to rout Game Warden Bortree in the great question, is a snipe a water fowl? Let the Colonel remind the Warden that snipe means woodcock; that the woodcock may be a timber-doodle or a hookum-pate, but it is also a mountain partridge; a partridge is a pheasant; and a pheasant may be a quail or a ruffed grouse, but as neither of these can it by any possibility be classed with water fowl—so there you are.

If this shall not convince Mr. Bortree, let the Warden utterly confound the Colonel by accepting the proposition that snipe means woodcock, but showing that woodcock means woodpecker; and the sportsman who sets out in pursuit of the native's woodcock, which thus proves to be a woodpecker tapping grubs out of a treetop, surely goes on a "wild goose chase"; and, gentlemen of the jury, if a wild goose is not a water fowl, what is it?

Send us a postal card of fishing news or experience or incident. Our angling columns are always open, and their interest depends upon the number and diversity of communications which appear there. No other journal in this country begins to give the amount and variety of fishing literature here printed from week to week. It is the ambition of those in conduct of the FOREST AND STREAM to increase its value and interest for the American angler.

Individuals who have bear cubs, or farms suitable for preserves, or setter dogs, or sets of antlers, or houses to rent, or guns to sell or exchange, are advised that neither the editors nor publishers of this journal do a general commission business; nor do they "happen to know of some friend who might want to invest;" nor can they undertake to find customers. Our advertising columns are always open, and advertising in them always pays.

Secretary Ball, of the Syracuse Rifle Club, tells us that no one has come forward on the part of the breechloaders to enter the proposed contest of muzzleloaders against breechloaders. Probably a contest will not take place, since the result either way would be without practical advantage to the winner.

# The Sportsman Tourist.

## CAMPS OF THE KINGFISHERS.—IX.

### CARP LAKE, MICHIGAN.

#### The Carp Lake Camp.

In the morning Sam and I got ready for a trip to McConnel's Lake for trout. It was a stream about three miles below the camp on the opposite side of the lake, comparatively easy to fish, and was usually fairly stocked with average-sized trout with an occasional good one or two to keep the "expectancy" up to the proper pitch. We had taken a good string out of it the years before in two or three hours' fishing and it was worth the pull down and back if we could do it over again, and besides there was always a bass or two to be picked up in Horton's Bay into which it flowed through a cedar swamp, a feature of nearly all the little streams feeding Carp Lake, only two or three of them being visible from a passing boat. When near the mouth of the stream we left the boat—one of the wooden ones, as old Sam could not be coaxed into the ironclad again—at the old log yard near where Ben Renshaw and I cut the poles for the dining fly in 1884, and followed a path out to the road which led us to the stream a short distance above where it was spanned by a rude log bridge. Here the little stream, at no place wider than an active youngster could jump across, made four or five sharp elbows in as many rods, at each one of which the water had scooped out a deep place. We tied on a barnyard hackle and Sam dropped his in at an elbow right against the steep bank above the bridge, and before I had time to note how it was done he swung an 8in. trout out on the grass with, "Jeems Mackerel, get on to that feller will ye?"

A rod above where he was fishing was the lower end of another pool, fringed on the side I was on with a growth of low bushes that hid the water from view along the foot-high bank over which they hung.

I reached the point of the rod over these and dropped the baited hook in the water close up to the bank, when the tip was suddenly jerked down and the next instant a bewildered trout nearly as large as Sam's was swung quietly out over the bushes with many twists and contortions and landed on the grass near where the other one was flopping and turning flip-flaps in his efforts to find the water again. Sam got another a minute after which appeared to exhaust his pool, for with the most careful fishing he got no more out of it. Meantime I had poked the rod over the bushes again and lifted out another a little larger than my first one, and the performance was repeated till I had taken out eight, each one a trifle larger than the one preceding, the last one an 11in. fellow most gorgeously colored. Then I took time to put them on a stringer and tie them in the water at the pool where Sam had left, and just then I was feeling mighty well satisfied with myself and the world at large.

Sam had crossed the bridge and was fishing from the top of a bank 8 or 9ft. high below it, when after a few minutes he shouted over, "Jeems, did you ever see the like o' that?" and looking over, there was a big trout dangling in mid-air half the height of the bank, the line tangled and caught in an overhanging bush and Sam helpless to release it without taking a tumble into the pool below him.

The trout kept curling up and twisting and doubling himself into all manner of shapes till at last the hook tore out and he dropped into the water, leaving Sam peering over the bank at the place where he disappeared, with his chin hanging down to about the point it did after the third days' fishing at Green Lake.

After a long and earnest look into the water he straightened up with "Well, ef that wasn't the beatinest flyin' trapeze performance I ever see in my born days," and giving the line a jerk, broke it short off at the bush and then made his way around across the bridge where he sat down on a log and tied on another hook with as much unconcern as though he had not just passed through a very temper-trying "episode."

The trout in my pool had quit biting at No. 8, and while Sam was tying on his hook I stepped cautiously up to the bank and looked over the low bushes to see what sort of looking water I had been taking them out of. It was not over a foot deep, but a yard or so further up it was much deeper and I dropped the hook up stream as far as I could for an overhanging bush that reached nearly across to the further bank.

As the bait touched the water a trout that looked fully 18in. long flashed from under the bank and dashed at the squirming worm, but he must have seen me as I leaned over the bushes, for when he got within a few inches of the hook he doubled back so suddenly that I fancied he must have sprained his backbone, and was out of sight under the bank before I could catch my breath.

"Great Scott, Sam, there's a trout as long as your leg," but Sam only laughed and said, "Got 'em agin, Jeems, another one o' yer fish lies," and baiting his newly tied on hook he crossed the road to another kink in the stream below and disappeared silently in the tangle along the bank and I saw no more of him for an hour or more when we met at the boat.

I made three or four more nervous casts, with my heart badly out of time, but the big trout would not come out again from his retreat under the bank.

I went to the stringer, killed one of the brightest-colored trout and cut off the anal fin and one of the ventral fins, the latter of which I put on the hook first; the anal was then put on in such a shape that it forced the ventral fin up the shank of the hook, which would make the bait whirl in the water like a trolling spoon when drawn along or acted on by the current. Then I slipped carefully around the bushes up to the abrupt bend in the stream where I could see the whole length of the pool, which was fifteen or twenty feet long. The water running squarely against the bank had scooped out a hole under it that looked to be three feet deep, but I couldn't tell how far back under the shell of earth that was upheld by a mass of roots belonging to the bushes along and overhanging the water.

I pulled six or eight feet of line from the reel and dropped the double-geared fin in the water at the foot of a little sandbar, and let the current suck it out of sight under the bank and then gave it a pull to make it spin. Instantly the point of the rod was yanked down, and for a moment there was a fierce tussle and I thought I had him sure; but, alas! the hook tore out and before it came in sight from under the bank it caught or doubled around an unseen root, and my heart slumped down into my left shoe, so to speak, and I felt that the game was over for that day at least.

I tried for ten minutes all the ways I could think of except diving under the bank to loosen that cussed hook, but it obstinately held its grip on the root, and at last, giving a strong pull, the line broke and a yard or more of it went with the current out of sight under the bank, and I stood there staring vacantly in the water, fairly beaten and unable to do the case justice from a profane standpoint; so I said not a word, as old Sam was not there to "approve the perceedin's."

It was no use to bother with that trout any more that day, and I tied on another hook and took my way up the stream to some other holes that I knew of, hoping to forget my disappointment in a fight or two with smaller fry.

This episode was worse than being hustled out of the field by the "ole black bull."

I fished along up the creek for two or three hundred yards, caught four or five more trout big enough to keep and string on a forked twig, got discouraged and flayed by mosquitoes and went back.

When I got to the big trout pool I looked into it and passed around the clump of bushes without dropping in the bait—it would not have been "trout sense" to do it—but I formulated some design for another day.

There is more satisfaction to the angler in being outgeneraled and beaten by the big trout of the pool than there is in fooling all the others of his lesser mates, for he knows he is still there and it puts him on his mettle to devise more cunning ways and means to circumvent him.

I took the string of trout I had tied in the water and left the stream with a determination to return, after giving the big fellow a rest of a day or two to doctor up his jaw and get over his scare, and slip up on him from the upper end of the pool and let the current suck under the bank to him a morsel that would make his mouth water to look at—something that he had not tasted nor seen since he left the lake to hunt up a summer loafing place some weeks before.

When I got back to the boat old Sam was still somewhere on the stream, but a few lusty yells brought a response from him, and after awhile he came poking out of the "bresh" with a respectable string of fair-sized trout, which, with what I had, made us feel easy about a good trout supper, and may be enough left for a taste for breakfast.

We pulled slowly along back to camp, trying the bass occasionally at likely looking places without much success, however, as the lake was too rough to pay much attention to fishing, and when supper was ready in the evening the 11in. trout somehow found his way, crisp and brown, to the Colonel's plate at the head of the table, and the expression of "pure delight" that overspread his sunbrowned countenance "a leetle more'n balanced the disappointin' episode with the big trout," as old Sam said, and the loss of his "flyin' trapeze performer" at the high bank below the bridge.

The others had not done much fishing during the day on account of the wind.

They had taken a few in the morning off the birch point, but the seas got so high the anchors would not hold, and they had been lying around camp in the shade of the oaks taking life easy.

I got small comfort out of my 18in. trout story, one making it out a big sucker that had strayed up from the lake, where the creek was high; another said it might have been a dogfish or a pickerel, and old Sam, with a wink at Kelpie, "reckoned it was a snappin' turkle," but they all agreed that they would not bother the pool when down that way, as they considered I had a preemption claim on the big trout, dogfish, or mud turtle, as the case might be, and might have it out with him whenever the spirit moved me. I gave him a day's rest and then the spirit prodded me sharply and headed me in the direction of McConnel's Creek soon after breakfast, alone in the ironclad, for Sam and Charley, Kelpie and the Colonel, and the Professor and Johnny had paired off and laid out a day's campaign in such a way that it left me to tackle the big trout in his fastness single-handed.

I stopped at another old log yard a few hundred yards above the mouth of the stream, caught a few small shiners with hook and line, secured the boat so as the waves would not beat a hole in her against the bottom before I got back, and took my way out to the road and down to the creek of many elbows, full of stratagems and schemes to secure the scalp of the warrior of the bridge—and anticipation; without which there is no real pleasure in going a-fishing.

The minnows were still lively in the bucket when I reached the stream, and hooking one on, I slipped quietly around the clump of bushes to the head of the pool and dropped it in where the current would suck it under the bank.

It was hardly out of sight when I felt a slight jerk on the line, and then I waited an hour—maybe it was not half a minute—with my heart in my mouth, for him to swallow the minnow, but when I gave the rod a twitch, to fasten the hook, it came back bare. I had pulled too soon and scored a backset in the first inning.

I made a detour around the bushes, got another shiner from the bucket and hooked it on, boiling over with eagerness, but with nerves as steady as a rock. The second attack resulted exactly as the first; the hook came back without the minnow. I was too eager and had miscalculated the time. I quietly got another minnow, and this time resolved to be possessed of a little more patience.

When the minnow drifted under the bank, another slight twitch of the line denoted that the old fellow was still there and thankful, doubtless, for the school of shiners that was coming his way.

I waited till I was quite sure he had ample time to swallow two minnows, and when I pulled the hook struck something and the next moment a trout of not a finger's breadth over 9in. was flopping and twisting and thrashing the water at the foot of the little sand bar, with the line reeled up too short to give him a chance to get under the roots again.

I stood looking at him, disappointed and amazed at the shrinkage that had taken place in that trout since a couple of days before.

I was reminded of old Knots's story of the darky and his catfish—"Golly, how dat fish am shwunk"—and found myself chuckling silently over the remembrance of the good old times in some of the old camps.

The shrunken trout kept up the racket near the sand bar, when suddenly a streak of color shot out from under the overhanging grass on the opposite side of the stream, from under a low bank where the water was not more than 6in. deep, and flashed out of sight under the bank from where I had just pulled the 9in. fellow.

Great Cæsar's bones! it was the big trout, who had been hidden under the grassy bank "a layin' for grasshoppers," and the struggles of his mate had scared him and moved him to hustle across to his retreat under the bush, lined bank.

Here was another backset of large proportions, for I knew it would be next to wasting time to fish for him any more till he got over his fright, and there was no telling how long that would be.

I lifted the now exhausted 9-incher out, released the hook and carried him around and chucked him in the bucket with the minnows, sunk it in the water near the bridge and then sat down on a log to reflect and study the situation over a while.

At the end of a half hour's vigorous "chawin' of terbacker" to help solve the problem, I hooked on another minnow and went around to the head of the pool and cast in, but after a minute or two of waiting it was plain he had not forgotten the queer antics and disappearance of his mate.

I let the minnow drift under the bank a dozen times or more and drew it out slowly, and with sundry alluring flirts and twitches, but it was no avail; he had suspicions around and would not be allured.

I got another minnow, the last live one in the bucket, and run the hook under the skin just in front of the dorsal fin which would give it the appearance of being disabled when in the water, having in mind the fool theory of an "eminent authority on bass," that a bass—and why not a trout as well?—will not take a minnow unless it seems to be crippled in some way, but even this "loony" idea would not work in practice, and I gave it up after a half hour's patient trying and concluded to give him another rest of a day or two.

I had been outgeneraled again, but the big trout was still in the pool.

I did not fish the stream at any other point, for my heart was set on the warrior under the bank only, and I wouldn't fool away time on fingerlings.

I went back to the boat considerably out o' gear, but still hopeful of the final outcome, for I was convinced that after a day or so in which to settle his disturbed thoughts he could not resist a live minnow, even though it did not belong to the order of cripples, for with due deference to the "eminent authority on bass" I may be pardoned if I think there is no "hoss sense" in his cripple theory. If bass had to wait on minnows to become disabled and crippled before feeding on them, they would soon all become so gaunt and thin that it would take a whole school of 'em to make a shadow.

I had intended to pull across to cat-tail point and fish a while but the wind was blowing a strong breeze up the lake when I got back to the boat, and I concluded to go to camp for once with a favorable wind.

When I got away from the shore outside the line of grass and rushes I saw old Sam and Charley in the big white skiff a hundred rods below, tied to a stake off the point above Horton's Bay, fishing for bass, and half a mile below was a line of whitecaps reaching across the lake, which denoted that a "capful o' wind was coming over from Lake Michigan." When the blow was within a hundred yards or so of them they seemed to take notice of it and headed the boat up lake with a sturdy pull at the oars which, however, did not keep pace with the wind that was roaring through the trees along shore in a manner that boded no good to me and the ironclad.

When the squall struck them Charley held the boat before the wind and they came pitching and rolling along like a ship scudding under bare poles before a gale.

In a minute or two I was in it with the ironclad and it was a caution to snakes to see that boat hump herself; first 'midships up and stem and stern down one moment, and the conditions reversed the next as she rode the seas without, however, taking a spoonful of water, as I kept her going before the wind at a pace that prevented the rollers from breaking in over the stern.

Sam and Charley were only a hundred yards astern coming up hand over hand, and Sam shouted, "Git out o' the way Jeems, or we'll run over ye," which doubtless caused a grin to disturb the gravity of Charley's face, as he was doing all the work at the oars, with old Snakeroot sitting complacently in the stern.

I shook a couple o' reefs out o' the foresa'l, took a pull at the weather braces, so to speak, and the ironclad increased her speed a couple of knots, but it was a powerful strain on the masts and sails—the skipper's back and muscles in other words.

The wind kept increasing in violence and it was not long till we shot around Alexander's Point, where the lake made a turn, and went rolling merrily across to camp a few rods apart, pulling a leisurely stroke, for the pace in the last mile had tuckered the two skippers out, and we were glad to beach our boats—lifting the ironclad well out on the smooth sand—and call the race a draw.

The others were in camp, having taken the hint when they saw the blow coming while fishing off the birch point, and Johnny was cutting a big swell over his daddy with a fine bass he had taken, while the Professor was trying to console himself with two or three measly goggle-eyes and a runty pickerel that had been forced to succumb to his prowess.

The wind veered around in the west, and by midnight had increased to a smart gale which threatened to send the tents sailing over the hill, but the big fly was protected by the small trees between it and the bank, and was in no danger.

I was awakened by the whipping and snapping of the tent fly overhead, which had started a corner guy, and the grinding and pounding of the wooden boats on the beach next called for attention without much waste of time. I lighted the lantern hanging against an upright, slipped on a pair of shoes, and getting out "breechesless and hatless," secured the loose guy and stayed the tent by throwing a line over the iron pin of the front upright and making it fast to a stake driven in the ground at the edge of the bank. The next tent was served in the same manner, but the third one—the headquarters of the Ken-

tucky delegation—and Barney's tent did not need it, as they were partly sheltered from the blast by some bushes. (Mem.—It is not hard to find your tools and other things in the dark if you have a place for everything and keep everything in its place, and another good line of conduct in a camp is, when you see anything that needs doing, go and do it, and you won't have to stand around waiting for some one else to do it. This is a good rule for the veterans as well as the youngsters.)

The boats were next attended to by pulling them up on the beach out of the reach of the rollers—a tough job for one—and then I went back and inspected the camp to see if everything was going to hold against the gale. I found all snug, and the boys apparently sound asleep, except Kelpie, and the Colonel, who had began to realize there was quite a blow going on outside, and they were discussing the matter of getting out to see what old Hickory was doing, but when they found everything had been looked after they changed their minds.

I turned in and went to sleep to the whistle of the wind and the roar of the surf on the beach; a strain of music that is always soothing to him who is in sympathy with nature and the wind god's moods. KINGFISHER.

## "PODGERS" IN THE MOUNTAINS.

IN THE SIERRA NEVADA MOUNTAINS, California, July 27.—*Editor Forest and Stream:* It seems but a few days ago that I sat in your editorial sanctum, in your best chair, with my feet on the table, after the usual manner of editor's visitors, and here I find myself, "doing the grand in a foreign land 3,000 miles away," perched up near the very summits of the Nevada range, some six or seven thousand feet above sea level, inhaling the fresh, dry, invigorating atmosphere of the piny woods—while you poor mortals, slaves of the ring, are doubtless sweltering and perspiring over your work. At least, I suppose so; for, thank the stars, I am out of reach of telegrams, newspapers, mails or females. Think of the luxury, the satisfaction, of being out of reach of the telegraph fiend. Well! I am. There is many a mile of summit and cañon—mountains and valleys—between us.

Where am I? Doubtless you yearn to know of such a spot. If you are prepared to leave the drowsy, shade-embowered little town of Sonora, Tuolumne county, California, at an early hour one of these delightfully cool mornings, and drive 35 miles over a good road, climbing gradually up, up, all the way nearly, you will arrive in the afternoon at a little oasis or valley, where there is a roadside station or hostelry with good accommodations for man and beast. It is within a stone's throw of one of the branches or tributaries of the Stanislaus River, a rapid and in places torrent-like stream, roaring over huge rocks and boulders, with intervals of placid waters, beautifully clear and icy cold, where the trout are supposad to lurk, awaiting the impatient fisherman.

They had not long to wait for your humble servant, who was soon equipped with his best split-bamboo and a trio of the most killing flies in his pocketbook. The sun was just dropping behind the tall pines at the summit of the high peaks inclosing the valley, casting lengthening shadows across the stream, as the first cast was made and a moderate-sized trout found a peaceful resting place in the creel, soon to be joined by numerous friends and relations to keep him from being lonesome.

I have no big tale to tell of my "catch" nor of the whopper lost; the whoppers had gone up to the lakes above; but the hotel table abounded that evening and next morning with all the trout a dozen hearty appetites could dispose of. I have had better fishing, and I have had much worse, the trout of medium size, as fat as butter, and had the firmness and hardness that cold water gives them in mountain streams. The insect food seemed very abundant and the "crop" of every fish caught was full to repletion of this natural food, hence they were not over-anxious to take the artificial, and they bit languidly as if they merely took the fly to be obliging; still a good many found their way into the basket, all that a reasonable fisherman could ask for and not be a fish hog.

The next morning was simply a repetition as to size and numbers. It was what might be termed rough fishing, for there were huge rocks and boulders lining the shores to be climbed over to reach the pools in the deep gorges, with the usual accompaniment of slips, slides and barked shins. But what does a fisherman care for such trifles?

The next day was devoted to rest, lounging in the shade overhauling tackle and applying arnica and mutton tallow to damaged cuticle. On the following day along came a trio of cattle herders bound over the range to one of their possessions in the valley seven or eight miles distant, through which the main Stanislaus River runs, and an invitation to join them and partake of the hospitality of their camp was accepted. Blankets and traps were loaded on a pack horse, and we were soon climbing the next range, following a very blind trail—blind to any one but these hardy mountaineers, though as easy to them to follow as a turnpike. It was a long climb—up, up, ever up; and the rarified atmosphere caused us lowland fellows to blow like porpoises. Arriving at the summit we halted under the shade of the great pines to rest and cool off; and then commenced the descent—in places so steep as to cause much wear and tear to the seats of our canvas overalls as we slid down, catching at bushes to check our too great speed. The horses, planting their feet, plowed their way down, often threatening to come on top of us. An hour and a half of this warm work brought us to the foot of the grade and to the river, a large, rapid stream too deep to ford: but the boys soon produced a dugout and we crossed over, swimming the horses, and stood upon the level ground—a so-called meadow a couple of miles long, furnishing good grass for cattle and horses, which constituted the farm or ranch of our hosts.

Saddling our horses again, we rode up the trail to the extreme end of the valley, where the camp was located at the base of a towering ledge of rocks running skyward thousands of feet. Across the river ascended from the water's edge a similar range. No scenery in Switzerland can equal the grandeur and awe-inspiring sight. The tall pines at the summit seemed mere bushes at that great height.

An hour's rest in the shade, a hearty lunch, and we were ready for the fray—and spray—of the roaring, rearing, tearing stream before us, scarcely fifty feet distant. We anticipated great sport as we jointed up rods, but as we started our hosts took a little of the edge off our enthusiasm by warning us to look sharp for "rattlers," which pleasant neighbors, they said, were numerous and belligerent, and it was a poor day for snakes when they did not kill a dozen while mowing down on the flat, and quite frequently a stray one around the cabin. It was not a pleasant thought, that while you were landing a big trout an Eve's tempter might be behind you selecting the most vulnerable point of your physical system to give you an excuse for drinking all the whisky in camp; and I knew that the frequent appeals to our only flask on the way over had left but a scarce dose in the way of cure in case of a bite. However, the trout was what we were there for, not snakes, and we proceeded to business. The fishing was good, much better than on the other stream, and larger fish; and the two of us came in at sundown with baskets well filled, content and very hungry.

A frying-pan full of the catch was soon giving forth delicious odors of frying fish and bacon, mixed with wafts from the tin coffeepot. The camp afforded the luxury of a rude table, and seats were supplied by empty boxes; and soon we were at work, taking it in a primitive way, every fellow with a trout in his fingers, standing not on the order of his munching, with occasional approving remarks, such as "By shiminy, ain't those trout fine! Give us another." There were five in the party, and the artist of the frying-pan is prepared to make affidavit that he cooked eight dozen, and they were not small trout by any means, so that considering there were other edibles besides—coffee, bread, bacon, etc., it may be surmised that there were some mountain appetites in the party.

The usual luxury of a pipe, stories by our hosts of their hunting and adventures in these mountains, as we lolled at full length around the camp-fire, brought us in due time to the question of sleep. Our blankets were spread on the pine needles and the silence not soon unbroken except by the roar of the river and the chirrup of crickets.

It was many hours before I fell asleep, for as I lay looking up through the pine treetops at the stars the question of snakes became a very vivid one in my mind. Before leaving New York I had given much attention to the correspondence in the FOREST AND STREAM on the subject whether rattlesnakes did or did not "spit" or eject their poisons, and in consequence I had a pretty heavy dose of snake on the brain, which, now that I was brought in such close communion with the pesky things, was revived with most unpleasant vividness. I said to myself as I lay listening to the rustling of every leaf, "What is to prevent Mr. Snake from coming crawling along through the dry grass on his predatory excursions for his supper and coming to me lying there nice and handy, and saying to himself, 'Hello! here's a tenderfoot; his ear looks rather tempting. I'll give him a nip'." I pulled the blanket over my head and tucked it in all around me. But it was useless. Sleep and rattlesnakes would not fraternize. How I cussed those contributors of snake lore of yours. I would like to have had every mother's son of them lying outside of me and around me as barriers and let them have a good opportunity to ascertain whether rattlers do "spit" before they bite or after or not at all. The question would cease to be one of interest to them very soon thereafter no doubt; but anyhow I wished they were all there to take their chances. Finally I fell asleep, after realizing the fact that the growing chilliness of the mountain air was calculated to discourage such tramps, my hosts having assured me that when it began to get cold the reptiles suspended business.

I awoke suddenly soon after daybreak to find myself all right, and we were all soon astir; and going down to the river indulged in ablutions in water so cold as to render the fire very desirable to warm our benumbed fingers.

A hearty trout breakfast followed, and my fishing companion was soon off again after more trout; but your humble servant was *hors de combat*—done up—gone in his underpinning. Ill-fitting rough hunting boots had monopolized more than a fair share of the cuticle of the feet in them—in other words, had "chawed" my feet up to that condition to render it perfectly impossible to travel, and particularly to clamber over those big rocks and boulders necessary to get to the pools. So instead of fishing I spread my blankets under the trees, and finding some old newspaper sstuffed in the crack of the log cabin (a year and a half old), I lay on my back, read, smoked and doctored my feet. My chum accused me of funking and making the excuse of lameness in fear of those promised rattlers; but when I showed him my trotters and the barren patches—barren of cuticle—he apologized. Our hosts having their work to do, left me to my own devices, and I enjoyed a day of the most perfect luxury of indolence—laziness, if you will—and rest that had fallen to my lot since the Concord fight. The novelty of the situation, such a change of surroundings from the lurid streets of Gotham, the grand scenery, the delightful atmosphere, the lulling roar of the river, all combined served to make it a day to be remembered for a life time. I thought of friends I left behind me, how they would howl in ecstacy to be there, and you poor, tired wheel horse of the editorial department, what would you have given to have been lying on your back under that big pine tree towering 200ft. above your head? Can you imagine it?* Even hypothetically, like the mongoose in the basket?

I am sorry for people that can't come to California and catch trout 6,000ft. above the sea level, lie on their backs under big pine trees, and know that for three months to come they can live in the open, with never a cloud nor drop of rain to dampen their camp traps, where the days are all sunshine and warmth, the nights cool enough for blankets, and where sleep is a luxury, and where snakes don't come, even if you do lie awake expecting them.

PODGERS.

[MORE TO COME.]

"A hare in the garden! Hand me a gun, Jacques." "But, sir, it is 5 in the morning; everybody is asleep." "Never mind; I'll fire on tiptoe."—*Le Monde Illustre.*

THE EMERGENCY MEDICINE CASE.—The Emergency Medicine Case, advertised in our columns, is the best thing of the kind we have ever seen, and something no traveler or camper should be without. It contains in remarkable small compass a dozen standard medicines for the ills that arise from change of climate, water, etc., as well as bandages, antiseptic cotton, etc., for the treatment of wounds resulting from accident. The case is of tin, reasonably tight, and as it measures less than 6in. in length can easily be carried in the pocket. The medicines are ingeniously packed, and as they are all in solid form cannot spill and soil the pocket. The drugs are guaranteed to be pure, and altogether the case seems to fill a long felt want at a price that puts it within the reach of all.—*Adv.*

## VOICES OF THE NIGHT.

IT is a quiet night. The atmosphere, clear as a bell after the gale which so lately blustered over the marshes, tingles with a faint suggestion of frost, though the light air, which wafts the smoke-wreaths from my pipe, is in the south.

There is no moon, only the misty starlight sparkling and snapping, in reflected glints from the still surface of the pools, scattered here and there through the marsh.

So still is it that we distinctly hear the metallic *tong! tong!—tink! tink!* of a cow-bell, way across on the uplands, where the cattle wander.

Plaintive, sweet in the stillness, there comes down to us the call of passing birds.

"Out of sight, out of mind" is a trite old saying, but in this case it is not fitting.

High up, somewhere in cloudland, a little flock of buntings is traveling. How do I know they are buntings? Listen! *Pink! pink!—Pink! pink!*—did you hear it?

Far away over the marsh, where the shadows are inky black, suddenly there rings a trumpet note *Orr-ronk!* only once, but startling, with its indescribable tone of wild, free life. That clarion tells us that far out there in the darkness a big gray goose is guiding its broad-winged followers through the night. In the morning perchance we may say, "I heard geese last night." But will that describe it all?

Hark! a *whirr-r rr* of wings seems to fill the air, as a bunch of ducks goes over. Every wing beat proclaims their identity as they speed away. Whistlers! Properly named from the shrill sound that accompanies the flight of these lovely birds.

Still we hear them *wheu-u-uuu!* fainter—fainter it grows—all is silence.

A *swish-h-h* of swift wings followed immediately by a sounding surge, announces that some sort of water-fowl has alighted near by, and presently a raucous quack betrays the presence of a dusky duck (*Anas obscura*). A startling *whirr*, a pattering of feet and wing tips on the calm water as he rises, and again the music of unseen wings throbs on the air as he darts away into the night.

From the northeast, where the Pleiades with their soft light are glowing in the heavens, there comes a weird cry, as of a pack of hounds in chase. Faint at first, it has grown with each repetition, until the welkin rings at intervals with the mysterious voices as they pass. What can they be? Our wonder is dispelled as old darky Jake pokes his wooly head out the cabin, with the query, "Hear dem swan, boss?" From some sedgy lake in the far North they have voyaged, their snowy wings have fanned the air by night, unseen, unknown, save as their wild notes come down to us.

Twice each year this living stream of bird life flows under the stars. Now north, now south, as the seasons come and go. We hear the clanging cries of wildfowl, and again the soft notes of their lesser brethren, like the chime of far-away bells, float out upon the night, clear, musical. Is it so very strange that one should find a fascination in listening to these "Voices of the Night?"

WILMOT TOWNSEND.

BAY RIDGE, N. Y.

## AS TO MULE DEER.

LAKE CITY, Minn.—*Editor Forest and Stream:* In your paper of July 21 is an article from "Sylvan" entitled "The Mule Deer in Domestication." In this article the idea is conveyed that the mule deer is a species separate and distinct from the blacktail deer. I think this is an error. After a residence of two years in the habitat of the blacktail—northern Montana—I believe the mule deer to be a blacktail. I have questioned many old frontiersmen and hunters, and all agree that the deer sometimes called the "mule deer" is an old, abnormally large blacktail doe, and that it is no uncommon thing to find them with what is termed "a roman nose," as is the case with some horses, and specimens have been killed that would weigh over 275lbs. The writer in fact saw the carcass of one such the past fall, which was shot on McDonald Creek, Fergus county, Montana, which weighed when dressed 287lbs.

I have never known a doe and fawns to be separated in flight, except the fawns be cut off, and by the time that they follow the doe they are eminently able to keep up with their dam.

They shed their horns at the same time the whitetail and elk do, along about the middle of the winter. The new growth of horn is covered with velvet until full grown, and when the horns are full and hard the velvet is disposed of by rubbing against trees and brush.

It is very difficult to preserve satisfactorily a head that has been killed in the velvet; it can be done, however, by hanging the head with the horns point downward, and daily inserting a darning needle through the velvet on the points of the horns. This permits the blood and the watery matter in the velvet to escape, and the velvet will then dry up without spoiling or shrinking unevenly.

A well known sportsman, Mr. John Sinclair, of Great Falls, Montana, has his own fun out of a colt's head, on which he has mounted the horns in velvet of a spike elk. Mr. Sinclair is not only a successful hunter, but a skilled taxidermist, and has a collection embracing many of the game animals and birds of this region, and nearly every specimen is a trophy of his ability as a hunter.

S. M. E.

[Throughout the West until the Cascade Mountains are reached the blacktail is a mule deer and the mule deer a blacktail. In other words these are two names applied to the same species. Mule deer is the book name, but blacktail the common one. On the Pacific coast is found the true blacktail or Columbian blacktail deer, which is quite a different animal from the big-eared fellow of the plains and the mountains. The great ears and the peculiar tail of *C. macrotis* will always serve to distinguish it from its relative *C. columbianus*, which more closely resembles the whitetail or Virginia deer than does the long-eared species known as blacktail or mule deer.]

## SPITTING OF SNAKES.

PHILADELPHIA, Aug. 4.—*Editor Forest and Stream:* On my return from a long absence, I find that some of your correspondents have been denying the accuracy of some of my statements regarding rattlesnakes. The assertion which is criticised is contained in a paper in the Proceedings of the U. S. National Museum, 1892, p. 687, on the species of North American snakes, and it is as follows: "They throw the body into a coil and sound the rattle, giving a sigmoid flexure to the anterior part of the body on which the head is poised with open mouth ready for action. At this time drops of the poisonous saliva fall from the fangs, and by a violent expulsion of air from the lungs are thrown at their enemy. In the act of biting," etc. Your correspondents allege that the dropping of "poisonous saliva" does not occur, and that it is not "thrown at the enemy" by a violent expulsion of air from the lungs or otherwise. One correspondent objects to the term "poisonous saliva," believing that the saliva is not poisonous, and is too viscid to be ejected forcibly from the mouth. To these criticisms I reply as follows:

First—The poison-secreting glands of venomous snakes are enlarged parotid salivary glands, and the poison is a modified saliva.

Second—I did not state that rattlesnakes always maintain the position described when about to bite. On the contrary, it is only when prevented from either biting or running away that they act in the manner mentioned. If a rattlesnake is annoyed by being stirred up with a stick and pebbles, etc., thrown at him, and is prevented from escaping, if he is in good condition and the weather is warm, he will sometimes act as I have stated from actual observations made on the *Crotalus confluentus* in New Mexico. When the mouth is opened widely the masseter muscle compresses the poison gland, and if the latter is full, forces some of it to escape through the duct, and it drops from the fangs. This is an observation which has been often made on various venomous snakes. If the snake expels air from the lungs in hissing, as it generally does when on the defensive, the drops will be thrown out with air toward the enemy. I do not suppose, and did not state, that this is done voluntarily by the snake: it is simply a necessary consequence of the mechanical conditions.

In conclusion, I would ask how many of your correspondents have teased an angry and vigorous rattlesnake who could not or would not run away, on a hot day, for a half hour or thereabouts, with a stick of suitable length, as I have done, so as to observe the consequences?

E. D. COPE.

PHILADELPHIA, Pa.

## BIRD LIFE IN A CITY YARD.

WHEN I was a small boy one of my hobbies was observing the birds of our neighborhood, and the first annotated list which I began was on those species noted in my father's yard in the heart of the village. This list, at first, as my knowledge was small, embracing but few birds, rapidly increased after a few years, and has finally grown to "the bigness you see," embracing 134 species, and is here presented for the first time, as—it is hoped—an interesting evidence of continued observation.

The yard where these notes were recorded is 5×12 rods in size, and is at almost the exact center of a corporation of two and a half miles square. At the time the list was begun this was a village of about 5,000 inhabitants, and it is now a city of over 20,000. A house, barn and sheds occupied the lot at the first, as well as many evergreens, maples, oaks, apple trees, numerous shrubs and a garden. Time has changed the premises greatly, and fauna and flora have assumed consequent variations. Many species of birds which were formerly seen here each year are no longer recorded, a result of the greater size of our city and the increased density of the population of the suburbs, with the consequent destruction of neighboring forests, which were once within our limits. Notwithstanding the changes resulting from a quarter of a century in a thriving manufacturing city, there are still many species which each year visit us on their migrations from the south, and a few which are reasonably regular in appearance from their northern haunts, and there still occur occasional surprises in the appearance of new and little-to-be-expected species.

In addition to the list given there are a dozen or more other birds which I have recorded here in our yard, but about which I am not as yet fully satisfied, and therefore do not present.

I am acquainted with 236 species in this county of Kalamazoo, and below is given an exact list of those seem on or over the 60 square rods of space in the city.

English common names alone are used for the sake of brevity.

THRUSHES, ETC.

The robin is present from March to October, the wood thrush is rarely seen, while the olive-backed and hermit thrushes are regular in spring and fall, the former often loitering a week among the raspberry and current bushes. The catbird is common and noisy, but does not breed as formerly, as the shrubbery is gone. Occasionally a brown thrush airs his musical talent in May. The Wilson's thrush used to be seen in migrations.

The bluebird used to build in the little boxes we provided, but the plebeian highest sparrow has routed him.

KINGLETS, TITMICE, ETC.

Ruby-crowned and golden-crested kinglets are always seen in migration, cheering us with their active movements. The gnatcatcher in spring and the curious, pleasing black-cap titmouse in winter lend their cheerful presence. Of the nuthatches, the white-bellied is nearly always with us, while the northern representative, the red-belly, is sometimes seen in company with the delicate looking, yet vigarous brown creeper.

WRENS AND LARKS.

Only the house wren is present, breeding when provided with quarters. Both the horned lark and titlark are often heard flying over, the latter in scattered flocks.

WARBLERS.

Excepting the sparrows, the *Sylvicolidæ* are the family best represented in our yard, but the little fellows remain only a very short time in spring and fall, most of them avoiding us in their autumnal journey. It is strange that the redstart has been seen but once, while it is surprising that one should find the white-browed, Cape May and Wilson warblers in the city. The black and white creeper, black-throat green, yellow-rump, Blackburnian, chestnut-sided are the most common and may be observed yearly, while the blue yellow-backed, Nashville, Tennessee, yellow, black-throated blue, bay-breasted, black and yellow, yellow redpoll and golden-crowned thrush have only been seen at wide intervals and some of them but once.

SWALLOWS.

Five species out of six that I know fly over our yard: the barn, white-belly, cliff, bank and purple martin. The latter used to nest before the advent of the sparrow.

VIREOS, TANAGERS, ETC.

The pleasing notes of the red-eye are to be heard each May and June and again later in the season, while the soul-thrilling, gurgling melody of the warbling and the clear penetrating staccato of the yellow-throat are often heard. That sweet-singing bird of gorgeous plumage, the scarlet tanager, wanders into our domain during May, and while looking about inspires us, as well as convincing all who hear, that at least one gaudy bird is a true songster. The cedar bird used to build in our old greenery and still appears, generally in winter. The cherry trees, his attraction, are gone. One white-rumped and one great northern shrike have been seen; the latter was killed in winter.

SPARROWS.

Among the northern species, which only appear in winter, may be mentioned the evening grosbeak, which is found hereabouts once in six or eight years; the pine grosbeak is still rarer; the rare white-winged crossbill and common red one, both frequent the evergreens. The lesser red poll and pine siskin are not rarely seen, coming a little after the common junco departs, and about the time when the uncertain snow buntings fly over in scurrying flocks. The migrating, sweet-singing purple finch has been seen in past years, as also the tree sparrow in his seasonal journey. Later, and after the appearance of the chewink, the white-throated and white-crowned sparrows arrive, the former generally a little behind his handsomer relative, but willing to make up the deficiency by remaining a week or so and stimulating us with the beautiful notes of piano-like measure and harmony. Chipping sparrows are common from April to October and the song sparrow a week or two earlier and later; both nest in our yard, the latter always in a hedge 2 or 3ft. from the ground. A vision of color and loud song comes with the rose-breasted grosbeak, while the sweet refrain of the indigo bird is often heard. The sulphur coat of the goldfinch is a pleasing sight to summer observers, while the disagreeable notes and pugnacious ways of the imported sparrow are ubiquitous.

BLACKBIRDS, ORIOLES AND JAYS.

Bobolinks fly over, gushing forth rollicking song, but never deign to alight. The stealthy cowbird mopes about occasionally, but I could never find that she made any of her unsolicited deposits in the nests of any of the nineteen species of the feathered tribe that have favored us by nesting in our yard at various times. The redwing, rusty and meadow lark fly over during migrations, occasionally resting for a moment. The bronzed grackle for years built in the tall evergreens, while the orchard and Baltimore orioles both nested occasionally, before the old apple trees and sugar maples were removed. Straggling flocks of crows fly over spring and fall, there being an hundred seen now where one was observed twenty years ago. Surely civilization assists some birds, if others and useful ones are becoming extinct. Our bluejay is as numerous as formerly, and is one of our old standbys with the robins, but really more intimately connected with us as he does not migrate to any extent. His harsh notes are welcome in the cold months, and his agreeable colors and odd habits are always pleasing.

FLYCATCHERS.

The common pewee may be heard each year in early April, next comes the clamorous kingbird, then the least flycatcher, which, however, is rarely found in the city, and lastly the wood pewee, which nests. Thus far I have seen only one olive-sided flycatcher.

SWIFTS, HUMMERS, ETC.

An occasional night hawk flies over, as also kingfishers. The black-billed cuckoo is often heard, while the ruby-throat seeks the garden and the gyrating chimney swift moves in semicircles or drops into the chimney, where its stick nest is glued to the sooty side.

WOODPECKERS.

We have five species of these borers which visit us each year; the downy is hardiest of all, and frequently seen in midwinter. Next comes the hairy. Of the last three, the golden wing arrives first in spring, then the red-head, and the yellow-bellied last. All are seen several months of the year, excepting the latter, which while migrating remains with us only a fortnight, during which time it infests maples and evergreens, drilling hundreds of small holes from which to collect sap in the spring.

HAWKS AND OWLS.

A barred owl was taken many years ago, and a common screech owl made a short stay. Marsh harriers, red-tailed, red-shouldered and sparrow hawks have been seen flying over; a Cooper's hawk was observed plying his trade among the English sparrows about 4 o'clock one morning, and a sharp-shinned was engaged in the same glorious work in broad daylight.

DOVES, GROUSE, SNIPE, ETC.

Passenger pigeons, so abundant in old times, once flew over our yard in countless numbers, and I have seen the sun darkened by their passage; but alas, this was many years ago. An occasional mourning dove flits by in spring migrations. A good-sized covey of partridges or ruffed grouse flew bewildered into the yard long since, and one which came against the house was stunned and captured. Less than ten months ago a large bevy of quail crossed our yard, and I have heard them all about this season.

Golden plover fly over rarely in autumnal journeyings, occasionally I hear a semi-palmated, and each season killdeers. The form of a woodcock was once not a rare sight at dusk, while snipe occasionally towered. Least sandpipers, grass snipe and spotted sandpipers are often distinguished by their notes, as well as greater and lesser yellowlegs and occasionally the field plover.

The great blue heron is the only one of the family that I have seen, while a dead body of an ortolan is the only evidence of the rail family in our yard.

WATER FOWL, GULLS, DIVERS, ETC.

Once the whistling swan swept majestically by, and among geese, the black brant, snow goose and Canada goose were seen, the last two in thousands years ago.

Of the ducks I have seen only a few of the twenty odd species known here, for as they more often migrate at night, my opportunities are small; however, the following were distinguished: Mallard, pintail, butterball, wood-duck and goosander.

Among the gulls were distinguished the Bonaparte's and herring gulls.

In loons and divers were recorded the great northern diver and the pied-bill grebe.

In addition to the above list a great many were guessed at, but from uncertainty are not mentioned. To many this list will appear very defective, but to all we will simply state that the species were observed within a space of five by twelve rods and in the air above it. At different times nineteen species were found breeding.

KALAMAZOO, Mich. MORRIS GIBBS.

### Migratory Birds in Malta.

REFERRING to Malta's spring visitors the *Mediterranean Naturalist* for June says that during the preceding month the valleys and gorges were alive with orioles, warblers, rollers and bee-eaters. In the rich crimson clover enormous numbers of quails found shelter during their sojourn en route for the Continent, while the branches and foliage of the carob, the prickly pear and the orange trees were thronged with harriers and larks.—*Nature, London, June 30, 1892.*

## A MISSOURI DEER TRACK.

CHICAGO, Ill., July 10.—Waking one morning and finding about 3in. of snow on the ground, I suggested to my brother to try a new direction for deer. Fastening up the dog, and taking a lunch, I carried a .44 Winchester, and my brother a 10-bore shotgun, as we always do when we go together, as we expected to see turkeys, and a shotgun is handy for turkeys. We started for a tramp which we knew would not fall much short of sixteen or eighteen miles. We had not gone more than about three miles when my brother gave me the signal which I knew meant deer sign, and which afterward proved to be the tracks of two old bucks. With my brother watching the tracks and me out on one side looking ahead, we struck a good gait as the tracks looked pretty old, and as they were going fast we had an idea they were a long way away. After a while we found where they had fed the evening before. We followed around and around through brushy thickets and wood chopping for miles and miles, until I got pretty tired of it, and would have given them up; but Jack is a great sticker, so he followed them until they were on top of a big mountain, about eight miles from home, and as they were going straight away from home, and the tracks were still old, even Jack gave them up, and we started on a circle back toward home. We had not gone a quarter of a mile until we struck the very same tracks going in the same direction, but still old. So we sauntered along carelessly on the track, thinking they were somewhere in the next county, when looking ahead through a small opening in the light timber, about 300yds. off, I spied one pawing around in the snow for acorns.

Telling Jack to stop I dropped on one knee and took aim (just as though I was taking aim at a chicken's head at home). Seeing hair in the notch, I gave the trigger a big yank and bounced up to see the result. Of course the deer went out of sight quicker than a flash, and Jack took a run up ahead to see if he couldn't get in a few buckshot, as it was running quartering with us. He had got about 100yds. when I saw, as I thought, the same deer coming straight toward me. I shouted to Jack to stop, and at the same time the deer stopped too, about 150yds. off. Taking quick aim (expecting it to run) I fired and missed it and it wheeled. Jack let go a load of buckshot. The deer went out of sight and the next instant out bounced, as we thought, the same deer out of a ravine and dashed off over the hill, Jack sending some buckshot at it just to keep from carrying them home. So there we were—all that shooting and notning to show. But we started over in the direction it had disappeared, when I happened to think that we had been following two, so I said to Jack, "I wonder what has become of the other deer." We stopped and glanced around. There, not 50yds. from where Jack had fired his first load of buckshot, we spied a deer doubled up over a log. Cutting his throat and dragging him around with his head down the hill so he would bleed good, we struck out after the one we had seen disappear over the hill. As soon as we struck the track we knew we had touched him as the snow was tinted with blood. Coming on top of the hill we saw a long stretch of open timber. Hurrying along and looking away ahead, we walked within twenty steps of the game crouched down in the snow looking back at us. We both threw up our guns at once but Jack headed me off by putting a load of buckshot in his head. Fastening a strap to its head we dragged it back to the other one.

Now there we were, eight miles from home with two big deer that we could hardly lift, not to think of carrying them eight miles. Jack started for home after a wagon. He went but a mile when he ran across some wood haulers and hired them, and we got home about 4 o'clock, two of the happiest fellows in southeast Missouri, with lots of "meat in the shanty." JIM.

### Hosts of Michigan Quail.

DRYDEN, Mich., Aug. 4.—The Michigan quail season will open Nov. 1 and run to Dec. 15. There is a big crop. The birds have not been so plentiful for years as they are this season in this locality; and reports of plenty come to me from other parts of the State. Sportsmen are looking forward to having some excellent sport this season.

T.

## A HUNT IN THE ROCKIES.

IN THREE PARTS—PART I.

It is hardly necessary to state that months of preparation and the usual fond anticipations were all gone through with before the arrangements were completed. My old companions in many a hunt, Messrs. A. C. Kepler, of Lancaster, and Frank B. Blood, of Conneaut, O., were anxious to go but could not. "Kep," one of the most ardent and efficient hunters and trappers in the United States, and a royal good fellow, was building a new house and could not get away. Blood, the man with nerves of iron and deadly aim, was an important witness in court, and compelled, much against his will and inclinations, to forego what we considered the most gigantic hunting excursion on our list.

It must be admitted that my spirits sank somewhat below zero as I stood alone with my face turned toward Idaho, with the determination to go if I was obliged to go it alone." After all, much of the pleasure to be derived from an outing depends upon agreeable companions. But, as the old party was broken, and I was going, I called on the reserve, and wrote to my friend, fisherman, rifle-shot and gentleman, H. W. Bush, Esq., assistant auditor and treasurer of the Kansas City, Fort Smith & Southern Railroad, at Neosha, Missouri. Well, were it not for the space it would take up I would insert his reply. It began thus: "Dear Old Boy: Whoop 'er up—I will be thar! Tell me how and what I must get ready," and closed up by saying something about lead-heading," which of course I did not fully understand, but learned all about it later on. I had heard of and was in correspondence with that celebrated hunter, guide and Indian fighter, George W. Rea, of Beaver Cañon, Idaho, had his terms per diem for a complete outfit, and knew just what it would cost; and the possession of this bit of information caused me to feel very perceptibly the necessity of getting at least two more companions to join us, lest the hunt would, like the Indian's gun, "cost more than it came to." My enthusiasm was so great in that direction that I offered one or two of my friends who always had galore in their eyes $50 toward defraying expenses to join me; but business or some other good reason interfered, and they were reluctantly obliged to say no to my entreaties. Wonder if I will have the same difficulty to encounter this fall, when I expect to go to Newfoundland on a caribou hunt? Just as I was about giving up efforts to decrease the expenses by increasing the number of hunters, I received a letter from a perfect stranger to me, Christian Weber, of Baltimore, Maryland, who incidentally heard that I was going to the Rockies a hunt, and requested that he be added to the party. I was not long in writing him to show up with recommendations, which he promptly did; and soon the third and last recruit was mustered in, and a capital fellow he proved to be, besides being an amateur photographer and the possessor of a fine instrument.

I assumed command of the expedition, and at once issued orders governing the amount of baggage, and each man was limited to about the following articles, all to be packed in a carry-all, in order to facilitate transportation on pack animals: One hunting suit, two undershirts, two pairs drawers, two overshirts, four pairs stockings, one-half dozen handkerchiefs, one pair hunting shoes or boots, one pair gum boots, one pair gloves, one cap, one hat, one gum blanket, two woolen blankets, two towels, one piece soap, ammunition and loading tools to suit arm used, pipes and smoking and chewing tobacco, in case they used any, and any other small articles which would neither take up much room nor add much weight. In addition to the above enumerated articles I carried, as I always do, a limited supply of medicines, hypodermic syringe, bandages and adhesive plaster, etc. When all packed, each man's luggage, independent of the arms and each a short light trunk rod and fly-book, weighed less than 50lbs.

### The Start.

What follows I take from my journal of outings, religiously kept for the last fifteen years; and if every one would take as much pleasure in looking over some of the old records way back, where big catches of fish and bags of game are truthfully recorded, in localities on the borders of civilization, but now under a high state of cultivation, they could pleasantly while away many an hour, and fight some of their battles over as the old war veterans are said to do.

Left Lancaster Sept. 30, at 4:45 A. M., fast line, on time (I suppose it knew I was in a hurry to get on my way to the greatest hunt (to be) of my life. Arrived at Philadelphia on time, and, after practicing on a warm but delightfully tough steak, I was ready to take the 8:15 train, B. Baltimore and Ohio, for Chicago; 10:40 we crossed the river on transports and landed in "my Maryland." At 1 P. M. passed through Harper's Ferry, where I had not been since 1861, when I was a gallant soldier seeking to destroy him who would insult the American flag, or something to that effect. Arriving at Washington, D. C., the first man I saw, because I was looking for him as I presume, was Chris Weber, the little German recruit from Baltimore. We had dinner in the rear car, talked the proposed trip over, and each, I suppose, formed an opinion of the other. 1:35 P. M., "Martinsburg," shouts the trainman, and that reminded me of the three months' picnic. I recognized nothing familiar about the place, away back in memory's halls, on a back shelf, and shielded from age and inactivity, I resurrected a picture of the destruction of a distillery, and can yet see streams of whisky flowing like water as the heads of the barrels were being chopped out with axes. I also see soldiers filling their canteens from depressions in the ground. 5:20 P. M.—Passing through the Cumberland Mountains, and now we stop at Deer Park, W. Va. The President's cottage stands on a hill due north and about 500yds. from the station. It is the first cottage on the north side of the track, and a very modest structure when compared to the summer residences of some of the crowned heads of foreign countries. The scenery from Martinsburg to 20 miles west of Deer Park is romantic and magnificently picturesque. 7:10 P. M., Grafton.—A good supper and but 15 minutes to "bolt" it in.

*Oct. 1, 5:30 A. M.*—Just getting daylight. Had a good night's sleep, and just passing Findlay, Ohio. Arrive at Chicago at 10:55, and leave for Kansas City at 12 M.

*Oct. 2, 6 A. M.*—Retired last night at 8 o'clock, and slept the sleep of the just. Crossed the Mississippi at 10:55 last night, and since then have been in the State of Missouri. Arrive at Kansas City at 7 A. M., and find the smiling face of Bush in waiting. After a square breakfast at the Blossom House restaurant, we do up the town. 11 A. M. finds us on board train en route for Denver, Col.

"SHONGO" AND HIS HUNTING HORSE "WARRIOR."
From an amateur photograph.

*Oct 3, 7:45 A. M.*—Here we are in Denver, the great city on the plains, an oasis in a desert. The ride from Kansas City to this point was not very interesting. Western Kansas and all of eastern Colorado is an arid plain, and resembles the ocean in general appearance; small cactus, scrub sage and ant hills go far to make up the very uninteresting picture of desolation. The earth was so dry that dust filled the coaches and made existence very unpleasant. 9:45 A. M. finds us en route again westward bound. Sixty-nine miles west of Denver, a rig for $24, or $8 each, for selves and baggage. 10:30 A. M., all aboard, and we are on our way behind two cayuses hooked to a light though strong wagon. Road good, though very dry and dusty. Stop at 2 P. M., and about half way, to feed. Route leads through a basin, which is bounded on two sides by high wooded mountains. Meet a band of about 150 Indians on their return from their fall hunt to their reservation at Blackfoot, Idaho, which is south of Beaver Cañon. Their pack animals were loaded to the gunwales with meat and hides, and they had with them a fine herd of horses of all shades of color. We had quite a parley with their chief Tindo, who could speak some pigeon English, and inquired as to whether there were any Indians at Beaver. He was a fine, fat, sleek fellow, apparently about 50. To the question as to whether they got plenty of meat, his his reply was, "Indian he get plenty meat." Just at sundown we pulled up at our long-looked-for objective point, Rea's Ranch.

Well, almost any one could form a faint idea as to the extent of our curiosity and profound satisfaction at the picture before us, presented by a glimpse at this veteran hunter's ranch. Bear, deer, antelope, elk, badger and mountain sheep pelts were tacked up wherever you gazed, and on the roofs of the building were securely anchored several pairs of elk antlers. During the afternoon we saw hundreds of sage hens, or chickens, as they call them here, and we bagged several by way of getting our hands in.

Rea's Ranch is located on a bluff, about 200ft. from the Shotgun, and at an elevation of about 25ft. above the water. Rea named the stream, and says it came to pass thus: Away back in the sixties he and a partner were trapping on this stream. They had pack animals, and among other things too numerous to mention the "pard" had one of those old-fashioned, muzzle-loading smooth-bore guns, as heavy as a fence rail, and Rea says almost as long, "and not worth a white and black skunk skin anyway." They had camped on the west bank of the stream, about a mile and a half below the site of his present ranch. The snow was deep, the horses were overburdened and almost tuckered out; Rea was packing the last horse, when "pard" handed him the old gun to be strapped fast on the now overloaded horse. Rea says, "Keep your old gun, you are more able to pack it than the cayuse. For a thimbleful of beans I would chuck it into the creek," "Pard" took the old gun's part and reached for his revolver, which was always at his side. Rea promptly knocked him down, and that was the end of it. "Pard" pouted, stood the gun up against a cottonwood tree nearby, and the outfit moved on. They soon settled the difficulty and all went on as smoothly as before, but the old gun kept lonely watch leaning up against the cottonwood. Several years after the occurrence Rea came through the valley again, and remembering the circumstance as well as the location, visited the spot. Sure enough, there stood the old gun against the tree, looking much the worse from the action of the elements and its long vigil. Rea, true to his first intentions, took up the weapon and cast it into the stream. Since that time the stream is known as the "Shotgun," and is so shown on the maps.

REA AND HIS RANCH.
From an amateur photograph.

### Rea's Ranch.

We return to a description of Rea's Ranch and its surroundings. The stream is not more than 10 or 12ft. wide 200ft. above the buildings. About 100yds. above it receives the waters from a spring which rises one-half mile further south, and where this spring empties into the Shotgun it is 60ft. wide and will average 8in. in depth. Below the building Rhea has constructed a dam, the back water covering several acres. The dam is so constructed that trout can go up but few can return. The consequence is that the water above the dam is alive with the speckled beauties of all ages and sizes, and furnishes not only fine sport but a handsome revenue from the sale of fish. He seines out of that dam yearly thousands of pounds, which net him 20 cents per pound delivered on the cars at Beaver Cañon. He has 920 acres of improved land, most of which is park or meadow, well set with natural grass, well watered and beautifully located. The buildings include of the dwelling, which is built of logs, with planing mill doors and window frames with glass. The roof is formed with poles, averaging from 4 to 6in. in diameter, laid side by side, in the interstices ropes of hay are carefully packed in, and covering the whole is about 10in. of earth, which becomes solidly packed and makes a good roof, shedding water well and besides resisting the sun's rays in summer, as well as the chilling blasts of winter. A good-sized kitchen attached completes the dwelling part of the ranch; and, although not as elegant as a brown or green stone front, with the floors covered with Brussels and the windows draped with lace curtains, Rea's Ranch on the Shotgun, located as it is in that beautiful valley in far off Idaho, furnishes finer scenery, with more solid comfort, rest and recreation for the brain-worker than either my pen or camera can depict.

The valley is about eight miles wide, bounded on two sides by spurs of the Rockies, some of them snow-capped and well wooded, and the air as pure as the rippling water. Near the dwelling is another building, known as the "dead house," without windows, but two doors on opposite sides. The contents of this building furnished a medley for a tourist not soon to be forgotten. Here hung against the wall, to the left as we entered, the antlers and skull of a bull elk, which had been killed but two weeks before our arrival. In yonder corner hangs the saddle of an antelope, with a very large piece clipped out for our

*Oct. 4, 6 A. M.*—Just arrived at Green River, Wyoming. The scenery here is grand beyond description. Weber becomes enthused and as we are again delayed and there is sufficient time, he gets out his camera and takes a view of Castle Rock, which is a magnificent pile, 600ft. above the railroad track, and fashioned by one of nature's best architects. 9:20 A. M.—Off we are again, and our objective point is Pocatello, Idaho. 3 P. M.—Just crossed the line dividing Wyoming and Idaho. For the last hundred miles we have been traveling along the Bear River, and if we saw one goose, brant or duck we saw thousands. This stream meanders along through the Rockies, and is the only one within many miles; and hence the waterfowl all congregate on its limpid waters and guzzle over its pebbly bottom. 10:30 P. M., we arrive at our destination, Beaver Cañon, Idaho.

*Oct. 5.*—All hands up early, repacking our baggage and getting ready for our trip up the Shotgun Valley to Rea's Ranch, which is 45 miles due east, and in the direction of the southern boundary of the National Park. We hire and the only thing interesting either in the animal or vegetable kingdom this far through this barren land to a traveler is the fact that it is almost impossible to look from the car window and not see prairie dogs sitting upright and sometimes within 10ft. of the track, looking cute and wise. How they live there and keep sleek and fat, where nothing grows but sage, I leave others who know to tell. Athol, Wyo., 1:35 P. M.—Colorado is now east of us, and owing to a wreck on a branch road we are delayed two hours; likewise at Cheyenne, which is a beautiful town of 8,000 inhabitants.

supper. Over there in that corner lies a pile of mountain sheep horns, antelope heads and horns. On the poles above our heads hang bear, antelope, coyote, lynx, badger, mountain sheep, elk and moose hides, and on the joists above rest our guide's toboggan and Norwegian snow shoes (some of the latter 10ft. in length). On the ground floor are traps of all kinds, some for grizzly and silver-tip bear, weighing as much as 50lbs. each, to which are attached ponderous chains. A great heap of riding and quaint-looking pack saddles finish up the contents of this unique inclosure, the sight of which helps to dispel the cares of business which still hover around us, though far from home and out of its reach.

The next structure adjoining is used for a general workshop, and has a forge, work bench and all kinds of artisan's tools. Near by the latter is the stable for the horses, and connected with it is the corral, a large inclosure in which the cayuses are confined when not grazing. Below the dwelling and about half way to the edge of the water is a cave or "dugout," such as many families lived in on the borders of civilization, where I used to hunt years ago in Iowa and Dakota.

The front of Rea's cave is built of logs, and has a strong door. This is used as a cellar for the safekeeping of meat, etc. Supper was called, and we were all anxious to get there, as our ride of forty-five miles from Beaver Cañon and the additional exercise of taking a chance shot at sage hens gave us appetites for much less tempting grub than juicy antelope steak, brook trout and roast elk, with good bread and potatoes, which was the bill of fare for supper, with the addition of coffee or tea as preferred.

*Sunday Morning, Oct. 5.*—We have all slept soundly. The sun is just peeping over yonder snowclad mountain top, the air is thin and cold, and a white frost covers the ground. That hoary-headed peak doesn't look to be over five or six miles from here, but Rea assures me it is twenty good long Idaho miles off. So much for our judgment of distances in rarified air. As he and I stood in front of the door admiring the beautiful sunrise as it lit up the magnificent landscape, I kept him busy answering questions, when suddenly I thought I saw something move on the side of a small elevation off to the right. I called his attention to the fact. "Oh, they are antelope; I presume you can see them in almost any direction and at all times in the day from the ranch. Get your field glass and take a good look at them." The glass was forthcoming, the same I carried through nearly four years of the late war, and sure enough there was a herd of ten antelope quietly grazing. I say, "George, how far are they off?" Again I was surprised, and took lesson No. 2 in computing distances in rarified air, as he replied, "At least two miles." "Where are Bush and Weber? We will call them. They, too, must see the first four-legged game." They soon appeared, half dressed, slip-shod and rubbing their eyes. The gentleman of German extraction became suddenly very much excited, and insisted on starting in pursuit at once, before breakfast, and although it was Sunday morning. "How far are they off?" queried one of us. One said three-quarters, the other thought they might be out about half a mile. When informed by George that they were at least two miles off, and that it would take most of the forenoon to get around them and under cover within shooting distance, our German companion became somewhat less enthusiastic, and gave up the idea of going for antelope on that particular Sunday morning before breakfast. A splendid breakfast over, and, after filling our pipes, we were busy doing up the ranch and its surroundings, lest some object of interest might have escaped our attention during the evening.

We soon learned that two new and important recruits had arrived during the night, and, as they were to form a very important factor in the outfit, I will devote a few lines to a description of who they were and what function they were to perform. One was "Bill," known as the "Panama Kid," who was a practical "cowboy" and an experienced "packer"—the latter avocation is a trade, calling or profession distinct from any other in the Rockies, and whose services are indispensable on a hunt such as we were about to engage in. His wages are fixed both by custom and usage, and if he understands his business his services always command his price. The packer furnishes his own outfit—horse, saddle, bridle, blankets, lariat, etc., and gets $3 a day and his grub. His duties are to pack the animals, which is quite a feat, and can only be acquired by long experience and constant practice, and in addition he cooks for the outfit.

The other recruit was Frank, a very estimable young man who had been a sheep herder for years, and who received $2 a day, his grub and a horse to ride. His duties were to assist the packer, picket the animals and do chores generally. Eight pack animals were required to transport our duffle, and it required the combined efforts of Rea, "Kid" and Frank all day Sunday to get everything arranged for the start on Monday morning. Bush, Weber and myself concluded to try our horses, which had been assigned us by the guide, and they were saddled up. Warrior, Rea's favorite hunting horse, was assigned to the writer. He was a noble fellow, almost white, and as gentle as he was good, and more will be said of him hereafter. Bush drew Wardrobe, a fine, wiry, jet black horse, smaller than Warrior, but a trump also. Weber got Buckskin, a somewhat tricky, fractious cayuse, and smaller still than Wardrobe, as Weber was the light-weight of the party, only tipping the beam at 125. SHONGO.

### Adirondack Deer.

DEER hunting in the Adirondacks will begin on Aug. 15, and the season will close on Oct. 31. Hounding will be lawful from Sept. 10 to Oct. 10, inclusive. No deer hunting at all is permitted in Ulster, Greene, Sullivan and Delaware counties. Hounding is not permitted in St. Lawrence county. One person may take two deer in a season only. No transportation (except of heads, feet and skins) allowed, except that one carcass may be transported when accompanied by the owner.

### "Two are Company, Three a Crowd."

IN hunting moose by calling, the members of too large a party are likely to interfere with each other and spoil each other's chances. For instance, two of us with our callers start out in the afternoon to spend the night on the grounds where we intend calling the next morning at daybreak; we have to get at least four miles apart, and with a large party it is difficult to properly locate them. EXPERIENCED.

## A HUNT IN THE WHITE PINE COUNTRY.

IN northwest Colorado lies a large tract of land north of the Grand River, which is one of the best hunting grounds now left in the United States. It would be hard to imagine any use beyond a hunting ground to which it will be put, a good part of it being mesa land, near timber line in altitude, and so cut up by ravines and cañons that journeys between neighboring parts are matters sometimes of days. In the surrounding counties are good farming and grazing lands which have been so thoroughly settled that the scattered game which, not very many years ago gave the Ute Indians their living, has been driven into this much smaller area. The Government has been quietly considering lately the preservation of the game and the conversion of the land into a second great national park, but this is probably a long way in the future.

Two years ago I found myself with time on my hands in Glenwood Springs, the Colorado hot springs resort on the D. & R. G. R. R., which runs through the Grand River Cañon on the very edge of the game country. Since I had last been there, a year ago, several bears were killed by Big Ike, the professional of that district, in the well-nigh impassable ravines which here and there cut the perpendicular sides of this cañon.

I had only three days, but when one is in the midst of a game country a good deal can be done in a short time, particularly when you are familiar with the country. I was fortunate too, for in Dotsero a few miles up the cañon, reached by a freight train early in the morning, I found Ned Dempsey, my guide, who has supplied me and a great many others with sport in the mountains. He had happened to come to town that day, and I lost no time in securing him. It took us not more than an hour to buy flour and bacon enough for three days, pack them and our bedding on his donkey, and start for where, as he expressed it; he had some elk staked out for me. We went light, you see, for we were to be back in three days, and then I am a little of a crank on traveling with few impediments and dispensing with riding horses when possible. When it is a very long way to your hunting ground horses become necessary, but when you are there as I was, one's legs are best, for besides the saving of expense, one's movements are not controlled by the factor of food hunting and horse catching in the mornings. If you can go with Dempsey you will recognize soon that one of his virtues is a great faculty for packing quickly. We got an early start and were soon on the trail to the trout lake in the mountains about sixteen miles away, where we planned our first camp. About six of these miles is a good steady climb, sometimes zig-zag up a steep place among furs and pines through which one can rarely get any breeze or view of the country, but the panorama from the top repaid all our work with interest; forty miles away we could see the Mountain of the Holy Cross, so called from the shape of a snow-filled ravine on its side, near its summit. On our other side, the hill fell down into what Ned said was a first-class bear country, and I readily believed it as we looked down many hundred feet to the tops of the firs and the fallen timber on the ragged sides of the ravines. A bear hunt is still waiting there for some man with more time than I had.

Our road led along the crest of the steep hill we had come up, and we pushed on, startling a bunch of cattle or horses now and then, but no game though we were on the close watch. I was glad of it, as the killing of a deer meant the end of our hunt, for venison cannot be sold or even given away in the spring according to the laws of Colorado, though a man in the mountains can kill meat for his own use. As the day grew short I added to our sturdy little donkey's load, one by one, my coat, my hunting shirt, my rifle, and was thinking of climbing on top of them all, when at about 4 o'clock, after following up for perhaps half a mile the prettiest little trout stream with the clearest and shadiest of swirling holes that ever were seen, we broke through the last clump of swamp alders upon the bank itself of the trout lake, our first camp.

We fished from the time we drove the donkey out of camp to rustle for his food until it was too dark to see, and without moving from one small cove caught, on flies, 114 trout that would average from one-half to three-quarters of a pound. I am glad to say that the laws of the State, and their strict enforcement, which is more to the point, will, in my opinion, allow any one to do as well as we did for a good many years.

Four years ago, before the present Colorado fish and game law was passed which forbids the sale of uncultivated trout at any season of the year, Ned Dempsey and a partner fished this lake for the market; while one carried the fish to town on donkeys, a two days' trip, the other caught trout enough to keep him on the road all the time. One hundred pounds of fish a day caught on flies came out of that little lake and the mile of stream below it for a large proportion of spring and early summer. Now, happily, this can not be done, or I should not have enjoyed those crisp, thick little fish, for there must be a limit, though hard to imagine these, to the fish in any waters. The above fish law works well; fishculture has become a small industry in Colorado, and the fish dealers are the most jealous guardians of the law, which is to them the prosperity of their business, and they follow and arrest many law breakers every year.

An early start in the morning, and our donkey, with his big pack and short, convulsively moving hind legs, headed our little party to the elk country; over this great wood-covered hill and round the next we climbed, the little lake with its precipitous green sides appearing from time to time below us where I least expected it. Ned was as light-hearted as I, chaffing his firm friend, the donkey, on his foolish appearance, and encouraging him with descriptions of the bunch grass he would soon find in our camp above until we arrived, at 3 o'clock, beside a spring just left by the snow to do its summer bubbling and give to the elk and deer what we were going to try to take away. However, that's the way we are made.

I rolled my thick jacket up and tied it around my waist with a small rope, for, hot as it was then, the night air was going to be very different, and our hunt might lead us some distance from camp. Ned took the lead, going carefully, examining the tracks, old and new, of which there were plenty, but not a sight of any game did we get; we started to follow, but gave up. A bear track perhaps two days old peeped over each ridge, until we came on a patch of timber in which were unmistakably a number of fresh elk signs, and we knew we had got there; Dempsey, with his finger on his lips, turned and gave me a look of "I told you so!" and in whispers he stationed me beside a clump of bushes on an edge overlooking a green level patch with a small spring in its middle. Then he walked softly away, and I, untying my jacket from around my waist, examined every rock, tree and corner around, listening to my heart beat, and telling myself how absurd it was to come so far and then risk my object by excitement; but philosophy is out of place in the mountains.

There! How in the world did he get there? I had not seen him come into the meadow; but there he is, slowly walking toward me below, nibbling a tender root here and there, as confident of solitude as possible—a young stag elk. Will he see me as I stealthily raise my .45 70 to my shoulder and wait for a sight at his fore shoulder. He won't turn, but still he doesn't suspect harm; and I abandon my first bead to take a long breath and to get a better one as he comes from behind a shrub. Down hill and only about seventy-five yards off, so aim well under; he swings around, I pull, and I gulp down my heart into its place again; for with strong, long jumps he is making a new record for a fir patch a hundred and fifty yards away. I pump another cartridge and pull again, but no use, till all of a sudden down he goes, and falls with a crash on the very edge of the trees, a game beast, for he ran seventy-five good yards with his heart cut in two by my first bullet.

We carried his tenderloin to camp, down the mountain, in the dark, and no small job it was either, but success makes light of difficulties, and we enjoyed a hunter's meal cooked over embers, and turned in under the stars to sleep until daylight. We packed his saddle on the donkey, but his fore-quarters were more than the little fellow could be expected to carry, so I hung them in a fir tree and we took the back track for the lake. We found on our way a camp of two men and two women who had spent about all the money they had in the world to come out to the mountains from Kansas City, to give a last hope in the high altitude to one of the men, a consumptive. The poor fellow had little to eat besides trout. They knew nothing of hunting, and the invalid had failed rapidly for the last few days. We supplied them with some fresh meat, and before we had started again after our lunch they told us he had eaten a pound of steak and had taken a new lease of life. That's my story; I reached town within my three days, having accomplished, with good luck, you'll say, perhaps, what it takes oftener longer to do; but this, as I have said, is one of the best game countries left to us. *

## CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

CHICAGO, Ill., Aug. 6.—One of the most notable features offered for the entertainment of the public at the World's Fair will be the brilliant water pageant of the Procession of the Centuries, in which will be seen doubtless the most superb collection of allegorical floats ever prepared in the world. The series will present in colossal pictured form the story of America. The technical description of some of the most interesting is as follows:

"The floats or barges, 24 in number, will be mounted upon specially constructed catamarans, and by ingenious mechanical arrangements will be propelled through the water. The aboriginal age will occupy the first position. In lieu of a single float this group will be composed of a score or more of independent canoes of varying sizes and characteristics, from the tiny bark canoe for a single paddler to the great wooden war canoes propelled by many paddlers. These canoes will be manned by Indians to represent the many tribes, from the nearly naked bronze-hued Indian of the tropics to their fur-clad brethren of upper America. There will be seen the war canoe and the daintier peace canoe, and there will be hunting, fishing and racing canoes. All of these will perform complicated and beautiful evolutions in which they are to be sedulously drilled. They will form a changing, broken group that will serve to act as an advance guard to the great procession of floats. This feature of independent small boats is to be repeated at intervals along the line.

"The aboriginal age will be followed by the stone age, the cliff dwellers. This float will be approximately 40ft. long, 22ft. wide, and 30ft. high, dimensions that apply with necessary variations to the remainder of the floats. It will show in *fac simile* the rude dwellings of the old cliff dwellers, mere caves in the rocky faces of steep cañon walls and reached by rude notched posts or ladders. At the foot of the cliffs on the flat level space will be seen groups of the Indians engaged in sacred dances. Near by their women grinding corn and preparing the feast. Curious feathered poles, rude trophies of the hunt, great jars of pottery and all manner of their implements, domestic, for war, religion and hunting, will be seen scattered about.

"Following the stone age comes 'The Age of Metal, the Aztecs.' Not the bronze age, for America never had such an age, but in its place an age of gold and copper. The vast float shows one of the huge teocallies of old Mexico. Within the shrine is to be seen the flower-garlanded, blood-bespattered image of Huitzilopochtli, the war god. Before the shrine there is a possession, Motehcuhzoma borne aloft by nobles in gorgeous vestments, with slaves holding a brilliant canopy above them. The great chief is robed in marvelous garments made of the brightest feathers of millions of humming birds and adorned with massive gold ornaments and precious calchihuitls. He is being conducted from his devotions to his splendidly ornate galley blazing with gold and color, with nodding plumes and flaunting banners. Other smaller canoes attend on either hand. Some of these draw after them floating islands covered with blossoming flowers. On other parts of the platforms various groups enact other scenes of Mexican life."

Others of the floats will be "Columbus at the Spanish Court," "The Departure of Columbus," "The Discovery," "The Cavaliers," "The Pilgrims," "De Soto on the Mississippi," "Marquette and La Salle," "Pioneer Days," "War," "Peace," "Liberty," and still others showing the arts and industries, science and literature. It will be a noble spectacle in all, a brilliant and impressive sight, and he will be a poor American who can look upon it without a lump in his throat.

Now, I don't know that all this would be especially apropos of anything were it not for one fact, and that an interesting one. All these brilliant allegories required a

designer, and their birth shows the quality of that designer. It was no ordinary mind and no ordinary hand which put in color these unbackneyed pictures of form and thought. The artist was Mr. W. L. Wells, of this city. His famous pictures of "Mallards" and "Teal" show that he has been on the marsh with both eyes open. As a shooter he is very well known in all this section, so familiarly known, in fact, that almost everybody out here calls him just Billy Wells, though I presume after this we will have to speak of him as Signor de Welles, or something of that sort.

This shooter-artist is as versatile as he is clever. Perhaps some readers of FOREST AND STREAM may recall the amusing little comic sketches which appeared in the FOREST AND STREAM report of the Illinois State shoot. These were the work of the same pencil that laid the draughts for this grand Procession of the Centuries. I think there will be many FOREST AND STREAM readers who at the World's Fair will gaze at this stirring pageant with an added interest, and perhaps with another reflection on the present surprising possibilities of the fellow with the gun.

THAT SNIPE.

It is probable that before very long Warden Bortree will have something further to say in regard to his position on the snipe-waterfowl question. Still, as I look over this week's FOREST AND STREAM, I cannot repress the thought that all his trouble must be for naught, since in the end the most valuable authority of all must be against him. In short, the thing has already been settled and there is no use talking about it any further. From Col. Bond's article I take, from the embodied letter written him by Dr. N. Rowe, the following:

"Moreover, the snipe is not a water fowl; that I stated in the *American Field* several times. In regard to this very question you can state positively what I have written you."

After this final and overwhelming word on the matter, I cannot see any use in further discussion, and trust that Warden Bortree will consider it in the same light. If it has been editorially stated by the *American Field* that the snipe is not a water fowl that do settle it, and no reference to the courts is necessary.

There is another phase of this question, for the sake of which I must again quote the opening sentence of this same letter:

"There is one thing that everybody is off on in regard to snipe. It was I who, in order to harmonize matters, proposed to remove all protection from snipe, and it was thoroughly and positively understood that snipe should not be protected."

The alarming position assigned the public by the eminent naturalist and rhetorician in question, in that the said public mind be both on and off a thing at the same time, cannot fail to set one thinking. When one thinks, the carking conviction eats into one's soul that there should be a more explicit statement as to the part the E. N. and R. actually played in that original legislation. I have just been talking with a gentlemen somewhat posted on the facts, and he tells me that the E. N. and R. did not cut even the figure of head midwife at the birth of that freak in legislation, the Illinois game law. If this be true, my quotation reads larger than it should. I hate like everything to destroy popular idols, but we have to do it sometimes in our business. It's tough.

THE PRAIRIE CHICKENS.

A young gentlemen who has lately been out prospecting around the edge of town says, "I believe there are more prairie chickens in Cook county than in all the rest of Illinois." He saw a number of pairs, but no young birds at the same time. Last week he bagged eight jacksnipe. Jacksnipe have also appeared in small numbers near Hammond, Indiana.

I have heard little from the chicken crop in lower Illinois, and we are not apt to hear much from it. Shooters who know a good chicken hole these days are not swarming into print for the most part. It is certain, however, that there will be good chicken shooting in Illinois, though the best of it will be gobbled before the law opens the season. I should not be much afraid to chance it below Bloomington, and I think a trip with Mason City as an objective point would be very likely to be successful. Barring the larger number of posted farms, I believe I would rather risk central Illinois for a chicken hunt than central Minnesota or South Dakota. I believe that northwestern Nebraska is in general the safest country of all to head for.

Mr. Chas. A. Rathbone, of Detroit, Mich., has the following to say in regard to the "game pocket" I have been keeping on ice for FOREST AND STREAM people:

"I have just received your letter of Aug. 1, and desire to thank you for your kindness in giving me the address and remembering me. I am uncertain about getting West this year; but should I go I will be glad to take advantage of the knowledge and use it in the proper manner."

As stated last week, I have written to all the gentlemen who inquired earlier about this chicken country, or have attempted to do so. If by chance any inquiries have been missed, I wish they might address me again so that I may get the names and addresses. Moreover, I should be glad if any reader of FOREST AND STREAM who wants to have a pleasant chicken shoot this fall would write for this address. I believe there is room for all, and while I know too much to guarantee shooting to anybody, I believe this is the place a good many men are looking for. Two days before the season opens there will still be the same number of men who will want to know, right away, where they can go quick and kill about 100 chickens a day, easy, not too far from the railroad. That isn't the wise way to do nowadays. It is wiser to begin plans for a chicken shoot at least a month ahead.

Unfortunately, the market-shooters begin their plans about a month ahead, also, and they get there, too. The unscrupulous are the most successful in the chicken game. Early chicken shooting is not sport for any one who ever did much of it and can shoot a little bit. The market-hunters do not shoot these "cheepers" for sport, but for so much a per each. It is a wonder they don't take the eggs home and kill the birds with a club as soon as they hatch. Great country, America.

E. HOUGH.

## UPLAND PLOVER SHOOTING.

DON'T think from this heading that it is my intention to describe my success in shooting upland plover or to give my views as to the best way of shooting them. I am merely going to give an account of an incident in connection with upland plover shooting, which, though not exciting or thrilling, is certainly uncommon, and I trust that it may be of interest to the reader.

I was driving over the hills of New Hampshire one afternoon late in July, just before the uplanders leave the inland pastures for the sea, when my attention was attracted by the whistling of some plover. Looking up I saw a pair flying over my head, and presently I saw them alight in a field where several more were feeding in the long grass. This promised sport; and a few days later I took the same drive with a gun in the wagon. When I arrived at the field where I had seen the plover feeding, I found that the grass had been cut and a number of men were loading hay into an ox-cart. In the lower corner of the field, however, I discovered a number of plover quite near a stone wall. Having hitched my horse, I made a long circuit and crept up to the wall, on the other side of which I had seen the plover. They were still there and within easy range; so I stood up and as they ran fired at them. Whether I got any or not is neither here nor there; but no sooner had I fired than one of the men whom I had seen loading hay came running toward me, shouting to me to get out and to take myself off to warmer climes, and calling me all manner of hard names. I waited till he came near and then tried to tell him that I was bent on no harm but was merely shooting plover. "Shooting plover!" he shouted. "Don't you suppose I know what you're doing?" and then he came very near calling me more names. Presently he became calmer, and then he told me that he had most as soon I went into his house and shot his children, and that he had much rather I shot his chickens. "Why," he said, "them plovers have been here every summer since I was a boy, and I wouldn't have them drove off and not hear them hollering and a whistling round the lot for nothing." I began to feel very mean and tried to say something about "sport," but whatever it was sounded very weak, and I went back to my wagon cured of all desire to shoot upland plover for the rest of the summer.

It is very rare to find such an appreciation and love of birds among farmers of New England, and it is this that makes me think this little incident worthy of note.

BRATTLEBORO, Vt. J. D. B.

## OLD DAYS IN MAINE.

MACHIAS, Washington Co., Maine.—These notes refer to the region watered by the Machias River and its tributaries. Memory carries me back for more than 60 years. At that time there were caribou in certain localities. In winter they collected on the plains where the moss grew upon which the fed, obtaining it by pawing the snow, making large heaps when the snow was deep. I remember seeing one brought into town alive, caught in spring on the crust. They were soon destroyed. I think there has not been a caribou on the river for 50 years.

The moose were quite plenty in those days, but the crust hunter annihilated them some 30 years ago. I was told that one spring the Indians had as many as 15 carcasses in one pile, killed on the crust. There came a thaw and took off the snow so that they could not get them out of the woods and so lost them.

The deer in my young days were not very plenty. They increased so that about 1845 they were quite plenty and kept so for about 20 years. In 1844 or '45 the first wolf was seen on this river. They seemed to come from the north, appearing first at the head of the river. They increased very rapidly, thinning out the deer. They reigned for some twenty or twenty-five years and then left and there has not been one seen or heard since.

After the wolves left, the deer increased. Before the game laws were passed I knew of two hunters who killed thirty-three deer in four days still-hunting in October. The hunters thinned them off till the law was passed protecting them, since then they have increased, till now they are as plenty as ever. One day last fall one of a party of hunters got lost and was out all night. The next morning his comrades with as many others as they could muster, some eight or ten, formed a line, each keeping within hailing distance of the other, and marched through the woods in the direction they though, him to be, shouting and making all the noise they could; this of course drove the game before them, and the man counted fifty-four deer go past him before the men came in sight.

Bears have always been plenty in this section. One fur dealer in this town tells me that he handles about twenty-five skins in a year killed within thirty miles of town.

Ducks of different kinds are plenty in autumn in our fresh water streams and ponds. Partridges are plenty some years and some years are not, owing I think to the state of the snow the previous winter. They have a habit of diving into the snow when it is light enough, to spend the night. Occasionally there comes a sleet storm in the night which forms a crust and they are imprisoned, and unless there comes a thaw in time they die. We have a few snipe and some woodcock in their season.

Pigeons were plenty in my boyhood days. We used to catch them in nets. I have caught 150 at one spring of the net. I know men who have caught over 5,000 each in a season. The pigeon had a habit of coming to the salt marshes for a drink of salt water about sunrise. As there were no trees for them to alight on, as they wanted to do before going down to drink, we used to put up what we called a raker; which has a pole set in the ground with another across the top with slats for them to alight on. The sportsman (?) would hide behind a blind with the largest kind of a gun (we called them King's arms) loaded with fine shot. The top pole was put in such a position that a gun fired from the blind would rake it "fore and aft." The pigeons would frequently come in so large a flock that the raker would not hold them. As many as could would alight, the rest would flutter for a moment over those already alighted, when the old King's arm would speak and down they came. I have known 100 as the result of two shots. But that is all gone. I have not seen a pigeon for years.

We have pickerel in our river, white perch yellow perch chubs etc., in our ponds. All of our small streams and many of our ponds abound with trout.

Now I do not think this a *paradise* for sportmen, but I *do* think there is sport to be had here in the season. In the summer, fishing; in the fall hunting combined with fishing. I think too there is one of the best if not the best chance for a deer park in the State. There is a tract of land in the market of over 20 000 acres which can be bought for about what the timber is worth standing on it, easy of access, no settlers and no turnpike crossing it, that takes in the best section of deer ground on the river. It was on this tract the man mentioned above saw the fifty-four deer. I would not be afraid to guarantee anywhere from 500 to 1,000 deer already on it. If protected they would double every year. As it is in one block my plan would be to enclose with a wire fence, the posts, iron rods driven into the ground. Such a fence would not burn or blow down and would not be very expensive. I should want about four men for game keepers. The timber on it would pay a good part of the price of the land, the increase of the game the cost of running it. This tract is about 15 miles from here, a turnpike within three or four miles, a buck board road the rest of the way. To get here, we shall have a steamer three times a week from Rockland via Bar Harbor. L.

## NORTHWESTERN DEER DESTRUCTION.

CHEWELAH, Stevens County, Wash.—The game is going fast from the Pacific coast, and we have not the power to prevent it, because away back in the mountains there is absolutely no game law, and no one to enforce it if there was one; so everybody who has a gun, except the true mountaineer, will shoot and kill any and everything he sees in the hills and at any and all times, and the small handful of sportsmen in this country cannot prevent it. All through the month of February the snowshoe hunters follow the deer so relentlessly in the deep snow that they are frequently driven down into the settlements, and shot or killed with dogs, the Justice of the Peace and the Sheriff taking a hand in the general slaughter. One man of my acquaintance long carried a black eye and a large section of sore ribs, the effect of a personal encounter with a buck deer in the deep snow. Being unable to kill it in any other way, he broke all its four legs with a club, and then went home for a knife and returned and cut its throat. Then he boasted of his daring and valorous deed, and his friends appeared to admire him. A while ago the Indians in this neighborhood made a drive in the mountains and killed seventy in one day. If the illegal killing of deer is allowed to continue long in that manner it will not be many years before venison will cease to occupy such a conspicuous place on the bill of fare of our city restaurants on the first day of March.

I notice an occasional contribution to the columns of FOREST AND STREAM from the pen of Orin Belknap, of this State. He is one whom I admire very much, because he is, to my own personal knowedge, one of the genuine sportsmen in this part of the country; a man who would not kill a deer or chicken out of season if his breakfast depended on it. K.

## DON'T BLAME US.

WHAT lover of shooting has not been called a fool or some other equally unpleasant name for being fond of such a childish and nonsensical sport as hunting?

If, however, those who ridicule some friend for walking and working hard all day in rain and mud just to get a few little birds which he could have bought for quarter the money would look at it from a psychological standpoint they would not wonder why others go shooting, but would be surprised to find that they themselves do not.

Human beings, like other animals, possess many instincts, and the hunting instinct is one of them.

If evolution and the survival of the fittest be true at all, the destruction of prey and human rivals must have been among the most important of man's primitive functions and these have become ingrained.

The hunting instinct is a transitory instinct, and if it is not exercised at all it may even entirely die out; and this is what has happened to most of the present civilized world. This desire is sure to make its appearance in each one of our lives at some time, generally before we are fifteen years of age, and if it be satisfied it becomes a habit, otherwise it disappears.

If we could retrace our lives we would undoubtedly find where this instinct has made its appearance. So, when in the spring or fall we get "the fever," and are blamed and scolded far going shooting, we can say that the bill is not to be settled with us, but with mother nature. M.

### What the Snipe Is.

*Editor Forest and Stream:*

It seems to me some contributors are wasting a great deal of ink on the snipe question.

After exhausting the stock of modern opinion they seem to be raking over the piles of ancient lore for "argument," as if a man's opinion was of greater value because he was a forefather!

If Adam himself had left a written assertion that a jacksnipe was a waterfowl, it would count for little with me, for I don't believe he ever shot one in his life. In fact, the most authentic ancient history doesn't state that there was any mud in his garden, and no snipe could live without mud. As the insignificant little thing that is now convulsing the continent could not possibly live in the water and would starve to death on dry land, why not compromise the matter and call it a mudfowl?

DIDYMUS.

### The Massachusetts Acclimatization Fund.

MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION, Committee on Acclimatization.—Boston, Aug. 8.—The committee on acclimatization of the Massachusetts Fish and Game Protective Association wish to acknowledge the receipt of the following contributions for the work of restocking the State with game, viz.: Mr. D. Kirkwood, $5; Mr. Richard Baker, $25; total, $30.

By the omission of three words in the Massachusetts paragraph of close seasons, in your issue of July 21, the close season for pinnated grouse in Massachusetts was stated to be between Jan. 1 and Sept. 15. The birds are protected at all times. Without such protection the Massachusetts Fish and Game Protective Association could not expect to stock the covers with imported birds.

HENRY J. THAYER, Secretary.

# Camp-Fire Flickerings.

"That reminds me."

A Seneaquoteem (Idaho) correspondent sends us this from the Pend d'Oreille *News*. It has the flavor of the soil:

Tom Murphy, W. P. Grainger and Harry Jackson are Priest Lake prospectors. While up there the other day and all the other boys having left camp to prospect, these three started out, two with pick, shovel and goldpan, to prospect for placer in a gulch near by, and the other, Mr. Murphy, with a gun to try and kill some meat, as that article was getting scarce in camp.

They traveled together for some little distance, when the party separated, Mr. Murphy keeping up toward the head of the gulch and the other two going lower down. They had been separated long enough for Murphy to cross the gulch and get on the other side and only a few hundred yards above the others when he was startled by a loud drumming noise, which he couldn't understand at the time, but which proved to be Grainger pounding on the goldpan. Anyhow, Tom, naturally thinking it to be a call of some kind although a new one on him, started toward the noise.

When about opposite the boys he saw Jackson up a tree hanging on to a limb for dear life, and making the most unearthly noise with his lungs possible, and Grainger going up another tree at a rate that would lead one to suppose he was no novice at the business. Tom, on seeing this peculiar performance, commenced to laugh, which it appears was not so thoroughly enjoyed by the others, as they commenced to swear at a 2:40 pace and wanted to know why he didn't shoot.

This brought the mirthful-disposed shootist to his senses, and standing on a rock from which he could look over a clump of brush he saw the cause of the boys' peculiar conduct. It was a grizzy bear and a vicious looking bear, too, for the dog had been running around and snapping at him for some time, which made his bearship somewhat angry, for he would strike such ugly blows at the dog that the force of them would turn him clear around. While all this circus was going on between the dog and the bear the boys were hanging in the trees, taking turns and then together cursing Tom for not shooting. Apparently an opportunity for a good shot presented itself, for he raised the gun to his shoulder, carefully took aim and as carefully lowered the gun again. Just to show how "cussed" a man can be, he innocently asked, "How much longer can you fellows hold on?" This was more than their wrought up feelings could stand, but their vocabulary was entirely too limited for them to express their reply in words—they just turned black in the face with rage.

Tom then sobered down and took a shot at the bear, which struck him, but not in a vital spot. The bear couldn't see Tom and consequently didn't know where the shot came from. He blazed away again, the ball striking home. On the second shot the bear saw where it came from and made a bee line for the place. He only made a few jumps, however, when he fell over, kicked a few times and died. The boys came down from their uncomfortable positions, Tom came over from across the gulch, they all helped skin the bear and went back to camp. Mr. Murphy brought the hide down with him. It's a beauty.

The funniest part of the whole business was drumming on the goldpan. It appears that Mr. Grainger had heard some prospector tell about charming a bear by pounding on a goldpan. The prospector was out trying some diggings and had no shooting iron with him when he saw a bear making for him. Not knowing what else to do he commenced pounding on his pan. The bear first stopped, looked awhile, then turned around and went away.

Grainger remembered the story when he saw the bear coming for them, and as neither of the boys had a gun with them, he said to Jackson, "Watch me charm him."

"Charm your mother-in-law," said Jackson, "I'm going up a tree."

Grainger kept pounding away on the pan and the bear kept coming. When the bear got within an uncomfortably close distance, Grainger started for a tree. At the foot of the tree, however, he made a last effort to charm the bear. Taking the pan and a stick he called out to Jackson, "Now watch me charm him."

"You fool, you'd better get up that tree, or the bear'll charm you," was Jackson's reply, whereupon Grainger started for the tree at the above-mentioned pace.

Mr. Grainger has no faith in the bear-charming proclivities of a gold pan.

## ROD AND GUN AND CAMERA.

As a recognition of the important place of amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, the Forest and Stream offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.

The subjects must relate to Forest and Stream's field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of Forest and Stream.

All photographs will be submitteed to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities; and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the Forest and Stream. This applies only to the particular prints sent us.

# Sea and River Fishing.

## ANGLING NOTES.

### Distribution of Black Bass in New York.

For many years the black bass distributed by the New York Fish Commission were caught during the winter in the "wide waters" of the Erie Canal at Rochester. This was rather an uncertain source of supply, for the number of bass available for planting in other waters was dependent upon the quantity of fish that might be left in the "wide waters" when the canal was drawn down. The bass, too, were of all sizes, so that it was not always convenient to transport them, and it was a trouble to get them when the ice had formed. It was found to be better and cheaper to procure small bass from the net fishermen in Lake Ontario, since which time the distribution has been made in summer. Last week the following shipments were made: To Lake George, upon application of Gen. Robert L. Banks, president Lake George Fish and Game Protective Association, 250; to North Creek, for M. J. Merrill, 200; for A. J. Cass, 250; for W. B. Young, 100; and for D. G. Yuengling, at Riverside, 250. Special Protector Wm. H. Burnett, who met the fish at Saratoga to take charge of the Lake George shipment, could not tell me the final destination of the bass that went to North Creek, but I know that those for Mr. Yuengling were for Brant Lake. North Creek is the terminus of the Adirondack Railway, and one of the gateways to the Adirondack region, where it is unlawful to plant black bass unless the waters already contain them, or the Fish Commission give consent by resolution. Brant Lake is a lake that was stocked with bass, and I have been witness to the growth and spread of the fish in this water, and witness also to their fall, which discounts the "rise and fall-off of the Roman Empire," vide Mr. Silas Wegg. I do not know of a lake of its size that promised after being stocked to furnish such unlimited bass fishing, in reason and in season, as Brant. June fishing, however, knocked it silly. Then the open season was made to begin Aug. 1. The recent fish law opened the season May 30, and now restocking has commenced. Gen. Banks asked for 1,000 black bass for Lake George, the only water in the State where there is a close time for the fish during the breeding season, and where the law is rigidly enforced, and was given 250. A special despatch from Fort Plain to the Albany *Argus* states that last week 2,000 black bass were planted in the Mohawk River under the direction of Fish Commissioner Hackney. As this is the Commissioner's own "deestrick," it naturally has a bulge on the balance of the State. A close season which covers the actual spawning time of the bass will do more to repopulate bass waters than all the bass that the State can buy and plant if the fishing season remains as it is.

### From Canadian Salmon Rivers.

The salmon fishing in Canada is on its last lap for this season, and my friend John Mowat in a personal letter says: "I traveled yesterday with our Premier, Sir J. C. Abbott, who had just returned from a week's tour up the main Restigouche, and although an ardent angler, had never seen our river. He was fairly successful in hooking, but the salmon were very delicate as well as fastidious, and three-fourths of those that interviewed him declined any handshaking. And although one of the most courteous of gentlemen, and Premier of Canada to boot, he could induce only six fish to enter the parlor. He was much pleased, however, and well he may have been, for it was the hottest week of the season. An odd fresh-run fish is still taken, principally at the home pool of the club. There will still be time for a week's good fishing in the upper pools if we have rain and cooler weather, only there will be very few rods to embrace the opportunity should it come."

Capt. Sweeny, poor fellow, could not die in Albany, and he made them bring him down here where he could breathe his last looking at the spot he loved so well. Peace to his ashes! He was one of the kindest, most hospitable and genial of men that ever cast a fly on the Restigouche.

### Hudson River Salmon.

When it was reported last week that four salmon had been killed in the Hudson River at Mechanicville with the fly, I made an effort to learn the particulars of the capture, because if the fish were actually killed with rod, reel and fly I believe that it was the first time that a salmon had been killed in this stream with the fly. A number had been reported previously as having been killed in this manner, but in every instance it was found upon investigation that the fish were killed on spoon bait. Mr. A. C. Johnson of Mechanicville, writes me that two of the fish were killed by Willian Vandenburgh and Albert Miller, that the salmon weighed 8 and 13lbs. respectively, and the captors tell him that they killed three with a deer-tail fly, *i. e.*, a bunch of deer's hair tied on a hook. The other two salmon, killed by John and James Dyer, father and son, were taken with spoon bait.

### Sale of Metis River.

Only a few months ago it was told that Lord Mount Stephen had sold his fishing on the Metapedia River to the Restigouche Salmon Club, and now Mr. Mowat writes me that he hears that he has sold his Metis property to an American friend, and that the price is probably well up toward $100,000, as the buildings are very fine, and the site and stream cost $32,000. Of the river Mr. Mowat says: "It is short, and a 90ft. fall three miles from the sea is a regular stopper for the fish. The stream is ledgy, with fine spawning beds, and unless supplied with fry will never be a salmon river. I hear that Lord Mount Stephen got only one fish on it this season. I hear also that he killed but one fish this spring in his Perthshire River, Scotland, but he rather astonishes the natives over there by running the rapids and fishing from a Gaspe canoe with a couple of his old guides taken over for the purpose.

"Some of the North Shore rivers, St. John and Moise, have done fairly—90 fish to three rods in twelve days and 100 to four rods in two weeks. The great complaint are, first, mosquitoes; second, lack of morning papers. Of course, vegetables, cream, butter, new-laid eggs etc., must all come out of the can, and it is so hard to combine business (which nowadays will not wait) with pleasure that the North Shore rivers are now only suitable for those who have retired from active business."

While three-mile salmon rivers in Canada are selling for a price well toward $100,000, the Hudson River is waiting to be opened in the upper part by fishways that will permit the salmon now in the river so reach suitable spawning grounds above the mills and factories. This can be done, and a fishway put in every dam and fall from Fort Edward to Luzerne, for about $40,000. These fishways will not only permit salmon to run up above all foul water to the streams where the fry has been planted, but they will also give shad and other fish an opportunity to do likewise. The State has built three fishways in the Hudson and now all interest appears to have ceased in making the Hudson a self-sustaining salmon river. This is an opportunity for Forest and Stream to show the power of the press in awakening the Legislature to the importance of building fishways in the Hudson.

A. N. Cheney.

## SUSQUEHANNA FISHING.

Bainbridge, Pa., Aug. 2 —Owing to the great amount of rain that fell during the month of June and in the early part of July in Pennsylvania, bass fishing in reality opened up auspiciously only three weeks ago. The dry spell which prevailed all along the river from the 10th of July to the 31st brought the water down to a proper level and the fishing was very good, with the exception of the very hot weather, which had a baneful effect. The absence of large fish among the large number of bass taken this season is remarkable, very few exceeding 2lbs. having been caught thus far. Of course the water has not yet reached its lowest stage, nor has bait become scarce; when such conditions exist then it is that the old mossbacks are wont to rush headlong to their destruction. There are many large bass, princely old fellows, in the deep waters of this locality, but they seem to have had so much experience with tempting lures in bygone days that only when driven by extreme hunger will they now take the baited hook.

About ten days ago the writer, while out fishing with a friend, witnessed a performance which was about as amusing to the spectators as it was provoking to the person most concerned in the affair. Mr. Bare and I were returning home from a trip to the riffles when we espied Squire McNeil, an old veteran fisherman of this place, busily engaged in fishing for chubs. As is his usual custom when out of bait, the Squire had pulled up to a grass patch, leaving his baited hooks trailing out from the stern of the boat, while he went on about the business of securing more bait. Just as we were passing by, at a respectful distance, and had said good morning and "what luck," two large bass tackled the two lines and were off before the Squire had time to wink; whr-r-r-r-r, whr-r-r-r-r-r sang out the two reels, up got the Squire with a rod in each hand and trying to keep both lines taut by a graceful see-saw movement of the body, which must have been acquired on the dancing floor years ago. Well, as a matter of course, one rod had to be dropped; this was done, and the fish was soon free. The other bass had by this time sought the kindly shelter of some rocks, snagging the line badly, and it was with considerable difficulty that the fish was finally landed, and found to be a 2-pounder. The Squire is certain that the bass lost was by far the larger of the two, but just why he did not hold on to him he is not able to explain. We were not near enough to help the Squire with his fish, nor were we close enough to hear any "un illigant" language. The Squire says there was none used, he didn't have the time.

In the middle of the river opposite this town there lies sunken in deep water an old tree; some of its branches extend above the surface of the water. About this tree a great many minnows gather to feed upon the insects found in the decaying matter collected about it. Some days since John Fullerton visited the spot and dipped bait from the bow of his boat, and with them fished for bass from the stern. In this manner he caught a dozen fish in a comparatively short time, and later in the day returned to the tree and took six more.

Pike-perch ("salmon") fishing has been fairly good for the early part of the season, but will be much better as cooler weather comes on. Some fine fish have been caught, and doubtless many more could be taken if the best bait, which is the lamprey eel, was to be had. The lamprey seems to be the only killing bait, and its scarcity is much deplored by the "salmon" fishers of these parts.

Among the fishes observed occasionally in these waters are the pickerel, rock bass, yellow perch and German carp. The pickerel and yellow perch are rarely taken here; the few pickerel that have been caught were very small as a rule. On July 20 George R. Bean, while fishing from a flat boat, at the river landing, caught a pickerel 19½in. long and weighing 1¼lbs. The fish was in prime condition, beautiful in coloration (we thought) and very excellent food. Rock bass are seldom seen. They are supposed to be hybrids between bass and sunfish here, which is not so according to the books.

The German carp has only recently made its appearance in the river and canal, and is frequently caught by using worms for bait.

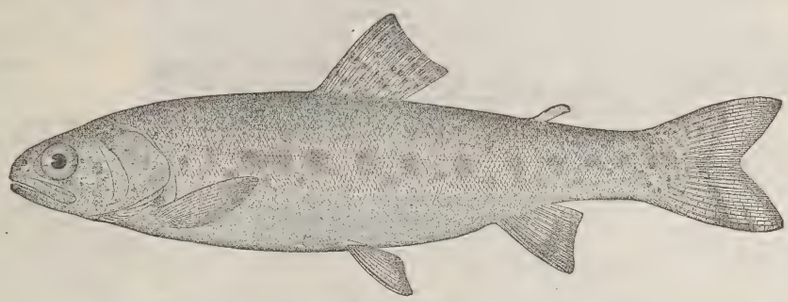
Dr. Hollingshead tells me that the fishing on the grounds of the Red House Gunning and Fishing Club at the head of the Conewago Falls, has been very good during the past three weeks. Among the catches mentioned was one made by Mr. Fred Ebel and Mr. Baker. These gentlemen caught in a day's fishing thirty-two bass averaging a pound in weight. Fishing is reported good also at Marsh Run and at the Middletown Ferry, just a few miles further up the river.

Stehman Herr.

### The Kingfisher's Rattle.

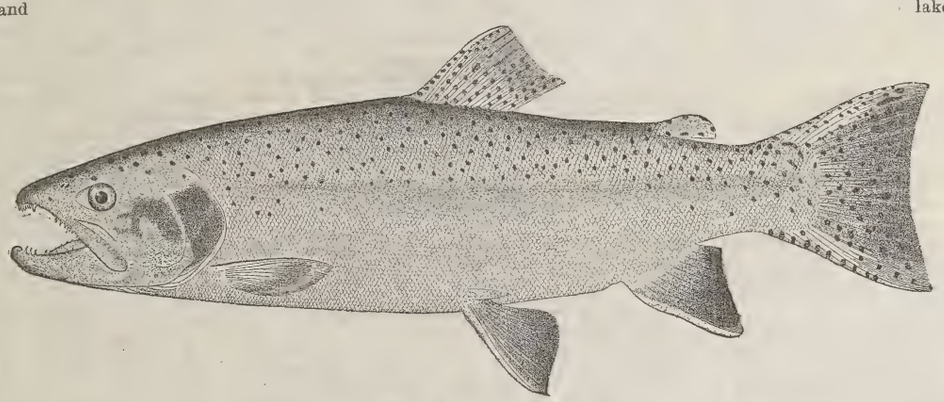
I've been on the road almost night and day lately, and only at home long enough to read the rattle of "Kingfisher"—and that in time stolen from sleep. One of these days I too may have time to go a-fishing; just now I'm "chained to business."

Headlight.



### Canadian Trout Ice Fishing.

An "order in council" of July 9 forbids fishing through the ice for trout in Canada.



## THE RAINBOW TROUT.

THE brook trout, mountain trout, speckled trout, or golden trout, of California, having become famous in its own country, was introduced many years ago into Eastern waters, wherein it is commonly known as the rainbow. The fish has been acclimatized also in Europe and Japan. Wisconsin, Maryland, Michigan, Missouri, New York and North Carolina now furnish suitable conditions for the new-comer, and in some Pennsylvania streams the species thrives, multiplies and provides fine fishing. Mr. Stewart has told in FOREST AND STREAM how readily the rainbow has accommodated itself to mountain streams of North Carolina, and how it appears to take unwarranted interest in the spawning of the brook trout. Our illustrations show an adult male from Verona, Missouri, where fry were introduced by the U. S. Fish Commission in June, 1882, and a young specimen from California showing parr marks. The rainbow was planted in the Yellowstone Park in September, 1889, and two years later Prof. Jenkins and Mr. Elwood Hofer found a number of 10in. specimens in Gibbon River, both above and below Virginia Cascade, near the place of deposit. The fishing there was limited to the artificial fly or the catches might have been larger.

The rainbow grows to a length of 2ft., and individuals of 8lbs. are on record. The relation of the rainbow to the steel-head or Gairdner's trout is still open to question. Ten years ago the writer called attention in FOREST AND STREAM (June 15, 1882) to the difficulty of distinguishing the young of these two, and he finds no less uncertainty in the problem to-day. If the two are identical we should use the older name, Gairdner's trout, for the species. It is well known that the latter grows nearly as large as the average Atlantic salmon, which it resembles strongly in shape.

RAINBOW TROUT (YOUNG).

RAINBOW TROUT (ADULT).

The rainbow feeds on worms, insect larvæ and eggs of other *Salmonidæ*. Dr. Livingston Stone has given the following very interesting account of its feeding habits: "The California trout roams about his watery hunting grounds partly on his side, with one eye directed to the bottom. He is quite as dependent, and probably more so, upon the supply of food that is beneath as upon the supply that falls from above or floats on the surface. He has another peculiarity also about feeding; when he sees any food on the bottom that looks to him out of place, or has from any cause a suspicious apppearance, he wheels past it, and as he passes the suspicious object he strikes it a vigorous blow with his tail and then turns to observe its movements. If there appears to be anything 'crooked' about it he will not touch it, and will, after striking perhaps once or twice more with his tail, abandon it altogether."

Spawning takes place usually from January to May. The eggs are about one-fifth of an inch in diameter and vary in color from light straw to deep salmon pink. A 2lbs. female yields about 800 eggs. In water at 54° Fahrenheit the eye spots show in twelve days and the eggs hatch in twenty-six days. The form of the embryo can be seen through the shell four or five days before the eye-spots appear. The females spawn in the McCloud River when three years old.

In the McCloud June and July are the best months for fishing.

The writer has found quinnat salmon eggs the most attractive bait for the rainbow and others have hooked many of the fish with grasshoppers. For fly-fishing a brown-hackle and a white-moth were most effective for "Coquina," while in Pennsylvania several of the early brook trout flies were readily taken. For large rainbows the flies must be as large as for black bass and salmon and the gut snells increased in strength proportionally. Owing to the gregarious nature of these trout it is comparatively easy to fill a creel unless some of the big tackle-smashers are encountered. T. H. B.

## CANADIAN ANGLING.

THE remaining salmon fishermen are rapidly leaving the streams. Mr. Blanchard, of Boston, came up from the Marguerite on Monday, having killed 10 fish in his second stay of 10 days in camp. Mr. Walter Brackett's fishing on the same river was very poor. He went home to Boston last week. The Prime Minister of Canada, Sir John Abbott, is just home from the Restigouche, where he found the fishing poorer than ever. A little more readiness on his part to meet the views of experienced anglers in the matter of fish protection would insure better sport for Canadian as well as for American anglers. Lieut.-Gov. Angers and Major Sheppard, of Quebec, have been the guests for 10 days past of Lord Stanley on the Cascapedia River. The Lieutenant-Governor took 10 fish and the Major 13. Lord Stanley, while fishing with them, killed 11 salmon. His Excellency will remain on the river until about Sept. 1, having a cottage at its mouth which he will occupy after the fishing season is over.

A fortnight ago I wrote you a report of the wonderful fishing done by Dr. Lundy of Philadelphia and Eugene McCarthy of Syracuse in the Ouiatchouan and Ouiatchouaniche rivers. Last week these persistent sportsmen made their way with a couple of Indian guides from Pointe Bleue to the opening of La Belle Riviere, in the Lake Kenogami district, some miles southeast of Lake St. John. They were only absent three days from Roberval and this is the result of their two rods' work, and the subject of a wonderfully fine picture from Mr. McCarthy's Kodak: two trout of 4½lbs. each, fully a dozen from 2½ to 3½lbs., and about 200 from ½lb. to 1½lbs. Mr. McCarthy writes that he has had the grandest time this year in the lake district that he has ever had, that he is completely in love with the country and that there is no place like it on God's footstool.

Mr. Martin J. Chamberland and Mr. J. H. Hendricks, manager of the Warwick Cycle Works, Springfield, Mass., have just returned from the Metabetchouan, where they have been fishing the waters of the Amabalish Club with wonderful success. They brought back with them some 130lbs. of speckled trout, including a splendid fish of 5½lbs.

I have good news this week for ouananiche fishermen, and in fact for all visitors to the Grande Discharge of Lake St. John. The splendid new iron steamboat has made a successful trial trip on the inland sea, and now crosses it daily from Roberval to the Discharge, making the distance of 24 miles in about an hour and a half—a saving of an hour in the passage. The Mistassini cost $45,000 and has accommodation for 400 passengers.

Mr. E. J. Myers, the New York barrister, ascended quite recently the great river from which the steamer takes its name. He was absent from Roberval about a fortnight, and made some remarkable catches of trout and ouananiche. After the next fortnight I believe that anglers in search of the best ouananiche fishing would do better to ascend some of the tributaries of Lake St. John than to fish the Grande Discharge. The best streams for this purpose are the Peribonca, the Mistassini and the Ashuapmouchouan. E. T. D. CHAMBERS.

QUEBEC, Aug. 4.

## NEW ENGLAND FISHERMEN.

BOSTON, Aug. 4.—At the seashore resorts this season there seems to be more than the usual amount of fishing, and the participants seem to greatly enjoy it. Mr. E. M. Gillam, commercial editor of the Boston *Advertiser*, is a good deal of a sportsman. This season he is spending the summer at Beachmont, as usual. Early in the season he purchased a good boat, and with his wife and friends the salt-water fishing is being tried with a good deal of success. The other day some sixty pounds of cod and haddock were the result of a single outing.

Mr. C. W. Leonard was formerly a partner in the successful firm of dry goods jobbers of Jackson, Mandal & Daniell, now Chatman, Kendall & Daniell. Mr. Leonard was tempted to go into the manufacture of dress goods at Bennington, Vt., where he has had a good deal of success. But he dearly loves to fish, and every opportunity that can be caught from the cares of a very busy life is given to his favorite pastime. He is training his boys in the same direction. This season his family is summering at Rockport, Mass., at the Turk's Head Inn. Mr. Leonard goes down there as often as possible and takes the boys out fishing. On a trip the other day they fished for perch and tautog from the shore with rods. Mr. Leonard likes this much better than fishing from a boat with hand lines. On the day in question his little son Charlie R., only 6 years old, was with him, with his brothers aged 9 and 11 years respectively, a cousin of 11 years, and two young friends of 12 and 14 years. In order to excite the boys Mr. Leonard offered prizes as follows: 1 cent for the first perch, 5 cents for a perch over 12in. in length, and 10 cents for the largest tautog. Little Charlie's black eyes sparkled at this announcement, and he was quickly at work fishing from the rocks. Soon he landed a perch, the first one, and took prize No. 1. Later he landed a perch that measured 12½in. in length, the largest for the day, and prize No. 2 was his. Then, to cap the climax, the little fellow soon hooked a big fish of some kind. In fact it was so strong that his father found it necessary to take the rod, it being evident that the fish was stronger than the boy. He played the fish carefully for several minutes when he was convinced that even a man had his hands full to handle the big fellow successfully. At last the fish gave up and was drawn near to the rocks, when one of the bigger boys ran down, and taking the line in his hands, by a careful jerk it was landed. It proved to be a tautog weighing 8¾lbs., and little Charlie had won prize No. 3. Mr. Leonard is at a loss to explain how it could happen that the little fellow took all three prizes.

Mr. James L. Reybold, salesman with Hyde & Wheeler, was born in the Adirondacks. His father was a pioneer farmer in that part of the country, but really followed hunting more than farming. His son naturally came up with a love for the woods. Every year, at vacation time, Mr. Reybold goes to what is left of the old haunts. At this time he is taking his few weeks at the old homestead, or near it, and his two sons, Will. E. and Frank S., are both with him; Will is a salesman at 101 Clinton st., and Frank is with his father. The boys, like their father and grandfather, both take to the woods and waters, and the gun and fish rod are the implements that suit them best. They intend to do some camping as well as fishing.

*Aug. 6.*—Reports from the salmon anglers are more favorable than early in the season, when the water was so remarkably high. Mr. Joseph Jefferson, the actor, was seen in Boston the other day. He was just back from his salmon river, the Miramichi, where, as already mentioned, he has been for some days. He visited G. B. Appleton's tackle store, and doubtless many of his theatrical friends, before going down to his elegant summer home on the shores of Buzzard's Bay. His success, with that of his friends, in salmon fishing, was good. The party took 117 salmon, though a great many of them were grilse. His Excellency, Gov. Russell, one of the party, as already noted in FOREST AND STREAM, took sixteen salmon. Mr. Jefferson remarked of the trip that it was a particularly enjoyable one. A number of trips were also made to trout lakes and streams, with good success in most instances.

Senator Aldrich, of Rhode Island, gave Congress the slip the other day, and last Tuesday morning he left Boston in company with a friend from Providence, and Mr. Henry R. Reed, of the Revere Sugar Refinery, and was on his way to Canada. The Senator is a lover of salmon fishing. When the gentlemen left the Hub their intention was to stop one day at Matapedia, and try the salmon there while waiting for transportation to their destination, the St. John, at Gaspe. There they are the guests of Mr. Ives W. Adams, of the American Net & Twine Co., of this city. Mr. Adams has one of the best salmon preserves in the Provinces on the St. John, at Gaspe. Very good success has already been had there this season, and up to the time of the departure of the Senator Aldrich party fifty salmon had already been caught, and these were all salmon and not grilse. Mr. Adams says that it is a peculiarity of this river that very few grilse are ever taken. The section is also noted for its splendid sea trout fishing. Mr. John Fottler, not unknown to the FOREST AND STREAM, as one of the most earnest laborers in the cause of game restocking in Massachusetts, and as one of the restocking committee of the Massachusetts Fish and Game Protective Association, is now at the same river. But he is due in Boston this week. He is interested, with Mr. Adams, in the same river, I believe. He has had good success in salmon fishing. There are four or five camps on the preserve. The middle building of one of these establishments was formerly a camp built for Lady Dufferin, who, during the lifetime of Lord Dufferin, was with him exceedingly fond of salmon angling. There are also reports of several good catches of salmon on the Nepisiquit, but I have not the names of the fortunate anglers.

*Aug. 8.*—Mr. R. B. Foster, an earnest lover of angling, died at his home in Waltham July 29. Mr. Foster was not wholly unknown to the readers of the FOREST AND STREAM, since several of his quaint and delightful angling stories have been told in its columns. He was born in Bethel, Me., 66 years ago, and reared on the farm in that town, he early acquired a love for the woods and waters which never left him. During his last sickness his dreams, when sleep would come to his pain-racked body, were frequently of angling, often accompanied with struggles to find the best pools in the stream, and then a peaceful delight in landing the trout he loved so well to take. He came to Boston when only 17 years of age and went to work for a truck farmer in Belmont. He married Miss Salome G. Eams, of Newry, a town adjoining Bethel. The firm of Foster & Weeks was formed in 1855, in the produce trade, and it is in existence to-day. Mr. Weeks survives his much-beloved and respected partner.

Mr. D. H. Blanchard, well known as the author of the celebrated salmon anglers' petition, is back in Boston from his salmon river, the St. Marguerite. He has later had good success there, and makes a clean record of twelve salmon, the largest weighing 37lbs. He received a dispatch yesterday from his people at camp saying that there were a good many salmon in the river, and he will

immediately start again for another try at them. He is looking "as brown as a nut," and is as genial and earnest in the cause of salmon protection as ever. Mr. Walter Brackett, with his son Arthur, on the same river, have had rather poor success this season.

Mr. C. E. Fitch, president of the Waltham Watch Co., has just returned from the Romaine River. Usually he has had good success, but this year the sport has been indifferent. The same is reported to be true of the Natashquan, the Godbout and other North Shore streams. The Natashquan has been fished by J. L. Pike, of New York, and J. C. Cramer and F. S. Hodges, both of whom have rsturned to Boston. SPECIAL.

## Forest and Stream's Fishing Postals.

*"DROP US A LINE" ON A POSTAL CARD.*

*Fishing News, Place to Catch Fish, Fish Caught, Fishing Incidents.*

MANISTEE, Mich.—I spend much of my time in the woods looking pine land and carry a fish-line in my pocket, and sometimes a gun, and take what fish and game I need for camp. The best trout fishing I ever found was in the headwaters of Fence River, in the Upper Peninsula of Michigan. It is also a great country for deer. I spent last summer in the woods from July 13 to Nov. 28. At the headwaters of Manistee River is the best place for grayling in the State. I went trout fishing twice this spring. Caught 23 in Cedar Creek, 8 miles south of Manistee. B. B.

LAKE VIEW HOUSE, Vt., Aug. 3.—Record of bass caught at Lake View House, St. Albans, Vt., by Mr. A. F. Troescher, of 860 Broadway, New York city: July 23, 23; July 25, 24; July 26, 22; July 27, 47; July 28, 7; July 29, 10 (½ day); Aug. 1, 20; total, 152. Weighed 1½lbs. to 4½lbs. each. SAMSON.

GOSHEN, Mass.—Trout fishing in Hampshire and Hampden counties closed Aug. 1. If the close season could now be extended to cover two half years from date, the range of sport would be materially enlarged. Meanwhile the State Commissioners ought diligently to replenish the rivers and brooks with fry and fingerlings. Twenty-five years ago hundreds of trout were caught to tens now. CHARLES HALLOCK.

FLEMINGTON, N. J., Aug.—At Corson's Inlet (N. J.) fishing good. Flounders biting well, my best catch being ten within two hours. Sea bass plenty, weakfish commencing now, sheepshead around, can be seen around the piling of the railroad bridge, but are rather shy, few catches being made by the champion sheepshead fishermen; season now about opening and continuing to keep good until October. J. H. S.

### WASHINGTON FISHING.

MR. CHARLES J. BELL, of Washington, has spent several weeks trouting and salmon fishing in Canada and is again home after a very successful trouting, but reports very poor salmon fishing. Messrs. Ives and Bell took sixty-eight trout in one day, the weight of which was 50lbs. They were the sea run trout in their silvery dress and none of them weighed over 3lbs. Flies with red, such as red-bodied hackles, were the best. It is claimed by old residents that the salmon fishing is being ruined by the Government. So many spawning fish are netted for the purpose of propagation that the fish are being literally driven from the rivers by fright.

Mr. George Kennan, the well-known writer, was met by the streams, and is said to be very enthusiastic over the subject of salmon and trout, as the angler views them.

The Helmet Fishing Club, 12 members, all good, hard-working, *bona fide* anglers, will go to the head of the Chesapeake about the middle of August. A yacht will be procured at Havre de Grace, with which the bass fishing of the lower Susquehanna can be reached, and later the party will go to Mountain Shore, or Carpenter's Point, for rockfish and white perch. Aug. 11 this club gives their annual excursion to Marshall Hall, on the Potomac. The committee of arrangements is as follows: C. J. James, E. M. Tolman, H. Weyl and C. Birch. All, or many of the anglers of Washington are expected to be present and a royal good time is promised.

The bass are having a midsummer rest here, as the Potomac water is muddy. A few days of clear weather and black bass scores will be as thick as flies again.

The fishing in the lower Potomac has not been up to the standard lately; too much natural food perhaps. It will doubtless surprise some people to know that crabs are taken in very dry seasons at the Navy Yard bridge, here in Washington, and that sharks often come within sight of Alexandria.

Having some curiosity to know what tarpum tastes like I followed one over from the market here a few days since to a restaurant on the avenue where it was served up for lunch. The fish would never be taken for fish when boiled and served in big solid chunks were it not for the bones, and even they were mongrels. The flesh had a very ancient veal-like appearance, but tasted like? It is beastly bad eating to my thinking, and if a man had to eat tarpum after catching it I hardly think he would want to take the second one. I secured a large garfish in market last week and had it served up at the table. This fish is stated by Dr. De Kay in his "Fishes of New York" to be highly prized by epicures. I am not an epicure and could not go into ecstasies over the excellence of the silver gar, or bill-fish as it is called in Great South Bay, N. Y. The green colored bones of this fish, as well as its curious form, and the great prolongation of the jaws, make it a curiosity. The stomach of this example contained one lone fish, a spot or young croaker. The gar itself was 3ft. 7in. long, and came from the lower Potomac. They are very common in the Chesapeake and in the Potomac, and occur here at Washington in considerable numbers. A more voracious fish would be hard to find. They are bait stealers too of the worst stamp, and are seldom if ever hooked, as they take a minnow in the middle, owing to the structure of their jaws. Their internal structure is as simple as could well be devised; a simple stomach, with a moderately long, simple intestine, which has the appearance of being especially well adapted for rapid transit. BON.

WASHINGTON, D. C., Aug. 8.

### JACK AND I AND THE MASCALLONGE.

I heard the distant waters dash,
I saw the current whirl and flash,
And richly, by the blue lake's silver beach,
The woods were bending with a silent reach.
—*H. W. Longfellow.*

IN my mind's eye and ear, as Shakespeare would say, I heard and saw the blue waters of the lake and the swirl and dash of river the first week in June, and all the ordinary things of life became as mere refuse, things despised—for a-fishing I must go. "No," said Stephens, "I cannot go. There'll be thousands of bushels of wheat coming in this week and next; and if I'm to get off for our trip along the North Shore in August, I must attend to business now." Knowing this to be so, I went to see Jack. Jack and I are always taken for brothers when we are together, though why it is so neither of us has been able to find out. I found Jack busy finishing a barge. "Well," he said, when I made known my errand, "if I can get this barge launched by to-morrow night I'll go."

Where should we go for a week?

"By remote Superior Lake
And by resounding Mackinac,
When northern storms the forest shake
And billows on the long beach break."

Yes, we would go along old Superior, either to Knife River, between Duluth and Two Harbors, or else to Stewart River, just beyond Two Harbors. But the next day Jack said he would rather go after mascallonge at Elbow Lake for the week, and take the trouting trip when we could have more time. So we arranged it, and Monday morning found us whirling eastward from Detroit on the Portland express, and noontime found us waiting in Walden to go northward; and by the gleaming light of the setting sun, sent through rifts in skurrying clouds, we went to Park Rapids on a mixed train such as the Great Northern Railroad Company delight to harrow the finer sensibilities of humanity with. The Great Northern agent at Waldena refused to check our dunnage, and said we must ship it as express or freight. I flatly refused to do either, and left the outfit lying on the platform until the train pulled in, when I went to the train baggage man and asked him if he would not take it in his car, and he very graciously said "Yes." Jack said, "It was all your cheek that did it."

"The shades of night were falling fast" when we reached Park Rapids. Should we go to a hotel? No. We would begin camp life at once. So in the gathering darkness, in a grove of pines on the river's bank, we set up our tent, and after making arrangements for a team to take us to Elbow Lake in the morning, we went to bed and went to sleep with the sound of the rushing river in its channel and the sighing of the wind among the pine trees in our ears. We were awakened in the early morning by the song of birds, and by half past seven were on our way to the lake. It is a beautiful drive, through the pine woods most of the way. By 10 o'clock we were at the lake, and setting up the canvas boat, placed our dunnage and ourselves in it and started to hunt a camping place. As we went out into the main lake, one of the half dozen islands that beautify it was directly in front of us. "There is where I want to camp," said Jack. I preferred some of the pine groves on the main land and said so, but after cruising along for a mile or so and finding nothing entirely satisfactory I gave in and told Jack to pull for his island. I had his rod out and was trolling, hoping we might get a fish for dinner. When about half way to the island there was a tug at the line and a splash far behind, and a mascallonge was hooked. Jack had never caught a mascallonge so I handed the rod to him and told him to reel the fish in. The fish fought well and kept Jack busy for a time, but finally he brought it within reach and a nice 6lb. mascallonge lay in the boat and Jack had christened his new greenheart rod. We pulled ashore, built a fire, and soon had dinner ready, of which broiled mascallonge formed a toothsome part.

After dinner we walked across the island to look up a good camp site, which we soon found in a little grove of pines, with the water but a few feet away on two sides of us. Jack staid there and went to clearing up the ground while I went back to the boat to bring it and our dunnage around to the beautiful sand beach on the south side of our proposed camp. As I went around the western point of the island I stopped rowing long enough to cast my line out, and then taking the rod between my knees I rowed along and had gone but a short distance when there came the familiar tug at the line, just as though the hook had caught on a log. I had my hands full right away. A stiff head wind was blowing, and to keep the boat headed up away from the rocky shore and at the same time hold the rod so as to keep a tight line on the fish required all the skill that I was possessed of. Once I brought the fish to the boat, but had to let it go again. Finally I saw that the boat was going on shore anyway so I headed in, and after the boat struck I sprang out, holding the rod in one hand and catching the boat and hauling it up with the other, after which I proceeded to reel in the fish and soon had the satisfaction of seeing the beautifully-marked fellow lying on the stones at my feet. I killed it, and shoving off started toward where Jack was. I had just reached deep water and cast my line in again when Jack came in sight along the shore. He at once called out:

"Where have you been, I thought you were drowned?"

"Oh, I've been having some fun down here."

"Fun? How much?"

"As much as one can get in landing a ten-pound mascallonge."

"You never have gone and caught a mascallonge coming up against this wind."

"Yes, I have, and—I've got another as sure as you live, Jack!"

It was true, and without trying to reel the fish in, I headed directly for shore, and when the boat came within reach Jack caught it and pulled it up while I proceeded to land the fish, which I soon did to Jack's great satisfaction. That's one of Jack's characteristics, to enjoy a friend's success as much as his own. I landed the last fish only a few rods from our camp site, and we at once went to work to pitch our tent and fix up for our five days' stay. In a little while the tent was up and fragrant spruce boughs laid down, making a mattrass more than a foot thick, on which we spread our blankets.

We went out on the water and staid out until "near the setting of the sun," taking two more of the lusty, gamesome mascallonge, when we thought it time to call a halt, as the five we had now would keep the table supplied for our whole time in camp.

We enjoyed the supper amazingly, and while I made the bed and arranged the duffle in the tent, Jack built an enormous bonfire.

"Well, if this isn't homelike I don't know what is," he said, as he surveyed the bed and the tent after everything was fixed. "I'm so glad and happy I can't keep still. Whoop!" As we were going to bed the moon rose in majesty o'er the tops of the pine-tree-crowned eastern shore, and a great expanse of silver sheen spread from the darkling shadows of that shore to the sand beach by our tent.

As we lay in bed there came to our ears clear and flute-like the cry of a whippoorwill, and several times during the night I heard the song, *Whip-poor-will; whip-poor-will;* and one night there were four singing all at once. We named our camp "Whippoorwill Camp." The next day we started to explore some. We went up one arm of Elbow Lake, and entering a narrow deep inlet, along which we went for nearly a mile, then came to a small lake, across which we went, and entered another narrow passage, which soon made an abrupt turn, and then another and still another, until Jack declared that we had "turned to every point of the compass, and more, too." On we went for miles, "The Thoroughfare," for so we learned that it was called, being generally a few rods wide, bordered by heavy timber all the way. Sometimes so stately were the pine trees along our watery way that what Longfellow has sung in his prelude to "Voices of the Night" seemed true for us.

"Before me rose an avenue
Of tall and sombrous pines;
Abroad their fan-like branches grew,
And, where the sunshine darted through,
Spread a vapor soft and blue,
In long and sloping lines."

It was very strange and we enjoyed it very much, winding about and at last entering a narrow gorge through which the water came rushing like a trout stream. On we went a mile or so further, when we pulled up to the bank, built a fire, boiled our coffee and eat dinner. We wondered where we could be, and found out later that we had come about nine miles, and where we ate our dinner was very close to Little Sand Lake, just beyond which is Big Sand Lake, then Turtle Lake and Man Trap Lake, all of which are famed muscallonge waters.

"Oh," said Jack, "if we could only stay a month and explore to our heart's content," and I heartily echoed what he said. Back we started, stopping at one place, where a trail led through the pines, along which we went but a short distance, when we came to a lake, a beautiful sand beach all the way around it so far as we could see. Bull Lake, we learned the name to be on inquiry. Returning to the boat we retraced our way through the Thoroughfare by the devious way of crooks and turns, until we reached Elbow Lake, again across which we went to Jack's Island and Camp Whippoorwill. We were pretty well tired out, but did not mind that, for we had seen something the like of which we did not know existed in Minnesota—the crooked Thoroughfare between Elbow and Little Sand lakes. The next day we went to the east end of the lake, picking up a couple of tigerish mascallonge on our way; and here we had another surprise. Entering a narrow channel that seemed to lead nowhere in particular, we came out to a part of Elbow Lake that we had not seen before, and following along the shore entered another channel, narrow, but very deep, and came out in Elbow Lake again off the east end of Jack's Island, the supposed east shore of the lake, thus proving to be an island completely hiding a long arm of the lake, which extends eastward over a mile, I should judge. Jack drew a long breath, and said, "Who'd have thought it."

In the afternoon we went fishing a while and I hooked "a whale" as Jack called it. I very foolishly told Jack to row to shore, and protesting against it he did. I commenced to reel the big fish in when something so strange happened that I record it as one of the many surprising things that happened on the trip. The fish ran around a bunch of rushes and I lost him. 'Twas very singular, and he was the largest one I hooked on the trip, too. Jack was almost heart-broken and would hardly be consoled for my mishap.

"If you'd only let me pull out into deep water as I wanted, you would have had that fish" he lamented, and I agreed with him only did not tell him so. It was one of the mistakes in judgment that we all make sometime or other in our lives.

That night as we lay in bed Jack gave a big sigh.

"What's that for?" I asked.

"It's our last night here and I wish we had a month more," he replied. It had been very pleasant indeed, Jack and I had never been off in camp before, but I had thoroughly enjoyed being with him, and hope we may have many trips together hereafter.

The next morning "we fished for keeps" as Jack said, and although no very large ones were taken we caught enough to make several of our friends feel very kindly toward us on our return home.

After dinner we reluctantly took down our tent, went over to the mainland, where the team was to meet us, rolled up our canvas boat and at 7 o'clock were in Park Rapids. We packed our fish in ice and I asked the agent at the depot to check our outfit and he promptly refused.

"Will you put the things in the car for us?" I asked.

"No, I will not."

"Can I leave them here at the depot until morning?"

"Yes," but with evident reluctance.

After supper we strolled around town awhile, went to the river and examined the new fishway just put in, then went to the hotel and asked to be shown to our room. The door would not shut tight, so I placed a chair against it, and placed my heavy grip on the chair. It was very hot, so we undressed, and lying down on the bed, Jack went to smoking, while I read aloud from the FOREST AND STREAM. Some one came along the hall, grasped the knob to our door and half opened it, then catching sight of two pairs of legs on the bed beat a hasty retreat. Then there was a row outside. Evidently the landlord had put us in some one else's room or had sent some one else into our room. Finally the clamor died away and we were disturbed no more.

In the morning when we went to the train I went into the baggage car and told Jack to hand me our dunnage, which he did. I stowed it away and told the some-

what astonished baggage master that that outfit was going to Wadena. He grinned, but said nothing, and it went. At Wadena the drayman took us and our outfit to the Northern Pacific depot, and at my request the baggage man checked every article for us and then said, "Gentlemen, if you want any more ice to put on those fish there is the icehouse, help yourselves." Jack opened his eyes and said, "Is the millenium dawning?" "No," I replied, "it is only the difference in the management of the two roads." "Great is the difference," quoth he. We were home in time for supper, and so ended a trip replete with pleasure and pleasing memories. The picture of Whippoorwill Camp and the many incidents connected therewith, with Jack filling foreground, middle-ground, and deeply shading the background, is one that I shall ever fondly cherish. MYRON COOLEY.

DETROIT CITY, Minn.

### "Where am I at?"

THE types make me blush and have brought the laugh on me. In the recent article, "A Side Issue, but no Trout," Ely is located in northwestern Minnesota when it is in the northeastern; there is no Nesaba Range, but Mesaba, and no river called American between Duluth and Ashland, but one named Amnicon. This last mistake, with locating Ely in the northwest, might arouse a suspicion that I was in a condition similar to that of a deer hunter Stephens and I met in Wisconsin last fall, who said, "I've hunted in the mountains in ol' Missoury lots, and never had no trouble, but I never saw such a country as this. I don't know where I am half the time." This was spoken with that drawl characteristic of some localities, and taken in connection with the dejected attitude of the man, made it very funny, and we've laughed over it many times since, as many a reader will laugh over the mistakes in question. MYRON COOLEY.

## CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 5.—Our vigorous young organization, the Chicago Fly-Casting Club, used very good judgment when, through the advice of its energetic secretary, Mr. F. B. Davidson, who knew whereof he spoke, it secured special rates over the C. & E. I. road to the bass waters at Momence. The Kankakee River, from that point on down for miles, affords about as good fly-fishing for bass as any water within twice the distance. Even the tyro members of the club have benefitted by the late practice meets, and it is to be presumed will now go after the practical application of the acquired knowledge. That's different again.

The Kankakee has for ten days been clearing up and has offered some little fishing. The Fox has been in much better shape, and below McHenry some nice catches have been made on the fly. There are some waters where black bass will take the fly, and some where they won't. The Fox below McHenry and the Kankakee below Momence are two places where they will.

Mr. John F. Randall writes me from St. Louis, that himself and a few friends are about to organize a society for the protection of fish, with membership largely from St. Louis and Alton. He says "our work is all in the future." It is to be hoped it will not stay there. Much actual and practical good can result from intelligent and determined work in fish protection. Fish protection is a much easier problem than game protection. We can not have too many societies of purposes similar to the above, and all success should be prayed this one.

Mr. George E. Cole, easily the first man in the West in matters of fish protection, has given himself a vacation, and is now with his family in the East, at Long Branch, where he will remain for several weeks. Let no one step needlessly on a clam now at Long Branch.

It was grim, ghastly retribution which last week overtook that Maryland man who was dynamiting fish in Worton Creek and was hoist by his own petard. The dispatches say that his body was blown to fragments, his shoulder blade being driven into the body of the friend who sat behind him. This is horrible enough, and too horrible to point a moral.

I never saw dynamite used under water but once, and that was at Lake Marie last summer, when searchers were endeavoring to raise the body of a boy who had been drowned. Contrary to my expectations, there was no great volume of water thrown up, only a sort of boiling ridge a few inches high. At each explosion we could feel a sharp, ringing clink along the bottom of the boat, such as you will hear when a charge of shot strikes a board. The boats retired only a short distance for each shot. The charges did not raise the body, but destroyed a number of fish. In the Maryland case it was different. Dynamiting fish has become altogether too common a method of destruction even in the sections where blasting or mining is not common. It is justly censurable as about the lowest form of low-down ways to kill fish.

At Green Lake, Wis., last Sunday, three ladies and two gentlemen got into a small clinker boat to cross the lake to attend church. The ladies raised their umbrellas as sails. The boat went over. Arthur Bennett, of Chicago, being a good swimmer, saved the lives of two of the ladies. The third, Mrs. Hollister, was drowned.

Mr. R. K. Hitchens, of this city, is resident agent for an Eastern firm, and he does nearly all his fishing in New Brunswick, scorning Western trout and bass for the glorious sport with the sea trout. He has fished for the big brook trout of Lake Superior near Marquette, and declares that they look identically the same to him as the sea trout of New Brunswick. Mr. Hitchens says that before he came West he had never seen any free-reel bait-casting, and he still prefers the fly. For the latter he will find greater use in New Brunswick than here, where the range of fly-fishing waters is restricted. E. HOUGH.

### Ocean Grove Bass.

MR. A. A. BROWER, of Philadelphia, who has a summer cottage at Ocean Grove, on the New Jersey coast, is an enthusiastic and successful fisherman. Recently he took, fishing from the Ocean Grove pier, a 14lbs. bass, the largest fish of the season.

THE FAVORITE LINE.—The Shenandoah Valley route to the South, comprised of the Norfolk & Western and East Tennessee, Virginia & Georgia Railways, is the sportsman's favorite line. "The Washington & Chattanooga Limited," which is a solid vestibuled fast flying train, consisting of Pullman, drawing room, sleeping cars, day coaches and Pullman dining cars, leave Washington 11:15 P. M. every day in the year, arriving Chattanooga 6:45 next afternoon, making close connection for all Southern points. Mr. B. W. WRENN, General Passenger and Ticket Agent, E. T., V. & G. R'y, Knoxville Tenn., will furnish free any information desired.—*Adv.*

# Fishculture.

## LAKE ONTARIO FISHERIES.

THE movement of the Cheaper Food Fish Association of New York, of which Judge Danforth is the president, was a very timely one, as now demonstrated by the late census returns of the fisheries on the Great Lakes. The decline of the industry on Lake Ontario in the last decade is certainly worthy of attention. In 1880 the number of fishermen was 587, in 1890 398, a decrease of 189. The capital invested in 1880 was $54,050, and in 1890 $47,716, a decrease of $6,334. Number of nets in 1880 34, and in 1890 172, an increase of 138. The value of the fish in 1880 was $159,700, and in 1890 $85,431, a decrease of $74,260, almost 50 per cent. The number of pounds of fish taken in 1880 was 3,640,000, and in 1890 2,691,946, a decrease of 948,054, and on close examination this catch of fish in 1890 discloses the fact that more than half of it was an inferior fish—the herring. The number of pounds of lake trout taken in 1880 was 569,700, and in 1890 6,500, a decrease of 563,200. The number of whitefish taken in 1880 was 1,064,000, and in 1890 it was 23,383, a decrease of 1,040,617. What makes this decline more marked is the fact that on the other great lakes during the same period there has been a decided improvement. The number of fishermen in 1880 was 3,906, and in 1890 6,498, an increase of 2,592. The capital invested in 1880 was $1,291,925, and in 1890 $2,785,243, being an increase of $1,493,318. The number of nets in 1880 was 1,466, and in 1890 3,659, an increase of 2,193. The value of the fish in 1880 was $1,493,200, and in 1890 $2,530,353, an in of $1,037,153. The total number of pounds of fish taken in 1880 was 65,102,000, in 1890 114,393,622, an increase of 49,291,622. The number of pounds of lake trout taken in 1880 was 6,234,900, and in 1890 11,195,131, an increase of 4,961,231. Whitefish in 1880 20,399,900, and in 1890 15,303,105, a decrease of 5,096,795.

Superintendent Porter, in commenting on the above figures, gives credit for the condition of things in the upper lakes to the work of the Michigan, Ohio and United States Fish Commissioners; that their planting in those waters has been the preservation of the industry, and had the New State Fish Commissioners been awake and done their duty, the industry of our great lake would never have been in the condition in which it is.

The movement of Judge Danforth and his associates has been productive of one good thing, it has aroused the attention of the U. S. Fish Commission, and an appropriation has been secured for the establishment of a hatchery on Lake Ontario, and work will be commenced on it this season. There has been some planting of whitefish in Lake Ontario in a small way by both New York State and the U. S. Government, but not sufficient to make any visible effect. Such work, to be effective, must be done on a very large scale. From 1882 to 1891 the United States has planted in Lake Ontario 45 000,000 of whitefish; in 1877 to 1890 Canada has planted in Lake Ontario 34,000,040. In 1877 to 1890 New York State planted less than 7,000,000 in Lake Ontario. We have more to say on this subject at a later date.

WESTERN NEW YORK.

# The Kennel.

## POINTS AND FLUSHES.

CHICAGO, Aug. 6.—While the matter of retrieving at field trials has been quite thoroughly discussed from every standpoint, there has been one argument brought forward by the advocates of it, which is most ungenerous and false, and which has been allowed to pass unanswered. It has, in substance, been stated that professional trainers were opposed to retrieving at field trials for the selfish reason that its abolishment would save them the time and labor necessary to teach and perfect the accomplishment. To me this appears most gratuitously unjust. With no data whatever except the suspicions which exist in their own minds, they present their surmises as existing facts. The writers who hold these views ignore the fact that the sentiment in favor of abolishing retrieving at field trials was not the result of demand on the part of field trial handlers alone. It was the result of the experience and knowledge of practical men who had made field trials a study. The measure had been considered many months by the E. F. T. C. before any action was taken on it. The correctness of the measure in abolishing it was not questioned by the majority; but the popular sentiment in favor of retrieving, by men whose personal field trial experience was little or nothing, was something to be considered. It was a matter which had been most carefully determined before many recent writers had given it a thought.

Even if the professional trainers had all argued against it—which they have not—it does not follow by any means that some man who disagreed with them would be justified in concluding that they did it for selfish purposes, much less in publishing his conjecture as a fact. Who would be more competent to give sounder opinions on the subject than the professional trainers? Having given an opinion, why should some man at a distance impute selfish motives to them, with no other proof to advance than the vaporings of his uncharitable imagination? Few professions can produce such a uniformly intelligent and reliable body of men outside of the learned professions as the dog trainers of America. It is only fair to assume, what is the fact, that they are interested in advancing their calling in every honorable way, not in obstructing its growth or lowering its standing.

That the imputation of insincerity on their part in opposing retrieving at field trials is groundless, is shown by the fact that all trainers concede the utility of retrieving in actual shooting. As all trainers break dogs in the manner required by their employers, the doings at field trials have no bearing on the matter. The trainer trains the dog according to its owner's wishes. But some men are supernaturally wise in discovering serious nothings. Their minds are so constituted that they abandon the fair consideration of the facts presented and search for dishonorable or selfish motives. It is gratifying to note that such writers are narrow and feeble in fair argument. As a matter of fact if the field trial retrieving of the past were taken as a standard it could do no harm to abolish it both in trials and in field shooting.

### Ranging.

I have received some most interesting letters of late on the subject of ranging and its properties, and I find that there is a keen appreciation of its true merits. It is a fact that there is much more in it than an exhibition of rapid scurrying over large fields or getting lost for an hour, more or less. One paragraph deals with the senseless exaggeration indulged in by ultra enthusiasts who strive to paint the sky in brighter tints. I would like to give the writer's name so that his words would carry the weight which his skill, experience and popularity have deservedly won, but as such would be against his wishes, I can only quote some of the interesting sayings. He says: "I cannot think about some of the ideas I have heard put forth without feeling inclined to be sarcastic. 'Killing pace' always amuses me. Who is to be killed? I suppose the dog is to try and kill himself. All these foolish sort of ideas would be of no consequence if it was not that some of our judges are possibly influenced by them, and consequently a fool dog that gallops like fury, if he only has luck enough to stumble on a good point now and again, is put before one that hunts from start to finish."

Speaking of fast dogs which performed indifferently as workers on birds, he says: "Off their noses, of course! That is the ever-ready excuse of owners whose dogs hunt the wrong way. I believe that there are not many all-around, high-class dogs whelped, not many good ones come by chance breeding. (I mean such as are bred by men who can only guess what dogs to breed together.) One must know the character of the dogs in every respect, in one's kennel, and for as many generations back as possible, before one can establish and keep up a good strain. Nothing but close observation for a number of years will do it, and that too by one who is quick to detect the faults of his own dogs. I asked Mr. ——— (a famous breeder and handler from boyhood, and now ripe in age and knowledge) if dogs were better now than they were when he was a boy. He said no, but that there were more of them. If a man can turn out one or two really good dogs every year he is doing well, I think. What we try to find are dogs that go as hard as they possibly can hunt, not run, much of which depends on their style of working. Ones which have good noses, high courage, fine tempers, lots of intelligence, endurance, style, etc., and no faults which cannot be cured. When we get a puppy of that sort, or even approaching to it, we expect to train him so that he will show off his good qualities at the trials. If another dog does not do as clean work we feel inclined to kick if he is put over our dog because he goes faster, our dog not being too slow. If he does as clean work and goes faster too, then it is all right."

### False Pointing.

On the subject of false pointing he says: "A well broken, experienced dog with a good nose will not false point at all. He may stop for a moment or two, but he will never stop on larks. If a well broken dog, with a good nose, a dog which uses his nose in the right way, makes a flush, or a bird flushes, you may be sure it is not the dog's fault. No man living can fairly say that a flush is excusable or otherwise, but he can soon tell where there is plenty of game whether a dog is a flusher or not. Some strange scent, some unusual disturbance of the atmosphere, may for the moment have destroyed the scent, but no well broken dog flushes on purpose."

Dr. J. Frank Perry, the famous litterateur and foremost writer on canine matters in this country, is now the owner of the copyright, plates, books, etc., of "Modern Training, Handling and Kennel Management." This work on training has been most generously conceded to be the best one before the public. Dr. Perry has, forthcoming, works on the diseases of dogs, conditioning, etc., which will add greatly to the literature on these subjects. B. WATERS.

## NEW ENGLAND F. T. CLUB DERBY ENTRIES.

*Editor Forest and Stream:*

The entries for the Derby closed Aug. 1, and the following satisfactory entry has been received. The total, 30, includes 4 pointers, 25 English setters and 1 Gordon setter. All these were whelped in 1891.

POINTERS.

DASH A. (George W. Lovell, Middleborough, Mass.), liver and white dog (champion King of Kent—Lass of Kent), July 4.

WILD LILY (George W. Lovell, Middleborough, Mass.), liver and white bitch (champion King of Kent—Lass of Kent), July 4.

BUD OF KENT (A. M. Tucker, Lexington, Mass.), liver and white dog (King of Kent—Vickery's Daisy Bang Bang), Aug. 25.

QUEEN OF KENT II. (G. A. Vickery, Lexington, Mass.), black and white ticked bitch (champion King of Kent—Vickery's Daisy), Aug. 25.

ENGLISH SETTERS.

DASH B. (Edward Brooks, Hyde Park, Mass.), black, white and tan dog (Gloster—Movis), Sept. 1.

GROUSE B. (Edward Brooks, Hyde Park, Mass.), black, white and tan dog (Gloster—Movis), Sept. 1.

BOSS (Edward Brooks, Hyde Park, Mass.), black, white and tan dog (Jean Val Jean—Mamie A.), Oct. 23.

ROD'S CHAFF (E. O. Damon, Northampton, Mass.), black, white and tan dog (Roderigo—Gladstone's Girl), March 3.

ROD'S MIRTH (E. O. Damon, Northampton, Mass.), white black and tan bitch (Roderigo—Gladstone's Girl). March 3.

COUNT BERKSHIRE (F. W. Whitlock, Great Barrington, Mass.), black, white and tan ticked dog (The Corsair—Bona), June 3.

PRINCESS POLLY (F. W. Whitlock, Great Barrington, Mass.), black and white ticked bitch (Rod's Whim—James' Lassie), Dec. 29.

TENNESSEE VANDAL (Oakland Farm Kennels, Taunton, Mass.), black, white and tan dog (The Corsair—Effie Hill), Jan. 19.

TENNESSEE GIRL (Oakland Farm Kennels, Taunton, Mass.), black, white and tan bitch (The Corsair—Effie Hill), Jan. 13.

BARRETT (W. B. Foster, Brockton, Mass.), orange and white dog (Duke of Gloucester—Belle of Brockton). May. 6

PUNCK F (W. B. Foster, Brockton, Mass.), black and white dog (Duke of Gloucester—Belle of Brockton), May 6.

ROY KENT (Cohannet Kennels, E. Taunton, Mass.), blue belton dog (Kent II.—Fedora Laverack), Feb. 25.

NANNETTE (Cohannet Kennels, Taunton, Mass.), black, white and tan bitch (The Corsair—Effie Hill), Jan. 19.

BRADLEY (D. A. Goodwin, Jr., Newburyport, Mass.), black and white dog (Rowdy Rod—Breeze Gates), July 4.

ALBERT'S DAISY (Dr. James E. Hair, Bridgeport, Conn.), white and orange bitch (Albert's Garry—Fanny San Roy), Feb. 7.

ROSE GLADSTONE (V. L. Bossa, New Canaan, Conn.), black, white and tan bitch (Dan Gladstone—Belton's Princess), April 10.

MARK'S LADY (J. L. Wells, Attleboro, Mass.), orange belton bitch (champion Gath's Mark—Jessie Noble), Sept. 10.

ROY WILSON (Noyes Billings, Dodgeville, Mass.), white, black and tan dog (Dad Wilson, Jr.—Bessie Roy), Sept. 6.

MATADOR (Rosecroft Kennels, New Haven, Conn.), black and white dog (Grover—Forest Dora), August.

PANG (H. C. French, Northampton, Mass.), black and tan dog (Paxtang—Mamie), May 15.

ROWDY ROY (A. M. Tucker, Lexington, Mass.), black, white and tan ticked dog (Roderigo—Field's Vic), Aug. 25.

ROD BELTON (Willard W. Lewis, Rockland, Mass.), black, white and tan dog (Count Roderigo—Bessie Roy), Jan. 14.

DRUID NOBLE (Agawam Kennels, Ipswich, Mass.), black and white dog (Count Noble's Boy—Model Bondhu), February.

DAMON C. (Hampton Kennels, Hampton, Conn.), lemon and white dog (The Corsair—Bona), June 3.

NELLIE G. (H. Rudolph Sack, Lymansville, R. I.), black, white and tan bitch (Breeze Gladstone—Lady Snowflake), Sept. 19.

GORDON SETTERS.

GYPSY (Hampton Kennels, Hampton, Conn.), black and tan bitch (Clarke's Jake—Daisy M.), January.

E. KNIGHT SPERRY, Sec'y.

### "From Nearly Every State."

DEXTER, Me., Aug. 1.—*Editor Forest and Stream:* From the small ad. in your paper offering the portraits of my pointer, Duke of Dexter, I have had orders from nearly every State in the Union, and "still they come." CHAS. D. ROBERTS.

## AMERICAN FIELD TRIAL CLUB.

*Editor Forest and Stream:*

I have just returned from a visit to the American Field Trial Club, at Columbus, Ind. I found the members of the club bustling, and there will not be anything left undone to make the trials next November a success. There will be dogs of superior breeding and of different nicks, entirely different from any that have run in trials before. The $5 limit is in reach of so many more sportsmen than a $10 limit.

These trials are for bird dogs and bird-finders, not so much for speed as the other trials (I did not meet any one claiming to be an expert with a lariat). Therefore these trials will show and try, in fact prove, some of the points our best breeders have been advertising on. I think there will be a big attendance just to see that merit. I went over the grounds where the trials will be run. The grounds are nicely located and there is plenty of water. We flushed several bevies of quail that were full grown, and no doubt the second hatch is on the way. The accommodations at Columbus for the trials are first-class; plenty of saddle horses (not plow horses) and vehicles for the dogs and man. Hotels are among the best, and those who stop at the Belvidere will find the landlord an all-around sportsman. As for railroads the Pan Handle will get you there. I will be there and would be pleased to meet you. ZULO.

INDEPENDENCE, Ind.

## CANINE TENACITY OF LIFE.

IN our issue of July 28 we spoke of a dog that had been shut up for twenty-nine days in an unoccupied store in Toronto. This particular dog may have undergone this lonely and trying experience or he may not, but we see nothing to doubt in the record made. It is well-known that dogs and other animals have undergone almost incredible fasts, and it would be interesting if some of our readers would give particulars of any case that has come to their notice, so that we can show how long a dog can possibly go without food. We have received the following from a correspondent on the subject:

*Editor Forest and Stream:*

I enjoy reading your paper very much. I saw your account of the long fast of a dog in an unoccupied store. My wife had a cat that was driven under a bridge one evening by a dog. That night there came a severe ice storm and closed the mouth of the bridge. We missed the cat the next day and hunted high and low for him. Thirty-five days after there came a thaw, and in clearing away the snow and slush from the bridge so the water could run through, I found the cat. He was alive, but very weak; could not keep any food on his stomach, not even milk, for more than a week. When found he could not walk. We nursed him back to life and he lived for three or four years. When imprisoned he was a full-grown kitten and very playful, but after such a shock he did not recover his spirits, and was never known to play again like other cats. SAM ROGERS.

WEST NEWBURY, Mass., July 30.

## THE PEARL OF PEKIN PROTEST.

*Editor Forest and Stream:*

I read in your issue of July 21, under the heading of "Dog Chat," the following, relative to the Pearl of Pekin protest:

"The news now comes from Mr. Brougher, the secretary of the American Coursing Club, that the case will not be acted upon until the annual meeting in October, 1892. Mr. Brougher's words are, 'The executive committee have reserved their decision until the October meeting of the club. They did not give any reason for so doing'."

I was not a party to referring this protest back to the club, but the majority of the executive committee, Mr. C. G. Page and Dr. S. J. Shaw, gave their reasons for doing so, by the following statement: "That as Dr. Shaw, one of the members of the executive committee, and Mr. Brougher, the secretary of the club, had made an affidavit that in their presence Mr. T. W. Bartels, the owner of Pearl of Pekin, had made a settlement of the dispute with Mr. J. J. Edmonds, the owner of Chicopee Lass, therefore in the face of this affidavit the majority of the executive committee declined to act on the protest, preferring to leave it to the club to do so." H. C. LOWE.

LAWRENCE, Kansas.

## DEFENDS MR. ISENTHAL.

*Editor Forest and Stream:*

I am indeed loath to enter into any controversy with "Aloin", of *Breeder and Sportsman*, but his ill-timed and ill-judged remarks anent "that hooked-nosed Israelite in Denver" impel me to ask a little space in your valuable paper in order to remove if possible every stain upon the character of a gentleman who was well-known and respected by a large circle of the lovers of the dog in this city.

To us, to whom the *nom de plume* of either "Aloin" or "hooked-nosed Israelite" is no cover of their respective personalities, the remarks in question are read with no other feelings than those of indignation and disgust, and of course "knowing the source," we treat them with the utter contempt both they and their author merit. But to those who may recognize "that hooked-nosed Israelite" and not be aware of the identity of "Aloin," I would say, that the former was regarded in the highest esteem by all who knew him, and his ill-timed death, a short time ago, was a severe loss to us who recognized that we had lost a good and valued friend and that the lovers of sport and the dog were minus a true and faithful devotee. L. F. BARTELS.

DENVER, Col., Aug. 4.

## ROCHESTER KENNEL CLUB SHOW.

*Editor Forest and Stream:*

In announcing that the bench show of the Rochester Kennel Club will be held in connection with the Western New York Fair, Sept. 26 to 30, instead of Sept. 6 to 9, it is proper that we should state that the very day we sent the telegram to Hamilton declining arbitration, we received from the fair managers a proposition to hold our show in connection with the fair, and it was decided that if Hamilton would not buy or sell, that we would give them the dates and consider the proposition of the fair managers. Every one knows Hamilton's answer to our buy or sell proposition, and the next week the correspondence appeared in print, and I wish to call attention to the fact that there were two letters published dated June 3, and both purporting to have been sent to me. This is not so, as for reasons unknown to me, the first of these was not received by me, but I hope this can be explained, as I do not wish it inferred that the letter was written at the time of the publication of the correspondence to fill a weak spot in Hamilton's case.

Again, on June 24 I wrote Hamilton a letter, which was returned unopened, with the statement written across the back that it was "Returned unopened, further correspondence not being desired." If this letter had been read by Mr. Stewart, he would have discovered that even after his hasty action the Rochester Kennel Club harbored no ill feeling, and was doing its best to drop out and allow Hamilton to have the conflicting dates, the conflict in dates being the fulcrum of our efforts to make satisfactory arrangements with the fair managers. When I saw Mr. Yates I suggested that he make a final effort to inform Hamilton that we would not conflict with them in any way. The result is well known, and the Rochester Kennel Club does not feel that it is their fault if Hamilton does not hold a bench show Sept. 6 to 9, 1892.

I wish finally to call attention to the "We are so much better than you" attitude assumed by Hamilton all through the correspondence. Comment is unnecessary; such things speak for themselves. O. STEWART BAMBER,
Secretary Rochester Kennel Club.

ROCHESTER, N. Y., Aug. 8.

## FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Can.—I met Harry L. Goodman at the depot here on Friday on his way to Montreal, to select a brace of puppies, dog and bitch, from the Mount Royal Kennels' champion Melac—Minervas fawn litter. They accompany him to Tennessee. He is chock full of his Tennessee farm, with twelve-roomed residence and other bric-a-brac attachments, and can talk of nothing else. He may lay off for a day here on his way back, and if he does Mr. Bell will take him in tow.

Mr. R. G. Wilkie of this city has been presented by Mr. W. Simpson of Egemouth, England, with the King Charles spaniel bitch La Fleur, whelped January last, by Le Roi (champion Ben d'Or II.—Lady Ellenboro) out of Princess Adelaide de Bourbon (champion Jumbo II.—champion Grace Darling). Mr. Wilkie intends sending her round the circuit.

Mr. Wade will enter the lists at Toronto with the mastiff dog Ealderman, which he has entered for that show. He is by Beaufort out of Emma, whelped April 1891.

The secretaries of the C. K. C. and A. K. C. are in correspondence regarding the claims for dates sent to both clubs. It is desired to come to some mutually satisfactory arrangement whereby clashing of dates, as in the unfortunate Hamilton—Rochester case, will become an impossibility. The matter will be referred to the next meeting of the A. K. C., to be held Sept. 8, when some plan of settlement will be suggested.

There is a probability of a dog show on a limited scale being held in Belleville, Ont., this fall in connection with the Quinte District Fair. Mr. H. Parker Thomas, a prominent barrister, Mr. P. Hart and other dog men are taking an interest in it.

The annual meeting of the Canadian Kennel Club will be held Tuesday evening of the Toronto show, and in all likelihood preliminary meetings of a Canadian Breeders' Association and the Canadian Fox-terrier Club will be held on the same evening. The formation of the former is for the purpose of holding one or more winter shows in Canada.

In London, Ont., a by-law was in force whereby all dogs at large in the streets were compelled to wear muzzles. Strong pressure by prominent citizens, who claim that muzzling in hot weather is more apt to induce rabies than to prevent it, has induced the council to repeal the obnoxious law, so London canines can now travel without the birdcage attachment.

Mr. A. Laidlaw has disposed of his interest in the *Sentinel-Review*, to which journal he has been attached many years, and will likely leave Woodstock.

Mr. R. Wanless, Sarnia, has imported from Mr. W. Harley, Edinburgh, the Dandie Dinmont terrier dog Rodger. He was bred by Mr. J. Hutchinson, whelped June 8, 1891, and is by Lomond Prince (Rab—Fanny) out of Floss (Hatteraick—Dandy Polla) and in color is a pepper. Mr. Wanless when he sold Sora to a breeder on your side may be said to have had "wan less," but now, with his new importation, he certainly has "wan more."

Mr. A. T. Wilgress, of Clarksburg, Ont., who once owned Edgewood Fancy, has added three good ones to his kennels, Trentham Duchess, Rosemary and Ted Pritchard. The last two are light-weights. Mr. Wilgress hopes to show a strong team at the fall circuit.

Mr. Geo. N. Dean, of Kingston, has a large scheme in hand, in the formation of a Canadian headquarters club in Chicago during the Fair. He wants local dogmen who propose visiting the Fair to join in and spend part of this week in Toronto talking it up. H. B. DONOVAN.

## BEAGLE CLUB MEETING.

*Editor Forest and Stream:*

As a reader of your valuable paper I would ask how it is that a report of the business transacted at the late meeting (July 28) of the Beagle Club is not found in your paper. The secretary of the Beagle Club must have the minutes of that and other meetings, and as I do not reside in New England, I would like to ask (for, Mr. Kennel Editor, I believe you are a member of the club also) how the other fellows are going to find out what is being done. I have never read full particulars of any meeting since I joined. It would be of interest to those not members to see what is going on and being done; perhaps they would become interested and join us. The other clubs have full reports, why not the Beagle Club? We ought not to depend upon private correspondence for such information. Surely the FOREST AND STREAM can get a scribe to keep it posted. W. H. ASHBURNER.

[This will be attended to in future.]

## MR. KREUDER'S BEAGLE CHALLENGE.

*Editor Forest and Stream:*

Any man, woman or child can buy good dogs if they have the cash, but it takes gumption to breed prize winners.

We are led to make the above remark after reading Mr. Kreuder's challenge in your issue of July 28, and we have waited a week to give Mr. Phoebus the first chance to accept. We know Mr. Kreuder well and that he is not bluffing, as the majority of challengers do nowadays. It is evident that he wants to show beagles, as he says they must be under 15in.; but why he wants them over 12in. is a puzzle to us, as some of the best beagles are under 12in. If Mr. Kreuder will modify his challenge a little we will give him a run for his money. We will show five dogs against his, but three must be bred by owner; and after the bench show we will run our dogs against his in the field trials for $10 to $25 each brace and $50 to the winner of the most heats.

HORNELL-HARMONY KENNELS.

HORNELLSVILLE AND COVERT, N. Y.

### Rochester Dog Show.

Mr. T. S. Bellin, of Albany, N. Y., has been engaged to judge non-sporting classes at the Rochester show. Premium lists will be ready soon. O. Stewart Bamber, M.D., 75 Rowe street, Rochester, N. Y., is the secretary.

### Business.

BROOKLINE, Mass., Aug. 1.—*Editor Forest and Stream:* * * * I am sure that your remarks as to ads. and answers to them in FOREST AND STREAM is all correct, as has been proven by my small ad. of a special character as to wire-haired Scotch terriers, etc. JAMES L. LITTLE.

# DOG CHAT.

### News from New Haven.

We are not gifted with powers of clairvoyance or we might be able to guess at dog news, and although FOREST AND STREAM covers a good many points and generally manages to give a news note now and then, still we have to send out a hurry call sometimes just to bring certain of our friends to a sense of their duty toward us. Mr. Frank Dole received one of these, and in answer he tells us he has been laid up for a few days, but how or in what way he does not say. He gives the name of the new Dandie Dinmont bitch Mr. E. Brooks, of Boston, Mass., purchased with Laird of the Heather, that was stolen, but recovered the other day. Her name is Ainsty Daisy and she is said to be one of the best living, having done a lot of winning and Mr. Brooks is quite proud of her. Frank Dole has just sent a draft for the well known Dandie, Amphion, winner of first, Birmingham; first, Manchester, and second, Cruft's show. All three mentioned are peppers, and the three cost in the neighborhood of $1,000. Mr. Brooks told us a year ago that he meant to have the best and he is carrying out his purpose. Mr. Dole has also just purchased for Mr. R. Dudley Winthrop, owner of the bulldog H. M. Stanley, the well known bulldog Leonidas. This is a big dog, weighing 57lbs., and is said to be the best over 55lbs. dog to be found. There will be a new thing in Skyes on the Canadian circuit this fall, and the Philadelphia people are expected to rub their eyes when they see it. The new comer is Endcliffe Maggie, a young bitch that has done quite a little winning at good shows on the other side. Mr. Dole imported her for Mr. H. K. Camer, of Philadelphia. She was in whelp to Poet when imported and had six fine pups last June.

For himself friend Dole has just bought the bulldog Leonidas II., by Leonidas out of Addiscombe Gipsey. He is a black brindle and has won a second, only time shown. Another is a good son of Pathfinder, that weighs under 45lbs., and also Lady Veino, by Rustic swell out of champion Rustic Lass. This is the bitch that is the heroine of the little story, "Three Hundred Miles to Buy a Bull Pup," published in *Stock-Keeper* some time since. Frank Dole has just sent to San Francisco one of the smartest bull-terriers he has ever bred It is eight months old, and is by Gully the Great out of Edgewood Fancy. "He was so good that I did not care about selling him around here." Our New Haven friend is very enthusiastic over a bitch that he has bred from champion Starlight by Gully the Great, and this will be reserved to hold up the stars and stripes against the English invasion at the World's Fair show next year. Better name her "Hail Columbia." Mr. Dole had a letter from one of the English bull-terrier men the other day, in which he said that since Gully the Great's departure they were hard put to find a good big stud dog. The dog is doing well for the breed over here; he has paid for himself, and on July 29 Mr. Geo. Runtun's bitch Wild Rose whelped thirteen puppies by him.

### Specialty Club Meeting Reports.

We draw attention to Mr. Ashburner's letter in another column. His ground is well taken. Every club secretary should either send a report of the proceedings to the club members or to such papers as will insure the report of the meeting being read by all interested. It is a short-sighted policy on the part of specialty clubs to so hide their light under a bushel. The reason is obvious. These reports create an interest in the readers that probably did not exist before, and this may lead to an increased membership list. Until the recent trouble in the Beagle Club we have received reports of all meetings with exemplary regularity, but the reports that are most anxiously looked forward to by outsiders have not come to hand, notably the July 28 meeting. FOREST AND STREAM contained exclusively, however, the main result of the meeting, the choice of judges, in its last week's issue. The following we are compelled to take from the American *Stock-Keeper*. The meeting was held in the Quincy House, Boston, Mass. Those present were "Messrs. F. W. Chapman, H. V. Jamieson, H. L. Kreuder, W. S. Clark, O. W. Brooking; B. S. Turpin, W. F. Rutter, Jr., and W. A. Power.

"Voted to accept the resignation of Messrs. William H. Hyland and George P. Berry. Voted that the field trial committee consist of the following members: Messrs. F. W. Chapman, B. S. Turpin, H. L. Kreuder, W. S. Clark, W. A. Power, O. W. Brooking, John Davidson, H. V. Jamieson, N. Rowe, C. S. Wixom, H. W. Lacy and W. H. Child. Voted that the name of Mr. W. H. Child be taken from the above committee at his own request. Voted to admit Messrs. T. Wills Hemphill, of Glen Mills, Pa., and Henry Hanson of Fall River, Mass., to membership." This is all the work that was done, the rest of the palaver from 9 P. M. Thursday to 5 A. M. Friday being taken up with smoothing things and arguing. Mr. H. L. Kreuder put down the law to some of them and his common sense prevailed.

### National Greyhound Club Meeting.

A meeting of this club was held on Monday afternoon at 4 P. M., in Mr. L. C. Whiton's office, 115 Broadway, New York city. Messrs. Huntington, Whiton and Osborne were present. The Brooklyn dog show was the principal subject of discussion and the time was chiefly taken up with selecting judges. Those so far chosen are: Mr. Wade, mastiffs, bloodhounds and Newfoundlands; W. Tallman, all setters; Aug. Belmont, foxterriers, and E. M. Oldham, spaniels. The following will be asked to judge: Dr. M. H. Cryer, pugs and toy spaniels, etc.; Charles Heath, pointers; Geo. Laick, beagles; H. W. Smith, greyhounds, etc.; A. M. Hughes, St. Bernards, R. F. Mayhew certain breeds of terriers, etc. The club will donate bronze medals for best dog and best bitch in the principal breeds and the prizes will be on a basis of $15, $10 and $5 in open classes for the important breeds and $10 and $5 in others. Kennel prizes of $20 will also be given to the more important breeds. Mr. August Belmont has offered $50 for the best American-bred fox-terrier under two years old. Mayor Boody has promised to open the show and several gentlemen like August Belmont, Col. DeLancey Kane and others will be patrons of the show. The list of names from which the club shall choose its list of judges was announced; they are: Messrs. H. Osborne, L. C. Whiton, C. F. R. Drake, C. H. Mason, Roger D. Williams, James Mortimer, H. W. Smith, Geo. Wilson and J. F. Kirk.

### Grand Rapids Show.

Our Western cousins seem quite capable of booming a dog show in approved circus style and are fully aware of the advantages gained by working the press with neatness and dispatch. The Muskegon *Chronicle* tells us that the Grand Rapids (Mich.), show is to be a great success. Two car loads of fine bred dogs are coming from Cincinnati alone and even friend Hawkes of Cincinnati will be surprised to learn that his Sir Walter Scot is quoted at $5,000 and is to be one of the main attractions. Messrs. Roger D. Williams and F. C. Wheeler will judge most of the show, the pointer and setter judge however, has not yet been chosen.

### Transfer of Coal Grove Kennels.

*Editor Forest and Stream:* I have sold to W. W. Titus my entire interest in the Coal Grove Kennel, only reserving for my own shooting Bohemian Girl. Mr. Titus will continue in the business at some point in the South and has my kindest wishes for his success. I bespeak the patronage of the public with my heartiest recommendation.

F. J. O'CONNELL.

### The Dog Catchers.

The Brooklyn dog catchers are waking up and Mayor Boody has received many complaints about them. The last one recites a case where a little boy and a Newfoundland were playing on the pavement before their home, when the boy saw the dog catchers coming at the other end of the street. The boy, who was quite young, tried to pull the dog into the house, but the latter saw no reason to hurry and the little chap had only succeeded in getting the dog half way into the hallway of the house when dog catcher No. 4 tried to take the dog away. The mother of the boy came to the rescue, was struck several times by the human brute and the boy was knocked down, the dog carted off and another act receiving the implied sanction of civic authorities had been rung down. Mrs. Gruyot, the owner of the dog, complained to the Mayor and the latter notified No. 4 to appear before him and explain matters, but he did not turn up and a warrant will be made out for his arrest. Justice should not lag in such cases.

### Black and Tan Terriers.

Dr. Foote is to be asked to become one of the vice-presidents of the English Black and Tan Terrier Club at its next meeting, according to the *Stock-Keeper*, the Duke of Newcastle to become honorary president. The club adopted the Scottish Club's standard, with these alterations: "That black and tan terriers should be more inclined to be cat than bare-footed; that the stern should be three-quarter and that in appearance he should be a terrier calculated to take his own part in the rat-pit." This latter is in contradistinction to the Scottish Club's idea, which is an appearance of speed and activity rather than strength and endurance.

### A New Pasteur Institute.

Dr. Gibier, whatever the merits of the Pasteur method may be, has certainly worked hard in the cause, and in the face of very adverse circumstances. The old building was found too small for the work, and ground has been broken in Central Park West and Ninety-seventh street, New York city, for a five-story brick building to be known as the Pasteur Institute. The building will contain every convenience and appliance for the special use to which it is to be devoted. Dr. Gibier has taken a ten years' lease of it and we can now look for a continued boom in hydrophobia scares.

### Fullerton.

Col. North has generally been accounted a most fortunate sportsman both on the race track and in the coursing field. It is, therefore, unfortunate that his numerous triumphs should be embittered by the knowledge that his great dog Fullerton, four times winner of the Waterloo Cup, is unable to sire a pup. Several of his own bitches have missed, and we all know about champion Spinaway's fruitless journey to Col. North's great dog. It is probable that in view of this unfortunate state of affairs that champion Spinaway will be sent to Col. North's Young Fullerton, who has sired some good litters and is well known as about the fastest dog in England.

### A Kennel Club for Richmond, Va.

We do not know who are the organizers of the poultry and kennel club that was to be started in Richmond, Va., one day last week, but those who remember the show held in that city in 1888 hope that some of the men of the Virginia Sportsmen's Association will take part in it. What a show that was, and no mistake, and how John S. Wise did hustle to make every one feel at home and enjoy himself. We can hardly imagine when we see this well-known pointer breeder walking decorously along the streets of New York dressed in sober broadcloth, that the jovial-looking man dressed *à la* John Bull in pink waistcoat and buff cords, marshalling that motley crew of foxhounds and way back fox hunters of "Ole Virginny," can be one and the same. Lots of dogmen wonder when the Association will hold another show. It will be a great one if they do.

### Trotting Dogs.

The trotting dog Doc has long held a unique position, but it is very likely that he will now have to share his honors with another "trotter" of the same breed. The Irish setter Joe, owned by D. Chapman, Cassopolis, Mich., is the newcomer. He is a handsome, well-bred animal, is three years old and weighs 72lbs. He was bred in Chicago. In his races he is harnessed to a pneumatic-tired sulky weighing 22lbs., which together with the rider makes an aggregate weight of 87lbs, behind the animal in a race. At a trial the other day Joe is said to have covered a half-mile in 1:43 and ran the same distance in 59s. Joe is matched to trot against the Canadian dog Doc, at the Detroit Exposition, and the contest will be an interesting one for those who care for such affairs.

### A. K. C. and C. K C. Registrations.

In connection with the Canadian shows it may be well to remind those Americans who intend exhibiting that owing to the reciprocity treaty in vogue between the A. K. C. and C. K. C., dogs listed or registered with the A. K. C. can exhibit themselves in Canada without regard to the C. K. C. register. There is rather a nice point that occurs to one when ruminating on this subject. Owing to these *vice versa* tactics an American dog can be registered in the C. K. C. book for 50 cents, whereas it costs $1 in the A. K. C. book. The American dog paying 50 cents is a registered dog just the same and carries its privileges across the border.

---

Mr. H. V. Jamieson in buying out the Forest Beagle Kennels is going quite extensively into beagle breeding. He has moved his kennels to West Duxbury, Mass., where he has an enclosed kennel yard of one acre. There is already a kennel building 16x10ft. and another 50x30ft. in course of erection. There are lots of rabbits on the farm, which is situated in a good hunting country and well adapted for beagle raising and training.

---

"Our congratulations to FOREST AND STREAM upon their Irish water spaniel illustrations, which are lovely."—*Stock-Keeper, England.*

---

Dr. W. C. Sneeden's, of Jamesport, N. Y., well known bull-terrier bitch, Winning Wagtail, was bred to Mr. Dole's Gully the Great, July 15.

---

The following have dogs for sale this week through the medium of our business columns: Lawrence Timpson, well-bred Skye terriers; D. E. Elbert, English setter pups and two brood bitches; 938 Prospect avenue, choice Irish and Gordon setter pups; W. Borrowscale, King Charles spaniel pups; John E. Davis, cocker spaniel Brock; Jas. G. Lathrop, trained coon dogs; F. L. Cheney, pointer pup and trained bitch, also setter pups; Wm. Arnot, mastiff pups and bitch, Handsome Brook Kennels, cocker spaniels, all sorts; F. F. Capers, black and white pointer pups; E. Kraeling, pointer Marc Anthony; C. Moulton, pug dogs; Wm. Carey, mastiff pups. Wants: W. A. Linn, a trained pointer dog.

---

The entries for the Kingston show will close Sept. 12, first day of the Toronto show.

---

Mr. Thos. Shillcock is selling out his entire kennel of St. Bernards. Here is a chance for some of our breeders, though all we need is an outcross from Plinlimmon blood. The kennels and all appliances are also to be sold, as Mr. Shillcock is going to take a large farm outside Birmingham.

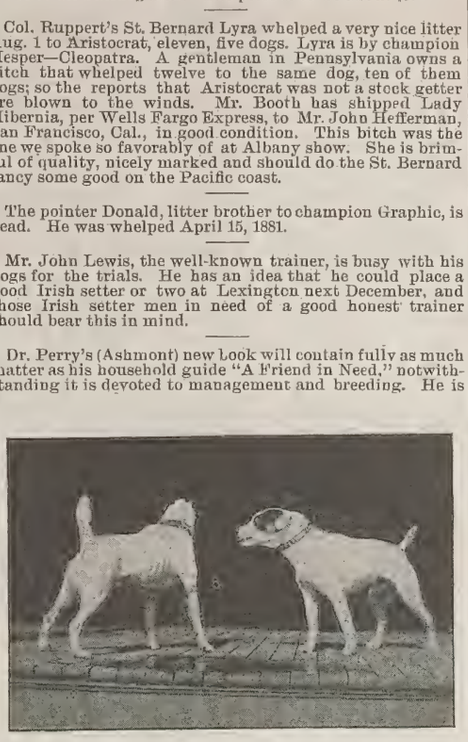
---

An item of news in the *British Fancier* will interest bulldog men. Messrs. Cyril F W. Jackson and Bowers are compiling a "Book of Bulldog Pedigrees" which is to contain authentic pedigrees and all information obtainable of every bulldog of note from the Ark down. This will embrace the particulars of about 6,000 dogs, and will be of great value to all bulldog men. The price is to be about $3.

---

Col. Ruppert's St. Bernard Lyra whelped a very nice litter Aug. 1 to Aristocrat, eleven, five dogs. Lyra is by champion Hesper—Cleopatra. A gentleman in Pennsylvania owns a bitch that whelped twelve to the same dog, ten of them dogs; so the reports that Aristocrat was not a stock getter are blown to the winds. Mr. Booth has shipped Lady Hibernia, per Wells Fargo Express, to Mr. John Hefferman, San Francisco, Cal., in good condition. This bitch was the one we spoke so favorably of at Albany show. She is brimful of quality, nicely marked and should do the St. Bernard fancy some good on the Pacific coast.

---



The pointer Donald, litter brother to champion Graphic, is dead. He was whelped April 15, 1881.

---

Mr. John Lewis, the well-known trainer, is busy with his dogs for the trials. He has an idea that he could place a good Irish setter or two at Lexington next December, and those Irish setter men in need of a good honest trainer should bear this in mind.

---

Dr. Perry's (Ashmont) new book will contain fully as much matter as his household guide "A Friend in Need," notwithstanding it is devoted to management and breeding. He is

"Touch me if you dare!"

BEVERWYCK TIPPLER AND BEVERWYCK MIKE.

Owned by Mr. Clarence Rathbone Albany, N. Y.

endeavoring to make it so complete the novice cannot possibly stray at any point. He is rushing this part of the book towards the printer and the work it has entailed has pretty well fagged the doctor out.

---

Mr. Mortimer was to sail Aug. 6 and is probably now buffeting his way over to this side.

---

Mrs. Morrison, until recently Mrs. Warner, the noted English exhibitor of toy spaniels, has accepted an offer to supply a Canadian gentleman with an important consignment of toy spaniels (all the different breeds), and Persian cats. So says the *British Fancier* this week.

---

Mr. Geo. Raper met with an accident the other day and had to cancel some of his judging engagements. It is termed a "trap accident."

---

Mr. John E. Williams imported recently the fox-terrier bitch Woodbine II., a half sister to the noted terrier Plaudit, from the kennels of Mr. Promfret Hikely, Rochdale, Eng. Woodbine came over in whelp to Brockenhurst Roger and whelped, just after landing, four dogs.

---

We are rather surprised that Mr. F. J. O'Connell should so soon withdraw his interest from the excellent kennel that he and Mr. Titus gathered together. We know what an active partisan in politics Mr. O'Connell is and probably his interest in field trials and field trial dogs will crop up again when the busy campaign is over once more.

---

It is not very often that Mr. Sears breaks out, but he had to tell us of a "special" litter by Sir Bedivere out of a Hesper bitch that, to quote his words, "I shall take a personal pride in showing to my friends. * * * Most of them perfectly marked and at a week old were walking all over the kennels."

## TORONTO DOG SHOW.

*Editor Forest and Stream:*

I wish to add a little information for intending beagle exhibitors at the coming Toronto dog show, Sept. 12 to 15, as there seems to be some misunderstanding as to the reading of the classes. Classes 137, 138, 139, 140 are for beagles 13 to 15in. inclusive. Classes 142, 143, 144, 145 are for beagles under 13in., consequently a 12½in. beagle cannot be entered in a 13 to 15in. class any more than a 15in. beagle can be entered in the under 13in. class. Entries for all the sweepstakes can be made on the same entry forms as used for the other classes. Canadian exhibitors must distinctly state if they wish to compete for the Canadian Kennel class specials. All entries close Sept. 1. C. A. STONE, Sec'y and Supt.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

### NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*Happy Thought, Sis, Lady Estelle and Lizzie B.* By Eberhart Pug Kennels. Cincinnati, O., for silver fawn pugs, one dog and three bitches, whelped July 23, 1892, by Happy Toby (Spokane—Lalla Rookh) out of Lady Alma (Eberhart's Cashier—Mabel E.).

*Kent III.* By A. E. Davis, Worcester, Mass., for black, white and tan ticked English setter dog, whelped March 22, 1892, by Kent II (champion Count Howard—Lady Westmorland) out of Miss La Salle (King Gladys—La Salle).

*Golden Chimes and Golden Gem.* By J. B. Martin, San Francisco, Cal., for white and tan and white, black and tan fox-terrier dog and bitch, whelped May 11, 1892, by Woodale Rustic (Warren Jim—Warren Torment) out of Blemton Rapture (champion Regent—champion Rachel).

*Robert, Rollo, Roy, Rip Rap, Ruth and Rachel.* By F. B. Zimmer, Gloversville, N. Y., for four black, white and tan beagle dogs and two white, black and tan bitches, whelped June 14, 1892, by Jubilee out of Nellie Bannerman (Jack Bannerman—Fly II.).

*Rustic and Rumpus.* By F. B. Zimmer, Gloversville, N. Y., for white, black and tan beagle dogs, whelped May 22, 1892, by Drummer (Blue Cap—Chimer) out of Millie (Blue Cap—Minnehaha).

*Rhyme and Rill.* By F. B. Zimmer, Gloversville, N. Y., for white, black and tan beagle bitches, whelped May 13, 1892, by Elora Dash (Elora Yap—Lark) out of Gipsey (Blue Cap—Chimer).

*Rocket, Ransack, Reckless and Rash.* By F. B. Zimmer, Gloversville, N. Y., for black, white and tan beagles, two dogs and two bitches, whelped April 29, 1892, by Drummer (Blue Cap—Chimer out of Beauty (Blue Cap—Minnehaha).

### BRED.

☞ **Prepared Blanks sent free on application.**

*Winsome Wagtail—Watchful Wagtail.* Wagtail Kennels' (Jamesport, N. Y.) bull-terrier bitch Winsome Wagtail (Rusher—Nell Bright) to their Watchful Wagtail, July 16.

*Winning Wagtail—Gully the Great.* Wagtail Kennels' (Jamesport, N. Y.) bull-terrier bitch Winning Wagtail to F. F. Dole's Gully the Great (Gladstone—Florie), July 15.

*Ileene—Dick Swiveller.* F. C. Fowler's (Moodus, Conn.) Irish setter bitch Ileene (champion Ponto—Drenagh) to W. L. Washington's champion Dick Swiveller, Dec. 8.

*Fanny—Dick Swiveller.* F. J. Heinz's Irish setter bitch Fanny to W. L. Washington's champion Dick Swiveller, Dec. 16.

*Grouse—Dick Swiveller.* Thos. Igne's Irish setter bitch Grouse (Count Patrick—Bella) to W. L. Washington's champion Dick Swiveller. Dec. 8.

*Hazle Tearaway—Dick Swiveller.* A. Kreb's Irish setter bitch Hazle Tearaway (Tearaway—Hazlenut) to W. L. Washington's champion Dick Swiveller. Dec. 19.

*Nellie—Dick Swiveller.* J. J. Mannion's Irish setter bitch Nellie (Cocksure—Tillie III.) to W. L. Washington's champion Dick Swiveller, Jan. 29.

*Bella H.—Dick Swiveller.* B. D. Matthews's Irish setter bitch Bella H. (champion Kildare—Red Rose) to W. L. Washington's champion Dick Swiveller. Feb. 2.

*Rose XIII.—Dick Swiveller.* Oliver Sumner's Irish setter bitch Rose XIII. (Don L.—Haidee) to W. L. Washington's champion Dick Swiveller, Feb. 4

*Lady Snipe—Dick Swiveller.* A. C. Anderson's Irish setter bitch Lady Snipe (Snipe—Nelly) to W. L. Washington's champion Dick Swiveller. Feb 10.

*Stella IV.—Dick Swiveller.* P. G. Hick's Irish setter bitch imported Stella IV. (Beaconsfield—Alma) to W. L. Washington's champion Dick Swiveller. Feb. 20.

*Clidie—Dick Swiveller.* C. D. Jolliffe's Irish setter bitch Clidie (Don Pedro—Daisy) to W. L. Washington's champion Dick Swiveller March 11.

*Lady O'Brien—Dick Swiveller.* G. C. Walker's Irish setter bitch Lady O'Brien (Joe—Kitty O'Brien) to W. L. Washington's champion Dick Swiveller, March 31.

*Lulu IV.—Dick Swiveller.* S. C. Anderson's Irish setter bitch Lulu IV. (Dick—Lulu II.) to W. L. Washington's champion Dick Swiveller, April 15.

*Kildare Tara—Dick Swiveller.* A. D. Sutton's Irish setter bitch Kildare Tara (champion Kildare—Bess P.) to W. L. Washington's champion Dick Swiveller, April 15.

*Lady Rose—Dick Swiveller.* H. Alexander's Irish setter bitch Lady Rose (Young Sarsfield—Haidee) to W. L. Washington's champion Dick Swiveller. April 20.

*The Marchioness—Dick Swiveller.* Kildare Kennels' Irish setter bitch The Marchioness (McDuff—Molly) to W. L. Washington's champion Dick Swiveller, June 5.

*Bessie Zapp—Dick Swiveller.* Fred Paster's Irish setter bitch Bessie Zapp (Tippecanoe—Maude Jones) to W. L. Washington's champion Dick Swiveller, July 30.

*Ripple—Jubilee.* W. Wilson, Jr.'s (Gloversville, N. Y.) beagle bitch Ripple (Drummer—Violet) to F. B. Zimmer's Jubilee, May 24.

*Twinkle—Stormy.* F. B. Zimmer's (Gloversville, N. Y.) beagle bitch champion Twinkle to his Stormy, July 24.

*Royal Rosey—Jubilee.* F. B. Zimmer's (Gloversvill, N. Y.) beagle bitch Royal Rosey to his Jubilee, July 17.

*Nellie S.—Jubilee.* Wm. Soule's (Gloversville, N. Y.) beagle bitch Nellie S. (Spite—Laure)), to F. B. Zimmer's Jubilee, July 10.

*Faith—Princelimmon.* F. B. Zimmer's (Gloversville, N. Y.) St. Bernard bitch Faith (Berkshire Prince—Jewell) to H. R. T. Coffin's Princelimmon (champion Plinlimmon—Lady Wellington), June 25.

*Juno—Jubilee.* Joseph Teetz's (Gloversville, N. Y.) beagle bitch Juno (Blue Cap—Minnehaha) to F. B. Zimmer's Jubilee, May 20.

*Flossie—Blemton Reefer.* D. F. McCarthy's (Tiburon, Cal.) fox-terrier bitch Flossie (Blemton Shiner—Jess) to J. B. Martin's Blemton Reefer (champion Venir—champion Rachel), July 22.

*Diana II—Hundesport's Zaenker.* Iroquois Kennels' (Tonawanda, N. Y.) dachshund bitch Diana II. (Mink—Adelheid) to W. Loeffler's Hundesport's Zaenker, July 10.

*Lady Pug—Eberhart's Cashier.* F. C. Bloomer's (Cincinnati, O.) pug bitch Lady Pug to Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora), July 26

*Midget Nellie—Patsy Bolivar.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Midget Nellie (Lord Clover—Sister) to their Patsy Bolivar (Eberhart's Cashier—Flossy II.), July 30.

### WHELPS.

☞ **Prepared Blanks sent free on application.**

*Uno King Don.* C. D. Roberts's (Dexter, Me.) pointer bitch Uno King Don (King Don—Patti M. II.), July 13, nine (three dogs), by his Duke of Dexter (Duke of Vernon—Boski).

*Woodbine II.* J. E. Williams's (Brooklyn, N. Y.) fox-terrier bitch Woodbine II. (Monte Carlo—Minx), June 23, four dogs, by Pomfret Hikely's Brockenhurst Roger (Rational—Yetene, sister to New Forest).

*Hillside Brilliant.* A. S. Cushman's (St. Louis, Mo.) fox-terrier bitch Hillside Brilliant, July 12, four (three dogs), by Hillside Kennels' Reckoner.

*Nellie Bannerman.* F. B. Zimmer's (Gloversville, N. Y.) beagle bitch Nellie Bannerman (Jack Bannerman—Fly II.), June 14, eight (six dogs), by his Jubilee (Lee II.—Flirt).

*Alice.* W. Loeffler's (Milwaukee, Wis.) dachshund bitch Alice (Waldmann II.—Crawl), July 26, five (three dogs) by his Hundesport's Bergmann.

*Polly.* E. Schwarzrock's (Milwaukee, Wis.) dachshund bitch Polly (Hundesport's Zaenker—Lina K.), July 14, three (two dogs), by Wm. Loeffler's Hundesport's Bergman.

*Popcorn.* Dr. R. A. Ferguson's (Bakersfield, Cal.) fox-terrier bitch Popcorn (Doctor—Jrssie), June —, four (three dogs), by J. B. Martin's Blemton Shiner (Blemton Rubicon—Blemton Brilliant).

*Mystic II.* E. H. Bragg's (North Sidney, Me.) beagle bitch Mystic II. (Ross—Spot), July 14, five (three dogs), by his Chubb (imported Blue Boy—Mystic).

*Laville.* Manatang Kennels' (Marblehead, Mass.) greyhound bitch Laville (champion Memnon—champion Harmony), July 24, by Hornell-Harmony Kennels' Hazlehurst (champion Balkis—champion Cassandra).

### SALES.

☞ **Prepared Blanks sent free on application.**

*Hayward.* White bull-terrier dog, whelped Aug. 7, 1891, by White Wonder out of Winning Wagtail, by Wagtail Kennels, Jamesport, N. Y., to W. B. Chamberlin, Danville, Pa.

*Gladys.* White bull-terrier bitch, whelped Aug. 7, 1891, by White Wonder out of Winning Wagtail, by Wagtail Kennels, Jamesport, N. Y., to J. H. Taylor, Bayside, N. Y.

*Blemton Brilliant.* White and ticked black fox-terrier bitch, whelped April 8, 1887, by The Moonstone out of Media, by C. D. Bernheimer, New York city, to J. B. Martin, San Francisco, Cal.

*Sir Kent.* Blue belton English setter dog, whelped April 8, 1891, by Kent II. out of Nicolette, by A. E. Davis, Worcester, Mass., to J. L. Adams, Louisville, Ky.

*Lord Clifton.* Silver fawn pug dog, whelped Aug. 20, 1891, by Bradford Ruby II. out of Lady Thelma, by Eberhart Pug Kennels, Cincinnati, O., to F. S. Pritchard, same place.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.*

---

G. S. G., Britt, Ia.—Col. Le Poer-Trench, 3 Hyde Park Gardens, London, England.

H. B., Montreal, Can.—Kindly give address of secretary of the C. K. C. Ans. H. B. Donovan, Toronto, Can.

R. E. E., Edwardsville, Ala.—What are Psovois good for? Ans. We do not know. They are very handsome dogs and some people say they are used to hunt wolves with.

W. B. K., Rockford, Ill.—I have a pointer pup, 6 months old, by Prince Naso II. ex Lucksie. Can I use Hammond's system of training with success on my dog? Ans. Yes.

J.B., Hudson, N.Y.—1. I bought a young foxhound of a prominent breeder last April when it was one year old. The first gun I fired was in June, and the dog ran home. I find he will run and hide if you strike a parlor match or a cap on a gun. He was guaranteed to me to have no superior in this State or the State he came from. Is there a remedy for a dog that is gun shy. 2. Are there any foxhounds bred in the United States that can only be used with riders and not adapted for the use of a gun? Ans. 1. There is no remedy for a gun-shy foxhound. 2. Yes, lots of them. The packs of English hounds used here are never shot over.

X. Y. Z., Oakland, Cal.—The latter part of answer 1, to your query was omitted last week. It should read: Give 5grs. of salicylate of bismuth three times a day, shaken on the tongue, and in addition give the following pill:

| | |
|---|---|
| Ferri redact | grs. xxiv. |
| Quinine sulph | grs. xii. |
| Strychnine sulph | grs. ¼ |
| Arsenious acid | grs. ⅛ |

Mix and make 12 pills; give one twice a day.

M. C. B.—Would like to know what will cure a hound dog from itching; he scratches, and cannot be still hardly a minute without scratching. His hair also is coming out. Ans. Rub the following dressing all over every other day: Kerosene 10oz., oil of tar 6oz., sulphur 1lb., sperm oil add one-half a gallon. Treat for worms; then give this mixture:

| | |
|---|---|
| Tr. nucis vom. | |
| Ferri pyro-phosph. | |
| Acid phosphori. dil | āā ʒ i |
| Aq. add | ʒ vi |

Tablespoonful three times a day.

J. H. B., Gardner, Mass.—1. What is the matter with my rabbit dog? At times he wants to pass something and only a few drops of yellow water will come. Sometimes he looks thin and other times all right. He also drags himself along on his quarters. He is a cross bred foxhound and beagle. 2. What is the best book on dogs and diseases and treatment? Ans. There may be some foreign body lodged in the rectum. It would be advisable to have a S. examine it. Give a tablespoonful of castor oil and ten drops of laudanum. 2. Ashmont's "Dogs, Their Management and Treatment in Disease." Price $2. Dr. Mills's "The Dog in Health and Disease." Price $2.75. Also Dalzell's "Diseases of the Dog." Price 0 cents. We can supply them.

An Interested Reader, Chicago, Ill.—My pointer dog, 11 months old, is affected with the mange and is troubled with a substance resembling matter, which collects on his eyelids and ashes, rendering him almost blind. Will you kindly tell me of a remedy? Ans. For the mange rub sulphur ointment all over every other day for two weeks. Treat for worms. Then give this mixture:

| | |
|---|---|
| Dialyzed iron | ʒ ii |
| Tr. nucis vom | ʒ i |
| Tr. gent. co | ʒ ii |
| Syrup | ʒ ii |
| Water add | ʒ vi |

Tablespoonful three times a day. Bathe eyes three or four times a day with the following lotion:

| | |
|---|---|
| Boracic acid | ʒ ii |
| Zinci sulph | ℈ i |
| Water add | ʒ viii |

H. T., Dryden, Mich.—I have an Irish setter dog, now sixteen months old, but he keeps so thin I am almost ashamed to take him out. He seems to have a good appetite and plenty of life. I feed him house scraps, oatmeal and milk, bones from butchers, etc. I keep him confined out of doors in a good clean kennel all the time, but give from one-half to an hour's run every day. What do you think is the matter with him, and can you suggest anything that I can do to put some "flesh" on him. Ans. Treat for worms. Give a little more meat in addition to food you mention, also give twice a day a dessertspoonful of codliver oil and the following mixture three times a day:

| | |
|---|---|
| Ferri. pyro. phosph | ʒ iss. |
| Tr. nucis vomica | ʒ i. |
| Liq. arsenicalis pot | āā. |
| Syrup simplex | ʒ iss. |
| Aqua ad | ʒ vi. |

Sig. Tablespoonful three times a day.

# Yachting.

27. Roy. N.S., Lord Alex. Russell Cup, Halifax.

The cruise which ends on Wednesday or Thursday is one of the most successful in the history of the New York Y. C., and is in one respect a remarkable one. The fleet has carried out a specially long programme without the least delay or postponement, a succession of fast runs carrying the squadron from Glen Cove to Marblehead in six days and a half. The fleet that went around Cape Cod before a fine southwester is nearly as large as that which ordinarily makes the final run of the cruise from New Bedford to New London. Thanks to the spirit of Com. Gerry and Mr. J. Pierpont Morgan, the fleet will enjoy two fine races, the one already sailed, for the Morgan cups, being an extraordinary success, over 100 miles of hard fighting, with but minutes between the leaders. Com. Gerry and all associated with him in the management of the cruise and the races have every reason to be satisfied with the result.

While the question of absolute speed over a measured course is still undecided, and is likely to be so until some genuine sportsman shall build a yacht to race Vamoose, the latter has during the past ten days given conclusive proofs both of her high speed and staying qualities. She has kept ahead of the fleet without effort, and the skillful handling and willing co-operation of Chief Heilbron and Captain Young have made it possible for those on board to see everything to the best advantage.

### Seawanhaka Corinthian Y. C.

The Rouse and Wetmore series, third race, and the handicap race for the Breese cup will be sailed simultaneously, and with the same entries, on Saturday, Aug. 13. They are open to all S. C. Y. C. yachts under 32ft. waterline, sailing in one class. The Rouse and Wetmore race will be sailed under the usual regulations for this series, except that time allowance for keel yachts shall be determined upon their racing length. A cup valued at $35 is offered by Miss E. L. Breese to the yacht winning this race, under such handicap allowances as may be determined by the race committee. The winner of the Rouse and Wetmore cup in this race shall not be eligible to compete for the Breese handicap cup. The race will be started as soon after 11 o'clock A. M. as possible.

Walter C. Kerr, Chairman, 17 Cortlandt street.

## NEW YORK Y. C. CRUISE, 1892.

While there is much to regret in that decline of the regattas and general races which has been so marked within half a dozen years, there are at the same time two results of the change which go far toward balancing its disadvantages. In the first place the withdrawal of the larger classes has been followed by a marked increase of building and racing in the smaller; in the creation of special racing classes such as the 40ft. in 1889-90 and the 21ft. class this year, in which the racing is keener and the opportunity for improvement far greater than in the former classes, each with a few large yachts of various ages and of unequal quality. It is safe to say that more may be learned this year from the new 21ft. class than is shown in any five years of the history of racing in the old 70ft. class.

In the second place, the decline of general racing through the season or rather in June and again in September, has resulted in a vast improvement both in amount and quality, in the racing of the great annual cruise, that of the New York Y. C.

Not only do the two fleets of New York and the East that still enter in the regattas join forces on the cruise, but many owners who never think of entering an ordinary club race are tempted into taking part in the squadron runs, the result being a racing fleet of fifty to sixty yachts, from 120ft. down to 40ft.

This year the racing occupies its usual important place in the programme of the cruise, one which will probably include some six or seven separate events. The general arrangements of the races are much the same as usual; the Goelet cups, the ninth annual series, are still the premier prizes, to be supplemented probably by a race at Marblehead, while the usual prizes are given for the squadron runs. These latter are made under the regular racing rules, in cruising trim, anchors on bows and boats carried, no clubtopsails, and no water to be taken into tanks after 8 A. M. each day. A first prize is given in each class for every race, with two starters, a second if more than three start.

The racing division of the fleet includes about 40 yachts, all told, though the starters in each squadron run will average about 30. The largest schooner class is showing up well this year, in spite of the absence of the stately old Palmer, the handsomest by far of the historic old racing schooners. The new Constellation not only looks well, but is sailing fast under her new ownership of Mr. Bayard Thayer, and with Capt. Watson handling the wheel as though he had never heard of anything so small as little Pappoose with her bucket steering well. The old Dauntless looks and is a different boat with her masts plumbed, the old historic rake having been taken out last winter. This year she has fairly broken her record, sailing with the fleet for a whole week without breaking a spar. Ramona, the old Resolute, is around to make a picturesque background to the fleet of small fry, reminding one of the old days when she and Palmer, Intrepid, Fleetwing, Sappho and their mates were the queens of the racing fleet; when 40 and 46-footers were never dreamed of. Coronet, too, is with the fleet this year, big and ungainly in hull and rig, with neither the finish of the newer yachts nor the yachty style of the very old schooners.

The two old rivals, Fortuna and Montauk, are together again in the squadron runs, though standing aside when the Goelet cup is mentioned, their day for such racing being over.

The 90ft. class lacks only the presence of Volunteer and Sea Fox to make it complete, mustering more yachts than in half a dozen years before. To the old boats, Merlin, Mayflower, Phantom, Comanche, Atlantic and Alert, are added two new ones, Lasca, designed by Mr. A. Cary Smith, and Alcæa, designed by Mr. William Gardner. Since last flying a racing flag Atlantic has been rebuilt and is now in new hands, being owned by two keen young yachtsmen, Messrs. Seeley & Marshall. Comanche, though an old yacht, is new as a racer, being the schooner Æolus, rebuilt last year.

Lasca, the new centerboard schooner, is a handsome yacht, a fitting mate to Iroquois and Yampa, with a good sheer and a handsome rig. Ugly as the "Gloriana bow" is in detail and on close inspection, it is not specially noticeable when the yacht is under way, and does not detract from her appearance, which has attracted only favorable comment throughout the fleet. Her topsides are black from the waterline up, with a heavy teak rail, the usual gold ornamentation showing well on the black paint. She has not been out long enough to stretch her sails, but her owner skipper, Captain Rhodes, is doing much to push her ahead in spite of this handicap.

Alcæa, the Gardner boat, is a keel craft, the most ambitious step in this direction yet made by an American designer, all the other racers of her class, deep as some of them are, having centerboards. Unfortunately, by dint of one even coat of white paint and the absence of all ornamentation, she does not show what a handsome boat she really is. Her figurehead, trail boards and other trimmings are to be very elaborate, but as they are not yet completed, she is sailing about with the rough end of her stemhead as the sole ornament. Her rig, patterned like Volunteer after that of Miranda, the "two-masted cutter," is very rakish, and under way there is no fault to be found with her appearance. Like Lasca, she has the fashionable snout, but of handsomer form, and her plating being all flush and particularly well laid, the bow has a cleaner look than in Lasca, whose "in and out" plating gives her a fullness in the bow. Alcæa has been under way long enough to stretch her canvas, and is ahead of Lasca in this respect.

The 80ft. class is sharing the prosperity of the 90ft. this year, with Marguerite, Iroquois and the new Shamrock. Since last season Marguerite has been entirely remodeled in sail plan and ballast plan by Mr. George A. Stewart in connection with her skipper, Captain Sherlock. The lead keel has been removed and recast in new shape, and important changes have been made in the sail plan. Though built in 1887 and rebuilt in 1890, Shamrock is new to the schooner class, her rig having been altered this spring. Her place is naturally at the head of the 70ft. class, but Mr. Maxwell has elected to lengthen her enough to sail with Marguerite, Iroquois and Œnone, the former two being 10ft. longer.

Quickstep has sailed for several seasons without a rival in her own class, but this year she has found one in the old Azalea, a boat that under her new owner, Mr. J. Clinch Smith, has been sailing very fast in the early regattas. With them is Gevalia, another old boat, and also Peerless.

The larger single-stickers are all well known, Gracie, Fanny, Katrina (with a new owner, Mr. George Work), and Huron. The 61 and 53ft. classes together include Wayward, Athlon, Clara and the Bronx River craft Ventura, the boats being classed from day to day according to entries.

The two Herreshoff boats in the 46ft. class, Wasp and Gloriana, are now well known, but the other leader, Harpoon, is comparatively unknown this season. As a matter of fact she was one of the most noted of the 46ft. class last year, but at the same time Harpoon of 1892 is a very different boat from Beatrix of 1891; so much so that the question that was involved at the end of last season, of the superiority of Gloriana or Beatrix, must remain without an answer. The change of name is hardly greater than the other changes which have been made in Beatrix under the direction of Mr. Burgess's successor, Mr. Stewart.

After a trial by Mr. Stewart of a heavy centerboard in the 30ft. Hawk, Messrs. Adams, Beatrix's new owners, determined to risk the same experiment in Harpoon, the change involving a material alteration of her ballast plan. The old keel was removed and replaced, a weight of 4½ tons being taken from it, the space on the keel being filled in with wood. The new board is made of steel plate, filled with lead, and weighs 3½ tons, special hoisting mechanism being necessary to handle it. The sail plan was changed by the use of a longer gaff with less peaking up, and a very large clubtopsail, together with minor alterations of the rigging by which the peak is held up. The result of the changes of ballast was a reduction of 1½ tons in the displacement, giving a shorter waterline, while the sailing length was not increased over last year. The stability has been increased by the weighted board, the yacht carrying her sail better.

The 40ft. class has brought out a few of the old flyers on the runs, but with no close or continuous racing; the suitability of yacht racing was never better shown than as the fleet moved running across from Newport to Vineyard Haven. The last boat, far in the rear, was a little black cutter, plodding along as though she had never been within hearing of a starting gun. Coming up from the eastward was a white cutter of about the same size, driving carelessly along with a boat in tow. The two met and passed with no more ceremony than a pair of coal-laden coasters, almost on the spot where two years before the white one was within her time allowance in the Goelet Cup race, and the whole yachting world was watching this pair. One was Gossoon and the other Minerva.

### Glen Cove to Morris Cove, Aug. 2.

RENDEZVOUS AND FIRST RUN.

Opinion was divided last year as to the advisability of abandoning the accustomed rendezvous at New London and returning to the former one at Glen Cove, Hempstead Bay, at the west end of Long Island Sound, and even after a practical trial the question was still an open one. The fact that Glen Cove was again selected this year may be taken as proof that the change was an acceptable one to the yachtsmen, and after this second trial the experiment may be set down as a success. The long and severe race of last year from Huntington to New London was not quite what yachtsmen were looking for, but no one was hurt by it; and this year the distance from Glen Cove to New London has been covered very easily and comfortably.

The main objection to a Glen Cove rendezvous has not been realized, so far from the traditional calms of Long Island Sound, some of the strongest winds of the cruises of both years have been met on the first and second day, west of New London. The weather on Tuesday for the first run was similar to that of the Huntington New London run of last year, though less severe.

In order to enable the non-owners and their friends to take part in the opening of the cruise, the steamer Myndert Starin was engaged, starting from New York early in the morning and accompanying the fleet until late in the afternoon. A tug was also provided to carry the captains from New York to their yachts at the rendezvous. The flagship Electra, with Com. Gerry on board, anchored off Glen Cove at 11 A. M. with a fleet of some 80 yachts in attendance. A meeting of captains was held at once, the decision being to sail at 1 P. M. for Morris Cove, New Haven Harbor, the run not being timed.

The morning had been cloudy and quite cool, with an easterly wind, and when the signal for a start was made a light rain was falling. The wind was then E. by S. moderate, with a foul tide and a little sea in the middle of the Sound. The yachts were anchored at random, some outside and some well up the harbor, and as they got under way as they pleased the start was a very uneven one. Viator took the lead, with Wasp and Gracie, Lasca and Alcæa were close together and got under way at the same time. Fortuna was in company with them. The most of the yachts started on starboard tack across the Sound, a few working the Long Island shore. Constellation and Merlin were at the head of the schooners out in the Sound. Lasca and Alcæa chose the latter course after a short time, Lasca being to windward and doing the better work, while Fortuna was astern of the two, but to windward of Alcæa.

The leaders, Wasp, Gracie and Viator, passed Oyster Bay about 2:30, Gloriana being then over a mile astern of Wasp. Fanny, Clara, Katrina, Quickstep, Shamrock and Liris were following along the shore. Lasca at this time was standing in for Lloyd's Neck, considerably ahead of Alcæa, crossing her bows by a good clear space on the tack off shore. Alcæa came about and the two stood on together, but Lasca was evidently pointing higher and holding on better, while she showed less angle of heel under the same sails. Shamrock, Quickstep and Fanny left the others off Lloyd's Neck and stood far across, Fanny working ahead very well.

About 3 P. M. the sky cleared, the wind still holding fresh. Marguerite, Merlin and Iroquois for a long time had been over on the Connecticut side, the former being ahead.

Shortly after 4 o'clock the Long Island division was in Smithtown Bay, Wasp leading Gracie in a very pretty race, the next boat, Constellation, being over a mile astern. Katrina, Viator and Gloriana had just passed Eaton's Neck. Over on the other shore, near the Norwalk Islands, was Fanny followed by Marguerite and Merlin, the two schooners fighting for the lead. Lasca and Alcæa were still together, inshore, but the former still ahead, though Alcæa was doing better work than in the first part of the run.

Thus far Marguerite and Merlin had held together, the advantage being on the side of the former, but after passing Norwalk Islands and making a long tack off shore, Marguerite stood in, while Merlin held her tack, the two parting company.

At 5 o'clock Fanny was still leading her division with Marguerite near her and Merlin well out in the sound. Shamrock had Quickstep under her lee inshore, while Lasca and Alæca, the next pair, were still in the same relative positions, save that the former had increased her lead. Little Liris was hunting Clara close inshore under Alcæa's lee, while astern were Pocahontas, Fortuna, Iroquois, Miranda, Athlon, Sayonara, and most of the tail of the fleet.

The real leaders were the boats which held to the Long Island shore, the order still being Wasp, Gracie, Constellation, followed by Gloriana, Katrina and Viator. With a head tide and a lighter breeze it was 8 P. M. before Constellation anchored in Morris Cove, soon followed by Gracie and Wasp. Marguerite was the second schooner and Lasca led Alcæa in. The others came in one by one until all were accounted for, save some who put in to Black Rock over night. Fleetwing lost her foretopmast off Eaton's Neck and kept on for New London.

### Morris Cove to New London, Aug. 3.

SECOND RUN.

Wednesday morning was cool and cloudy, after a brisk shower during the night, the wind being light from northwest. The orders were for a start at 10:30 A. M., and before that hour Ituna took her position outside New Haven harbor, sending out a dinghy to mark the lee end of the starting line. The race for the day was to New London, passing outside of Bartlett's Reef, 39 nautical miles. The preparatory gun was fired at 10:17, the start for the 70ft. schooners and all single-stickers being at 10:28, all others starting at 10:37.

The wind by this time was N.N.W., but still light, and a number of yachts which failed to make Morris Cove were coming up from the westward.

Gloriana and Wasp were first for the line, the former crossing just after the gun, setting balloon jibtopsail after crossing. Wasp, however, bore away, setting her ballooner and crossing with good way on. Gevalia was third, followed by Athlon, then Quickstep and Sayonara. Azalea was just too late for the handicap gun, at 10:37, the signal for the remainder of the fleet. Lasca was first of the large schooners, the fleet being timed:

| | | | |
|---|---|---|---|
| Preparatory | 10 20 00 | Dauntless | 10 47 37 |
| Start | 10 30 00 | Ventura | 10 47 50 |
| Gloriana | 10 30 39 | Marguerite | 10 48 05 |
| Athlon | 10 32 20 | Comanche | 10 48 20 |
| Gevalia | 10 32 36 | Alcæa | 10 48 25 |
| Wasp | 10 35 12 | Œnone | 10 48 30 |
| Sayonara | 10 38 33 | Atlantic | 10 48 48 |
| Handicap Start | 10 40 00 | Fanny | 10 49 56 |
| *Quickstep | 10 40 00 | Handicap | 10 50 00 |
| *Liris | 10 40 00 | *Shamrock | 10 50 00 |
| *Clara | 10 40 00 | *Iroquois | 10 50 00 |
| *Azalea | 10 40 00 | *Constellation | 10 50 00 |
| Lasca | 10 43 38 | *Gracie | 10 50 00 |
| Alert | 10 45 25 | *Coronet | 10 50 00 |
| Fortuna | 10 45 25 | *Ramona | 10 50 00 |
| Katrina | 10 46 31 | *Phantom | 10 50 00 |
| Merlin | 10 47 25 | | |

*Handicapped.

With a ten-minute interval to cross in the yachts struggled over, one at a time, making the start devoid of all interest.

Nearly all carried balloon jibtopsails, the schooners carrying balloon maintopmast staysails. The course brought the wind about abeam, the fleet moving briskly on the last quarter of the ebb. Just after the handicap gun at 10:47 a number of yachts reached the start from the northward, among them Gracie and Phantom.

As the leaders reached the Thimble Islands they struck a calm patch, the result being a most remarkable lining up of the whole fleet. Gloriana stopped first, Wasp soon running up and stopping just abeam of her. As the others ran up each in turn stopped as she ran abeam of the leaders, until the thirty yachts lay in line as though for an anchor start. Fanny, Gracie, Wasp, Gloriana, Shamrock, Gevalia, and the others to windward soon caught a very light air and forged ahead, but Alcæa, Lasca, Fortuna and the larger boats were in a bunch, almost motionless.

As the first division drifted ahead the wind left them as well, and soon the leaders were drifting without steerage way. Wasp, Liris, Gracie, Fanny and Gevalia came together, the latter three being in collision, but touching so lightly that no harm resulted.

When the leaders were near Falkner's Island, at 12:30, a breeze from S.W. wandered along, picking up a yacht here and there at random. Sayonara, the first boat, had her boom to port, while Wasp near by had hers to starboard. While most of the fleet were holding the N.W. breeze a number of scattered yachts caught the new wind, all jibing over by 1 o'clock.

With a very light air and a foul tide, the fleet moved slowly, while it was so strung out that all semblance of a race was lost. Sayonara and Wasp were fighting for first place, the old boat holding the new one; Gloriana had been left in the toss for places some distance astern, and was now chasing Fanny for third place. Lasca was first of the schooners, with Marguerite and Shamrock further offshore, followed by Atlantic.

When Cornfield Lightship was passed, Wasp was timed 1m. 30s. ahead of Sayonara, the order of the leaders being Wasp, Sayonara, Fanny, Lasca, Gloriana, Marguerite, Shamrock, Iroquois, Atlantic, Dauntless, Quickstep, Constellation, Merlin, Phantom, Alert, Katrina, Alcæa, with the rest scattered astern. From Wasp to the last boat was a distance of three or four miles.

The remainder of the way was made still more slowly. Ituna and Electra ran in to New London about 5 o'clock, and Wasp crossed the finish line between Ituna and New London Light at 5:12, with Lasca 6 minutes astern, Fanny 6 minutes later. For two hours the others came straggling in, the wind having died out at sunset. Dauntless won in her class, Lasca was nearly an hour ahead of hers, Marguerite won in hers by half an hour, Quickstep in hers. Fanny came up to her old reputation as a big light weather boat; Clara beat Athlon in spite of a heavy handicap at the start, and Wasp was far ahead of Gloriana. The full times were:

FIRST CLASS SCHOONERS.

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Dauntless | 10 47 37 | 6 47 45 | 8 00 08 | " " " |
| Constellation | 10 50 00 | 6 58 28 | 8 08 28 | " " " |
| Ramona | 10 50 00 | 7 06 07 | 8 16 07 | " " " |
| Coronet | 10 50 00 | Withdrew. | | |
| *Fortuna | 10 45 25 | 7 30 26 | 8 45 01 | 8 37 04 |

THIRD CLASS SCHOONERS.

FIFTH CLASS SLOOPS.

| | | | | |
|---|---|---|---|---|
| *Clara | 10 40 00 | 7 48 23 | 9 08 23 | 9 08 23 |
| Athlon | 10 32 20 | 7 41 15 | 9 08 45 | Not meas'd |
| *Ventura | 10 47 50 | Withdrew. | | |

SIXTH CLASS SLOOPS.

| | | | | |
|---|---|---|---|---|
| Wasp | 10 35 12 | 5 42 39 | 7 07 27 | 7 07 27 |
| Sayonara | 10 38 33 | 5 51 58 | 7 13 25 | 7 12 16 |
| Glorijana | 10 30 39 | 6 08 12 | 7 37 32 | 7 36 30 |
| *Liris | 10 40 00 | 7 42 00 | 9 02 00 | 8 52 17 |

*Moved up from next lower class.

The winners are: Dauntless first, Constellation second prize; Lasca first, Atlantic second; Marguerite first, Shamrock second; Quickstep first; Fanny first, Katrina second; Clara first; Wasp first, Sayonara second.

The race amounted to nothing as a test, but was a fluke after the first hour.

A large fleet of New York yachts was in attendance at New London, while off the New York Y. C. station were anchored the vessels of the North Atlantic Squadron, Dolphin, Philadelphia, Concord, Miantonomah and Vesuvius. After nightfall the entire fleet was illuminated, electric lights and lanterns being shown all over the harbor, while the search lights of the war vessels threw their beams in all directions across the water and to the clouds overhead. A meeting of captains was held on board the flagship, at which it was decided to sail for Newport next morning on orders from the flagship.

## New London to Newport, Aug. 4.

THIRD RUN.

Thursday morning brought a fine summer day, clear and bright with a light southerly breeze and smooth water. Among the yachts which joined the fleet were Sagamore, Mayflower, Grayling, Narwhal, Minerva, Mariquita, Unquowa, Harbinger, Mineola, Uvira, Verena, Speranza, Peerless, Wampanoag and Aloha.

Fleetwing was up the harbor shipping a new foretopmast. Among the outside yachts in harbor were Social, schr.; Waterwitch, schr.; Rajah, yawl; Muriel, cutter; Countess, steamer; Awa, sloop.

There was a light haze over the water when Ituna ran out to Sarah's Ledge and set a boat to mark the western end of the line, but it disappeared a little later without troubling the fleet. The preparatory gun was fired at 11:15 with the gun for the first division at 11:25, with 10m. to cross in. With this time and a light wind the start was a mere straggling over the line, the times being:

| | | | |
|---|---|---|---|
| Preparatory | 11 10 00 | Montauk | 11 40 15 |
| Start | 11 20 00 | Alert | 11 40 32 |
| Wasp | 11 25 45 | Fanny | 11 41 05 |
| Sayonara | 11 26 35 | Atlantic | 11 42 55 |
| Gloriana | 11 25 27 | Fleur de Lys | 11 44 48 |
| Mineola | 11 27 02 | Ventura | 11 44 48 |
| Quickstep | 11 27 52 | Handicap Gun | 11 45 00 |
| Uvira | 11 29 01 | *Dauntless | 11 45 00 |
| Liris | 11 29 01 | *Lasca | 11 45 00 |
| Mariquita | 11 30 26 | *Merlin | 11 45 00 |
| Verena | 11 30 28 | *Alcæa | 11 45 00 |
| Gevalia | 11 31 12 | *Comanche | 11 45 00 |
| Clara | 11 33 19 | *Shamrock | 11 45 00 |
| Minerva | 11 33 44 | *Athlon | 11 35 00 |
| Handicap start 2d Div. | 11 35 00 | *Katrina | 11 45 00 |
| Iroquois | 11 36 53 | *Phantom | 11 45 00 |
| Huron | 11 38 16 | *Peerless | 11 45 00 |
| *Azalea | 11 38 30 | *Constellation | 11 45 00 |
| Mayflower | 11 38 48 | *Ramona | 11 45 00 |
| Gracie | 11 38 48 | | |

*Handicapped.

Wasp and her class crossed on the weather end of the line on port tack, in close company, the 40ft. class also being well together, but the other classes were broken up from the start. Lasca and Alcæa kept close together over the weather end of the line. Nearly all went in on starboard tack, working out for Race Rock.

The wind was light and fluky and the fleet was scattered. At 12:30 the leaders, Wasp, Gloriana, Mariquita, Sayonara and Quickstep were off Race Rock, the 46-footers carrying baby jibtopsails. Beyond the Race the wind was steadier, but many yachts were caught and becalmed before they reached the lighthouse, the result being that by early afternoon the fleet was strung out over some six miles of water, robbing the race of nearly all interest.

About 1:30 a moderate breeze from S.S.W. struck the leaders, waking up one after the other, until the whole fleet, save a few unfortunates who had not cleared the Race, was under way at a good speed, with ballooners straining at every topmast.

Far in the lead were Wasp, Gloriana, Mineola and Sayonara, the latter not doing as well as yesterday. Quickstep, to windward of them, was far ahead of Lasca, the second schooner. Atlantic, Iroquois and Mayflower were together well off shore, with little Uvira in a good place further in. Astern of her were Huron, Clara and Liris abeam, with Merlin astern of them, while far outside of her was Gevalia, Verena and Alcæa came next, while Shamrock, after leading for a long time, gave place to Marguerite. Inshore of these two was Constellation, reaching at a great pace. Gracie was leading Fanny, with Katrina half a mile or more astern, with Peerless following the three, while last of all was Ventura, heeled well over. Still in the Race were Alert, Dauntless, Fleur de Lys, and a lot of unfortunates apparently destined by hard luck to make an after dark finish off the Bumplings.

With the fleet so scattered and strung out, there was little opportunity for comparison, the smaller cutters being matched beside the large schooners. The 46ft. quartette was having a fair trial of speed, with Wasp and Gloriana nearly even; Quickstep and Lasca, each alone, were certainly sailing fast; Atlantic was holding Mayflower; Marguerite and Shamrock were having a race; and so were the three 70-footers. Many however, like Merlin, Clara, Constellation and Huron, were sailing far from their classmates, merely hurrying to the finish as fast as balloon sails could carry them.

Vamoose ran in and out everywhere through the fleet, now ahead to place the leaders and then drifting astern until the rear of the procession passed. At 3:30 she stopped off Point Judith to time the leaders as they passed, all breaking out spinakers to starboard before they bore away for Narragansett Bay. Those timed were:

| | | | |
|---|---|---|---|
| Quickstep | 3 35 00 | Lasca | 3 38 00 |
| Wasp | 3 37 00 | Gloriana | 3 39 00 |

With started sheet Lasca soon passed Quickstep and finished in the lead. Huron did excellent work, winning in her class. Clara started late, coming from Black Rock, and apparently alone in her class, to her surprise learning afterward that she had beaten Athlon. The most surprising detail of the race is the time made by Alert and the other large schooners, apparently left behind at Race Rock:

FIRST CLASS—SCHOONERS.

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Dauntless | 11 45 00 | 5 32 38 | 5 48 00 | 5 47 28 |

| Verena | 11 30 38 | 5 47 56 | 6 17 18 | . . . |

*Moved up from lower class.

The winners were: Constellation first, Montauk second; Lasca first, Merlin second; Iroquois first; Quickstep first, Gevalia second; Huron first, Katrina second; Clara first; Gloriana first, Wasp second; Liris first, Minerva second.

Near the finish Constellation was in collision with the schooner Idlewild, Mr. J. Cooper Clark, fouling the topping lifts and unshipping the main boom of Idlewild. The boom flew foreward, its fore end striking Mr. Clark in the head. He escaped with several cuts sufficiently serious to require the care of a surgeon, but the accident came very near proving fatal. The old sloop-cutter Active was also run into by a steamboat, losing her headgear.

In Newport Harbor were many more yachts waiting to join the fleet, among them being Harpoon, Wayward, Puritan and Wild Duck. It is five years since the New York fleet has gone beyond Vineyard Haven, and the idea of prolonging the present cruise to Marblehead was discussed early in the season. At a meeting of captains on board the flagship in the evening, it was decided to go around the Cape and hold a race at Marblehead, the entire programme being embodied in the following general order:

ABOARD FLAGSHIP ELECTRA,
HARBOR NEWPORT, Aug. 5, 1892.

GENERAL ORDER No. 4:

The squadron will next proceed to Vineyard Haven and thence to Marblehead.

The Commodore offers for competition two cups—one for schooners and one for sloops which have not hauled to clear bottom since the commencement of the cruise. The race to be sailed at Marblehead over the Eastern Yacht Club's course under the rules of the New York Yacht Club, and to be open for yachts belonging to other clubs.

Captain J. Pierrepont Morgan, of the Corsair, offers two similar prizes to be sailed for on the squadron run from Vineyard Haven to Marblehead.

The regatta committee offer an additional prize for all keel schooners on the squadron run to Marblehead.

The date and details of the race for the Commodore's cup will be duly announced at Marblehead after the arrival of the squadron, and after the race the fleet will there be disbanded.

The squadron will remain at anchor in port on Sunday and will dress ship on signal. The boat races will take place at Marblehead.

By order of the Commodore.

STEPHEN PEABODY, Fleet Captain.

## Goelet Cups, Aug. 5.

NEWPORT—BLOCK ISLAND COURSE.

Last year the Goelet cups, offered by Mr. Ogden Goelet for schooners and singlestickers, brought out two new and notable boats, the rebuilt Volunteer in the schooner class and the famous Gloriana. This year Volunteer is absent from the schooner class, but in her place are two new schooners, whose performance is watched closely throughout the fleet. Thus far Lasca has made much the better showing, but Alcæa is evidently capable of more than has yet been brought out of her.

In the singlestick class the interest was doubled by the presence of the new Wasp alongside the old victor Gloriana, the three preceding races having failed to settle finally the question of superiority. Harpoon, too, who as Beatrix was unable to enter last year, was waiting at Newport, while there was another unknown in the 53ft. Ventura.

The most interesting entry was the new Drusilla, the 35ft. fin-keel built for Vice-Com. Morgan by the Herreshoffs, and sailed to day by Mr. N. G. Herreshoff. She measures just the 15 tons required by the club rules to make her eligible to enter.

The entries were:

SCHOONERS.

| | Length. | |
|---|---|---|
| Constellation, Bayard Thayer | 107.28 | Allows |
| Alcæa, L. V. Clark | .... | Not meas. |
| Merlin, W. H. Forbes | 93.35 | 7 54 |
| Lasca, J. E. Brooks | .... | Not meas. |
| Alert, J. N. Laning | 91.53 | 9 03 |
| Mayflower, W. A. Gardner | 89.83 | 10 14 |
| Atlantic, Seeley & Marshall | 86 31 | 12 39 |
| Marguerite, R. S. Palmer | 83 48 | 14 42 |
| Iroquois, R. E. Ellis | 82.24 | 15 41 |
| Quickstep, Fred Grinnell | 70.11 | 26 07 |

SLOOPS.

| | | |
|---|---|---|
| Gracie, J. P. Earle | 74.03 | Allows |
| Ventura, Tiffany & Austen | 60 22 | 14 24 |
| Wasp, A. Rogers | 54.97 | 21 11 |
| Sayonara | 54 24 | 22 19 |
| Harpoon, Messrs. Adams | .... | Not meas. |
| Gloriana, W. B. Hopkins | 54.17 | 22 19 |
| Drusilla, Vice-Com. J. P. Morgan | 38. | 38 |

The first event of the day was a short but severe squall about 10 o'clock, just as the yachts were preparing to leave Newport Harbor for the usual start off Brenton's Reef. Gloriana, just under way outside the inner harbor, caught the full force of it. Harpoon, at anchor inside with her big clubtopsail aloft, had hard work to stow her canvas, everything being adrift for a few minutes. A number of yachts dragged their anchors, but no damage was done, and by 11 o'clock the racing craft were working out of the harbor. There was a promise of real racing in the strings of small boats loaded down with anchors, hatches and general dunnage, and moored astern of friendly yachts that remained at anchor, and also in the big clubtopsails which were sent aloft for the first time on the cruise.

The storm left a flat calm, and the Ituna lay off the Brenton's Reef Lightship for over two hours waiting for the breeze. When it came it was from S.W. and very light, bringing a big fleet slowly out of the harbor, all the racers sending up clubtopsails. By 1:30 there was enough wind to warrant a start, late as the hour was, a postponement being in every way undesirable, and the course signals were set for the Block Island course, 18½ nautical miles, to a mark-boat off Block Island, almost dead to windward; 18 miles to a mark-boat off West Island, a free reach, and 6½ miles home on the wind.

As it proved, the race was almost a duplicate of that of last year. On the first leg the winners worked the Narragansett shore down to Point Judith, about half-way, doing better than those offshore. The second leg was run under spinakers, to starboard; but the third was a little closer work this year, three or four hitches being made, while last year each yacht laid her course for Brenton's Reef without a tack.

With a 5m. interval to cross in, the start was a very poor one. Ituna made the weather end of the line and the Brenton's Reef Lightship the lee end, the yachts coming on port tack from the one direction and on starboard from the other. Shortly before the start Quickstep took in her clubtopsail, carrying a jib-header through the race, and Drusilla, with a low pole mast, could carry only three lower sails. All the others carried clubtopsails and baby jibtopsails, Gracie setting a jib-header with the balloomer in case of more wind.

The first gun found Drusilla in the middle of the line, hove to, Harpoon was working to leeward of the lightship, while Gloriana, Gracie and Wasp were to windward of Ituna. With the gun Gloriana luffed around Ituna's stern, while Harpoon darted across from the lee of the Lightship. There was little to choose between them, save that Gloriana was on port tack, and when they met a few moments after crossing she was obliged to tack under Harpoon's lee bow. She stayed there for a short time, when Harpoon tacked and left her, standing in for the Narragansett shore. Gracie crossed on port tack a minute after Gloriana and at once straightened out for the shore, being to leeward of Harpoon. Wasp held back, working above the line, and finally following Gracie on port tack. Drusilla was slow in starting, going over on port tack from the middle of the line, only to meet a small steam yacht and a catboat directly in her way. In avoiding them she drove down on the lightship, squeezing by with her mainsail almost touching it.

The start of the schooners followed close on the smaller boats, at 2:25, Marguerite making a good start from the lee end of line, closely followed by Iroquois and Constellation, Mayflower meanwhile coming over from the weather end of the line on port tack. Merlin followed Constellation, Mayflower going between the two as she crossed tacks with them. A minute later and Lasca came by the lightship as Quickstep shot around clear of Ituna, with Atlantic well in her wake. Both Alcæa and Alert were handicapped. Though there was no close work for positions, the start was a pretty one, in the schooner class especially, the yachts shooting across from both ends of the line at the same time. The times were:

| | | | |
|---|---|---|---|
| Gun | 2 20 00 | Mayflower | 2 26 20 |
| Gloriana | 2 20 53 | Constellation | 2 26 27 |
| Harpoon | 2 21 36 | Merlin | 2 27 08 |
| Gracie | 2 22 27 | Lasca | 2 28 35 |
| Wasp | 2 23 23 | Quickstep | 2 28 49 |
| Drusilla | 2 23 41 | Atlantic | 2 29 28 |
| Handicap and starting gun | 2 25 00 | Handicap gun | 2 30 00 |
| Marguerite | 2 25 54 | Alcæa | 2 30 00 |
| Iroquois | 2 26 10 | Alert | 2 30 00 |

Wasp went on the starboard tack early in the race, Drusilla held her original tack for a time, but when she came under Gracie's lee as the latter stood off shore, she tacked and started after Wasp, leaving Harpoon and Gloriana still heading for the beach. Mayflower and Quickstep made for the shore, but the other schooners made short tacks on middle course before standing in. Alcæa and Atlantic were close together, but after a luffing match the new boat took the lead, leaving Atlantic and Alert, the latter well off shore, to bring up the end of the procession.

Quickstep had dropped from second to nearly last place in her class, while Constellation, following the course of Pappoose and Sayonara in previous races off Newport, had worked the shore with good advantage and gone to the lead, with only Harpoon, now nearing Point Judith, ahead of her. Gloriana was to leeward of Harpoon, while Lasca held second place of the schooners. Well inshore and astern of her were Mayflower, Marguerite, Merlin and Iroquois, close together, the little Drusilla under their lee. Alcæa was alone, offshore from the group of schooners, and considerably astern, while Quickstep, Atlantic and Alert were hopelessly lost. Gracie and Wasp by this time were far offshore, Wasp having the better position and being about fifth or sixth boat in the fleet.

Harpoon was clear of Point Judith at about 3:30, standing along on starboard tack with Gloriana, Constellation and Lasca following on the same course. Mayflower had left her mates, and cleared the Point a good distance ahead of Merlin, the latter having Marguerite for company on her weather.

Alcæa had held a poor place all day, and was well astern of her fellows at Point Judith, but she saw a chance for a change of luck, and going on port tack as soon as she cleared the Point, she stood in along the land, holding a good breeze and stemming the strong tide which was driving the fleet to leeward.

Lasca was making a good race with Constellation, the pair going to the westward when some distance off shore, leaving Mayflower, Merlin, Marguerite and Iroquois chasing the small boats as they stood to the southward on starboard tack.

For a time the spectators were entertained by a brush between the two steam yachts Conqueror and Wild Duck, the former taking the lead. When nearing the outer mark, Lasca broke tacks with Constellation, standing over toward the leaders, Harpoon and Gloriana, the big schooner still standing to the westward until she could make a final leg for the mark.

Her long east upon her had so helped Alcæa that when the whole fleet came driving together for the turn she was close astern of Constellation, coming to the turn on starboard tack just in time to put Lasca about, the situations of the two suggesting the famous meeting of Volunteer and Gracie at the same point last year. The turning of the mark was a creditable piece of work all around, the big ships coming up close together and working like catboats. Harpoon led the fleet, setting her spinaker before she was fairly headed on her new course. The times were:

| | | | |
|---|---|---|---|
| Harpoon | 5 02 19 | Wasp | 5 10 18 |
| Gloriana | 5 04 02 | Merlin | 5 10 40 |
| Gracie | 5 06 21 | Marguerite | 5 11 17 |
| Constellation | 5 07 19 | Iroquois | 5 14 21 |
| Alcæa | 5 08 57 | Drusilla | 5 19 55 |
| Lasca | 5 09 27 | Atlantic | 5 21 08 |
| Mayflower | 5 09 31 | Quickstep | 5 38 18 |

Drusilla was 15m. astern of Harpoon, something more than her allowance. It was 5:30 P. M. when the last boat rounded, and with a light wind the finish was bound to be a late one. Every stitch was set, spinakers, balloon jibtopsails and maintopmast staysails. The order of the leaders was unchanged for a long time after the turn, but in the middle of the fleet there was some racing. Mayflower ran Lasca and headed her, Marguerite and Merlin had a close race, the former leading. Harpoon laid a straight course from mark to mark, with Gracie, Gloriana and Wasp following her, but Constellation, to avoid bothering the small fellows perhaps, held more to the south, the schooners following her rather than Harpoon. The wind fell at dark, and when Constellation found herself to leeward of her course to the West Island mark, she had but a light breeze to work up in. Alcæa followed her and was caught in the same predicament, the other schooners steering a better course and reaching the mark close to Constellation. The only times taken were:

| | | | |
|---|---|---|---|
| Harpoon | 7 26 00 | Gloriana | 7 28 45 |
| Gracie | 7 27 15 | Wasp | 7 32 24 |

Constellation came next, then Marguerite, Merlin, Mayflower and Iroquois. On the last leg the yachts headed up on port tack in hopes of fetching the lightship, but before the six miles were covered were obliged to tack. Gloriana passed Gracie, finishing second; Merlin led the schooners, with Constellation second, Mayflower third and Lasca fourth. Alert and Drusilla withdrew on the first half of the run. The full times were:

SCHOONERS.

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Constellation | 2 26 27 | 8 53 22 | 6 26 55 | 6 26 55 |
| Alcæa | 2 30 00 | 9 03 48 | 6 33 48 | . . . |
| Merlin | 2 27 08 | 8 50 06 | 6 22 58 | 6 15 01 |
| Lasca | 2 28 35 | 8 58 58 | 6 30 22 | . . . |
| Alert | 2 30 00 | Withdrew. | | . . . |
| Mayflower | 2 26 20 | 8 54 02 | 6 27 42 | 6 17 28 |
| Atlantic | 2 29 28 | 9 18 34 | 6 49 06 | 6 36 27 |
| Marguerite | 2 25 54 | 8 57 11 | 6 31 17 | 6 16 35 |
| Iroquois | 2 26 10 | 9 00 26 | 6 34 16 | 6 18 35 |
| Quickstep | 2 28 49 | 9 19 10 | 6 51 01 | 6 24 54 |

CUTTERS AND SLOOPS.

| | | | | |
|---|---|---|---|---|
| Gracie | 2 22 27 | 8 39 45 | 6 17 18 | 6 17 18 |
| Wasp | 2 26 23 | 8 35 47 | 6 12 24 | 5 51 13 |
| Harpoon | 2 21 36 | 8 30 11 | 6 08 35 | . . . |
| Gloriana | 2 20 53 | 8 35 00 | 6 14 07 | 5 51 48 |
| Drusilla | 2 23 41 | Withdrew. | | |

Merlin for the second time wins a $1,000 Goelet cup, while Harpoon wins the $500 one. The latter part of the schooner race was less interesting and decisive than the first part, but in the smaller class the fight was a good one from start to finish, unimpaired by chances or flukes. Harpoon and Gloriana had a square fight together all day, the former coming out ahead. Both Wasp and Drusilla suffered by leaving the fleet for the offshore course on the way out, and the little fin-keel did not find wind enough; but it is easily possible that with the breeze just suiting she might save her time, over half an hour, from the 46-footers.

During the first half-hour of the race an accident that nearly proved serious happened on board Constellation. Mr. Henry A. Bryant, of the Eastern Y. C., so well known as the amateur designer of Alert and Thetis, was working forward when the handle of a mast winch broke, striking him in the thigh and making a deep cut. He was cared for by his brother, Dr. John Bryant, and taken ashore after the race. Though the wound bled freely, no arteries were severed, and it is likely to heal quickly. With a light wind, it was quite late when the racers finally reached the harbor.

## Newport to Vineyard Haven, Aug. 6.

FOURTH RUN.

Saturday morning was very different from Friday, a perfect day for such an important race as the Goelet cups, but unfortunately they were already won, and the programme called for a 11 o'clock start for Vineyard Haven by way of Sow and Pigs and Vineyard Sound. The day was clear and sunny with a fresh breeze from S.W., making a free reach to the Sow and Pigs, 18 miles, and a run to West Chop, 19 miles further.

The gun was fired at 11:30 for the smaller yachts and 11:40 for the larger, with 10m. time to cross in for each. No clubtopsails were allowed, but backstays were well set up on the starboard quarter to stay there all day, and No. 1 jibtopsails were kept up. The first division was over the line promptly, but the second took more time, the procession being ten minutes in crossing. Gloriana was quickly away alone, but Wasp crossed to windward of Harpoon and the two were soon at it, hammer and tongs, in a luffing match, being so nearly equal that it lasted, off and on, for some five miles, when Wasp's topmast went over the side and she started homeward for Newport to repair damages and rejoin the fleet. The schooners set their maintopmast staysails on the line. Merlin having been in stops and breaking it out smartly. Mariquita was badly handled, getting on the wrong side of the lightship and jibing to get back to the line. Just as she crossed her topmast snapped and she returned to Newport.

After timing the start Vamoose returned to Newport for stores, the result being that when she was again off the start the last yachts of the fleet were so far ahead that even she could not catch them, and even a short cut through Quick's Hole only brought her in as the last boats were staggering into Vineyard Haven under the hard gusts off the hills. The race, however, though exciting through the speed, was devoid of any special incident, being merely a straight run. Off the Sow and Pigs spinakers were set to starboard before an increasing breeze. The stranding of a backstay cost Gracie her topmast

just above the cap, but her spinaker and the club burgee were lashed to the stump, and she came in but a little astern of her class. Uvira also lost hers. The story of the race is told in the following table of times:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| **FIRST CLASS—SCHOONERS.** | | | | |
| Dauntless | 11 44 13 | 3 03 53 | 3 19 40 | .. .. .. |

* Moved up to higher classes.

Constellation makes the best time in her class, probably the fastest recorded run over the course, but the great event of the race was the performance of Lasca, her elapsed time being but 6m. greater than Constellation. Marguerite beat Iroquois, and the old Azalea astonished every one by a victory over the smart little Quickstep. Katrina won in the 70ft. class, and Wayward, in the 61ft. class, defeated Ventura and Clara, who were put up with her, although she started with the last, and they, with Athlon, with the first division.

Gloriana and Harpoon had a close race, the former winning by seconds. Uvira saved her time from Sayonara in spite of a broken topmast.

For once the fleet was in harbor early, many of the yachtsmen finding their way over to Cottage City. Sunday, a clear bright summer day, with a fine bracing breeze off the sea, was spent as usual, the fleet dressing ship at noon, and the wise ones turning in early to prepare for a 5 o'clock start for the race from West Chop to Marblehead Rock, 120 nautical miles, for the two Morgan cups.

## Vineyard Haven to Marblehead.

FIFTH RUN—AUG. 8.

LONG distance races are seldom a success, owing to the uncertainties of weather, which decide the ownership of the prizes, or chance rather than merit. The last race around Cape Cod, on the cruise of 1887, for cups offered as now by Mr. J. Pierpont Morgan, was a marked failure, a drifting match of two days, the whole fleet lying becalmed off Chatham all night, and reaching Marblehead 36 hours after the start. The present race started under far more favorable conditions, and with every prospect of a good run, there being a nice S.W. breeze over the starboard quarter, with four hours of ebb tide to help the yachts well over Nantucket Shoals.

The yachtsmen have been favored with exceptionally fine weather at Cottage City, the atmosphere being remarkably clear on Saturday and Sunday nights, every line angle of the buildings in the town being sharply outlined against a cloudless sky of deep blue, with the full moon hung out aloft just over Cape Poge Light. Monday morning brought the same clear weather and cloudless sky, so that the turning out shortly after sunrise was a treat rather than a hardship. Sails were set on about 50 yachts, some going on with the fleet and others returning to the westward.

Vamoose is certainly an ideal boat for the work she is now doing, and though on the present cruise her possibilities have not been properly brought out, it is plain that only from such a craft and under proper management can the races of the cruise be seen with such accuracy as is necessary to insure a truthful report. The programme arranged for this race was to start several hours after the yachts, picking up the rear of the fleet and steaming slowly through it, reaching Marblehead in the afternoon. This involves the seeing of the race stern first, and by way of a change the story may be more interesting if told in the same direction.

In order to see the start it was necessary to turn out at 4 A. M., an easy walk of a mile or more carrying one to East Chop Lighthouse. From here the view well repaid the slight trouble involved, the rising sun lighting up the sea and showing the first of the fleet, Huron, Peerless and Gloriana standing out of the harbor, toward the line, Iuna being anchored off the black buoy under East Chop.

Huron set a jibtopsail and laid her course for Cross Rip, but Peerless and Gloriana stood back, the latter soon falling in with Wasp, who had shipped a new topmast at Newport, and rejoined the fleet, being towed from Newport by the steam yacht Tranquilo. The main fleet was slowly working out for the line, the preparatory gun being held until all were near it at 5:20. At the starting gun, 10m. later, Gloriana went over the line on Wasp's weather, the two timed together. Once over the line, Wasp walked ahead and was soon clear of Gloriana. Mr. Nat Herreshoff was with Mr. Rogers on board of Wasp.

Azalea made a good start, just after the two, Sayonara, with no number and a boat in tow, going over the line, America also crossing, though of course not in the race. She had met the fleet at Newport, being out to see the Gourd cups sailed for, and on Saturday she had sailed with the fleet, making a very fast run in spite of a foul bottom. To-day she started two minutes ahead of the gun, intending to try her speed against the newer boats.

Mariquita had shipped a new topmast and hurried over from Newport, crossing the line just under Quickstep's lee. With her was Gossoon, not in the club, but sailing a private match with Mariquita. Harpoon was in no hurry to get away, wisely leaving Wasp and Gloriana to do the luffing, while she sailed a course of her own. Mineola crossed with number up and boat in tow, returning in a little while and not starting.

The start of the schooners and the larger cutters was slow and uninteresting, they got over the line, which is about all that can be said. A line start with a ten minute interval is safe and convenient affair, and the risk of collision which attends a one-gun start is largely avoided. Such a slow but sure proceeding, however, is not racing, and robs the race of much of its interest. Alert, Speranza and Fortuna were all handicapped. With the racers started Electra, Iuna, Corsair, Oneida, Clermont, Columbia and Conqueror. Lasca did not wait for the race, but started on Sunday. Some of the yachts spread their ballooners, but a number were content with large jibtopsails and maintopmaststaysails. Once well clear of the headlands, the fleet struck a good pace and hurried off for Cross Rip Lightship. The start was timed:

| | | | |
|---|---|---|---|
| First gun | 5 35 00 | Katrina | 5 48 00 |
| Gloriana | 5 35 41 | Constellation | 5 48 39 |
| Wasp | 5 35 42 | Atlantic | 5 49 52 |
| Azalea | 3 36 01 | Dauntless | 5 50 23 |
| Quick | 5 37 27 | Œnone | 5 51 41 |
| Mariquita | 5 37 31 | Alcæa | 5 52 43 |
| Harpoon | 5 38 09 | Ramona | 5 53 37 |
| Second gun | 5 45 00 | Miranda | 5 53 52 |
| Peerless | 5 43 11 | Mayflower | 5 54 25 |
| Iroquois | 5 44 42 | Marguerite | 5 34 52 |
| Merlin | 5 46 43 | Handicap gun | 5 55 00 |
| Clara | 5 47 25 | Speraza | 5 55 00 |
| Wayward | 5 47 47 | Alert | 5 55 00 |
| Phantom | 5 47 57 | Fortuna | 5 55 00 |

The leaders not only carried a good ebb tide to Pollock Rip, but caught the tide to hold them along the shore of Cape Cod. At the Handkerchief spinakers were set to starboard, being shifted to port after the jibe. At Pollock's Rip Mayflower lost her foretopmast after passing Shovelful lightship.

It was 8:08 A. M. when Vamoose left the wharf in front of the Sea View House, at Cottage City; the fleet, with a start of over two hours, being out of sight. The sea was smooth, the yacht running easily and hardly rolling, the entire motion, including the vibration, being so slight as to permit of writing a fairly legible hand with little difficulty. At 8:45 a small cutter was passed, cruising to the eastward, not one of the fleet. At 8:56 Capt. Young put the boat cleverly under the stern of the Cross Rip Lightship, and Mr. Heilbron, the engineer who has charge of the boat, threw a bundle of papers aboard. On the way to Handkerchief a slight roll was met; the lightship was passed at 9:37, the bundle of papers just striking the rail and dropping into the sea, the first of many bundles thrown by Mr. Heilbron since the cruise began which has failed to go aboard.

At 10:05 Vamoose slid by the side of the red lightship on Pollock's Rip, and five minutes later she was beside the wreck of the Alva, near which was anchored a small wrecking schooner. The three masts are still standing, showing a heavy list to starboard, the bow lower than the stern. The foretopmast is broken short off above the cap, and the main and mizzenbooms are afloat, the ends showing on the surface of the water. The sight is a sad one, especially when contrasted with Electra, Corsair and Iuna, or even the jolly little Vamoose; enough to send a shiver through the stoutest of steel frames.

Just before Pollock Rip was reached the whole fleet hove in sight ahead, running with spinakers to port, and at 10:25 the schr. Fenella was passed, cruising along in the rear of the racers.

As the dreary sand wastes of Monomoy gave place to the green-topped bluffs, covered with snug old farmhouses and picturesque modern cottages nestling about the twin lights, which bore abeam from Vamoose at 10:38, the head of the fleet was picked up, the schooner Speranza holding that enviable position; always remembering that this yarn is running at half speed astern. In shore of her and 100yds. ahead was Clara. Closer in to the beach and a little ahead was Peerless, spreading a large ballooner between her topmasts, and ahead of her were Mariquita and Gossoon. Cavalier and Nonpariella were not racing, though the yawl was carrying a mizzenstaysail. Sayonara and Fleur de Lys were not racing.

This ended the first part of the fleet, there being over a mile of clear water between Fleur de Lys and Phantom, while half a mile further along were Œnone and Azalea. Before Nansett was reached spinakers came in. Another half mile of water and Alert was passed carrying balloon topmaststaysail and balloon jibtopsail, Wayward being close inshore of her and Miranda.

Another piece of open water with one little sloop pegging along inshore, and a fleet of nine yachts was met, Ramona being first, then Gloriana, inshore, Quickstep and Atlantic being immediately ahead of her. Harpoon was ahead of Atlantic, with Alcæa on her lee bow, Wasp was next, while Mayflower, Marguerite and Fortuna completed the group. When Vamoose passed Nansett Lights at 11:26, Mayflower inshore was just ahead, Marguerite a quarter of a mile astern, and Fortuna a short distance from the latter.

Iuna was off to seaward of Vamoose, with jib, fore and mainsail set, and ahead of her was Republic, in trouble, with headsails down. Wasp, Harpoon and Gloriana were spaced about a half-mile apart in single file.

When a couple of miles north of Nansett, Katrina lost her topmast, letting the three schooners run up on her. At the time she was a mile and a half ahead of Mayflower. Save a steam yacht in shore and Baboon alone outside of all the fleet, there were no yachts within three miles of Katrina. Marguerite and Fortuna took in jibtopsails, setting smaller ones. Katrina, after her mishap, ran for some time under two sails before setting her jib, but later she rigged a jury topmast and set a jibtopsail.

Below the Highlands the tug Sylvester Ward, carrying the two photographers, Messrs. Stebbins and Peabody, was passed.

The cutters Thelma, Huron and Iroquois were just off the Life-Saving Station at the Highlands, only the latter in the race, but she and Huron were both traveling fast, with booms well over the starboard quarter.

It was 12:20 when Vamoose passed the Highland Lights, and came upon the first bit of close work in the race. Thus far it had been a procession, but here were two yachts, Merlin and Dauntless, close together and fighting hard for the lead, having luffed each other all the way up the beach, Merlin going clear in this, the last of several spirited luffing matches. The breeze was now quite fresh, Merlin carrying working topsails and second jibtopsails, heeling to her scuppers.

The leaders, clear of the land, were heeling to a strong and steady breeze, but those still under the shore caught it in puffs, one striking Alcæa, with both big ballooners set, and heeling her well down. Both she and Iroquois picked up fast between Nansett and the Highlands, and improved their positions considerably. Constellation was visible a long distance ahead, astern of her being America and Columbia. Both had started from East Chop, Columbia about half an hour ahead of start of the racers. America was carrying a heavy naphtha launch swung out on the leeside, and when she met the sea and wind in the Bay it was necessary to stop for a time and swing in the launch. For a time she held side by side with Oneida, the latter under both steam and sail.

One large schooner in the middle of the fleet, not one of the racers, called forth many objurgations, especially from the smaller yachts, by her disregard of the rights of others, to say nothing of the courtesies always accorded by outside boats to those which are racing.

At 1 o'clock Vamoose passed Columbia, picking up America half an hour later, Conqueror and Oneida, both under canvas, being abeam but to seaward of America. Both America and Constellation were carrying spinaker booms dropped to windward. As the leaders left the lee of the land off the Highlands and hauled up for Marblehead, they found a freshening breeze, still S.W., and a lively roll to the sea out in Massachusetts Bay. Vamoose had a chance to show some of her good qualities, among which is not an entire freedom from rolling.

At 2 P. M. the afternoon was as fine as the morning had been, light, fleecy clouds on the horizon and a blue sky above; not only an ideal yachting day, but an ideal schooner day, with a good quartering breeze over nearly all of the 102 miles. At 2:20 Vamoose passed to the leeward of Constellation, far in the lead of the fleet and driving along with maintopmaststaysail and jibtopsail set, and at 3:14 the little steamer was off the lighthouse at Marblehead, where the flagship was already waiting to time the yachts.

Vamoose left Cottage City at 8:05, making the run of 102 miles in 7:06, or nearly 14½ knots an hour, 6:52. No effort was made to test her speed, the object being to obtain a good view of the entire race from start to finish, which was satisfactorily accomplished, there being half an hour in which to reach Castle Rock, on the end of Marblehead Neck, before Constellation crossed the finish line at 3:45:10. Not very long after came America and Columbia, the former well ahead.

Far out to the S.W. was a long string of white sails, Dauntless and Merlin rising fast, big Ramona easily distinguishable, and close by her the little 80ft. Iroquois. Next came the new linen sails of Alcæa, then two white schooners and a black one, beyond them a succession of white dots, all that was distinguishable being that the smaller boats were heeling to a sharp angle under the strong breeze in the middle of the bay.

Along the rocks were many excited spectators, attracted by the coming of the fleet, eagerly scanning the water with glasses and speculating as to the identity of each distant white dot. The interest of the race was centered on Harpoon as against Wasp and Gloriana, Boston against Bristol, and every white boat which appeared in the lead of a black one was triumphantly hailed as Harpoon, with Wasp second and Gloriana out of sight.

The finish was more exciting by far than the start. Dauntless crossed at 4:16:38, leading Merlin (4:22:13) by nearly 8m. Iroquois and Ramona made a fine finish, the little clipper luffing out and running ahead within the last mile, crossing at 4:39:48 to Ramona's 4:40:19. After Alcæa there was a long gap to the next group, the three passed long before in company off Chatham, Fortuna, Marguerite and Mayflower. They were separated by about a quarter of a mile each, Mayflower, in spite of the loss of her foretopmast, having held the other two all day. They were timed at 4:51:38, 4.53:57, and 4:56:28 in order.

On they came, Alert at 5:01, Atlantic at 5:03:33, and Miranda, also without a foretopmast, at 5:05:36. When Katrina approached she was carrying a small jibtopsail set on a jury topmast, a topsail yard lashed to the masthead. She was timed at 5:14:55. The golden serpent on Phantom's bow was visible a long distance off. She crossed at 5:21:30, with Quickstep at 5:24:03. Huron followed Katrina in, she not being in the race. Fleur de Lys, astern of Quickstep, also was not racing. Œnone crossed alone at 5:32:43.

Now came the ringlestickers, rising quickly, the second boat was unquestionably Wasp, and there were few on all Marblehead Neck who doubted that the white Burgess boat a quarter of a mile ahead of her was Harpoon. A lubber on the rocks who timidly suggested that the white boat was very large for a 46-footer, and that Wayward was not yet heard from, was completely withered by the scornful glances of those who heard him, and was glad to sneak off under the pretext that he could see the race better from behind a sheltering corner of the rock.

As the pair neared the excitement increased, until it culminated in a marked calm as the mainsail of the leader swung a little, disclosing the racing number, 94. Wayward crossed at 5:54:30, Wasp following at 5:55:58, Speranza between them at 5:55:07.

Again the buzz of excited conjecture was heard along the rocks, but this time it was shortlived, there was no mistaking the familiar shovel-nose of the leader of the two white boats now within easy sight. Gloriana was leading Harpoon, having passed her when the pair struck the sea, and was now a minute ahead, the times at the line being 6:07:09 and 6:08:08. As Gossoon has not been measured, the corrected time is not known, but with her late start she leads Gloriana by 1m. 32s.

Azalea had passed almost unnoticed at 6:02:24, and the last boats now came up, Peerless 6:09:44, Clara 6:44:58, and Mariquita at 7:09:14, winning her match with Gossoon by 1m, 20s., a close fit for a distance of 102 miles.

As the flagship passed into Marblehead Harbor she was greeted by the guns of the fleet, and the most successful long-distance race ever sailed in America, if not in the world, was over. Twenty-five yachts started, the longest of 116ft. waterline, the smallest of 40ft. The best time was just under 10 hour, or rather better than an average of 10 knots, while the 46-footers averaged 8 knots and the 40-footers just under 7½ knots. The full times were:

The times for the squadron run cups and for the regatta committee prize for keel schooners were:

Constellation wins the $1,000 Morgan cup and Wasp the $500 one, Mr. Rogers winning a similar cup in Bedouin in 1887.

The programme for the final days of the cruise was announced on Monday night in the following general orders:

ABOARD FLAGSHIP ELECTRA,
HARBOR OF MARBLEHEAD, Aug. 8, 1892.

GENERAL ORDER No. 5.

1. On Tuesday, Aug. 9, at noon, a gun will be fired from the flagship, both flags hauled down, the New York Yacht Club signal sent to the main and the Eastern Yacht Club signal sent to the fore.

Two guns will then be fired from the flagship as a salute.

Each yacht will then fire one gun as a salute to the Eastern Yacht Club.

When all the yachts have saluted the Commodore of the Eastern Yacht Club will return the salute in behalf of his club with two guns.

One gun will then be fired from the flagship, the colors hauled down and the former colors reset.

Immediately after, a gun will be fired from the flagship, when all yachts will dress ship and remain dressed until sunset.

2. The boat races will take place on Tuesday, pursuant to general order No. 6.

3. On Tuesday evening at 9:30 P. M. the commodore and members of the Eastern Y. C. have invited the captains of the New York Y. C. and their guests to a reception at their club house in Marblehead.

Yachts in the squadron will illuminate with fireworks during the evening.

4. The race for the commodore's cups will be sailed on Wednesday, under the direction of the regatta committee.

5. On Wednesday evening, Aug. 10, at 9:30 P.M., a reception will be given by the commodore on the flagship to the officers and members of the Eastern Y. C. and the captains of the New York Y. C. and their guests.

6. The attention of the captains of the squadron is called to a circular issued by the house committee of the Eastern Yacht Club, requesting the names of the guests in the squadron, and also containing valuable information; a copy of which is sent herewith.

7. A meeting of the captains will be held aboard the flagship on Wednesday evening at 9:15 P. M., in the event of the race having been sailed, for the purpose of disbanding the squadron.

By order of the commodore. STEPHEN PEABODY, Fleet Captain.
FLAGSHIP ELECTRA, Aug. 8, 1892.

GENERAL ORDER No. 6.

SQUADRON CRUISE BOAT RACES.

Owl and Game Cock colors—The Game Cock colors will be for four-oared gigs pulling sweeps, The owl for cutters pulling two sweeps or two pairs of sculls.

For other boat races—Entries will be $2 an oar, made by the owners of yachts, and boats will be classified according to the number of oars they pull.

Coxswains must be carried in all boats except dinghies.

The commodore offers as additional prizes $25 to the winners of the Game Cock and $10 to the winners of the Owl colors, and $25 to the winning launch.

The start will be made alongside the flagship, and entries will be received and details as to course be given on board.

Letter B (club code) displayed at the fore will signify "the boat races will take place to-day at —," and the hour will be indicated at the main.

By order of the commodore.

STEPHEN PEABODY, Fleet Captain.

In the evening the harbor was filled with boats and the rocks were covered with people, all eager to see the yachts. The chief point of interest in the fleet was Vamoose, the little flyer being new to Eastern waters. It was ladies' night at the Corinthian Y. C., a band playing on the lawn, while the piazzas were crowded. The steam yacht Sultana has attracted general attention in every port by a handsome display of green electric lights from bowsprit end up over her three masts and down to boom end.

On Tuesday the programme of salutation and boat races was carried out, the results of the races being as follows:

Gamecock colors, 4-oared gigs, Dauntless 1, Speranza 2, Constellation 3. Owl colors, pair-oared cutters, 7 starters, Nonpariel 1, Alert 2.

Single scull race, seven starters, Merlin 1, Barbara 2. The steam and naphtha launch race was won by Electra's launch, steered by the mate, Mr. Fish, with Columbia's launch second, beating Dauntless, Fortuna, Fleur de Lys, Atlantic and Sultana.

During the afternoon the shore of the Neck was lined with handsome turnouts from Beverly, Salem and the surrounding country. A band played in front of the Eastern Y. C. house, and the day was a general holiday for all Marblehead. The programme for Wednesday called for a race for the two cups offered by Com Gerry, with a possibility of another race for cups offered by the Eastern Y. C. on Thursday, the fleet disbanding Wednesday night.

## Racing at Marblehead.

Following the three races of the previous week were three separate matches off Marblehead on Aug. 1; the first being between the cats Magpie, Koorali and Typhoon; the second between Pyxie and Reaper; and the third between Reaper and Vanessa. The day was rainy, with a reefing breeze from N.E. and plenty of rain. The first race, from off the Eastern Y. C. house around Bowditch Ledge Buoy, two rounds, making 12 miles, was started at 11 a. M. The first leg of each round was to windward. Magpie and Koorali kept together by the wind, but with sheets started Magpie gained. Typhoon fell astern on the windward work and withdrew on the second round. The finish was timed:

| | | | |
|---|---|---|---|
| Magpie | 10 50 53 | Koorali | 10 51 34 |

Magpie wins by 41s. elapsed time.

The next race was between Pyxie and the Hereshoff fin keel Reaper, for $25 per side, over the same course. Both yachts carried single reefs, Pyxie leading from start to finish. She broke the jaws of her gaff on the last run, but won by 7m. The first round was timed. The race was not finished, but the stakes were paid on the result of the Corinthian race next day.

| | | | |
|---|---|---|---|
| Pyxie | 3 47 16 | Reaper | 3 53 00 |

The third race, started at 4:10 P. M., was between Reaper and her sister boat Vanessa, over the same course. Vanessa winning by 58s.

On Tuesday morning the wind was light, with a sea still rolling. Pyxie had to borrow a gaff that was too heavy for her. In the morning she sailed a match with Vanessa, once around Bowditch Ledge, 6 miles, being beaten.

The Corinthian Y. C. race of Saturday, postponed for want of wind, was re-sailed, starting at 2:10 P. M. The course for the 21ft. and 25ft. classes was around Pig Rocks and Half Way Rock. The wind was E.N.E. After beating out of the harbor the yachts ran for Pig Rocks, where the order was Vanessa, Thrush, Reaper, Freak, Catspaw and Pyxie.

After the beat to Halfway Rock the times were:

| | | | |
|---|---|---|---|
| Reaper | 4 06 10 | Catspaw | 4 09 05 |
| Freak | 4 07 30 | Vanessa | 4 09 40 |
| Thrush | 4 08 45 | Pyxie | Not timed. |

Reaper held her lead off the wind and won, while Vanessa was second on allowance. In the cat class there were three starters, Typhoon, Koorali and Magpie, the former leading all the way. The times were:

CLASS A.

| | Length. | Finish. | Elapsed. | Corrected |
|---|---|---|---|---|
| Reaper, H. B. Benson | 24.00 | 4 44 15 | 2 34 15 | 2 30 53 |
| Vanessa, A. Bigelow, Jr. | 24.00 | 4 49 52 | 2 39 52 | 2 36 30 |
| Catspaw, C. A. Prince | 26.04 | 4 47 50 | 2 37 50 | 2 37 00 |
| Freak, J. B. Paine | 25.10 | 4 48 48 | 2 38 48 | 2 37 23 |
| Thrush, John Bryant | 27.02 | 4 48 03 | 2 38 03 | 2 38 03 |
| Pyxie, O. Sanderson | 24.11 | 5 09 20 | 2 59 20 | 2 57 01 |

CLASS B.

| | | | | |
|---|---|---|---|---|
| Typhoon, J. I. Taylor | 23.09 | 3 55 42 | 1 40 42 | 1 40 42 |
| Magpie, H. G. Otis | 22.04 | 3 59 14 | 1 44 14 | 1 43 06 |
| Koorali, R. C. Robbins | 23.01 | 3 58 23 | 1 44 38 | 1 43 07 |

Reaper wins $30, Vanessa $20, Catspaw $15, Freak $10, Thrush $5, Typhoon $25 and Magpie $15. Pyxie has ended her racing at the East and is on her way home.

## Beverly Y. C.

MONUMENT BEACH.

The 188th race, third open sweepstakes was sailed at Monument Beach July 30 in a double-reefed northeast wind. Gymnote was on hand, but carried away her mast on the deck just before the start. Fin put in a little ballast in order to measure into the third class. Result as follows:

SECOND CLASS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Mist, G. H. Lyman, B. Y. C | 27.04 | 1 57 45 | 1 48 01 |
| Lestris, J. Crane, Jr. B. Y. C | 26.04 | 1 59 40 | 1 48 54 |
| Torment, C. C. Hanley, Mon Beach | 27.04 | 3 02 56 | 1 53 12 |
| Surprise, Thos. Codman, B. Y. C | 27.04 | 2 04 15 | 1 54 31 |
| Gymnote, W. E. C. Eustis | Dismasted before start. | | |

THIRD CLASS.

| | | | |
|---|---|---|---|
| Cayuse, F. W. Sargent, B. Y. C | 22.09 | 1 52 42 | 1 40 42 |
| Tycoon, J. L. Stackpole, Jr, B. Y. C | 23.01 | 1 53 10 | 1 41 41 |
| Elna, J. Parkinson, B. Y. C | 22.10 | 1 53 55 | 1 42 01 |
| Vivian, N. Huckens, Jr., Onset | 23.00 | 1 55 45 | 1 44 06 |
| Fin, L. M. Stocklin, B. Y. C | 17.01 | 2 00 00 | 1 44 01 |
| Phenomenon, D. L. Whittemore, Onset | 23.00 | 2 01 47 | 1 50 06 |
| Daisy, H. Stockton, B. Y. C | 21.01 | 2 03 17 | 1 49 30 |
| Doris, J. Parkinson, B. Y. C | 23.02 | Broke tiller. | |

FOURTH CLASS.

| | | | |
|---|---|---|---|
| Cygnet, E. Fenno, Falmouth | 19.11 | 1 17 55 | 1 08 44 |
| Kitten, Toby Club, B. Y. C | 19.11 | 1 18 50 | 1 09 39 |
| Edith, G. G Van Rensselaer, B. Y. C. | 19.04 | Withdrew. | |

Mist, Cayuse and Cygnet take first; Lestris and Fin second; Tycoon third.

Judges, N. H. Emmons, F. E. Cabot. Courses, 10½, 8½ and 5 miles.

189TH RACE—MARBLEHEAD.

The sail-off for the third class cats, not made on time July 29, took place Aug. 1, at Marblehead, in a strong two reef northeaster; course from stakeboat off E. Y. C. house to Bowditch Ledge beacon, and return, twice around; Bowditch Ledge being 2¾ knots dead to windward of starting point.

Only Magpie, Koorali and Typhoon started, at 11:10, the last crossed the line too soon and had to come back, losing 1½ minutes.

Magpie and Koorali carried two reefs, Typhoon seemed to have three. Magpie at first seemed to draw away from Koorali, but under the Beverly shore Koorali picked up a little, and Magpie not knowing the beacon turned rather wide at 12:01; Koorali made a close turn three seconds later and took the lead. Coming home before the wind Magpie stuck to her like a leach, the turn being made: Koorali 12:29:11, Magpie 12:29:19, Typhoon 12:35:35.

After rounding they split tacks for a minute, and when they met Koorali on the port tack barely cleared Magpie. Koorali at once went on starboard tack, close to windward of Magpie, who at once seemed to shoot into the wind, Koorali went on port tack and Magpie kept on. When they next met Magpie led, and from here on gained steadily. Bowditch Beacon was rounded by Magpie at 1:50:50, Koorali 1:51:25. Summary is:

| | | | |
|---|---|---|---|
| Magpie, H. G. Otis | 22.00 | 2 40 50 | 2 23 48 |
| Koorali, R. C. Robbins | 23.04 | 2 41 25 | 2 26 03 |
| Typhoon, J. I. Taylor | 23.09 | Withdrew. | |

Koorali protests Magpie. It will be decided Friday. All three are new boats. Typhoon by Stewart & Binney, the other two by Hanley, of Monument Beach. Judge, W. Lloyd Jeffries.

## White Bear Yachting Association.

A cup and pennant race was sailed on July 30, at Dellwood, White Bear Lake, Minn., distance 10 miles, weather fine, wind 8 miles, unsteady and steady S.W.

FIRST CLASS.

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Later On, C. M. Griggs | 3 45 12 | 5 41 58 | 1 56 26 | 1 50 15 |
| Hornet, P. H. Gotzian | 3 46 00 | 5 42 55 | 1 56 55 | 1 50 44 |
| Fortuna, J. M. Welch | 3 44 50 | 5 41 05 | 1 56 15 | 1 52 33 |
| Wapsie, Stickneys & Bigelows | 3 45 02 | 5 42 20 | 1 57 18 | 1 52 34 |
| Shark, L. E. Newport | 3 45 20 | 5 43 20 | 1 57 56 | 1 55 51 |
| Kitten, Stickney & McKechnie | 3 48 27 | 5 46 13 | 1 57 46 | 1 56 42 |
| Storm King, J. W. Taylor | 3 45 12 | 5 58 10 | 2 12 57 | 2 09 48 |

SECOND CLASS.

| | | | | |
|---|---|---|---|---|
| Secret, L. T. Bement | 3 55 00 | 6 01 22 | 2 06 22 | 1 59 01 |
| Mischief, E. H. Ozmun | 3 51 05 | 6 01 06 | 2 10 01 | 2 03 11 |
| Nushka, Elmer & Ordway | 3 50 32 | 6 00 00 | 2 09 28 | 2 02 28 |
| Mary, L. Corning | 3 51 22 | 6 04 40 | 2 13 18 | 2 12 10 |
| Amelia, A. McLaren | 3 58 40 | 6 12 22 | 2 18 42 | 2 13 00 |
| Merry Monarch, H. Galusha | 3 51 41 | 6 09 40 | 2 17 59 | 2 17 47 |

Winners—First Class: First prize, Later On; second, Hornet. Second Class: First prize, Secret; second, Mischief.

Later On must stand remeasurement before being allowed the race. She will probably be placed second, with Hornet first, the others remaining unchanged. Judge: R. B. C. Bement.

## Lake Winnebago.

Oshkosh, Aug. 21.—The annual regatta of the combined fleets of Lake Winnebago has been sailed and the yacht Carrie Morgan owned by ex-State Treasurer H. B. Harshaw is the winner of the commodore's cup. The cup is a trophy given by Commodore Charles W. Felker several years ago, to be sailed for each successive year. The race for it this year was fixed for July 16, and upon that date a race that led to considerable hard feeling was sailed. Three yachts were entered. They were the Minerva of Fond du Lac, the Marguerite of Menasha and the Carrie Morgan of this city. The race had hardly begun when the wind died out and it developed into only a drifting match from which, just after rounding the stake boat, the Marguerite withdrew. The Carrie Morgan drifted in first and was awarded the prize. The Menasha yachtsmen at once entered a protest claiming that the race should have been sailed under a rule prescribing a time limit of three hours, whereas fully five hours had been consumed. In consideration of the distance sailed, six miles to leeward and windward, they urged that the time limit was just. Upon looking up the rules of the Oshkosh Yacht Club under which the race was sailed, it was found that the Menasha yachtsmen were mistaken as to time limit, that limit having been abolished by resolutions in '85. Owing to the misunderstanding, however, Col. Harshaw offered to sail a second race for the cup and a purse of $100. The proposition was agreed to and Thursday, July 28 was fixed upon for the second race. On that day it rained and the race did not come off till the 29th. Again it developed into a drifting match and again the Carrie Morgan won. The entries were the same as in the race of July 16, and the course measured the same distance, twelve miles. The exact time made was as follows:

| | Start. | Finish. | Corrected. |
|---|---|---|---|
| Carrie Morgan | 2 18 10 | 5 38 40 | 3 20 30 |
| Minerva | 2 16 35 | 5 37 45 | 3 21 10 |
| Marguerite | 2 20 20 | 5 43 12 | 3 22 52 |

Owing to a time allowance due the Minerva the Carrie Morgan won by only 35s., but the Marguerite was beaten by 3m.

## Hull Y. C., Aug. 1.

HULL—BOSTON HARBOR.

The race of second class boats of the Hull Y. C. on Aug. 1 found only two starters, Handsel and Chapoquoit, the weather being very unpleasant, a N.E. storm with a heavy sea. The start was made at 11:3 from the pilot boat's moorings off Boston Light, the course being from the judges line, leaving Boston and Martin's Ledge buoys on the port, to the Graves Whistling Buoy, leaving it on the starboard to Davis Ledge Buoy, leaving it on the starboard, thence leaving Harding's Ledge Bell Buoy on the port to starting line, 20 miles.

There was a fresh N.E. breeze through the race. Handsel crossed with a lead of 10s., gaining rapidly on the first leg to windward and holding her own free. The times were:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Handsel, J. R. Hooper | 33.04 | 3 24 32 | 2 35 18 |
| Chapoquoit, C. H. Jones | 37.10 | 3 29 39 | 2 46 41 |

Judges, Com. J. J. Souther and Mr. J. R. Chadwick.

Handsel wins $25 and one leg for the championship.

*Aug. 2.*—On Tuesday a second race, the wind being E.S.E. The course was the same as on Monday, but there was smoother water. At the Graves Chapoquoit was ahead, but on the beat to Harding's she was passed by Handsel. On the close reach home, with more wind, Handsel gained, the times being:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Handsel, J. R. Hooper | 33.04 | 4 29 20 | 3 40 14 |
| Chapoquoit, C. H. Jones | 37.10 | 4 31 55 | 3 48 57 |

Judges, Com. J. J Souther, Messrs. E. C. North, J. H. Chadwick and W. E. Sherriffs. The prize was $25 and the Rice cup for 30 footers.

## Pyxie—Reaper Match.

Aug. 1 at 2:36 Pyxie and Reaper started on their match over same course as Magpie and Koorali, except they were limited to the channel, which meant rougher water. Pyxie with four men aboard, carried whole sail. Reaper, with five men, carried single reef and stormjib set half-way out on bowsprit.

They started on the second, Pyxie to windward; she at once began to outpoint and rather outfoot Reaper; half-way down Reaper lost about two minutes, luffing up and getting jib on end of bowsprit.

Bowditch Ledge was rounded by Pyxie at 3:22:10, Reaper 3:28:45, but in jibing round the beacon Pyxie badly cracked her gaff, a measurement-saving contrivance not over strong. The peak was slacked down, but as she entered harbor gaff broke completely in two. She crossed line at 3:47:30, Reaper at 3:53:15.

Pyxie of course was out of it and anchored. Reaper picked up a mooring, put in another reef and then sailed over course with Vanessa, who had just arrived and also carried double reefs and stormjib. Vanessa came back 58 seconds ahead of Reaper.

The accident to Pyxie was much regretted. It was fairly her race, and after Mr. Sanderson's very sportsmanlike conduct in bringing the boat from New York and testing the 25 rating and 21ft. classes, no one liked to see him lose a race in this fashion.

## Riverside Y. C.

New York, Aug. 2.—*Editor Forest and Stream:* Owing to the delay in getting measurements of some of the new boats, the regatta committee of the Riverside Y. C. have just completed their corrected time of winners in regatta of July 9. First class schooners, Nirvana, a walkover; second class schooners, Azalia won, beating the Peerless by 3m. 58s.; first class sloops, Alcedo won, beating the Eleanor by 5m. 49s.; second class sloops, Merope won, beating Almy 9m. 25s.; yawls, Kitty won, beating Rajah 1m. 10s.; first class cabin cats, Gumslide won, beating Aura 6m. 4s.; second class cabin cats, Myrtle won, Nellie second by 20s.; third class cats, Nahma won, beating Pearl 15m. 4s.; jib and mainsail class, Tattler won, beating Sirene 5m. 7s.; first class open cats, Wilmered won, beating Gertrude 3m. 37s.; second class open cats, Phyllis won, beating Effie 36m. 6s.—C. T. Pierce, for Committee.

## Yachts, Boats and Canoes.

If you have a yacht, boat or canoe that is lying idle, and for which you would rather have the cash than the keep, or if you are thinking of buying and can't find what you want at the price you are willing to pay, advertise in the columns of Forest and Stream. For a dollar, or even fifty cents (at the three-cent a word rate) you can insert a comprehensive advertisement in our columns that will at once put you in communication with brother sportsmen far and near. Let them know what you wish to buy or sell and you will hear from them

## The Sale of the Alva.

The wreck of the steam yacht Alva was sold at auction on Aug. 5, as she lies under water off Monomoy Point, Cape Cod, the price realized being $3,500. The purchasers were Perkins & White, of Boston, who will set to work at once to raise her if it is still possible.

## YACHT NEWS NOTES.

The race for the Queens cup of the Royal Yacht Squadron was sailed on Aug. 2, around the Isle of Wight, the principal interest centering in the Emperor William II., who was on board his yacht Meteor. There seems to have been a general attempt to let Meteor win, as Irena withdrew, L'Esperance grounded on the Brambles, and Corsair was nearly half an hour astern. The weather was light and fluky, and a stray breeze caught Corsair, the Payne 40-rater, near the finish, and brought her in just within her allowance.

Eugene Spear of Chicago, is building a handsome standing keel cutter yacht, 30ft. over all, 6ft. 6in. wide, and 4ft. 6in. deep, which will be launched early this month. Joseph Hansen is the builder.

On Aug. 3 both Meteor and Irene, Prince Henry's 40-rater, were defeated.

# Canoeing.

## FIXTURES.

AUGUST.

4-25. A.C.A. Meet, Willsborough Pt.
27. Rochester, 4th Trophy Race,
15-20. A. C. A. Meet, race week, Irondequoit Bay. Willsborough Point.

## The Red Dragon Trophy.

Philadelphia, Aug. 8.—The second race for the R. D. C. C. trophy cup was sailed Saturday, July 30. Four boats competing. Start 3:30 P. M. Osceola, H. E. McCormick; Kieloe, T. W. Noyes; Enid, D. A. McCormick; Tadpole, R. G. Fleischmann. The wind was strong from N. W. terminating in a thunder squall. Rain drove the judges under shelter so the time was not taken at the finish. Max.

## Atlantic Division Meeting.

The annual meeting of the Atlantic Division A. C. A., will be held at the A. C. A. camp, Willsborough Point, on Monday evening, Aug. 15, at 8 o'clock. Election of officers.—F. L. Dunnell, Purser, F. W. Seavey, Commodore.

## Northern Division Meet.

The report of the Northern Division meet in type for this week, has been crowded over to our next issue.

## A. C. A. Membership.

The following gentlemen have applied for membership in the A. C. A.: Atlantic Division—Dwight G. Holbrook, Yonkers, N. Y.; L. S. Bracher, Thos. W. Bracher, C. Walter Cushier, New York city; W. Irving Hare, Brooklyn. Eastern Division—L. W. White, Charles A. Pratt, Worcester, Mass.; Wm. V. Forsaith, Boston, Mass. Northern Division—Thos. Main, Orillia; A. H. O'Brien, Toronto.

# Rifle Range and Gallery.

## Big Shoot on the Jersey Range.

The magnificent range at Sea Girt, where all the Jersey guardsmen are put through their paces during the rifle shooting season, will be the scene of some intensely interesting matches on Sept. 5 to 10, inclusive. These grounds are on the New Jersey State Camp grounds, said by competent judges to be the finest camp grounds in the world. The plot comprises 148 acres of land, almost as level as a billiard table. The grounds are a parallelogram in shape, bordered on the north by the Beach Road, leading to the old Stockton mansion (now the Beach House); on the west is the Long Branch Railroad; on the south Squan Lake, and on the east the broad Atlantic. Situated 60 miles from New York and only 12 miles from Long Branch (8 miles from Asbury Park), the camp is not only easy of access, but those who go there to take part in the shooting can readily run up to the Park or Branch for a little relaxation in the evening.

There are ten mid-range and ten short-range targets, all of the elliptical pattern, similar to those used in the regular army. There are also two targets for 1,000yds. work. The shooting is done toward the ocean, and the light is invariably favorable.

The great attraction in September will be the second annual meeting of the New Jersey State Rifle Association, the programme for which includes the Interstate, Hilton trophy and Wimbledon cup matches, formerly shot at Creedmoor.

The full programme of the meeting is given below:

No. 1. Member's Match.—Two hundred yards, open only to members of the New Jersey Rifle Association; rounds five; position, standing; weapon, any military rifle. Entrance fee $1, re-entries allowed. Prize—The member's championship gold badge, shot for annually, and held by the winner during the year. To be shot at any time during meeting. Won in 1891 by Col. A. R. Kuser.

No. 2. The Kuser Match.—Continuous, 7 shots at 500yds.; position prone, head toward target; rifle, any military; open to all comers. Entries $1 each, or three for $2, if taken at one time; re-entries allowed. Prize—A Maynard rifle with two barrels, value $85, presented by Col. A. R. Kuser. Second prize, 25 per cent. of the entrance money. Third prize, 10 per cent. of the entrance money. All prizes to be won on the aggregate of three scores, and ties in totals to be decided by the next best score (or scores).

No. 3. All-Comers' Military Match.—Continuous. Open to everybody; distances 200 and 500yds.; position, standing at 200, prone at 500; five shots at each distance. Entrance fee $1, or three tickets for $2, if taken at one time. Rifles, the U. S. Springfield, or any military rifle adopted and issued by any State. The firing at both ranges must be done on the same day or the score will be void. Scores which would qualify members of the N. G., N. J., as marksmen will be allowed. Prizes—First, 10 per cent. of entrance money; two of 5 per cent. of entrance money; ten of 2½ per cent. of entrance money.

No. 4. The Schuetzen Match.—All comers, continuous match, distance 200yds., position standing, number of shots seven on the standard American target, with 11-inch bullseye (the bullseye including the 7 ring.) Any weight rifle with any trigger pull, palm or other rest allowed. When firing the muzzle of the rifle must be kept outside the loophole of the shelter. The allowance for military rifles will be four points on each string. Cleaning allowed between shots. The aggregate of three scores to count for all shots. All ties in aggregate will be decided in the manner prescribed in Paragraphs 651, 652, Small Arms Firing Regulations. Entries unlimited; fee $1 each ticket. Sixteen prizes, viz.: 1 of 25 per cent. of entrance money; 1 of 10 per cent. of entrance money; 4 of 5 per cent. of entrance money; 10 of 2½ per cent. of entrance money.

No. 5. New Jersey National Guard Match.—Open to teams of 6 from each regiment or battalion of the National Guard of New Jersey. (As fully provided for in circular, Department of Rifle Practice, dated Trenton, July 30, 1892.)

No. 6. Regimental Team Match.—Open to teams of six from the regimental and battalion organization of the National Guard of the following States: New York, Pennsylvania, Connecticut, Delaware, Maryland, New Jersey and District of Columbia. (As fully provided for in circular, Department of Rifle Practice, dated Trenton, July 30, 1892.)

No. 7, Perrine Memorial Match.—Continuous. Open to officers and enlisted men. N. G. N. J. only; 5 shots each at 200 and 500yds.; position, at 200 standing, at 500yds. prone, with head toward target; entrance fee 50 cents, re-entries unlimited. Rifles, the State arm. The firing on both ranges must be done on the same day. Scores which would qualify members of the National Guard as marksmen will be allowed. Prize, a gold medal presented by Col. Lewis Perrine, Jr., in memory of the late Quartermaster-General Lewis Perrine. Shot for annually, to be held by the winner during the year.

No. 8, Wimbledon Cup Match.—Open to all citizens and residents of the United States. Distance, 1,000yds. Thirty shots. Weapon, any rifle within the rules, cleaning allowed. Position, any without artificial rest. Entrance fee $2. To be shot on Friday Sept. 9. First Prize.—The Wimbledon cup. Presented by the National Rifle Association of Great Britain to the N. R. A. of America, to be competed for on conditions to be decided upon by the National Rifle Association of America, and to be held by the winner till the next year, when it will be shot for on the same condition. Value, $560. Won in 1875 by Maj. Fulton; in 1876 by I. L. Allen; in 1877 by Dudley Selph; in 1878 by Frank Hyde; in 1879 by C. H. Laird; in 1880 by W. M. Farrow; in 1881 by F. J. Rabbeth; in 1882 by W. Budworth; in 1883 by H. T. Rockwell; in 1884, 1885 and 1886 by J. W. Todd; in 1887 by T. J. Dolan; in 1888 by W. M. Merrill, in 1889, 1890 and 1891 by C. H. Gaus.

No. 9, Hilton Trophy Match.—Open to teams of twelve from the following: 1. The United States of America—A. The army of the United States, one team from the troops stationed within each of the three military divisions—Atlantic, Pacific and Missouri (three teams in all). B. The United States Navy (one team). The National Guard or ununiformed militia of the several States and territories, including the District of Columbia (one from each State or Territory). 2. Other countries.—England, Ireland, Scotland, and each of the provinces of Great Britain, and all other countries, one team each from the following: A. The regular army. B. The militia. C. The volunteers. D. The navy of any country. Separate teams may be sent out when the organizations are separate. The members of each team to be officers or enlisted men, and active members of the corps or organization which they represent, and to appear in the authorized uniform (full dress or fatigue) thereof. They shall be selected in such a manner as shall be prescribed by the military authorities of the country or State they represent, and shall, if required, be certified to by them as being their authorized representatives. Distances, 200, 500 and 600yds. Rounds, seven at each distance. Position, standing at 200yds.; any at 500 and 600yds. Weapons, any military rifle which has been adopted, authorized or issued as an official arm by any State or government. Ammunition, any. Entrance fee, $2 each man. To be shot on Friday, Sept. 9. Prize.—A trophy, presented by Hon. Henry Hilton, of New York, to be shot for annually at such range as the National Rifle Association of America shall select, to be held during the year by the head of the corps or organization whose team may win it, to be returned to the N. R. A. at the expiration thereof. Value, $3,000. Also a medal to each member of the winning team: Won in 1878 and 1879 by New York, 1880 by Division of Missouri, U. S. A., 1881 by New York, 1882 by Pennsylvania, 1883 by Michigan, 1884 and 1885 by Division of Atlantic, U. S. A., 1886, 1887, 1888 and 1889 by Massachusetts, 1890 by District of Columbia, 1891 by New York.

No. 10. Inter-State Military Match.—Open to one team from each State or Territory in the United States, consisting of twelve members of the regularly organized and uniformed National Guard or Militia of such State or Territory, including the District of Columbia, chosen in such manner as shall be prescribed by the military authorities thereof. Each team must be provided with a certificate from the Adjutant General of the State it represents, certifying that each of its number is a regular member of their uniformed militia, in good standing, and was such on the first day of June, 1892. They shall appear in the uniform of their corps. Distances, 200 and 500yds. Position at 200yds., standing; at 500yds., prone. Weapon, any military rifle which has been adopted, authorized or issued as an official arm by any State or Government. In cases where the State has adopted no particular model (which must be certified to by the Adjutant General), the team will be allowed to use the rifle in use by the regular army of the United States or by the uniformed militia of any other State. Rounds, ten at each distance. Entrance fee, $2 each man. Prize—

To the team making the highest aggregate score, a large bronze "Soldier of Marathon," presented by the Commander-in-Chief, on behalf of the State of New York, to be shot for annually at such range as the N. R. A. may select, and to be held during the year by the Adjutant General of the State whose team may win it. Value, $500. Also a medal to each member of the winning team. Won in 1875 by New York, 1876 by Connecticut, 1877 by California, 1878 and 1879 by New York, 1880 by New Jersey, 1881 by New York, 1882 by Pennsylvania, 1883 by Michigan, 1884 and 1885 by Pennsylvania, 1886, 1887, 1888 and 1889 by Massachusetts, 1890 and 1891 by New York. To be shot on Friday, Sept. 9.

Bullseye Targets.—Bullseye targets will be open all the time during the annual meeting. Tickets (entitling the holder to one shot at any bullseye target) will be sold at the office of the Financial officer, upon the range, at 10 cents each or twelve for $1. Each competitor making a bullseye will receive a bullseye ticket, provided he fires in the position authorized at that range. At the close of the firing each evening the pool receipts (less one-half retained for expenses) will be divided pro rata among those making bullseyes, on presentation of their tickets. No person will be allowed to fire more than three shots consecutively at any bullseye target, provided others are waiting to fire.

The team competitions, Nos. 5 and 6, will be of two days duration, each man to fire 10 shots at 500yds. and to make two skirmish runs of 20 shots each in each match. These runs will be from 600 to 200yds. and back, 5 halts on the advance and 5 on the retreat, with 90 seconds firing interval at each halt. A trophy will be awarded to the winning team in each match, the trophy to be held by the winner for one year.

### Revolver Championship.

THE match shoot between Dr. Bell, the first winner of the Winans trophy, and George A. Jantzer, the first challenger, was very quietly conducted at the St. Mark's Place Gallery in this city on the afternoon of Aug. 3. It was hot and sultry, and the inclosed gallery did not clear well of smoke, and the bright light upon the disk could only define the black bullseye as a gray spot, approaching a dull blur.

It was not an occasion for first-class work, and neither of the men shot up to their recorded ability. Dr. Bell had placed new sights on his revolver. The fore sight showed a square cornered face to the eye, being cut sharp off on the breech end. The rear bar had a square angled cut so that the fore-sight when centered showed a clear light all about it. Centered in this way and with the line of the rear bar tangent to the bullseye's lower cap a clear and definite sight was obtained and one which could be depended upon to be the same at each shot. The objection to the pinhead sight was the uncertainty of getting it centered on the bull's eye with each shot, particularly where the difference in the size of the two was large. When shooting with the pinhead tangent to the bull there was a like uncertainty, which Dr. Bell thinks he has obviated in the square-cut sight and slot.

Each of the shooters got off the 5in. disk, Dr. Bell five times and Mr. Jantzer four times. It was evident without shooting off the fifth round that Jantzer was a leader and this round was omitted, leaving the score stand:

| | 1st string. | 2d string. | 3d string. | 4th string. |
|---|---|---|---|---|
| Jantzer | 8.3 | 6.1 | 8.1 | 13.05 |
| Bell | 13.6 | 7.6 | 8.5 | 10.55 |

Record.—Jantzer, **22.5in.**; Bell, **26.6in.**

The revolver offered by the Smith & Wesson Co. to the initial winner of the trophy has reached the office of FOREST AND STREAM from the Springfield factory and is subject to the order of Dr. Bell. It is as pretty a bit of workmanship as the lover of small arms would care to see. It is No. 28018 factory number, with elaborately engraved work upon the dark stock, barrel and chamber piece. It has 6½in. .44cal. barrels with ivory handle. It rests in a morocco case and may fairly be classed as a very choice output from a factory out of which a slovenly bit of work is never permitted to go.

### New Jersey Rifle Shooting.

[*Specially Reported for Forest and Stream.*]

THE much advertised shooting festival of the Allgemeine Schuetzen Bund, which took place at the Cypress Hill Shooting Park last week, has turned out a flat failure, as I predicted it would two months ago. In the first place the result was due to bad management, and another the park is too far out of the way. Had it taken place in the Union Hill Schuetzen Park the result would have been different.

Schiess Club, Sixth Battalion, Germania Schuetzen Bund, W. R. N. J., headquarters 423 Washington street, Hoboken. Friday, Aug. 5:

| | | | | | |
|---|---|---|---|---|---|
| G Victoria | 235 | D Kruse | 226 | L Mahle | 214 |
| L Schmidt | 232 | L Neukranz | 226 | | |
| F Neuman | 239 | O Schmidt | 215 | | |

Class medal shooting will be inaugurated next month. This will no doubt prove a winning factor for the club, as something had been looked for, as the interest by the members in rifle shooting was waning.

Miller Rifle Club, Hoboken, N. J., Wednesday evening, Aug. 3.—The scores of to-night are appended below. Ten shots, off-hand, 25-ring target, possible 250:

| | | | | | |
|---|---|---|---|---|---|
| D Miller | 248 | D Peters | 231 | R Zoch | 219 |
| F Brandt | 238 | H F Meyer | 229 | F Landolt | 218 |
| J H Kruse | 234 | J Vogel | 228 | F Vanderheyden | 217 |
| L Sohl | 233 | A Stadler | 222 | F Dunsteadt | 217 |
| F Kloepping | 233 | W Forkel | 221 | F Kammel | 212 |

Medal shooting will be resumed on the first Wednesday in October. A medal will be purchased for each of the three classes.

At the recent shoot and picnic of the Secaucus Horse Gardeners' Troop at the Union Hill Schuetzen Corps, excellent marksmanship was displayed by many of the members, and consequently high scores were in the majority. First prize was secured by Frederick Paschel, second by John Heflich, and third by Henry Engelbrecht. The affair was most successful, both socially and financially, and the committee who had the matter in charge deserve praise for their great hustling.

The Hoboken Rifle Club elected the following officers Monday evening: Captain, Wm F. Dilger; First Lieutenant, Chas. Paasch; Second Lieutenant, August Dahl; Orderly Sergeant, John Stein; Sergeant-at-Arms, Jos. Schauer, Jr.; Recording Secretary, Christy J. Kennedy; Financial Secretary, Frederick W. Kroeger; Treasurer, Henry Wirth, re-elected; First Shooting Master, J. H. Kruse; Second Shooting Master, Edward Rayot; Trustees, ex-Captain John Yeck, Chas. Paasch and August Dahl. A social session followed. The scores made in the regular weekly shoot which followed were:

| | | | | | |
|---|---|---|---|---|---|
| Capt Dilger | 228 | John Stein | 217 | J Schneider | 212 |
| J H Kruse | 227 | A Dahl | 217 | C J Kennedy | 212 |
| C Paasch | 225 | J Schauer | 212 | E Rayot | 206 |
| F W Kroeger | 220 | | | | |

Class medal shooting will soon be a feature.

### Rensselaerwyck.

ALBANY, N. Y., Aug 4.—The following scores were made to-day at Rensselaerwyck range by members of the Third Brigade Rifle Association. Shooting was at standard American target. Weather conditions were favorable for off-hand shooting, but light was not bright enough for good rest scores. There was no wind until late in the afternoon:

| | Off-Hand. | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Maj C H Gaus | 10 | 6 | 10 | 8 | 9 | 10 | 7 | 10 | 10 | 7— | 87 |
| W C Gomph | 0 | 10 | 8 | 9 | 6 | 9 | 6 | 7 | 6 | 10— | 80 |
| | 10 | 10 | 8 | 7 | 9 | 7 | 8 | 10 | 10 | 9— | 88 |
| | 5 | 10 | 8 | 10 | 6 | 9 | 10 | 10 | 10 | 6— | 84 |
| Chas P Frey | 7 | 9 | 6 | 10 | 7 | 10 | 7 | 10 | 8 | 6— | 77 |
| | 8 | 9 | 7 | 9 | 9 | 8 | 9 | 10 | 7 | 7— | 83 |
| *L Geiger | 7 | 5 | 3 | 8 | 7 | 4 | 8 | 7 | 6 | 10— | 64 |
| | Rest. | | | | | | | | | | |
| Maj C H Gaus | 12 | 11 | 9 | 11 | 12 | 11 | 11 | 12 | 10 | 10—109 | |
| | 11 | 9 | 11 | 10 | 10 | 11 | 10 | 11 | 10 | 9—102 | |
| | 10 | 6 | 11 | 12 | 12 | 9 | 12 | 9 | 11 | 11—106 | |
| *L Geiger | 9 | 12 | 8 | 8 | 10 | 11 | 9 | 10 | 12 | 9— | 98 |
| | 11 | 9 | 7 | 11 | 12 | 9 | 9 | 9 | 11 | 10— | 98 |

* 25-caliber.

### Garden City Rifle Team.

THE Garden City Rifle Team met for their weekly contest Tuesday evening, at Burley & Erickson's shooting gallery, 146 South Halstead street, Chicago. Conditions were: 25yds, 25 shots each, open sights, free off-hand position, Massachusetts paper target. Possible 300 points:

| | | | | | |
|---|---|---|---|---|---|
| H S Burby | 275 | A Gormsen | 255 | Thos Ford | 250 |
| W J Gibbs | 267 | Mrs L Thornton | 253 | F Erickson | 249 |
| J Hosie | 262 | C A Henkle | 253 | | |
| John Polites | 257 | J C Martin | 251 | | |

After the regular shoot a sweepstake was shot for and won by Mr. H. G. Burby, making a score of 112 points out of possible 120.

## Trap Shooting.

All ties divided unless otherwise reported.

### FIXTURES.

**If you want your shoot to be announced here send in notice like the following:**

Aug. 9-12.—Pennsylvania State Sportsmen's Association's annual tournament, Reading, Pa. Walter D. Eiler, Sec'y.
Aug. 9-12.—West Point Gun Club tournament, West Point, Miss.
Aug. 10-11.—Chadwick's tournament, at Marmont, Ind.
Aug. 10-11.—Big Four Gun Club tournament, at Burlington, Ia.
Aug. 10-12.—Missouri State Amateur Association tournament, at Lexington, Mo. Added purses. Address G. A. Sturges, Sec'y.
Aug. 14.—Lincoln Gun Club tournament, Alameda Point, Cal.
Aug. 15.—Live pigeon tournament, at Mt. Pleasant, Pa.
Aug. 16-17.—Union Gun Club tournament, at Springfield, N. J.
Aug. 17-18.—Dixie Gun Club tournament, at Pensacola, Fla.
Aug. 17-18.—Gallard Gun Club tournament, Natchez, Miss.
Aug. 18-20.—West End Gun Club tournament, at San Antonio, Texas.
Aug. 23-24.—Greensboro (N. C.) Gun Club tournament.
Aug. 23-24.—Hackettstown Gun Club tournament, at Hackettstown, N. J.
Aug. 23-26.—International tournament, Des-chre-shos-ka Island, Detroit, Mich. Live birds and targets.
Aug. 24-28.—California State Shooting Association tournament, Concord, Cal.
Aug. 25-26.—Rockville Gun Club tournament, at Rockville, Md.
Aug. 26-27.—Sparta Shooting Club tournament, Sparta, Ill.
Aug. 29.—Parkway Rod and Gun Club open shoot and picnic Dexter Park, Long Island.
Aug. 30-Sept. 2.—Standard-Keystone Target and Trap Co., fifth annual tournament, at New London, Conn.
August.—Niles Gun Club tournament, at Niles, Mich.
August.—Connecticut State League, at Bristol, Conn.
August.—New Jersey State Trap-Shooters' League eighth monthly tournament, Harrison, N. J.
September.—Saratoga Gun Club, annual tournament, at Saratoga, N. Y.
September.—Rocky Mountain Sportsmen's Association annual tournament, at Denver, Col.
Sept. 5.—Frankfort Game and Fish Protective Association, first annual tournament, at Frankfort, N. Y.
Sept. 5-7.—Pier Gun Club tournament, at Atlantic City, two days at targets, last day at mud hens.
Sept. 6-8.—Central Illinois Sportsmen's Association annual tournament, at Jacksonville, Ill.
Sept. 7-8.—Tiffin (Ohio) Gun Club tournament.
September (second week). — Interstate Manufacturers' and Dealers' Association tournament, at Auburn, N. Y.
Sept. 27-Oct. 1.—Grand five days' tournament at Mt. Sterling, Ky.
Oct. 5-6.—West End Gun Club tournament, at Ottumwa, Iowa.
Oct. 5-7.—First annual tournament of the Riverside Gun Club, at Red Bank, N. J. First two days targets, last day live birds John P. Cooper, Sec'y.
Oct. 18-20.—Highland Gun Club annual fall tournament, at Des Moines, Iowa.
Oct. 19-20.—Somerville Gun Club tournament, Somerville, N. J.
Nov. 23-26.—Milwaukee (Wis.) tournament, targets and live birds.
May, 1893 (last week).—Knoxville Gun Club tournament, three days targets, last day live birds; $1,000 added to purses.

## DRIVERS AND TWISTERS.

The Denver, Col., *News*, of Aug. 1, says: "Most all of the marksmen have laid aside their killing apparatus for the heated term and adopted the more quiet but equally taking operation of fly fishing up in the cool mountains. Many of them returned last week from their outing with the usual fishy stories of large catches and big individuals. The only pair that have stuck to their breech-loaders have been Bryan Heywood and Mechling, both noted shots, and their stories of last week's sport among wild doves equalled some of the fish stories. They went out on Clear creek and in two hours bagged 131 birds. A match will be shot between the pair this week at the same targets, each man to take 100 shells and shoot alternately, the loser to pay for the supper. Charley Hampson has the fall tournament, which is to take place September 1, under the auspices of the Rocky Mountain Sportsmen's Association, already under way and promises to make the event successful."

* * *

People wonder at the fact of from 25 to 40 entries being high at the recent tournaments and say, "Why, a few years ago the entries ran up to double those figures." This is very true, but to-day gun clubs are numbered by the hundreds, where they were counted by the dozens (or less) in 1888. In the latter year there were held about a dozen first-class tournaments, whereas in May, alone, of 1891 there were over thirty. Nearly every club in the country takes a hand at engineering a tournament, the result being that as shooters can find plenty of sport close to their homes, very few of them do as they did four or five years ago, and swing around a circuit taking all the way from six weeks to three months. Outside of those men who represent some sporting goods, gun, ammunition or target firm, there are very few traveling shooters.

* * *

Dr William Nicholas Pindell, who died at Newark N. J. on August 3, was one of the oldest and most popular members of the Essex Gun Club and was a thoroughgoing sportsman, being passionately fond of field and water sports. Every year he would have an outing among the ducks on the Chesapeake and another with the quail in Virginia or Maryland. He had been ill for several months previous to his death, but four weeks ago he told the writer that he was rapidly coming back to his old form and hoped to enjoy some sport in the South this Fall. But the dread destroyer had set his mark on him and on the above date he passed over to the great majority, the immediate cause of his death being cancer of the stomach.

* * *

The New London (Conn.) Gun Club's grounds are taking on an active appearance. Preparations are being made for the fifth annual tournament of the Standard Keystone Company, which will be held the latter part of this month. We have assurances from all parts of the State of Connecticut, from New Jersey, Massachusetts and New York that a large number of shooters anticipate being present and predict that this will be one of the largest tournaments held this year. Programmes will be ready for distribution this week and may be had upon application to the office of this paper or to the Standard Keystone Company.

* * *

ERIE, Pa., Aug. 2.—The Clover Gun Club was organized here last evening with a membership of twenty. Seth Clover was elected president; Chas C. Rife, secretary, and R. T. Brown, treasurer. The objects of the club are to improve its members in the art of wing shooting and to do what is possible to enforce the game and fish laws in this section. We will hold weekly shoots, and in the fall will give a tournament that will attract all the noted cracks of the country. At our first shoot yesterday, at 100 Keystone targets each, Clover broke 97; Rife 89, and Blenner 88.—MALLARD.

* * *

The newly organized South End Gun Club, of Albany, elected the following officers on August 5. President, John Machwirth; Vice-President, Charles Voelker; Secretary, E. C. Rosche; Assistant-Secretary, P. J. Kresser; Treasurer, Dr. J. Pfitz; Club Captain, W. G. Parr; Electrician, Conrad Kleet; Board of Directors, R. H. Moore, G. C. Nichols, Geo. Deiseroth, John Saim, P. J. Kresser and J. Long. The club has fine grounds at Parr's Island. One of the features is a 200-yard rifle range. An opening tournament will be held shortly.

* * *

SYRACUSE, N. Y., Aug. 3.—The monthly meeting of the Onondaga Sportsmen's Club was held last evening. There was considerable talk about the system of handicaps now in use by the club. It was considered by many members as very unfair in that it does not give the best shooters in the club a fair show to win in the medal shoots. It is a very favorable system for the poorer shooters and naturally they object to any change. No action was taken, but it is probable that a change will be made.

* * *

The International tournament to be held by Barnes and Gilman at Des-chre-shos-ka Island, at the mouth of the Detroit river, August 23 to 26, inclusive, is attracting attention all over the country and the chances are that almost every state will be represented. The island itself is a beautiful place for an outing and the projectors are noted as royal entertainers. Added to this the "only Jack" Parker will be major domo of the affair and this is a guarantee that things will run smoothly.

* * *

Clubs would do well not to agree to add money to purses until they have the hard cash in their possession, as subscribers to purses do not always fulfill their pledges. A Johnson City, Tenn., hotel proprietor promised to contribute $50 during the recent shoot at that place, but after the shoot he refused to pay more than $20, claiming that he could afford to give no more, on account of having "only 22 shooters" stopping at his place. The Johnson City boys are not likely to send many more boarders to the above mentioned house.

* * *

The West End Gun Club of San Antonio, Texas, published an attractive programme for the Texas Field Tournament to be held on August 18 to 20. On the first day there will be five events at Keystone targets; two at live bats and one at live pigeons. On the second day five at Keystone targets; two at live bats and and two at live pigeons. On the third day three at Keystone targets; one at live bats and two at live pigeons. The North handicap will be used in the target events.

* * *

Enoch Miller tells us that the tournament of the Union Gun Club at Springfield, N. J., will be held on August 16 and 17, instead of on the 17 and 18 as previously announced. On the 16th there will be five 10-target events, $1 entry; four 15-target events, $1 50 entry; and one 20-target event, $2 entry. On the second day the events in order will be at 5, 8 and 10 live birds and a miss-and-out. Shooting from 9 a. m. each day.

* * *

The Perth Amboy (N. J.) Gun Club recently had a Rhode Island clambake, and in the evening they made a fire of the boxes and barrels, in which their stores had been packed. Some one imagined that a big fire had broken out and gave an alarm, which called out the entire Fire Department. Now the Mayor and Chief Engineer are trying to find out whether the sounding of the alarm was a mistake or a practical joke.

* * *

The Harbor City Gun Club of Michigan City, Ind., was reorganized and elected the following officers. President, Fred. S. Whipple; Vice-President, M. H. Christner; Treasurer, C. W. Cole; Secretary, A. E. Thornton; Field Captain, Roman Eichstaedt. Several new members have been admitted and the club's prospects never were brighter.

* * *

The Belvedere Gun Club recently organized in Washington, Pa., is officered as follows: Capt. Robert L. Tidball, Messrs. F. B. Roberts, James Crall, B. W. Haywood, S. R. Riggle, C. A. Mansell, Chas. O. Smith, Wm. Smith, Harry Messenger and F. O. Lever. The club will shoot under the American League rules. The paraphernalia has been secured, and club practice begun.

* * *

A pigeon shooting match will take place at Girardville, Pa., August 13, between H. W. Foy and John L. Lavelle against George Griffith and P. C. Foy for $100 a side and four barrels of beer. Much interest is being manifested, as some of the gentlemen have acquired local fame as marksmen.

* * *

Some lively work will be seen on John Erb's "Old Stone House" grounds in Newark, N. J., the coming season, judging from the "match talk" indulged in by the live bird experts of Newark and vicinity. Very little shooting has been done there this summer, owing to the scarcity of pigeons, but after October 1st the sport will receive a big boom.

* * *

At Morristown, last Wednesdy, after Riggott shot his twenty-second bird the gatherer went after it, but just as he approached the bird a fine orange and white setter belonging to one of the spectators rushed out and picked up the bird with which it trotted back in triumph.

* * *

The monthly shoot of the Essex Gun Club will be held on the Marion grounds on Thursday next. In the club prize contest, each member shoots at ten live birds under the club handicap rules.

* * *

Enoch Miller promises a big time at the Union Gun Club tournament at Springfield, N. J., on August 17 and 18. The first day will be devoted to smashing Keystones, while live birds will be used on the second day. Stages will meet all trains at the Millburn depot.

* * *

The Hackettstown (N. J.) Gun Club tournament on August 23 and 24 will draw a big party of shooters. "Long Jim" Smith will be major domo, and that is equivalent to saying that everybody will have a jolly time. Targets only.

* * *

The employees of Uncle Sam in the Kansas City Post Office have organized a gun club. At a recent shoot for the club medal, F. B. Nofsinger, Jr., superintendent of the registry department, was the winner, breaking 24 out of 25 targets.

* * *

The following scores were made at the shoot of the Fond du Lac (Wis.) Gun Club on July 30, at 25 blue rock targets per man. M. M. Anderson 17; L. H. McLain 17; Fred. Hubbell 17; A. R. Keating 15; M. S. Trevelen 12.

* * *

At the shoot of the Bradford (Pa.) Gun Club on August 1, at 50 targets each, N. Wells broke 41, J. D. Ormsby 40, J. W. Vantine 32, L. E. Mallory 32, G. E. Benninghoff 31 and Ernest Koester 30.

* * *

The West Side Gun Club, of Saginaw, Mich., will give a big reception to the members of the Trapshooters' League during the shoot on Monday and Tuesday next.

* * *

Lieut-Col. R. Heber Breintnall, the well-known Newark sportsman and trap shot, will spend the latter part of August and a part of September in the Yellowstone Park region.

* * *

Harry Thurman is making big preparations for his target and mud-hen tournament to be held at Atlantic City, September 5 to 7.

* * *

It is to be hoped that at the next shoot of the New Jersey Trap League, the East Orange Gun Club will provide carbon copies of all scores for the sporting press.

* * *

Enoch Miller expects to take a team of "world beaters" from New Jersey to New London this month.

* * *

Dave Davis of Scranton, Pa., and James Jones of Sibley, will shoot a find, trap and handle match at 21 birds each for $100 a side at Sibley on August 16.

* * *

The Pekin (Ill.) Gun Club have paid $1,400 for thirty-one acres of land opposite the town, and will fit it up as a first-class shooting and base-ball ground.

* * *

The Atlantic (Iowa) Gun Club will hold a live bird and target shoot on September 1.

* * *

A big shoot is announced to take place at Tiffin, Ohio, on September 7 and 8, under the auspices of the Tiffin Gun Club.

* * *

The West End Gun Club, of Ottumwa, Iowa, will hold an amateur tournament on October 5 and 6.

* * *

J. L. Brewer and Dr. Carver are to shoot a match at 100 live birds at Atlantic City, on Saturday. The match is said to be for $1,000 a side.

* * *

The Kirtland Gun Club, of Cleveland, O., will shoot for the Cuyahago County cup on the third Monday of each month.

* * *

A live bird shoot will be held at Mt. Pleasant, Pa., next Monday and a good lot of birds are guaranteed.

* * *

The Rockville (Md.) Gun Club should make a big go of its tournament with Billy Wagner at the helm.

* * *

A gun club for sport and enforcement of the game laws has been organized at Randolph, Neb.

* * *

All the cracks in Jersey will attend the New London tournament.

* * *

Bradford, Pa., is to have a tournament next month.

* * *

Morganton, N. C. has a new gun club with eighteen members.

C. H. TOWNSEND.

## Riggott is Jersey's Champion.

SEVERAL weeks ago, in an announcement of a live-bird match to be shot between Frank Class, of Morristown, N. J., and Wm. Tell Mitchell, of Lynch Station, Va., the title of "champion of New Jersey" was tacked on to Class's name. While Class had never contested in an out-and-out State championship match, he had nevertheless succeeded in defeating all the Jerseymen against whom he had contested, hence the title of champion had been conferred upon him by the newspapers, and until recently no exception had been taken thereto. He had repeatedly offered to shoot matches against not only any man in New Jersey but in the entire country as well, but his challenge went begging.

After the match above mentioned, his claim to the title was questioned by that well-known sportsman and boniface, John Riggott, of Rockaway, who challenged Class to a match at 100 live birds each, for $250 a side. The challenge was promptly accepted by Class and his backers, and Wednesday, Aug. 3, was decided upon as the date, and Frank Class's new shooting grounds, on the Morristown Driving Park, as the place.

The principals are too well known to need any lengthy licographi cal here. John Riggott with his rotund form and 230 odd pounds of avoirdupois is noted as one of the "squarest" and most nervy shooters in the State, and a man who will invariably "shoot to win" regardless of the "lay of the land" in the vicinity of a pool seller. While he is frequently seen on a shooting ground when sweepstakes are in order he has not been much heard of of late years in connection with match shooting. A couple of years ago he and Frank Class shot a match against two well known Philadelphia amateurs (?), the Quaker City contingent being the victors. Each man shot at 50 live birds, Riggott grassing 43 and having by far the hardest lot of birds. Last season he shot two matches at 100 birds each against L. H. Davenport and won them both. Living in a locality where game is very plentiful and being passionately fond of sports afield he never loses an opportunity to follow his dogs, and is able to make things interesting for those who attempt to outwalk or outbag him in the course of a day. This work, added to regular habits of life and constant inhaling of country air, has given him an iron constitution and a nerve which cannot be shaken by trifles.

Frank Class, his opponent, is at this time one of the best live-bird shots in America, and has made a phenomenal record during this and last season, his average being 93 6-10 for 750 birds shot at in consecutive matches, six being at 100 birds each, two at 50 and two at 25 birds each. This is a record of which any man could well feel proud. As a "finisher" Class is a very dangerous man, his nerve seeming to become hardened down as he passes the half-mark in a match. Both men are quiet and unassuming during the match, having little or nothing to say from start to finish, even to their handlers.

It was 2:45 when the match was called, and at that time fully 500 people were on the grounds, nearly every part of the State being represented. Among the spectators were noticed Chas. H. Raymond, of Morris Plains, who imported the first Laverack setters ever seen in this country; Robert S. McCracken, Court McCracken, W. B. Campbell, Theodore Young, J. L. Keggan and "Big" James L. Smith, all of Hackettstown; Fred Class, of Pine Brook; Harry E. Smith, Wm. S. Canon, the one-armed expert, Samuel Castle and Jas. E. Wheaton, of the Newark Gun Club; Harry Piper, Class's backer and a well-known hotel keeper of Morristown; Frank Piper, also of Morristown; Milton F. Lindsley, of Hoboken, the well-known wood powder expert; Al Heritage ("Old South Paw"), of Jersey City; Jas. Cavanaugh, of Madison, who was once considered the best live-bird shot in the State; "Uncle Jack" Harrison, of Milburn, an old-time field and trap-shot; A. Sickley, of the Union Gun Club of Springfield; Dr. P. J. Zeglio, the well-known Warrenville M.D., and his brother Joe, who is developing into a crack target smasher; Neaf Apgar, the popular representative of Henry C. Squires.

The weather was delightful. The sun shone brightly and warm, but there was just a suspicion of a breeze, which made the heat endurable. The grounds are very pleasantly situated about a mile and a half from the depot. On three sides are dense woods, over the tops of which can be seen the mountain ranges. The shooting is done on the baseball diamond immediately in front of the big grand stand. The birds were furnished by Al. Heritage and as a lot but little can be said in their favor. Some few were good flyers, some were fair, and there the story must end so far as their quality is concerned. Even at this season it would seem as though, for an event of such importance as this, better birds could be procured.

Dr. P. J. Zeglio, of Warrenville, was chosen as referee and Frank Mason as official scorer. Neaf Apgar, who has entirely recovered from his recent illness, was trap-puller. James L. Smith looked after Riggott, while Class's interests were looked after by his backer, Harry Piper. The press representatives were provided with seats and a table immediately in rear of the score. The match was governed by Hurlingham rules, both men standing at the 30yd. mark.

Class went first to the score getting a rather slow right-quarterer from No. 3 trap, which he grassed with his second barrel. Riggott's opener was a right-quarterer from No. 5 trap, which he killed with his first. The first miss was by Class on his eighth round, when he allowed a rather slow left-quartering driver to get away by using a slow second; he lost his tenth, a right-circler, for the same reason, and his twenty-fifth, an ugly zigzagger, dodged both barrels. Riggott had hard work with his fourteenth bird, a straight driver, and his fifteenth, a circler, both of which fell dead within 2yds. of the boundary. Score of the first quarter, 23 for Riggott to 22 for Class, with rising odds on Riggott.

On the second quarter Riggott made a clean run. Class's twenty-second bird was one of the very good ones which was able to carry a double allowance of shot to the rear boundary, over which it toppled, stone dead. Score 48 for Riggott and 45 for Class with wagers of five to three on Riggott and a few takers.

On the third quarter Riggott made a miscalculation on his eleventh round and allowed a slow circler to get away, this being his only miss. Class killed twenty-four and slipped up on the next, a fairly fast left-quartering driver. Riggott 72 and Class 70 killed with Riggott still the favorite.

On the final quarter Class made a run of seventeen and his next, a passable right-quarterer, fell dead over the boundary. Riggott made a goose-egg on his fifth, a slow driver, and on his twenty-second, a medium-paced ditto, missing the latter clear and clean. At this stage of the game the score stood 92 for Riggott and 91 for Class and the friends of both men began to throw out money at a lively rate. Speculation was rife as to the outcome and everybody began to stand on tip-toes as the men took their turn at the score. Class kills, Riggott does likewise. Again Class sends a third to grass and his merry opponent follows suit. Now the Morristown man goes to the score for his last trial, gets a hoverer, grasses it with his first and falls back with the consciousness of having given his opponent 9¼ to beat. As Riggott steps leisurely to the score and takes a long breath a hundred people are asking, "Will he flunk?" "Has he the nerve to kill this bird and win?" "Well, I guess he has the nerve," says one of the Rockaway man's supporters, "or at any rate I'll risk any part of a hundred on his killing."

Up goes the gun to the shoulder for a "sight," down comes the butt below the armpit and "pull" follows instantly. Over goes No. 2 trap, out start a left-quartering incomer and as the butt is pulled against the shoulder two reports follow in quick succession, the bird gives up the ghost and the State championship along with the more substantial $250 belong to John Riggott.

And what a shout went up from the supporters of the victor; a shout that made the welkin ring and tingle the ears, and well did the modest Rockaway boniface deserve all the applause he received. To face a man of Class' acknowledged skill and nerve, to have to kill the last bird to win, when your opponent has 94 kills to his credit requires an iron nerve and this Riggott showed that he possessed.

Class too came in for his share of credit for the splendid run he made, killing 72 out of his last 75 birds. His fight was a game one, the race being lost on the first quarter. During the first half of the race he seemed to be slightly off-form, his second being much slower than is usual with him. Later on he came down closer to form, but it was then too late to save the race.

Riggott's nerve is shown by the following occurrence which to a man of ordinary nerve would have meant sure defeat. Early on the morning of the day of the match a colt attached to a buggy balked in front of Mr. Riggott's hotel, in Rockaway. In the carriage was a lady who was naturally frightened. Mr. Riggott asked the lady's escort if he thought the colt would move by being taken by the bridle, and being answered in the affirmative he talked soothingly to the animal, seized the bridle and attempted to get him to move. The first pull on the bridle being ineffectual he gave another, when the colt suddenly reared, one of his hoofs badly bruising the back of Mr. Riggott's right hand. He then brought the colt to its feet, but no sooner did it settle than up it went again, this time giving Mr. Riggott a grazing blow on the side of the head. He also lost his footing, and as the animal landed a second time it threw him to the ground. For safety he retained his hold on the bridle, but before he could recover his footing had received another glancing blow on the head and an ugly kick in the ribs. He was helped into the house and his injuries attended to, but all the persuasions of his family and friends could not dissuade him from going to Morristown to shoot the match. After Mr. Riggott had been so roughly treated by the horse the driver told a bystander that "the animal always had a mortal antipathy to strangers and would never allow one to handle him."

And yet this same man allowed "a stranger" to risk his life with the horse. I regret very much my inability to give the name of this driver. To undergo the above experience and afterward shoot such a race as that at Morristown proves conclusively the stamina of John Riggott. During the earlier part of the race when Class lost two birds, some of Riggott's admirers began to cheer and shout, but they were very promptly checked by Riggott himself, who told them very plainly that he wanted "fair play and no favors." After this the applause was confined to good shots.

Below is the full score of the match, the use of FOREST AND STREAM'S copyrighted "trap score type," enabling us to give the full history of the shoot in this succinct form. The first line shows the trap from which the bird was sprung, the second line shows the direction of flight taken from and the third line shows whether the bird was killed with the first or second barrel, missed or fell dead out of bounds. T denotes a towerer; H a hoverer or bird killed close to the trap; and ○ a dead out of bounds.

The match started at 2:46; at 3:26 each man had shot at 25 birds; the first half of the race ended at 4:02; 75 each had been shot at at 4:38 and the last shot was fired at 5:10. Class used Schultze and Riggott used American wood powder. C. H. TOWNSEND.

## Nitro Powders.

*Editor Forest and Stream:*

Several months ago I began a series of experiments with nitro powders, and due notice was given in FOREST AND STREAM, owing to which I received many letters of inquiries in regard to my experimental work. My object has been to obtain a nitro load for inanimate target shooting that I could do as good work with as I could with my black-powder load. For the past three years I have had a desire to shoot nitro powders, but I must say that I have given it up as a bad job many times, for I could not make as good scores with my shells loaded with nitro powders as I could with my regular black-powder load, which for the past two years has been 3drs. F. F. F. G. powder and 1⅛oz. No. 8 shot. Such a load in my 12-gauge, 7¼lb. gun has given me entire satisfaction. At the commencement of my experimental work with nitro powders it was my object to obtain a nitro load that I could do as good work as with 3drs. of black powder. And to give a full report of my experiments with nitro powders would occupy too much space in the columns of FOREST AND STREAM, so I will cut the story short by saying that I have established a load that I consider the best I have ever used.

I use 2½drs. (measure), or 36grs. weight, of American "E. C." powder, loaded in U. M. C. smokeless shells, two No. 11 and one No. 12 black-edge wads over powder, and 1⅛oz. No. 8 chilled shot, with thin top-shot wad and a square crimp. On July 4, at a public tournament, I broke 97 out of 100 single Keystone targets, with a run of 73 broken without a miss. My reasons for being strongly in favor of "E. C." is that it has a hard grain and does not pack down in the shells, and can be loaded with as little care as black powder. "E. C." has another very desirable feature; with its hard grains it does not clog in running through a loading machine. In regard to wads for nitro powders, it is my opinion that thick cardboard wads should not be used, as a perfect gas-check can be obtained with 3 black-edge wads. When using "E. C.," "S. S." or Schultze powder in Club, Climax, Rival or other cheap shells in my opinion it is absolutely necessary to prime with fine black powder to overcome a perceptible hang-fire. Therefore I strongly advise the use of U. M. C. smokeless shells with all nitro powders. C. H. BURDIDGE.

HARTFORD, Conn.

## Nitro Measurement.

THE Union Metallic Cartridge Co. has decided to measure its charges of nitro powders in factory loaded shells by grains weight instead of by drams (bulk measurement). The company has prepared the following table of the comparative measurement of the principal nitro powders:

| | Schultze. | S. S. | E. C |
|---|---|---|---|
| 2½ drs. bulk measure equals | 36 grs. | 34 | 37 |
| 2¾ drs. bulk measure equals | 38 grs. | 36 | 40 |
| 3 drs. bulk measure equals | 42 grs. | 38 | 44 |
| 3¼ drs. bulk measure equals | 45 grs. | 40 | 47 |
| 3½ drs. bulk measure equals | 48 grs. | 43 | 50 |
| 3¾ drs. bulk measure equals | 51 grs. | 46 | 53 |

1lb. = 256drs. = 7,000 grains.

## Shooting at Fond du Lac.

FOND DU LAC Wis., Aug 6.—Inclosed find scores of our shoot today. This is only our third shoot, and as all except two are new men we think we are doing well. Twenty-five single bluerocks, expert traps: M. M. Anderson 20, Lant Lewis 21, S. B. Amory 18, Wm. Hamilton 11, L. F. McLain 20, Fred Hurlbut 17, A. R. Keating 17, Fred Hurlbut 17, A. R. Keating 17, Fred Hunt (visitor) 16.

## Shooting at Acton's Park.

BALTIMORE, Md., Aug. 2.—The Standard Gun Club began a two days' shooting tournament at Acton's Park to-day. Notwithstanding the rainy weather the attendance was large and the shooting close and interesting. The entire day's programme, consisting of 11 events, was finished. The results:

First event, 10 singles, $1 50 entrance: Rice 8, Bonday 6, Clements 8, Bond 8, Willey 9, Buckbee 4, Hunt 6, Damm 9, Lupus 7, Ducker 9.

Second event, 10 singles, $1 entrance: Experts—Willey 8, Damm 6, Ducker 6. Amateurs—Bond 7, Bonday 9, Clements 5, Duvall 8, Hunt 6, Buckbee 7, Rice 8, Jersey 7.

Third event, 15 singles, $1 50 entrance: Experts—Duvall 12, Bonday 13. Amateurs—Bond 10, Ducker 10, Willey 11, Hunt 12, Damm 13, Jory 8, Buckbee 8 Rice 10, Hunter 8.

Fourth event, 15 singles, $1.50 entrance: Experts—Bond 13, Damm 11. Amateurs—Ducker 10, Willey 8, Duvall 13, Bond 13, Hunter 14, Hunt 14, Clements 8, Rice 11.

Fifth event, 20 singles, $2 entrance: Experts—Bonday 16, Duvall 15, Bond 17, Hunt 14. Amateurs—Willey 8, Damm 18. Ducker 17.

Sixth event, 10 singles, merchandise prizes, entrance 80 cents: Buckbee 8, Hunter 9, Dyson 6, Hunt 4, Jory 4, Rice 6, Damm 8, Bond, Jr. 9, Willey 7, Ducker 7, Lupus 5, Duvall 8, Bond, Sr. 5, Bonday 10, Franklin 8, Clements 8, Dankmyer 8.

Seventh event, 20 singles, $2 entrance: Experts—Bond 14, Ducker 14, Damm 14, Hunter 14. Amateurs—Franklin 15, Hunt 17, Duvall 16, Bonday 18, Willey 14, Dankmyer 17.

Eighth event, 15 singles, $1.50 entrance: Experts—Bonday 11, Hunt 11. Amateurs—Franklin 13, Bond 14, Duvall 11, Damm 9.

Ninth event, 15 singles, $1.50 entrance: Experts—Franklin 12, Bond 11. Amateurs—Willey 11. Bonday 14, Ducker 12, Hunter 9, Duvall 11, Hunt 14, Jory 10, Malone 10, Damm 11, Clements 10, Rice 7.

Tenth event, 10 singles, $1 entrance: Experts—Hunt 7, Bonday 7. Amateurs—Willey 7, Bond, Jr. 9, Duvall 9, Damm 8, Franklin 9, Bond, Sr. 5, Malone 8.

Eleventh event, 10 singles, $1 entrance: Experts—Duvall 8, Franklin 9, Bond 8, Ducker 9. Amateurs—Willey 7, Hunt 9, Bonday 8, Buckbee 5, Clements 8, Rice 6, Malone 7, Jory 6, Damm 7, Hart 5.

*Aug. 3.*—Not more than 25 members of the Standard Gun Club were present at the second day's tournament at Acton's Park today. There were but few spectators in attendance. The weather was fine, however, and the members of the club made a very good showing in the various contests. But nine events on the programme were shot. Following are the results:

First event, 10 singles, $1 entrance: Smith 7, Buckbee 7, Franklin 8, Ducker 9, Hunt 10, Damm 8, Hansen 5, Bonday 7, Malone 8.

Second event, 10 singles, $1 entrance, $10 guaranteed to the winner: Ducker 10, Hunt 10, Malone 6, Bonday 8, Damm 8, Buckbee 5 Lupus 8.

Third event, 15 singles, $1.50 entrance; Ducker 13, Hunt 10, Bonday 15. Franklin 10, Duvall 14, King 9.

Fourth event, 15 singles, $1.50 entrance fee, $15 guaranteed to the winner: Bonday 10, Ducker 14, Duvall 13, Damm 13, Hunt 13, Montgomery 4, Franklin 15, Smith 11, Clements 11, Malone 10.

Fifth event, 10 singles, $1.50 entrance: Franklin 9, Duvall 8, Hunt 9, Ducker 9, Damm 8, Bonday 9, Smith 9.

Sixth event, ¼ keg wood powder to first, 2 bags chilled shot to second and 2 bags chilled shot to third, 10 singles, 80c. entrance: Franklin 9, Hunt 9, Montgomery 6, Ducker 10, Duvall 10, Damm 9, Bonday 8, Stoor 4, Buckbee 7, Smith 8, Clements 14, Malone 5.

Seventh event, 20 singles, $2 entrance and $20 guaranteed to winner: Bonday 16, Smith 20, Ducker 17, Franklin 18, Hunt 18, Huks 17, Duvall 19, Damm 17, Clements 14, Buckbee 15.

Eighth event, 15 singles, $1.50 entrance: Ducker 13, Hunt 12, Damm 13, Huks 13, Duvall 14, Smith 11, Dankmyer 11, Franklin 14, Jory 19, Bonday 13, Lupus 10, Buckbee 11, Clements 12.

Ninth event, 10 singles, $15 guarantee to winner: Bonday 9, Damm 7, Ducker 9, Duvall 9, Franklin 9, Montgomery 8, Hunt 10, Jory 14, Dankmyer 6, Smith 9, Malone 8, Lupus 7, Buckbee 9, Clements 5. A rubber coat offered as a prize for the best shot was won by Bonday.

## At the Hollywood Trap.

LONG BRANCH, N. J., Aug. 1.—The shooting contingent, operators and spectators were out in force to-day about the Hollywood trap. The principal match was between Fred Hoey and Captain Money. The conditions were 100 birds each, 30yds. rise, 21yds. boundary. The stakes were put at the nominal figure of $100, but several thousand really hung in the balance until the last bird was dropped. Mr. Hoey has not been in his usual form this summer, and the odds were slightly in favor of Captain Money, $100 to $90 being offered and taken over and over again.

Both started off in good shape, the birds proving a lively lot of genuine bluerocks. Each led by two birds alternately through the match and four times the shooters were tied. Captain Money missed his 89th bird, which left Hoey a lead of one, but Hoey missed his 90th bird and the tie was re established, both then killing the rest and finishing with 91 killed and 9 missed each. The excitement was so intense that not a word was spoken on the grounds during the last ten birds except "Are you ready? Pull!" A similar match will probably be made as a shoot off.

Immediately afterward the third match between Dr. Wilson of New York, and Clarence Dolan, of Philadelphia, was begun at 100 birds, 30yds. rise, for $500 a side. The first match was a tie at 75, the second match was won by Dr. Wilson, 86 to 85, and to-day's match was supposed to settle the supremacy of one or the other of the shooters. Dr. Wilson was in great form, and steadily made and kept his lead of two birds, winning handily, with a score of 90 killed and 10 missed to Dolan's 88 killed and 12 missed.

Dr. Wilson gave a big dinner at Hollywood last night to celebrate his well-earned victory, as he is a much older man than Dolan, and is obliged to shoot with very strong spectacles on his nose.

*Aug. 3.*—There was the usual Wednesday crowd about the pigeon traps at Hollywood to-day, when a number of sweeps were shot. The Hollywood grounds have proved a great boon to pigeon cracks, as they are the only ones in vogue during the summer, and enable them to keep their hands in all the year round.

Some idea may be gained of the popularity of this sport from the fact that bills for pigeons alone last week aggregated $800.

The first sweep, 5 birds, handicap rise, with allowances, $5 entrance, brought out Fred Hoey, D. C. Johnson, Yale Dolan, V. Wilson, C. W. Dolan, P. Hazard and E. G. Murphy. V. Wilson and C. W. Dolan divided.

The second sweep, same conditions, same entries, was divided by Dolan and Hazard. The third event, $15 entrance, same conditions, was divided by Fred Hoey and Yale Dolan with scores of 11 straight. The next event, similar conditions, was divided again by Fred Hoey and Yale Dolan with 14 straight.

Final event, $25, sweep, was divided by C. W. Dolan and P. Hazard with 15 straight each.

## The Union Gun Club.

THE eighth monthly shoot of the Union Gun Club was held at Springfield, N. J., on Aug. 5, the weather conditions being fine and the attendance fair.

In the club medal contest at 25 targets per man the scores were; Class A—Wm. Sigler 24, R. H. Breintnall 23, E. D. Miller 21. Class B—C. Drake 23, Jos. Byran 21. C. Smith 21; Smith winning second on shoot-off. R. Williams, A. Sickley and Geo. Pudney tied for third in Class B Pudney wianing on the shoot-off.

Sweepstakes, 10 Keystones per man, $1 entry, two moneys:

| | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
|---|---|---|---|---|---|---|---|
| W Smith | 9 | 8 | 9 | 9 | 10 | 8 | 9 |
| Drake | 9 | 8 | 9 | 8 | 0 | 8 | 6 |
| Sigler | 9 | 10 | 10 | .. | .. | .. | .. |
| Breintnall | 9 | 5 | 8 | .. | .. | .. | .. |
| C Smith | 7 | 8 | 10 | .. | .. | .. | .. |
| Miller | 8 | 10 | 9 | 8 | .. | 8 | 10 |
| Sickley | .. | 8 | .. | .. | .. | .. | .. |
| Williams | 8 | .. | .. | .. | .. | .. | .. |

No. 8 was at 5 pairs.

## Bluerocks at Pine Brook.

ON July 27 the following scores were made at Pine Brook, N. J., in a match at 25 bluerocks each for $5 a side between Miss Jennie Smith and Frank Piper, the latter a recent addition to the trap shooting ranks:

Frank Piper .....1000110101010010101010110—12
Miss Smith.....1011110111101111111111110—20

On the following day the same parties shot a match at 50 bluerocks each on Frank Class's new grounds in Morristown, J. E. Wheaton also entering the lists. The entry was $10 each. The scores:

James Wheaton.0000110100111001110001000000001100110010011001101—21
Miss Smith.....1101110101011101101011111111111111011111111101111101—40
Frank Piper.....1101110110000111111010110101101101011111101111—35

### Bergen vs. Passaic.

THE members of the Passaic City Gun Club went from Passaic to Cherry Hill, N. J., on July 30 to try conclusions with the Bergen Gun Club in a contest between teams of ten men each, at 25 targets per man. The home boys had their shooting clothes on as the following scores will show:

Bergen Team.

| | |
|---|---|
| Van Riper | 0001110110110111110111101—17 |
| Taylor | 1111111111111111111101001—23 |

### Shooting at Pearl River.

THE Excelsior Gun Club had a very pleasant time at its last shoot, although the hot weather made a perceptible difference in the attendance. There were twelve contests on the list, three of these being at live birds. The scores in these were as appended: Nos. 1 and 2 being at 10 birds, $4 entry, and No. 3 being a $1 miss-and-out:

| | No. 1 | No. 2. | No. 3. |
|---|---|---|---|
| Keittle | 0222002101—6 | 0020212212—7 | 0 |

### Des-chre-shos-ka International.

JUDGING from the very attractive list of prizes to be contested for at the International tournament, on Des-chre-shos-ka Island at the mouth of the Detroit River, Aug. 22 to 26 inclusive, this should be one of the warmest affairs of the season. The first, third and fourth days will be devoted to shooting at bluerocks, while on the second day live birds only will be used. The big event on the opening day will be at 50 bluerocks for the L. B. Littlefield Michigan State championship medal and seven merchandise prizes; the medal can be won only by a resident of the State, but the merchandise prizes can be won by anyone who shoots a stiff pace. There will also be three 10-target events, two 15 and two 20-target events, open to all comers.

On the second day the main attraction will be the international match for the Gilman & Barnes medal, won last year by L. T. Duryea, of Brooklyn. This will be open to the world at 25 live birds per man. There will be three merchandise prizes also in this event. Other events in order are at 5, 7, 3 pairs and 10 live birds and a miss-and-out.

On the third day the premier attraction will be the match for teams of four men each from any regular organized gun club in America, 25 bluerocks per man, the first prize being $50 in cash, presented by Gilman & Barnes; second prize will be a set of four game pictures, value $25. There will also be three 10-target, three 15-target and three 20-target events open to all.

On the fourth day will occur the match for the international target championship trophy, at 50 single bluerocks, open to the world. In this there are eight merchandise prizes beside the medal. The rest of the day will be filled in with target events.

The Parker handicap will be used in all target events excepting those for the medals and trophies. In these no handicap will be used.

### Oneida County Sportsmen's Association.

UTICA, N. Y., Aug.—The weekly shoot of the Oneida County Sportsmen's Association drew out a fair number of members and some good scores resulted. Once more Elliott made a clean score in the club contest. Harris and Knowlton tying for the club badge in contest No. 2 on 24 breaks each, Knowlton winning on the shoot off. The weather was fair with a westerly wind. The conditions were 25 kingbird targets per man, event No. 1 being for the club prizes and No. 2 for the badge. The scores: Event No. 1:

| | |
|---|---|
| Knowlton | 1111111111111101111111111—24 |
| Booth | 1111111111111101111101111—23 |

### The Trap at Wilkes-Barre.

WILKES-BARRE, Pa., Aug. 8.—Quite a number of shooters met on the grounds near the Wilkes-Barre Gun Factory on Saturday last, and enjoyed themselves shooting at flying targets. Several had never shot at inanimates before, although they were good live-bird shots, and some of the low scores will be improved in a little time. We expect to have a practice shoot on each Saturday afternoon, and give a two days' tournament at bluerocks and live birds in a few weeks, as soon as weather will be cool enough to give live birds a chance. All scores were made at bluerocks, known angles. Ely, Park, E. H. K., Roth, Rhodes, and W. S. Jacobs used Wilkes-Barre guns.

First match, 10 singles: Tom Ely 10, E. Roth 9, W. K. Park 9, E. H. K. 8, W. Jones 7, C Renowden 7, T. N. Jones 7, W. S. Jacobs 7, E. A. Rhodes 6, C. Schomaker 4, J. Schooley 4, John James 3, J. Barnett 2, C. Schaffer 2.

Second match, 10 sirgle bluerocks: E. H. K. 9, T. Ely 8, E. Rhodes 8, W. Jones 7, J. James 7, F. Cole 7, M. Lewis 7, W. K. Park 6, E. Roth 6, J. Morgan 6, C. Schaffer 5, W. Jacobs 5, C. Schomaker 5, G. Attenger 5, C. Renowden 4, Collum 4, Schooley 3.

Third match, 10 single bluerocks: E. H. K. 9, W. K. Park 8, Rhodes 6, W. Jones 5, J. James 4, W. Jacobs 4, Schooley 4, Attenger 4, E. Roth 3, T. N. Jones 3.

W. BARRE.

### The Towanda Gun Club.

TOWANDA, Pa., Aug. 6.—A few of the faithful turned out to our regular monthly shoot for club badge, and demonstrated they were still able to hold their own in making a fine score of "goose eggs" as any club in the country. Following are the scores, first, 10 targets rapid firing system, last 15 from three unknown traps, known angles:

| | |
|---|---|
| Montanye | 1111101111 1010010011111o—18 |
| Turner | 1101111100 1010001110100l0—14 |
| Snider | 1101111000 1101001111010—16 |
| Brown | 0111101101 1100000101000o—12 |
| Dittrich | 0001100110 0101010111111—14 |
| Hamaker | 0000101110 0010100000100 — 8 |

W. F. DITTRICH, Sec'y.

### Dunkerly vs. Ernest.

A LIVE bird match between Thos. Dunkerly, of the Eclipse Gun Club, and John Ernest, of the Delaware Gun Club, for $50 a side, took place on Aug. 2, on Lutz's farm, on the Notch road, at Paterson, N. J. Mr. Smith acted as referee, and a large number of people witnessed the contest. It was at first agreed that the contestants should have 15 birds apiece, but when it became impossible for Ernest to beat his opponent the shooting stopped at the twelfth bird. The official score is as follows:

| | |
|---|---|
| Dunkerly | 111111110101—10 Ernest.....011010001011— 6 |

### The Cleveland Gun Club.

CLEVELAND, O., Aug. 4.—The East End Gun Club held their regular shoot this afternoon. The attendance was very poor. J. I. C. won first and Sweetman second badge. The following were the scores made:

| | |
|---|---|
| Sweetman | 1110011111111101111001111111—25 |
| J. I. C | 1100111111101111101111111111—26 |
| North | 1011011111100110001010000010000—14 |
| J C Beard | 1101111101011100101000110111—20 |

## Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. A. D.—Letter for you here.

W. M. TRACY.—We have a letter for you.

MOPANG.—Please send your address to this office.

L. W. F.—We are not advised as to the locality. You would do well to write to the postmaster.

G. V. G.—Your inquiry relates to a subject quite out of our line, and of the rules of which we know nothing.

BLUEFISH.—Write to Game Protector Robert Brown of Port Richmond, Staten Island, to whom we have forwarded your card.

J. H. D., Poughkeepsie.—We send you copies of FOREST AND STREAM of Sept. 18 and 25, 1890, which contain full and illustrated description of the wingnish.

RATTLER.—There is no certain antidote for snake bite known; the subject has been discussed at length in previous volumes of this journal, but without result.

A. E. E., Lodi, O.—We cannot name prairie chicken shooting grounds in the locality mentioned, but President John G. Smith, of the Iowa Association, in our issue of July 14, recommended Birt. Bancroft, Ledyard and Elmore, and vicinity, Iowa, as affording good sport.

SNAKE KILLER.—We know of no acid used to put out where snakes abound for the purpose of driving them away. Broken glass scattered about their holes and in their haunts is sometimes effectual to drive off rats and field mice, and if your snakes are in dens a systematic and thorough treatment with broken glass might effect the purpose.

BLACK BASS, St. Lawrence River.—Fresh liver will probably be taken by black bass in the crates; they take it readily in ponds. The bass will eat frogs, toads, snakes, crayfish, helgramites and other insect larvæ; the yellow perch is a favorite food of this fish and the smaller sunfish serve its appetite equally well.

H. G., Trenton, N. Y.—In the town of Trenton we have several small brooks which have been stocked some three or four times with trout from the State Hatchery. They were stocked by subscription, a number of men got money enough together to pay the expressage on the fish and a man to go after them. We got permission from the owners of the land that the brooks ran through to put them in, and in each case it was granted. They were stocked the last time four years ago, and three years ago one of the men, through whose property one of the brooks runs, put signboards on his stream and a small pond which he has made since it was stocked. A man was caught fishing in this brook and was about to be arrested, and rather than to have any trouble he paid $10 to settle it up. Are streams which have been stocked from State Hatchery private or are they public? Ans. Stocking a stream does not in this State make it public. Under the trespass laws the owner of the land may forbid fishing in the stream, even preventing the contributors to the fund for stocking from fishing for the fish they paid for.

N. T. R., Westerly, R. I.—Will you please let me know in your next paper if the gray wolf and the timber wolf are the same? and will you also tell me if wolves roamed in the State of Maine in large numbers in 1869, and if there are any there at the present time? 1. The same. 2. There are believed to be no wolves in Maine at the present time.

G. P., Sr., Albert, Can.—Please inform me the best time of year to plant wild rice, and also the best kind of ground and how to put it down. Ans. Sow in September, as soon as gathered. It should be planted in water that has a muddy bottom, is not too cold, has not too strong a current, and is not more than 8ft. deep. Before sowing soak the seeds in water, so that they will sink at once when cast into the water.

M. W. P., Lakewood, N. Y.—On Chatauqua Lake here there are a few quite wide marshes and bays and ducks are very shy of the shore, no one shooting many of the immense number that stop here late in the fall. Now we do not have many days shooting, consequently would like to find some way to get them. Where can I get directions for building a sink-box? Sink-boxs are unknown here. We do not wish to slaughter them in quantities, but would like to be able to get a dozen in a day's hunt; as it is now one is lucky to get two or three ducks, though seeing thousands. Ans. You will find plans and full directions for building sink-boat in "Hints and Points for Sportsmen." But the law forbids use of floating devices other than boats propelled by hand.

CLEREMONT, South Dakota.—Have experiments been made testing velocity of shot, showing the time requierd for a charge of shot to go a distance of 50yds., gun to be loaded, say, 3drs. powder and 1 or 1¼oz. shot, or any first-class nitro or black powder? If such experiments have been made, will you give them for both 40 and 50yds.? Ans. Prof. Alfred M. Mayer, of Stevens Institute, once conducted an elaborate series of experiments to determine the velocities of shot charges. His report was published in full in our issue of Oct. 28, 1880. The results were given in mean velocities for 30, 40 and 50yds., *i. e.*, "the average velocities of the flight of shot over these distances, and not the velocities at 30, 40 and 50yds. from the gun," as follows:

I. 10 Colt gun, 5drs. Curtis & Harvey powder, 1¼oz. shot.

| Size of shot. | Vel. 30yds. | Vel. 40yds. | Vel. 50yds. |

"The prettiest shot I ever saw was made by a woman," said T. R. Lane, of Oshkosh, Wis., an enthusiastic sportsman. "I was surveying in Coles county, Ill., in 1848, and stopped for dinner at the cabin of a settler named Junken. We sat in the shade by the cabin door while Mrs. Junken prepared dinner. A little tow-headed tot less than a year old was creeping about the big yard. Suddenly we heard the sharp *whir-r-r* of a rattlesnake. Full 60yds. away a big fellow was coiled, ready to strike, while within a yard of it creeping directly toward it as if charmed was the child. To cry would cause the rattler to strike; to reach the child in time to save it was impossible. The snake's head shot forward, and at the same instant a sharp report rang out from the cabin door and his snakeship was rolling headless in the grass. We found Mrs. Junken lying in a dead faint across the still smoking rifle. She caught the rattler's head at 60yds. on the fly."—*St. Louis Globe-Democrat.*

"Tommy, how did you get the back of your neck all sunburnt?" "Pullin' weeds in the garden." "But your hair is all wet, my son." "That's persp'ration." "Your vest is on wrong side out, too." "Put it on that way a-purpose." "And how does it happen, Tommy, dear, that you have got Jakey Du Bois's trousers on?" (After a long pause)—"Mother, I cannot tell a lie. I've been a-swimmin'."—*Chicago Tribune.*

### CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The Editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The Editors are not responsible for the views of correspondents.

### SUBSCRIPTIONS.

Subscriptions may begin at any time. Terms: For single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

**Three Copies, $10. Five Copies, $16.**

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States Canada and Great Britain.

Foreign Subscription and Sales Agents—London: Davies & Co.; Brentano's; Sampson Low & Co. Paris: Brentano's. Foreign terms: $5 per year, $2.50 for six months.

### ADVERTISEMENTS.

Inside pages, 30 cents per nonpareil line. Special rates for three six and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices $1.00 per line. Only advertisements of an approved character inserted.

**Address all communications:**

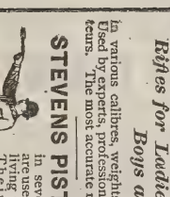
CHARLES HALLOCK.
CONTENTS: Distribution of the Salmon. Life History of the Salmon. Technology of Salmon Fishing. Salmon Fishing in the Abstract. Luxury of Salmon Waters. Itinerary of the Salmon Rivers.
A book to read *now*; and to be put in one's pocket for reading again in camp.
Cloth, 126 pages. Price $1.00.
FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.



SOME anglers labor under the false impression that large dealers and manufacturers charge more for their goods than the keepers of small shops. A glance at our new Illustrated Catalogue and Price List for 1892, which we will mail on receipt of 6 cents to cover postage, will show how much they are mistaken.
ABBEY & IMBRIE,
Manufacturers of All Grades of Fishing Tackle,
18 Vesey Street, New York.

Notice to Fishermen! Cut Prices for 1892!
I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

*"Fine sense and exalted sense are not half so useful as common sense. There are a score of men of wit for one man of good sense. He that carries nothing about with him but gold, is every day at a loss for readier change."—Addison.*

There are more men of sense now than in Addison's time. By men of sense we mean men who can comprehend the theory and advantages of a business that places the man or woman buying for his or her own wants, in contact with the makers of the goods. Practicing as we preach, we buy this way ourselves, cheaper and better. We know you can do the same.

Montgomery Ward & Co.
111 to 116 Michigan Ave., Chicago

STEVENS
Rifles and Pistols.

MEPHISTO
331-333 BOWERY, BET. 2d & 3d STREETS.
NEW YORK, July, 1892.
Our "ONDINA" all Havana tobacco NEW YORK made cigar, our world-renowned "MEPHISTO" and all other finer grades of cigars made by us are superior in many ways to those made in the tropics. In addition to all the tobacco markets of the earth to which we have access, New York City always commands the best of every material as well as labor. OUR New York factory is a perfectly ventilated, clean abode. No sort of uncleanliness is permitted, and our cigars, therefore, are not liable to contain matters other than tobacco, and smokers may confidently and safely use our cigars, not needing a mouth-piece or a cigar holder to prevent unpleasant consequences. To protect consumers from imposition, every "MEPHISTO" cigar is banded.

# SPRATTS PATENT

MEAT FIBRINE DOG CAKES (WITH BEETROOT)

## REFUGE II.

(Pinlimmon ex Recluse.)

Winner of over forty prizes, including the *medal for the best stud dog*, Agricultural Hall, London, 1891.

**Fee, $60.00.**

**Champion**

## Kingston Regent.

**Fee, $50.00.**

## Prince Clifford.

**Fee, $20.00.**

SEVERAL LITTERS SIRED BY THESE DOGS FOR SALE CHEAP.

**NEW YORK ST. BERNARD KENNELS,**
138TH ST. AND THE HUDSON RIVER.
HENRY JENNINGS, Manager.

**The Fastest Field Trial Winner in America.**

AT STUD. FEE $25.

# PAUL BO

(No. 20,207).

Black, white and tan English setter dog.
By Champ. Paul Gladstone—Bohemian Girl.

First, Southern Derby, '91.
First, Central A. A. Stake, '91.
Absolute winner Central A. A. Stake, '91.
Second, Southern A. A. Stake, '92.
Winner of English Setter Club's Silver Medal, for best English Setter conforming to the English Setter Club standard, at Southern Derby, '91.
He will be allowed a limited number of bitches of approved breeding.

RICHARD MERRILL,
3355 Grand Avenue, - Milwaukee, Wis.

# MELROSE KENNELS
## ST. BERNARDS.

Stud dogs, puppies and brood bitches.

**Lord Melrose at Stud.**

Fee $50. Largest dog in the world.

E. H. MOORE, Melrose, Mass.

STUD POINTERS.

## Ch. Pommery Sec.

(Ch. Graphic—Lady Vinnie.)

## Champ. Ossining.

(Ch. Robert le Diable—Countess Nellie D)

For stud fee, list of winnings, etc., address WM. H. HYLAND, North Tarrytown, N.Y.

**In the Stud. Fee $25.**

# WHYTE B.,

By Roderigo—Florence Gladstone.

Divided 3d, Southern Field Trials.
Broken dogs and puppies of strictly pure Llewellin breeding always for sale. The blood of my kennel is the bluest of the blue.
HERBERT S. BEVAN, Lamar, Miss.

BULL-TERRIER AT STUD:

## CHAMPION CARNEY,

(A.K.C.S.B. 24 936).

To a limited number of approved bitches.

TUBBY HOOK KENNELS,
Inwood, New York City.

**IN THE STUD.**

## Why They Need It.

COURT HOUSE, Hamilton, Aug. 11.—*Editor Forest and Stream:* I have much pleasure in informing you that at the last meeting of the board of Ontario Game and Fish Commissioners it was unanimously resolved that in future the Commissioners should be supplied regularly with copies of the FOREST AND STREAM.

Your paper has reached such a standard of excellence, treating as it does, both popularly and scientifically, all that appertains to the protection, preservation and propagation of game and fish on this continent, that the Commissioners feel that they cannot be without it.

You will therefore be good enough to place on your subscription list the following names, to whom you will send your paper regularly until further notice. [Here follow the names.]

A. D. STEWART,
Sec'y Ontario Fish and Game Commission.

## *ILLUSTRATIONS OF WILD LIFE.*

WE have in preparation a series of illustrations of American wild animals, to be published as supplements of the FOREST AND STREAM.

The drawings are by Mr. Ernest E. Thompson, whose previous work in this line is well known; and we are confident that the merits of his successful delineation will be recognized. The subjects already drawn are of the Felidæ, and they will be published as follows. See that your newsdealer has the numbers:

Sept. 8. THE PANTHER.
Oct. 6. THE OCELOT.
Nov. 3. THE CANADA LYNX.
Dec. 1. THE BAY LYNX.

## *THE FISHING "UP SALT RIVER."*

MESSRS. HARRISON and Cleveland are anglers; and as we pointed out last week, since one of them, missing the White House, must in due time go "up Salt River," both must be interested in knowing what sort of fishing will be found in those famous waters; and the FOREST AND STREAM has undertaken to tell them. Since our announcement last week a correspondent has suggested that Mr. Cleveland might himself give us the information we are intent on giving him; but any personal knowledge Mr. Cleveland may have of Salt River fishing is based on an experience now four years old; and every one knows that the angling resources of a stream may be completely altered in a much briefer period than that, and it is one characteristic of our fishing columns that the reports in them are always up to date.

A special correspondent commissioned to investigate the fishing resources of Salt River has presented his report, which is printed to-day. It must be conceded that the picture drawn is not an enticing one for the angler, nor of a character to afford much consolation in the prospect. When the catalogue of "the finny tribe" of Salt River begins with water snakes, soft and hardshell turtles and crawfish, the stoutest-hearted statesman may well enough "view the situation with alarm." Nor is one in the end likely to be reassured by reading that the accepted sport on the stream is "cooning for cats," a special branch of the Waltonian art with which the new-comer, though a bait-fisherman, must be sadly unfamiliar.

Nature and man have joined forces to diminish the fish supply. Recurring floods pour into Salt River tons of mud and sand which kill the fish; impassable dams forbid ascent to spawning grounds; barbarous modes of fishing and a more barbarous disregard of nature's laws as to breeding seasons combine to ruin all possibility of well stocked waters.

The fish supply, however, might be improved by restocking. Mr. Harrison would be making a prudent provision for himself, or at least doing the graceful thing for Mr. Cleveland, if he were to ask the United States Fish Commission to turn into Salt River a few million goggle-eyes and gars and blue cats and jumpers.

But before restocking may wisely be pursued on any extensive scale, missionary work must be done among the dwellers on the river; they must be weaned from "cooning" catfish off the spawning beds, and taught to exchange trot-lines and pitchforks for hook and line, as savages are led to put away their breech-clouts for pantaloons. Then, in the good time coming, with fish in the river and true fishermen on its banks, the old question, "Which would you rather or go a-fishing," might be answered in favor of Salt River fishing, even though the alternative were the White House.

## *COMMON LAW AND COMMON CUSTOM.*

THE owner of a North Carolina mountain farm, through which flows a stream, stocked the waters at considerable expense with a species of trout not indigenous to the region. The fish did well; and though the stream was duly posted, the proprietor's neighbors helped themselves and defied his prohibitions. The trespass laws proving ineffectual, the common law was invoked, the trout catchers charged with larceny, convicted and punished.

The common law gives the owner of land and water the exclusive right to take the game or fish found thereon. It is this exclusive right to take them that constitutes his so-called "property" in them. Further, the common law principle is that whenever any one else, without permission, invades this right, and captures the fish or game, the fish or game, so soon as it is reduced to possession, becomes the property of the land owner; and taking away the fish or game constitutes larceny.

For instance, if Mr. O. O. Smith, of Pennsylvania, were thus to capture a trout in the brook on the farm of Mr. Rowland E Robinson, of Vermont, Mr. Robinson having the exclusive right to fish therein, the moment the fish was clutched by Mr. Smith it would become the property of Mr. Robinson; and if Mr. Smith should take it away, Mr. Robinson could have him punished for larceny.

This is the common law principle; but we need not say it is a principle more honored in the breach than in the observance. After a tussle with the fish and its capture, Mr. Smith would not for a moment consider that it did not belong to him; nor, whatever attitude Mr. Robinson might assume toward the man from Pennsylvania as a trespasser, would he think of confiscating the fish and lodging Mr. Smith in jail for stealing it.

Common law is one thing, common custom quite another. As a rule, in this country game and fish are looked upon as belonging to the person who takes them, not to him on whose land or in whose waters they are taken, except in those instances where an individual or association protects game and fish for the purpose of sport. It is probable that in the future, as game preserves shall multiply, and as private enterprise, like that of the North Carolina case we have cited, shall introduce new species and thus acquire an equitable claim to a certain ownership in them, we shall hear more of this phase of the common law. There will be, as there are now, certain aggravated cases, where the peculiar conditions would in public opinion justify punishing the taking of game or fish as larceny; but the day will be a long time coming, if it shall ever come, when the successful sportsman or angler shall regard himself or be regarded by others as a thief because he has taken game or fish from the premises of another.

AN interesting note of fishery protection, recorded in *Nature*, is that the Chamber of Commerce at Tahiti has recommended the abolition of the diving apparatus used in the pearl fishery because in their opinion the shells found in a greater depth than 10 fathoms are those mostly important for reproduction, and to destroy them will ruin the fisheries and bring distress upon the natives who depend upon the pearl-shell diving, without the dress and apparatus, for their livelihood.

## *SNAP SHOTS.*

BY a discussion in the Moses case the General Term of this State has decided that the law forbidding Sunday fishing applies to private ponds. Last year the Clark's Lake Anglers' Club leased the exclusive fishing rights in Wickham Pond, in Warwick, N. Y., and the public was warned not to trespass. As the water had always been open to the public for fishing, much discontent was shown with the new order of things; and two young men having been arrested for trespass, a counter move was made by the villagers, and President R. H. Moses, of this city, was arrested for fishing on Sunday and was fined $5. Mr. Moses refused to pay the fine and appealed his case to the County Court, which sustained the Warwick justice, and then to the General Term, which has reaffirmed the decision of the lower court. As other fishing statutes apply to private waters, it is difficult to surmise the grounds upon which Mr. Moses hoped to evade paying his fine.

Probably few persons are aware of the large proportions of the canary bird trade between Germany and the United States, and fewer still dream of the extent of the American song-bird trade between the two countries. Some light on the subject is given in a recent report of George H. Murphy, of the Berlin consulate. Germany sends us every year 100,000 canary birds, of which about two-thirds come to one firm in this city, to be shipped thence to Charleston, New Orleans, San Francisco and other distributing centers. This same firm sends back to Germany from this country every year about 5,000 Virginia cardinal birds, 3,000 nonpareils, 2,000 indigo birds and 500 mocking birds. If there is no error in Mr. Murphy's figures this drain on the American bird supply is something which should have the immediate attention of the authorities.

Readers of the charming story which Mr. Hills sends us relating his experience in photographing a nesting woodcock, should turn back to the issue of July 28, and study again the reproductions there given of Mr. Jaquin's photographs. The pictures and the story together make up a very interesting contribution to the literature of this favorite game bird. In bringing out such pictures as these the FOREST AND STREAM Amateur Photography Competition may already be pronounced a successful enterprise. A Washington correspondent suggests that some possessors of really meritorious amateur photographs may be deterred from submitting them by the notion that only difficult subjects are desired. This would be a mistake, the plan provides for all phases of outdoor life within FOREST AND STREAM'S special fields.

Have any game or song birds been introduced into New Hampshire? A law of the last legislature provides for the protection for five years of "birds not now to be found in the State, but which may be brought into the State prior to October 1, 1896." Our correspondent "Von W." suggests that this may have been designed to protect the game enterprise of Mr. Austin Corbin, on Croydon Mountain. It is also possible that some of the sportsmen in the southern or eastern portions of the State, influenced by similar action in Massachusetts, may have proposed to introduce pinnated grouse or Mongolian pheasants.

The trout fishing on the North Shore, Mr. Starbuck tells us, has been very poor this year, in fact "played out" for the rod and line fisherman. But the Indians have netted tons and tons of trout, selling their catch to a large fish dealing concern for 10 cents a pound; and the big ones find their way chiefly to Chicago markets.

A Wisconsin man brags of having taken 480 brook trout at one haul with a basket in a dammed stream. In the good old days before the missionaries went to the South Sea Islands there used to be go-as-you-please matches to determine which chief would eat the most man.

A sawfish 24ft. long was captured in a net at Evans River, New South Wales. The saw measured 5ft. and had 25 pairs of teeth.

We have several inquiries for prairie chicken grounds, and information of available territory would gladly be received.

# The Sportsman Tourist.

## THE FALL HUNT.

For five days I could almost hear the monotonous patter of those two horses' hoofs coming nearer and nearer from northern New Mexico. I could shut my eyes and see Mat's tall figure coming as if he was a part of the horse he rode. Young, tall, a clean cut face, blue eyes, curly yellow hair, a trifle bleached out by living in the open all summer. But it was not by second sight that I knew he was coming. I had received a telegram which said: "Coming with two horses; trunk by express. Mat." I knew what it meant. Mat's steers were sold and he was coming to spend a month or so with me hunting and enjoying society—hunting a little and cooking some for his own pleasure. Mat is a Yankee cowman who has lived in New Mexico for several years, and who has made a practice to come and see me every fall. I know every water hole, every stream and almost every rock from his ranch to where we live; and so I can reckon how long it will take him to come. I told my wife, "So you can expect Mat Saturday night. We will go on a hunt Monday."

Saturday at 3 o'clock Mat came up to my office door, riding a beautiful black pony and leading a white one packed scientifically. The halter of White was hitched securely to Black's tail, and Mat paid no more attention to him than if he didn't have a second horse.

He dropped his bridle and came into the office. "How are the folks?" "Well." "Have you been on Pawnee lately?" "No, but everything is all right there. Come over to the house and we will stable the horses. I will be ready to go hunting Monday." It took but a short while to go to my house, unsaddle and unpack and soon the ponies had their noses deep in mangers of fragrant gramma grass.

Matthew looked like another man when he came into the supper room a little later. When he rode up he had on a suit of faded corduroy, a big white sombrero, and the boots with toothpick heels that are usually worn by cowboys. When he stepped into the dining room he was in a black suit that fitted like a glove, and looked like the gentleman that he is.

We sat up and talked far into the night, for we are partners in a bunch of mares that he is taking care of, and he had much to tell me. The next morning my wife remarked: "It seemed that you men never would stop talking last night. I woke up last night to hear Will declare that he never would own another of those Normans again and I believe that he talked you to sleep, Mr. King, for I know he followed you into your bedroom." But she didn't mean it, for I know she likes him almost as well as I do.

We commenced after breakfast to prepare for a little hunting trip, and in two days we started and steered northwest. In my old hunting buggy familiarly called the mud wagon, we loaded up tent and blankets, saddles and ropes, man food and horse feed, guns and cartridges. It's hard work to keep out useless things from an outfit, when I go hunting; and so I have adopted this method. I first pile everything I think I want on the floor in one room, and then weed it out till the load fits the wagon. I can get enough for a two weeks' hunt on the horse I ride if I have to, but I don't like to, so I generally go in a buggy or wagon if I can. We hitched up my two bay horses, Mat tied his ponies to the horses' girths; and away we went over miles and miles of prairie, level, dun colored and cold. There were but few houses in sight at the start, till after 20 miles there was not one: and at about sunset we drove down to Hackberry Spring to find that Fay, the old squatter, who had held it down for several years, had proved up and gone. The door of his stone house stood open, and we appropriated it and soon had our outfit inside. I picketed the bays on good grass; and Mat saddled up to prospect around, while I got supper. Hackberry Cañon is a wide open valley running down into the Pawnee Creek, and has only one good water-hole which is close to the spring which bubbles out of the bank near the cabin and runs down into the water-hole a distance of about 200 yards.

By the time I had made a fire, cleaned up the room, arranged our plunder and had a good supper ready, Mat came in looking pleased. "There is a bunch of antelope," he reported, "about a mile up the draw feeding, as quiet as if they had never seen a man. Cook is still on his ranch down at the mouth of Hackberry. Mrs. Cook wants us to come down and camp there, for Cook has gone away to be gone a week and she is afraid of the mountain lion."

So we ate supper, packed up again and moved down to Cook's, as I knew we would when we unpacked. For now I will let you into an open secret. The real reason Mat liked to hunt antelope on the Pawnee so well was that there was an attraction at Cook's ranch. When we rode up, Mrs. Cook and Nelly were bustling around getting supper. After we had unpacked again, we had to eat another supper and then Mrs. Cook and I exchanged news, while Mat and Nelly, who was a very handsome girl of 19, talked politics in the adjoining room. I retired at 10 and Mat came to bed two hours after in good spirits and seeming at peace with the world. "We are going to be married on Thanksgiving day, if Cook gets home all right," said he, which will show you, dear reader, that Matthew had been acquainted with the family before.

Don't think I am going to tell you much more about how these people spooned around. No, I am going to tell you how we killed the big buck, and try to have you see the broad prairie as I saw it.

Early next morning after breakfast Miss Nell declared that she was going hunting with us to hold the horses. Mrs. Cook said: "If Nellie will be in the way, Mr. D., I'll not let her go." I declared that I was glad to have a horse holder; and so Mat, Nell and I started up the cañon in my buggy with Mat's horses hitched up; but they were not Mat's more than five minutes longer, for he asked Nell how she liked them, after she had driven them about a mile, and when she said, "Splendid," he told her he brought them up for her, and I believe I would have given her a pair myself to get such a look as she gave him.

But soon we left the creek bottom and drove up on to the level prairie. Seeking a knoll, we swept the surrounding country with field glasses, and at last discovered the same bunch of antelope that Mat saw the night before, 10 in number, led by an enormous buck. They were just feeding up out of a little hollow about two miles away, and headed right toward us. We drove back out of sight. Mat and I slid into our leather pantaloons, so that we could crawl without wearing our knees out, and planned our crawl. We had to crawl over the hill in plain sight of the band and be in sight for half a mile. If they saw us they would probably take us for wolves, and not be frightened; then we could walk up a hollow that ran across their line of feeding, till the hollow got too shallow to conceal us as we walked, then crawl about half a mile more. It was a big contract; but at it we went, and in about half an hour we lay near the head of the swag, in a little hollow that had been worn long ago by the water, within half a mile of the antelope, who were feeding toward us unsuspicious of danger. I was perspiring freely, and my heart thumped against my ribs; but Mat looked as cool as a cucumber, for he was in good condition and looked as if he could crawl all day without losing his wind.

We lay and watched the band through the tall grass that fringed the water hole. An old doe was in the lead; and the big buck was behind, occasionally running off a young buck that was hanging around, when he came too near his harem. The hair on the neck of the buck stood up like a mane when he ran off the young one, and I could see that he looked white around the nose as I squinted at him through the field glasses.

They moved toward us very slowly, and once I thought they were going to change their course. But no, they fed slowly on by fits and starts. The does got within 100yds., the big buck 50yds. further back, and the young one—a two year old—about 50yds. behind him. "We have got to shoot," said Mat. I told him to shoot the big one (for I knew Nell was watching us), and that I would try the little buck. We sighted our Winchesters carefully and both shot at once. The big buck reared and pawed the air, then fell stone dead with a bullet clean through him. Mine fell, then got up and started after the does, which were making themselves scarce as fast as possible. I fired twice more at him and down he came at the second shot; and by the time Miss Nell had arrived with the ponies on a lope, and with the old mud wagon bouncing over the rough prairie, we had our quarry disembowled; and after gazing a moment admiringly at the big buck we lifted them both into the back end of the buggy and drove slowly down to the Hackberry spring, intending to stop there and have lunch: fried antelope liver, fried salt pork, fried potatoes, bread and butter, pickles and strong coffee. Mat and Nell cooked while I picketed out the horses.

We ate an awful big meal. As Nell was finishing off with a big pickle, Mat asked her if he shouldn't fry her another panful of liver. She said no, simply, but with an amiable smile. His foolishness bounds off that young woman very harmlessly. Just then Harry Cook, her twelve-year-old brother, came down the slope into our camp like a shot out of a gun on his bicycle, and took a header just as he reached camp. He landed with a resounding thump on his stomach and slid along like a toboggan; then limped into camp, holding both hands over his chest rather low down, and gurgled in a voice broken with sobs, "Oh, wouldn't ma feel awful if she saw me fall like that, Nelly?" We assured ourselves that he was not seriously hurt; Nell declared that she knew she would get gray some day on account of Harry's performances; and then Mat fried another panful of liver and Mr. Harry ate as if he was hollow clean down to his toes. "I believe the fall just shook Harry up enough to give him a good appetite," said Mat. "You just git on that velocipede and try it yourself, you old, long cow puncher," grumbled Harry, with his mouth full of liver.

We concluded to quit hunting and drive home to the ranch on Harry's account, for he was jolted up considerably; so we put the velocipede in on top of the bucks and went slowly home.

When we got there we found that two ladies had driven up from ten miles down the creek to visit Mrs. Cook, and they were having a great powwow when we arrived. I tell you four lively women can talk considerably when they don't meet but once in two weeks. Harry sat in one corner seeming to be awed for once at the four women who all talked at once like a flock of blackbirds, till at last he couldn't stand it any longer, and burst out in a dismal wailing, "Boo hoo." "What is the matter, Harry?" said Mrs. Cook in an anxious tone. "I told a lie yesterday, ma." "Oh, how could you do such a wicked thing, Harry? You must pray for forgiveness to-night." "I will," penitently exclaimed Harry, and then at it the women went again about dress skirts cut bias and other kindred subjects dear to a woman's heart, till Harry concluded that he was not receiving due consideration and burst out again with a melancholy howl. "What's the matter now, Harry?" snappishly exclaimed Mrs. Cook. "I just now remembered that I had told another lie." "When was that?" "Oh, about an hour after the first one." "Well, that was very bad; you must pray to be forgiven for both to-night."

Mat and I, who were in the next room, slid out to relieve our feelings behind the house, but Mat didn't joke any about it, for he is loyal to the whole Cook family.

The women departed at last and we had supper, after which Mrs. Cook and I beat Nell and Mat at dominoes, as Mrs. Cook is a religious woman, and does not believe in cards.

I went to bed early and Mat came some time, but I do not blame him, for he seems to enjoy Nell's society. When I got up next morning, they were both bustling round, Nell getting breakfast and Mat helping her. Mrs. Cook and Harry had not appeared yet. I went out to feed the horses; and when I came in the family were all up and waiting for me to help eat breakfast. After breakfast I overheard Mat tell Harry a story. It ran as follows: "When I lived in Kansas I worked for Bob Perry; and one day he told me that we must go from Jetmore, where we lived, up to the ranch to see how the cattle were getting along. We went. It was a distance of 20 miles, and when we got to the cabin we found it had been broken open and the grub all stolen, so Bob shot an owl and told me to cook it for supper. I cooked it whole, feathers and all, it was so small; and after boiling it for about an hour Bob asked me how dinner was getting along. I raised the cover and tried the owl with a fork to see if he was tender; and he squawked, so I slapped the lid on again, and left him to cook some more. At about 6 o'clock Bob came in and said we must have dinner, so I raised the cover of the pot again and the owl jumped out and flew away." "I am afraid ma will have to talk to you some about lying, before she lets Nell marry you," was Harry's comment on the story.

I started for home at noon and never saw Nell Cook again, for on Dec. 1 or therebouts Mr. and Mrs. Mat King came to town to take the train for New Mexico; and I shall call on them at their home in Chaparral Cañon on or about Oct. 1, if I am alive. W. J. Dixon.

## "PODGERS" IN THE MOUNTAINS.—II.

In the Sierra Nevada Mountains, Cal., July 31.—My last left me lying under the shade of the big pines on the bank of the main Stanislaus River nursing my galled feet, preparatory to resuming fishing, which I essayed the next morning, with only partial success as to feet, but fair as to trout, considering that I selected the easiest fishing in close proximity to the camp, not caring to do tall climbing over rocks and sliding down into the deep gorges to reach the big pools and larger trout.

A few hours of it convinced me that the feet would give out before the trout did, and I returned to camp to resume my blanket under the trees. I had caught all the trout a reasonable man could ask for and was content.

At sundown my compadre Brown came in with some very fine fish, and after a hearty supper we voted to return next morning to our headquarters at Strawberry Valley and Parson's comfortable hostelry, where we had left the team, and one of our party, who had pleaded illness and had remained behind. Whether the presence of several young ladies, daughters of the owner of the hotel, had a bearing and influence on his case was a question. At any rate we found him astonishingly healthy on our return. The breakfast over we saddled up and loading the pack animals with our traps, forded the river just below camp, and began the long climb up the grade to the summit.

By our early start we escaped the heat of the day later and made good progress, although we had fairly to scramble up places so steep that our horses had to put forth their best efforts and to be halted every few yards to breathe. The others dismounted and led their horses, but by virtue of my lame feet I was prone to stick to the horse, he being a veteran at this service and strong. We occasionally encountered springs of icy cold water trickling from under some huge rock, and stopped to rest the horses, throwing ourselves on the ground under the shade of the tall pines. Speaking of which I never saw such a magnificent forest of pine timber, trees five and six feet in diameter, as round as if turned in a lathe and running up to a height of 75 to 80 feet without a limb; timber that would fill a timber man's soul with joy. But these denizens of the forest aresafe from the sacrilegious axe. They are inaccessible to human hands, that is, could never be got out to the mill. The whole distance was one grand open park of these giants. There was no undergrowth, and a wagon could be driven in any direction so far as space was concerned, and provided a wagon could ever be got there, which would be impossible. So there is one noble forest that is safe from the ruthless hands of man.

A couple of hours' climbing brought us to the summit, and here we enjoyed a long rest, and man and beast needed it. Then began the descent, which on this slope was more gradual and easier. Just at 1 o'clock we looked down on the roof of Parson's wigwam, a very comfortable one, certainly, and a shout of welcome greeted us from the invalid, whom we found taking it very easy in a rocking-chair, surrounded by a bevy of young ladies reading and sewing, and apparently enjoying home comforts muchly.

We found that another expedition awaited us, a trip over another range to another stream 8 or 10 miles distant. The party included a young Catholic priest, who was said to be a most skillful fisherman. His hatband was decorated with numerous artificial flies, and he was evidently eager for the fray.

Brown and myself having had our fill, and feeling not over fresh after our morning's ride, declined, so the party left us to our own devices and dashed off across the bridge, and were soon lost to sight on the opposite slope of the mountain. Our invalid being this time one of the party, it was our turn to occupy the rocking-chair and fall heirs to the ladies for the next two days, at the end of which the party returned with marvelous stories of the number and size of their catch.

However skeptical we may have been as to their success, unsupported by the evidence of the padre, we could not of course go back on him, and therefore all was accepted as facts. They probably did have fine success, as the stream they went to is celebrated for being well stocked with fine large fish.

Ten lazy, dreamy days were dozed away at Strawberry, every moment an enjoyment, every respiration of the delicious mountain atmosphere redolent of the pine woods towering up behind the house, a discouragement to any waiting son of Æsculapius—no prospective doctors' bills for us.

It is one of the wonders that so few residents of San Francisco go to the mountains. The climate of the city is in the summer chilled by the northwest trade winds that rise at 10 o'clock every morning and blow strongly all day, and are not infrequently accompanied by a raw fog; consequently people go to the country to get warm instead of to get cool, as in the East.

A few strike out for Lake Tahoe, a beautiful sheet of water 15 miles long and from three to seven miles wide, abounding in lake trout—big ones; but it is not fashionable, hence only a few and sensible people are to be found there. The 400 go to Santa Cruz and Monterey, 75 miles down the coast, where the climate is a few degrees milder. They go there ostensibly to bathe, but do not bathe—very few at least. The water is too cold except for young women with good figures to exhibit; ice water would not exclude those—vanity keeps them warm. The world goes to show its Paris dresses—dance, sit on the piazzas, gossip and flirt. The women have a dreary time all the week, as it is not until Saturday that the men can leave business to run down over Sunday. A few superannuated old beaus remain through the week, but they are useless material to the summer girl aspiring to an engagement or a flirtation. It is a poor matrimonial market, but for the fisherman it has attractions. Trolling for salmon and barracouta is fine sport, and the season is just coming in, which fact will cause the subscriber to be heard from early the coming month.

To-morrow we start for home (Sonora), and with any ordinary luck will reach our boiled shirts by sundown.

We have had a glorious time, which like a serial story is "to be continued;" and I trust I shall have other mountain trips to write about. We have been everywhere received with open arms by the hardy mountaineers, a most hospitable set of jolly, big-hearted rough diamonds, whose camp, horses, bacon and frying pan are ever at the service of the tenderfoot (that is me); and conspicuous among those to whom we are greatly indebted for horses and hospitality I want to thank the Geniss boys, Tom and Ed, and their partner, Mr. Whitehouse. Nobler, more accommodating, good-hearted fellows never lived. They left their cattle and ranch work to pilot us over the mountains and entertained us right royally in camp, scorning the idea of compensation.

It is characteristic of the mountaineers of California, for they are truly such. Earning their bread in herding and raising sheep, cattle, etc., and lumbering, they are to a man splendid physical specimens, hardy, of remarkable endurance, whole-souled, brave as lions, fearing nothing that walks the face of the earth. They think nothing of a trot over a mountain range of ten or fifteen miles for a plug of tobacco or side of bacon, and back before night, fresh as larks. As for instance, our camp host, Whitehouse, thought no more of piloting us over the mountains eight miles and being back to his dinner in camp than we would of stepping around the corner to point out to a stranger the way to 318 Broadway. The mountains of California have given birth to a race of men that cannot be equalled by any country on earth for physical strength, endurance, high spirits and manly attributes, generous to a fault, slow to anger, but terrible when roused. Every man a Spartan—never turning his back to man or grizzly. It is a pleasure to go among such a people after the experience of a few years in cities, where it is every fellow for himself and Old What's-his-name for the hindermost—and he generally gobbles the lot.

This particular or special class of men I refer to are the outcrop, the second crop, I may say, of the early-day miners, bred in the hardy school of their fathers, and are peculiar to the mountain region. They are born and raised there, and nothing can tempt them to seek occupation on the flat lands. They are almost to a man cattle raisers, herders or mill men—sawmill or quartz—all good miners, but generally prefer the free, roving life of cattle raising, on horseback all summer and snowshoes all winter.

As an instance of pluck and endurance, the "boys" with whom we camped hauled a sick man from their camp last winter up the grade and over the mountain on a sled sixteen miles, on snowshoes, over snow 6ft. deep, to reach a doctor. Any one who has ever experienced the vigorous exercise of climbing a mountain on snowshoes can appreciate the muscle and endurance it must have involved. Your humble servant once essayed a trial of snowshoes on a side hill, resulting in his getting an involuntary start down the hill at a 2:40 gait, ending in a "pitch hole," landing him head foremost in the soft snow with nothing in sight but the snowshoes, whence he was ignominiously pulled out by the heels. Since which snowshoeing is to him a lost art. Every man to his trade. PODGERS.

## CAMPS OF THE KINGFISHERS.—X.

### CARP LAKE, MICHIGAN.

#### The Carp Lake Camp.

THE wind was still blowing heavily when we got out in the morning, and the lake too rough to handle a boat with any comfort, and Charley and I decided to walk over to Fouch's Creek, a couple of miles or more, for trout, leaving the others to put in the day as they chose. We were put on the trail by a neighbor up the lake where the road turned up the hill, and found our way over and into a dense cedar swamp swarming with mosquitoes, where we got bewildered and floundered around for an hour trying to find the stream, at one time scaring a cock grouse nearly out of his feathers as he sat near an old mossy log over which we stepped. As he sprung up almost in my face and shot off through the tangle and out of sight with a roar of his wings, it was a question which of us was scared the worst. We found the stream after we had wandered around in the hot, dank swamp till our tongues were about hanging out, Charley graciously allowing me to do all the cussin' necessary to get out of the tangle, and after I had fished up it a hundred yards or two and caught one juvenile trout I had enough, and went back to the road near where it crossed the stream, where Charley would be sure to see me when he came back, and laid down in the shade of a bush and went to sleep.

He came along after a while, it must have been a couple of hours, with six or seven trout strung on a twig, and we made our way back over the hills and to camp with a notion buzzing around in our heads that it was another case of old Sam's "bunkoed agin, b'gosh." We found the camp much as we left it in the morning, the only "episode" that had happened worthy of note being the hatching out of three young robins in a nest in one of the oaks to which a guy of the dining fly was made fast, an event that we had been looking forward to with much solicitude for several days.

The day we made camp and for a day or two after we had heard some peculiarly plaintive bird notes repeated at frequent intervals overhead in the oak which none of us, not even Kelpie, who was chock full of bird lore, could identify, but after much peering and straining of eyes through the leaves of the oak a nest was discovered, over the rim of which we could see the head and tail of a bird which Kelpie, after a few trials to get the right focus with his defective old eyes, keener than a hawk's when he was younger, pronounced a robin.

About the first thing that Johnny did after he arrived at camp and got his bearings was to climb into the tree and scare the old bird off the nest to see how many eggs there were in it, which he duly and vociferously reported from the tree. "Three little eggs, by cracky," and then he was hustled down from his perch, and in a couple of minutes or less Mrs. Robin was back on the nest.

Since then we had been waiting with daily increasing interest for the hatching, and to-day Johnny had again climbed into the tree and found three big-headed and featherless youngsters "gummed together" as it looked to him in the bottom of the nest, and the strain was over, for there had been much guessing as to whether all three of the eggs would hatch or not.

We had learned by watching Mrs. Robin that the plaintive note was a call for Mr. Robin to "bring on the victu-els," as old Sam said, while she was keeping the eggs warm: but now, when the hatching was safely over, the notes ceased and they were both kept busy hunting and carrying worms and insects with which to feed the hungry, gaping mouths, upstretched and expectant at the slightest jar of the limb on which the nest rested.

The mother bird seemed to know we intended her young no harm, and had become so well acquainted and tame that she would fly down from the nest and pick up crumbs and scraps thrown on the grass across the road, which doubtless saved her some trips to the neighboring fields and was a source of much gratification to us.

We watched the growth of our pets from day to day with a feeling that they were, in a sense, under our special care, and had any one disturbed them with the intention of harm he would have had the whole camp on his back in less time than it took one of the youngsters to gulp a worm.

Kelpie named the camp "Robin's Nest Camp," and by that name the remembrance of it will always be dear to our hearts. KINGFISHER.

## SKUNK AND RATTLESNAKE.

CRIPPLE-CREEK GOLD FIELDS, Col.—While camped over on Oak Creek, in the summer of 1883, I was an eye witness to one of the most novel of combats. At noon one day as I was coming down from the mine for dinner, I spied a skunk shifting itself about in a strange manner. Thinking he was performing some acts that were unusual and not becoming to one of his race, I sat down; and with my powerful marine glass I soon found the reason. Before the skunk upon the ground lay a huge rattlesnake coiled up for business, his massive flat head presenting a most savage aspect. Now and then raising his head as the skunk would come within reach he struck it again and again. The skunk, as if anxious to continue the duel, would pounce upon the back of the snake until driven off by the powerful swaying to and fro of its body. This was repeated again and again, until finally with one heroic spring the skunk landed upon the snake and in a twinkling of an eye almost, had bitten the head from the body, save a shread of skin which held together. Being satisfied with the result, I hastily picked up a rock and throwing it at the skunk routed him, leaving me in full possession of the field. On examination, I found the hide of the rattlesnake uninjured save where the skunk had given it its death cut in the neck. The same evening and for six consecutive evenings I saw the skunk, and on the seventh evening shot it; after it had scampered around for that length of time. This satisfied me that rattlesnake bites do not materially retard the progressive life of a "pole-cat," to say nothing of proving fatal thereto. The snake was 3ft. 6 in. in length, with nine rattles. The snake's hide I kept until recently, wore it out as a hat band. The rattles I still have. The skunk is the only animal (to my knowledge) that will not succumb to the deadly bite of the "rattler," unless medical aid is invoked. BUCKSKIN HARRY.

## PHOTOGRAPHING A NESTING WOODCOCK.

HUDSON, N. Y., Aug. 15.—*Editor Forest and Stream:* Thinking that some of your readers might be interested in the particulars of how I got the pictures of woodcock published in your paper of July 28, I write you.

One evening in the last week of June while out on my bicycle, a gentleman called me as we met on the highway and said: "Do you want to know where you can find a woodcock's nest?" I answered "yes," but continued to ride on, thinking he was joking me as I was just learning to ride, and that he wished to see how well I could fall off if I tried to stop. He well knew that if there was anything he could say that would call me to a halt it was "woodcock."

Having business in town the next morning, he called at our office and said he wished me to come out to his farm. I promised that I would; and that afternoon at 3 o'clock found me five and a half miles out of town. I met him and we walked up to a small piece of new cutting on the west side of a large piece of woods, and after a short search found the bird. She was on her nest, which was on the ground under a very thick bunch of new growth about three feet high, and so thick that the bird could not be seen unless you got right down on the ground, and she was so near the color of the dead leaves that you could not see her then unless you got very near. This was a new sight for me. I have seen woodcock feeding and have seen them running on the ground, but never before had I seen one on the nest; and I wished then and there that all the brotherhood of sportsmen might have seen her and enjoyed the sight as I did.

I had taken the precaution to bring Ed and his camera with me, so that if possible we might get some pictures. We talked by motion and walked on tiptoe for fear of disturbing her. After making six exposures we went home to see if we had secured any pictures. I was particularly anxious that we should get some good ones, and do not remember now if Ed said he would develop the camera, and if he had not focussed the tripod too sharp the pictures might be all right. Ed's place of business is next door to our office; and after working half an hour after our return I thought I must run in and see how they turned out. They told me Ed was in the dark room, and for fear he would forget to tell me, I opened the door three or four times just to see how he was getting along and to look at them, all of which Ed told me in a few emphatic words was not conducive to the success of a good photograph. Result, six plates and no pictures.

The next morning at 6 o'clock we were at the place again ready for another trial, and as the sun came up over the woods, the light being on our backs, we could get a better light. The nest was on the east side of the bush. We cleared away all growth that interfered with our view of the nest, fearing all the time, however, that she would fly away. We secured five negatives, and without any of my assistance at the door of the dark room we secured the photograph, No. 1, published in your paper. This was taken with the camera about 4ft. from the bird.

The next day being Saturday, and having a half-holiday, I rode out to see if she had been disturbed in any way. I worked carefully around her all the afternoon, cutting away any growth that would obstruct the view of her, and took off the leaves and extra limbs from the bush in order to let in more light. She did not leave the nest or appear to be in the least annoyed by my presence. I lifted her bill up with a small stick and had my hands on her back and she did not move. I was there until 8 o'clock in the evening and she did not leave her nest during that time.

On the following Monday it rained, and I could not go out. On Tuesday, June 28, we were out there at 6 o'clock in the morning, and knowing that there was no danger of her being frightened or leaving the nest we put the camera within 2ft. of her and got picture No. 2. I then lifted her from the nest, and we got picture No. 3 of the nest and eggs, which you reproduced. She jumped from my hand to the ground, and hid in the grass. I noticed that the eggs were not picked and thought by watching every day I might secure a picture of the young.

I was there the next day, but finding her sitting so quietly thought I would not disturb her. The next day I called again, and to my great surprise the house was deserted, the family had moved out, and nothing was left but the shells.

I was particularly anxious to obtain these pictures in order that all sportsmen who are interested in the woodcock might see them and thus enjoy in part what I did in witnessing the reality. G. HILLS.

### Nova Scotia Birds' Nests.

A NEST rarely found in this vicinity was discovered at this place July 19. It was a nest of the ruby-throated hummingbird, and at the time contained eggs. It was placed on the limb of a beech tree about 25ft. from the ground, and built of the seed cotton of the poplar or willow tree. The outside is covered with a lichen the same as grows on the tree. This lichen is fastened to the nest with the silk of cocoons. The nest is placed on the bare limb, not near any leaves, and would easily be mistaken for a bunch of moss grown there. The measurements of the nest are: Outside diameter 1¼in., outside depth ½ to 1¼, inside diameter ⅝, inside depth ⅝. Only two such nests were ever found near here, but no doubt there are quite a number, as hummingbirds are plentiful through the summer.

Another nest rarely found came under my notice last summer. It was that of the winter wren, and was built among the roots of an overturned hemlock tree. It was found June 1 and contained eight eggs. The young did not live to leave the nest, as the dirt caved in and destroyed the nest, overturning it and killing the young.

W. H. MOORE.

SCOTCH LAKE, N. B., Aug. 2.

### Habits of the Rattlesnake.

DR. DEWITT WEBB, of St. Augustine, Fla., sends us this note by Dr. John Vedder, whose museum of Florida wild life is well known to the tourists. Dr. Vedder writes: "You are quite correct; the diamond rattlesnake does not follow a person after he strikes; he springs back in a coil. He forms an S. The principle of striking is to straighten out the vertebra with some muscular force. He does not follow his prey; he lies in wait. I have never seen nor heard of one following or chasing its prey. Sometimes when discovered they will try to get away, and even will not rattle; but when surprised suddenly he is quite sure to strike and spring back and recover for another attack; rattles, awaits your approach and holds the fort."

# Camp-Fire Flickerings.

"That reminds me."

It is a well known fact that human nature doesn't like to be laughed at, so I'll just tell you, as a friend, a little joke that was played on me by "force of circumstances"—if you'll promise not to print it. It happened on Long Island. I was down there woodcock shooting many moons ago, and on the evening preceding my intended departure I was urged to get up before daylight next morning to shoot a black duck or two to carry home. I strongly protested against it, as it was the last day of September and the law was supposed to protect them till the first of October. However, I stifled my conscience in the face of such a temptation as they held out (assuring me that they had been shooting them for two or three weeks) and slipped off quietly before the break of day to a small pond in the woods. I was covered all over with a guilty feeling, but "stood my ground," and with the first streak of dawn I saw a reconnoitering party sailing over and one of them tumbled suddenly into the huckleberry bushes not 40ft. away.

I waited in the frosty air till daylight, and as no more came I went to where I marked my victim down, and after parting the thick bushes and hunting carefully for some time I found him and hastily stuck him into my big coat pocket, imagining a game warden watching me from behind each tree. I hurried back to the hotel, and as it was nearly train time I ran to my room, opened my valise and jammed the duck in without even looking at him and got on the cars with about as guilty a feeling as a high-minded, honorable sportsman ever walked off with.

After getting home and sitting in my warm and cozy room an hour or two, I rang for the servant—an Irish lady—and told her to get that duck out of my valise and cook it for my dinner.

She opened the valise, dragged out the duck, and then with an ejaculatory sound that usually indicates a nasty smell, threw down the duck and rushed out of the room as if she suspected a trick.

But I protest, even to this day, that I was innocent of any such intention. It was merely a mistake.

I had hastily pocketed a duck that some other fellow had shot, and lost, at least a week before. It was a cold morning and the duck was stiff, but I stupidly overlooked that fact in my haste to put it out of sight of the game wardens; and it gave out no odor to indicate its condition till it got comfortably warmed up in my room.

I have always thought it best to respect the game laws, and I mean to do it. DIDYMUS.

# Game Bag and Gun.

## THE SNIPE AS A WATER FOWL.

CHICAGO, Aug 10.—*Editor Forest and Stream:* I have noticed in a recent FOREST AND STREAM that Mr. E. S. Bond has published his second and last letter of attack on the game law, the snipe and the game warden. As the tone of his article appeals to the reckless and the vicious, I have concluded that it was best that I should reply. I am greatly surprised at the position he has taken. Not very long before my appointment, he urged me to accept the office, and promised me his support in enforcing the law against the violation. In explanation of my position in regard to enforcing the law against the killing and selling of snipe, I wish to say: That last spring there were a great many snipe offered in the market here. Game dealers were buying them and putting them in cold storage, as the supply exceeded the demand. Since 1879, these birds had been killed and sold at all times in this State.

To make my case clearly understood, I will state again what I have heretofore said. Examing the law carefully, I found that it read: "It shall be unlawful to hunt, kill, trap," &c., "any wild goose, duck, brant, rail, or other water fowl," &c.

I saw a number of game dealers and told them that I had concluded that the law really covered snipe, as it had mentioned the principal swimming game birds and then had mentioned "rail," which is one of the species termed "waders." and that it was a natural and reasonable inference that the law intended to protect the rest of that class of birds to which the "rail" belonged, meaning all the snipe. While the game dealers did not agree with me, they all admitted that snipe should not be killed during the breeding season. They all said they would not offer any of these birds until October 1st, when it should be lawful to sell the other birds mentioned in the law. Nobody has made any fuss about this matter since, except Mr. Bond. He says that I never have read a work on ornithology. Well, he is mistaken, as I have read all the works I can find on the subject, including his favorite authors. For several years I rented to him and his partner part of a store on South Water street, in which we were joint occupants. I have always had the kindliest feelings toward him in all matters (except on the subject of game destruction).

Now, I am not going to set myself up as an ornithologist, but I sincerely believe that a snipe is a "water bird." For about three hundred years they have been classed as "waders," and it doesn't matter whether recent writers call then runners, trotters, pacers or walkers. They are certainly made after the same pattern, and they are the same in habits and in every particular that they were during the past centuries, during which time scores and hundreds of able men have studied them and written about them. I cannot see any good reason for not still calling this class of birds "waders." They certainly are addicted to that habit and they seek their food in the mud and water, and one writer says they have a pump in their bill, and that "they take their food by a suctional or extractive process."

Mr. Bond says recent writers have changed the classification of snipe, but he gives very little information as to what the writers on birds have said on the subject. A prominent ornithologist says: "Almost every writer seeks to be a founder of a new system, and casting down the structures of his predecessors attempts to build upon the ruins an edifice of his own; Linnæus, Cuvier, Temmerick, Illiger, Fabricus, Latrilla, and a host of lesser authors have attempted to establish their own system."

In natural history there are mentioned many species of creatures under the title of "water animals," as distinguished from land animals of the same class. For instance, "water deer," a small musk deer of somewhat aquatic habits, found in certain parts of China. "Water antelope," one of numerous different kinds which frequents marshy or reedy places, a reed buck or water buck found in Africa. "Water dog," a dog accustomed to or delighting in the water, or trained to go into the water in pursuit of game.

I will refer the reader to several authors and what they have said:

"History of British Birds," including their organization, habits and relations on classification and nomenclature, etc.. by William Macgillivray, A.M., LL.D., Professor of Natural History, etc., London, England, in his able works arranges that class of birds usually called "Grallatores" (waders), in the following orders: 1st, Cursores or runners, embracing the cranes, bustards, prantincoles, etc. 2d, Tentatores or probers, consisting of plovers, lapwings, oyster catchers, sandpipers, curlews, snipes, woodcock, etc. 3d, Aucupatores or stalkers, the bitterns, storks, ibesses and spoonbills. 4th, Lattitores or skulkers, the rails, water hens and coots.

"Cassell's Order of Birds," as prepared by Dr. Brehm, says: "Order VII. Stilt walkers (Grallatores)." "The birds belonging to this order have usually long legs, formed in such a manner as to enable them to seek their food at a certain distance in the water, and are further characterized by their long, thin neck, slender, high tarsi, bare thighs, three or four-toed, and fully developed wings." "During a three days' passage to the White Nile we have seen an almost uninterrupted line of birds of this description, numbering some 50 species, running, fishing in thousands and tens of thousands upon each side of the stream, and literally swarming in every lake, pond and ditch."

The classification of birds, as adopted in the British Museum, comprises "Order VII., Stilt walkers (Grallatores) Waders:"

Family I. Plovers, sub family 6.

Family II. The Herons. sub family 5.

Family III. The Woodcocks, sub family 6, including snipe.

Family IV. The Screamers, sub family 2.

Family V. The Rails, sub family 2.

Order VIII. Geese (Anseres) Swimmers. Last family, 25 birds.

The Rev. J. H. Langille, M. A., writes a work which he dedicates to Dr. E. Coues, Buffalo, N. Y., June 26, 1884, entitled: "Our Birds and their Haunts, of Eastern North America." Brief histories and full description of all species east of the Mississippi. "The illustrations which should add much to the character of the book have nearly all been furnished by Dr. E. Coues. Where scientific nomenclature as given in his former work, I have adopted throughout."

Of the "Wilson snipe" he says: "The young are of a grayish color, heavily streaked with several shades of brown. According to the precocious habits of the infant waders, they leave the nest as soon as they are out of the shell and feed vigorously on the insects found in marshes, moss and meadow grass, until their tender bills are firm enough to probe the soft ooze." Of rail he says: "They are abundant in the marshes and about bodies of water throughout the middle district of our Union," etc. Of their habits he says: "Leaving the logs and floating debris it slumps in and wades or swims for a short distance without the least inconvenience." Of "yellow shanks" he says: "Long bills, long necks, long legs. They are not uncommon on the sea coast, but being, rather, fresh water birds, are more abundant in the interior."

The "Key of North American Birds," by Elliott Coues, A.M., Ph.D., says of snipe: "The birds are found by the water edge the ground is soft and oozy, in moist thickets, low rank meadows, bogs, marshes by the river side and on the sea shore."

"Theodore Jasper: Birds of North America," says of snipe birds: "Fourth Class, Runners. Three families; second division of stilt walkers. The members of this section usually inhabit marshy land, the boarders of swampy lakes and the sea coast." He calls all of the following birds runners: Doves, quail, pigeons, plovers, heron, snipe, storks, cranes, water pheasant, moor hens and many others.

I desire to quote once more what the "Century Dictionary" says, recently issued and regarded as the most complete and reliable dictionary ever published: Defines "water bird" or "water fowl," "An aquatic, as distinguished from a terrestrial or aerial bird, in the plural the Grallætorial and Natatorial or wading and swimming birds, collectively distinguished from the land birds."

It is unnecessary to furnish further evidence. All writers seem to agree that the snipe is a bird that frequents marshy places where there is water, and that he is in every respect perfectly equipped for that purpose. I desire to notice some things said by Mr. Bond's supporters.

Some old and some new men of learning have called a male sheep a ram, not a buck.

Now, it seems to me that Dr. Rowe, whose letter Mr. Bond publishes, is making a tremendous claim when he says he "proposed to throw the protection off from snipe." Will the Doctor inform us who put in the law these words, "Rail and other water fowl." Isn't it very probable that when the law was passed by our Legislature some other persons besides Dr. Rowe and the Hon. L. B. Crooker had something to do with formulating it? The Doctor also states in his letter that snipe are not water fowl; that he has said so a number of times heretofore in his paper.

I am in receipt of a letter from the FOREST AND STREAM, New York, which says: "You are undoubtedly right on the question of snipe being a water fowl."

Mr. Turtle says: "Water fowls include ducks, geese, swans, pelicans and any bird that alights in the water." That proves my case. Snipe will alight in the water anywhere when they can wade.

In answer to Mr. John Watson, I will quote the following from the *American Field*, July 30:

"In the last issue of the *American Field* I noticed in the snipe discussion a statement that a 'wing-clipped snipe placed in the water would drown before reaching a shore 200 yards away.' I recollect that many years ago, while I was shooting near Blue Island, Ill., a large yellow-legged snipe, being wing-broken, took to deep water to avoid capture and swam for a long time without any apparent fatigue. The distance was not any measured two hundred yards; but there was any amount of reserved force left in the bird up to the time when the muzzleloader was re-charged and the bird secured."—N. FERGERSON (Jacksonville, Ill.)

Now I am not going to defend the writers of all the dictionaries against Mr. Bond's statement, that they do not know anything about birds. I am sure if he had a single one to refer to, he would be very prompt to quote it to sustain his case if it was on his side, but they are all against him.

I have said much more on this subject than I had intended. As game warden, I am going to protect the birds as much as lies in my power. My feelings have been "lacerated" for years by Mr. Bond, while he was in the game business, when he was in league with the hide hunters of deer, elk, antelope, etc.; when he was the principal receiver of thousands and tens of thousands of trapped wild pigeons, until they were exterminated; when year after year he was encouraging the trapping of quail and prairie chickens in various parts of the West, and the baiting and netting of ducks in Wisconsin, and for years evading our game laws by keeping supplies of birds out of reach of the law, from which he filled orders at all seasons.

Now he has retired from business, he has ceased to be a sportsman. He has not a particle of interest in the game of our country. Game dealers are keeping their promises fairly well and obeying the law. Sportsmen are behaving themselves better than ever before known, and game is being protected and everybody seems satisfied and happy, except Mr. Bond. From him there comes a feeble appeal to dealers and sportsmen to fight the law, to exterminate the snipe and disregard the game warden.

What is to be gained by any one following his advice to "test" the law, I am unable to understand.

Among all the persons who have spoken to me on the subject, not one has shown such a spirit of quibbling and malice toward the poor snipe as has been exhibited by Mr. Bond. MAURICE R. BORTREE, Game Warden.

CHICAGO.

### The Utah Quail Law.

MAYOR'S OFFICE, Circleville, O., Aug. 10.—*Editor Forest and Stream:* In your issue of Aug 4, 1892, you ask for an interpretation of this law. "Sec. 4. Any person who shall kill, ensnare, net or trap any quail, partridge, pheasant, prairie chicken, sage hen or grouse within the Territory of Utah between March 15 and Aug. 15 of each year, or who shall kill, ensnare, net or trap at any time, any lark, whippoorwill, thrush, swallow, snow bird, bobolink, woodpecker, or other insectivorous birds, not being birds of prey, except English sparrows, and the bird commonly known as 'California quail,' shall be guilty of a misdemeanor."

There are evidently in Utah two birds known as "quail." One designated simply as "quail" (the common "Bob White"), the other as "California quail." The construction that I place upon this law is that "quail" may be killed only from Aug. 15 until March 15, and that "California quail" and "English sparrows" may be killed at any time without violating any of the provisions of Section 4 of the law. In other words, this section of the law does not at any season of the year favor "California quail," but treats them as outlaws. J. WHEELER LOWE.

## AN ACCIDENTAL DEER.

WHILE I was staying on a ranch some twelve miles from town, with my friend D., he proposed that we hitch up the buggy, take my Winchester and the shotgun and see if we couldn't get two or three geese. The only way we hunt them here on the prairie is to drive within about 200yds. of them as they feed, and shoot them—or rather, at them—with a rifle. Dick proposed that we go horseback, but as I had not ridden any for some six months until the day before, when we had ridden all day, I negatived his proposal on account of my feelings. "Well," said Dick, "if you don't care to go horseback we'll go in the buggy." This was a great concession on his part, as like all ranchmen he has a mortal antipathy to any mode of locomotion except by means of horse and saddle. "You clean out my shotgun, as it's rather dirty, and I'll go and get up the horses." He went on to the lot, caught and saddled a horse, and as I came out on the gallery to clean the gun (nearly all such work we do on the cool, shady porch of the house), he was riding off after the horses in a gentle "lope," sitting, as only a ranchman or cowboy can, with his body almost perpendicular, his feet just touching the bottom of his stirrups, and swaying easily with every motion of the horse. After cleaning the gun I took it, the Winchester and a jug of water, and placed them in the buggy. As soon as Dick penned the bunch he roped the buggy horse and between us we managed to hitch him up, but as he had not been driven for some time, the first mile was a sort of "go-as-you-please," and it was mostly his "please," too. We got him righted in time, though, and drove up along the creek toward the dam.

As we came to the top of a slight rise covered with scrub oak, the sun had just risen like a great ball of fire and now hung, seemingly motionless, with its lower edge just touching the horizon. Every twig, leaf and blade of grass shone beneath his rays, as though hung with diamonds instead of dew drops, while their scintillations almost concealed the forms of the twigs. I was interrupted in my enjoyment of the scene by Dick very calmly saying, "Yonder's a bunch of brant." Sure enough there, in front of us, about 500yds. away, sat a bunch of about fifteen brant; but alas for human hopes; before we got within 300yds. of them they flew off down the creek, quietly talking to each other in their own language. We went on around the dam and across the flats but "nary" goose did we see, so we struck out about six miles across the prairie making a circle toward the ranch.

As we were driving up a little swale covered with dead scrub oak, we jumped three deer out of the grass where they had been lying. Deer generally feed in the early morning, and why these were lying down I don't know, but so they were. After running about fifty yards they stopped to look at us—a buck and two does. I had made up my mind that we couldn't get any closer, so I picked up the Winchester and set the sight at 250yds., which I judged was the distance, and holding fine on the shoulder of the buck, I let her go. As the old gun spoke the deer started off at their usual "bunch of steel springs" gait. Hurriedly throwing another shell into the gun I held, as nearly as possible, about three inches over the buck and fired again. Just after I did so the buck dropped his tail and changed his gait into a sort of scrambling trot. He didn't travel very fast, but it was just about as fast as we could drive through the scrub, so I handed the gun to Dick and told him to knock him down. We stopped the buggy and he shot, knocking him over. We found when we reached him that my first shot had gone through him just behind the last rib and that Dick's had broken both hips. I had not hit him at all at the second shot. We found also that neither of us had a knife to bleed him with, so we put him in the back of the buggy and started for the ranch. He was a three-prong buck, but his hide was very seedy and full of ticks. As soon as we reached the ranch we cleaned and cut him up.

Dick and I have disputed ever since as to whose deer he was, some hunters claiming that the deer belongs to the hunter whose shot hits him first, others the one who hits him last. W. M. P.

VICTORIA, Texas.

## AN INCIDENT OF THE COTTONWOOD FIGHT.

IN THE MOUNTAINS OF WASHINGTON.—*Editor Forest and Stream:* In your issue of the 14th inst. Mr. S. S. Norris gives the freaks of a bullet. It might be of some interest to your readers to learn of the freaks of two bullets that came under my observation in 1877, during the Nez Percé Indian war, in the Cottonwood fight.

F. A. Fenn had a bullet cut four holes in his pantaloons without drawing blood, and one burnt both lips and loosened a front tooth. This was kissing a bullet in reality.

About one week later I was running a race with some fifteen or twenty Indians, the goal was a small mound, whoever reached the mound first could hold it. We had some friends coming on the trail, which passed just at the foot of the mound. The horse I was riding was quite fast; I had got a hundred yards or so ahead of my companion, and stopped to take a shot at an Indian. After I shot I jumped on my horse, just as a young fellow came up. We were on the move, when he said, "Lew, I'm shot." I asked him if he was hurt bad. He said, "No, I have caught the bullet." "All right," said I. "Put it in your pocket."

I let my horse run, and soon left him, for I had the trail and the Indians had the grass. I reached the foot of the mound, when the nearest Indian was about 150yds. from the foot on his side. The mound was tolerable steep and about 150ft. high. I let my horse climb as fast as he could. When I reached the top I jumped off; and the Indians were on the run to get out of the reach of my long-range Remington. I opened fire and kept it up as long as they were in sight. When the excitement was over the young fellow showed me where he had been shot. The ball had just grazed his arm, making a blue streak about five inches long, and had struck his gun barrel (where it screws into the frame) and had raised a dent on the inside of the barrel as large as a pea; it then glanced and fell into his left hand. The gun was ruined, but it saved his life.

The shot had been fired at me, as the young fellow had not been in sight for an instant.

I tell you those bullets that are out of those Government guns, with 70grs. powder and 45grs. lead, are dangerous things to be kissing and catching. No, thank you, I don't want to be around when there are any more flying. LEW WILMOT.

## A HUNT IN THE ROCKIES.

IN THREE PARTS—PART II.

THE day was all that could be desired, warm, clear and pleasant. We followed the Shotgun down to where it empties into a branch of the Snake River, three and a half miles below the ranch, and then went down the Snake about two miles, crossed over, and came up the right bank on top of the bluff to the forks, thence home. Ducks, geese and swan fluttered up at every bend in the stream, but as we were only on a pleasure trip we only carried our side arms. We got back to the ranch about 4 M., delighted with our trip and the performance of our horses, and so sore from r first ride that we were much more mfortable standing than sitting. Weber, r German recruit, said he was not sore, t the saddle was. Our guide and the ys, "Kid" and Frank, had in the meanile arranged the pack saddles all in a y and placed to each one what belonged it, which includes the saddle padding, ropes, double front and rear girths for ddle and girth for pack, also lariat or ket rope for horse. In another row opsite the saddles and their regalia were anged the various articles of household l kitchen furniture to be packed on each dle. These sundries consisted, in adion to our three carry-alls, of two wall ts, two large leather paniers, in which bedding was to be packed in order to ep it dry in case of rain, one Dutch oven, e large iron pot for boiling and making oss" game stews, two frying pans with ndles, one shovel, one mattock, one uble-bitted axe, one pole axe, one bag th potatoes and onions, two bags flour, e bag with mess pork, one with salt, one th roasted coffee and tea, one coffee mill, e sack containing horse shoes, nails of kinds, tools, etc., including copper and nealed wire of different sizes, also several whouse traps for small fur-bearing me, a box containing canned grapes, peaches, cherries, llies, condensed milk, etc.; a mess box also containing ffee-pot, knives, forks, spoons, tin plates and cups, yal baking powder and pepper; in addition, many ier small necessities too many to enumerate. As the hole outfit was furnished by our experienced guide, thing was wanting to make our mforts as complete as possible. fter moving around, observing e preparations which had been ade for the start in the morning, e were informed that there would a circus in the neighborhood of e corral before long, and if we ere interested we would be deadaded, and would be allowed oice seats. The "Kid" and Frank ere about to lasso, throw and shoe rebellious cayuse whose feet were nder, and fears were entertained at he might give out on the hunt thout shoes. We gladly accepted e kind invitation, and were much nused and highly entertained at messing the performance, which as entirely new to us. Kid was t long in casting a noose over the imal's head, and although he obcted to the fullest extent of his ility, it was not long until Frank d a slip knot around one of his kles, and in shorter time than it kes to write it he was down and ady for the operation of shoeing. en came supper, and after that a endly smoke and a general trad of some very large hunting and hing stories, the truth of which I uld not vouch for, except those I an myself. We also repacked r carry-alls, and very solemnly cussed the forest fires which re raging all over the country on th sides of the valley. We all ned in at an early hour in order be up in good time, that we ght get as early a start as posle.

*Monday morning, Oct. 7.*—There re no laggards this morning—all deck at break of day. A royal akfast and coffee that, as "Nessik" said once to me as he exded an invitation to join him at Tarpon Springs, rida, "takes you by the throat." All hands to the lm, and in two hours we were ready to photograph start. Our outfit consisted of eight pack animals, for riding and four extras in case of accident, hteen in all. We made a short ride across the valley the timber line, and encamped about 4 P. M. in the ra beds, which our guide informed us extend from the sers in the Yellowstone Park, following the general nge of mountains, at the foothills of which we were, ne 400 miles. The weather has been lovely since our rival in Idaho, although our guide informs us that no n has fallen during the whole summer. The drought d the presence of forest fires on all sides of us lead us fear that the smoke and fire have already driven or ll drive the game from their usual haunts, and make m restless and nervous even if they can be located. we camped in a cabin or shack and the time required put up tents was spared us, supper was soon prepared and disposed of, and all hands, except the packers (who do no hunting) took a whirl up the mountain side afoot, anxious to find out whether the game signs were fresh or not.

In this particular locality there are but two kinds of timber growth, pine and quaking aspen. Some of the latter are as much as 20in. in diameter, while the pine seldom grows to be more than 1ft. The altitude at this point is about 6,400ft. above sea level. The water from a small spring seeps out from under an immense lava bed, some 150yds. below the shack, and furnishes water for our party, though the shovel had to be used vigorously in order to get a sufficient supply for our thirsty animals. Along the course of the moist ground several old game water holes are plainly marked with the hoof and claw prints of the elk, deer, antelope, bear and wolverine, some dried up and hard, others where there was still some moisture quite fresh and looking as if they had been made but a day or two before our arrival.

READY FOR THE START.

From an amateur photograph.

None but those who have experienced the excitement of the chase can form any idea of the sensations experienced by seeing fresh signs of new game, and in a brand new country. But the fire cast a gloom over the venerable weather-beaten face of our guide, and had a tendency to dampen our ardor more than once, especially when we could satisfy ourselves that the fresh tracks were made when fleeing from the fiery element.

*Tuesday morning, Oct. 8.*—We all returned to camp last evening about dusk and had quite a tramp. Plenty of recent signs of elk, but not a hair in sight; grouse and sage hens until you could not rest; but now we were after bigger game, and having had satisfaction shooting small game, we paid no attention to them. Everybody well and in as good spirits as could be expected under the circumstances; and by the way, when I speak of spirits I don't mean spirits of wine, inasmuch as we took only one quart of whisky with us, which was sealed, and said seal was not to be broken except in case of sickness or some other important occasion of equal emergency. We concluded to insert the latter clause for fear none of the party would get sick, and we might want to celebrate at the close of the hunt.

*Wednesday, Oct. 9.*—Mounted yesterday morning at an early hour and crossed a spur of the range through a low divide, riding about five hours. Had several light showers of rain. Game signs no fresher than day before. During last night it began snowing, and at sun-up this morning it was still falling. This gladdened our hearts, for two reasons, and very good ones; snow is the best thing out in which to track game, and puts out fire better than rain.

*Camp Rea, on Rea's branch of Snake River Valley, Idaho, Oct. 10.*—We broke camp and headed for this point, which is at the foot of the range just crossed, and made camp by 2 P. M. Snow about 6in. deep. Leaving the packers to put up the tents, we divided up—Rea and Bush going south and Weber and I going north. Rea and Bush came up to a bull moose, and after following him for about six miles were obliged to return without getting an opportunity to administer a hypodermic of lead. No other signs of game seen, as most of the ground had but recently been burned over. The writer got into camp just before sundown, and out of the little stream just in front of our tents yanked a fine mess of trout for all hands in less than half an hour, with a brown-hackle. Supper over, we filled pipes and held a pow-wow, determining to push on in the morning in search of some country where the fire had not disturbed the habitudes of the "monarchs of the glen."

*Camp Kepler, on Split Creek, Rea's Park, Oct. 11.*—We pitched our camp in this magnificent grove of tall pines near the above-named little stream, which is not more than 4ft. wide, and from 12 to 15in. deep, and strange to say, the stream quietly disappears in a fissure in the earth not more than a mile from camp. The distance traveled yesterday was about eighteen miles. Rea's Park is a large area of meadow land, surrounded by high mountain peaks, mostly treeless with well-wooded foothills and flats, and contains many thousands of acres, well set with buffalo grass, and through it wind the glittering waters of the tortuous Snake River. Deep, dark cañons open out upon the entire plain, and through nearly all of them ripple beautiful streams of clear, pure, cold mountain water, which have their origin either from the snow-capped peaks or springs. These sparkling rivulets meander through the meadow lands, their banks fringed with water willows and their depths inhabited by speckled beauties, finally emptying into the Snake, that prince of rivers and the angler's paradise.

The march through this splendid country was simply delightful. The weather was all that could be desired. The sun shone brightly, and the air was just cold enough to be bracing and exhilarating. The little streams were full of mallard, black and teal duck, and by the time we arrived in camp we had fowl enough for days. The *honk* of the wild goose and the peculiar piping sound of the beautiful swan could be heard in all directions and at all times during the day. The arms of civilization had not yet extended to this region, though the said arms are getting very long in America; but frequently we came upon tepee poles and Indian sweat boxes, showing where some poor red devil had been first warmed up to the boiling point with red-hot stones, and then treated to a cold plunge bath in the chilling waters of the beautiful streams always close up. Poor fellows! They had no business to be sick, and they would not then have been subjected to so heroic treatment, and in the majority of instances violent death. But it is the same old story—all manner of mankind must be doctored in strict accordance with some chosen plan.

CAMP KIPLER.

From an amateur photograph.

Here and there also we noticed where hunters, trappers, or prospectors had camped at some time, from the fact that the marks of the axe or the picket pins to which the horses were tied could be seen. It is sad to notice throughout this whole territory the marks of that almost extinct species of American game, the buffalo. His bleaching bones, horns and old wallow holes were ever present, reminding us of the useless and wanton destruction of that noble game animal—gone never to return to his accustomed haunts.

As before stated, the game signs all indicated that they had traveled southeast, being driven in that direction by the forest fires. The snow, which but three days ago was several inches deep in the valley, has all disappeared, except on the mountain tops, which are still covered and reflect the rays of the sun, producing in the rarified atmosphere a magnificently weird picture never to be forgotten. The air during the afternoon has been so warm and balmy that the buffalo flies seem to have arisen from among the smouldering remains of their majestic namesakes, and to be trying to form a dress parade. They manifest an unusual amount of industry when on the bite, and insist upon creeping into our ears and nostrils, or investigating our eyes.

*Oct. 12.*—This was a cold, frosty morning. The sun came up clear and the day is warm. To-day is Sunday; we rest, write and darn our clothes. Rea says he is not tired and will go in search of fresh meat. Even this has been a grand, eventful day for us in this far-from-home wilderness. Rea returned to camp empty-handed about the middle of the afternoon. We cleaned our guns, slept, traded hunting and fishing stories, and the packers repaired the saddle pads and other paraphernalia pertain

ing to the outfit, and baked a supply of bread in the Dutch oven. My last act just before the sun went down was to sit astride a log which lay across Split Creek, and wash my handkerchiefs. Although only four feet wide and from twelve to fifteen inches deep, while thus engaged I counted eighteen trout flitting by, and not one of them was less than ten inches in length. We have trout baked, broiled, boiled and fried, and strange to say, we never tire of them. This evening we enjoy the camp fire, as the nights are cold and frosty. Rea's reconnoitre during the day satisfies him to a certainty that the game has gone south, and the order was given the packers to be up before day light in readiness for an early start.

As we have had five days' experience on the march, I must be pardoned for devoting a few words in relation to our faithful animals, the Rocky Mountain "cayuses." No beasts of burden could be better adapted to the wants of the plainsman, prospector, hunter or ranchman. They can live wherever a goat can manage to subsist, by pawing away eighteen inches of snow, if necessary, in order to crop the buffalo grass which abounds in most of the region through which we traveled. "Warrior," the horse which I ride, is strong, gentle, sure-footed and understands his business. I have ridden him both up and down mountain sides as steep as the roof of a house, and I never knew him to stumble or make a mis-step. He will pick his way through a windfall, stepping from one log to another, and intelligently trying each one to ascertain how strong it is before putting his whole weight upon it—leaping over the high ones, and breaking as few sticks as many men who think themselves still-hunters. I ride up to a flock of ducks or geese, and as they rise shoot from the saddle, and I am positively sure that while I take aim or have the arm in position to fire, he holds his breath. It is not necessary, most of the time, to use the reins to guide our animals; all that is necessary is to sway the body slightly to the right or left as the case may be, and they obey. When left to themselves on the march, they follow in single file, and the one in front usually picks out the best footing in the most difficult and uneven ground. What has been said of "Warrior" can well be applied to "Wardrobe" and "Buckskin," ridden by Bush and Weber respectively.

"COME TO BREAKFAST."

During our stay in this camp we scoured the country in all directions, and on many occasions found game-yards and water-holes at the foot of cañons tramped up like sheep-pens, and all signs not later than ten days or two weeks; the trails all going south in the direction of the Teton range and Jackson's Hole country.

*Camp Misery, Oct. 14.*—This camp was named from the fact that it is located on a divide between a meadow and lava bed. We arrived here about 3 P. M., after having marched about ten miles over very rough, poorly-wartered country, and but little feed for our stock; in fact, our present camp site afforded the first opportunity to graze our horses during all the day's march. About half a mile east of camp, on a small branch of Warm River, we found a beaver dam inhabited by one family of that interesting rodent. We set three traps along the breast of the dam, but as it was dark before we were done they were smart enough not to repair so recent a break in the dam, and the consequence was that when we came to look them up this morning they were as we left them. Had we remained another night, we would have caught one or two of the cunning dam-builders without doubt. The signs of moose were very abundant, as evidenced by the fact that the tops of all the willows which line the banks of the stream were clipped off, and the tracks of the ungainly game could be seen everywhere in the soft soil.

*Warm River, Wednesday Morning, Oct. 15.*—Yesterday we made about twelve miles through a country composed of lava beds, scrub pine wind-falls, and here and there small patches of prairie. All the streams were dried up, and our animals suffered for water. We arrived here about 3:30 P. M. and were obliged to go into camp on account of not being able to make the next water before dark. We are near the head of the stream, and on the right bank. The water is so warm that there are few, if any, fish in it at this point, and it was never known to freeze over. It is about fifty feet in width, and the water in some localities is quite deep. During most of the day's march yesterday, especially when we were on high ground, we could see the Teton Mountains in Wyoming, looming up to the south of us, and about fifty miles distant. The "Old Man" of the range, over 13,000 feet above sea level, especially appeared like a cloud; and when the sun shone upon its snow-covered top, it resembled the fabled cloud said to have a "silver lining," but on the outside.

After a hearty lunch we were off in different directions in search of fresh meat, and by sun-down when all had reported we had seven grouse, five hares, twelve ducks and seven squirrels. Yesterday evening after the tents were pitched, beds made and the stock attended to, the packers made a bean-hole, and the consequence was we had some very fine beans for breakfast this morning.

By the way, it might be interesting to some were I to describe the method of producing Boston baked beans in the wilderness. The trick is simple enough if you know how, and are in possession of the following ingredients, viz.: The beans, salt pork, salt, two or three tablespoonfuls of molasses, a metal stewing pot, with a good closely-fitting cover, and a spade or other instrument with which a hole two feet deep by eighteen inches in diameter can be made in the earth. Put the beans in the pot, interspersed with layers of thin slices of pork, add water sufficient to cover them and no more; then dig the hole, in which kindle a fire first with dry wood and keep it well filled with green hard wood if it is to be had. The fire should be kept up from early evening until bed time, if two or three hours all the better, which affords a good chance for any of the party whose turn it is to tell a whopper. When it is time to retire the coals are shoveled out of the hole, the molasses and pepper are added to the contents of the pot; and it is set in the bottom of the pit. The live coals are filled in around it and over the lid, and the whole covered to the depth of five or six inches with the earth which was taken out in making the excavation; the burning faggots and those of the regular camp fire are placed over the grave, and there you leave it until morning. When breakfast is nearly ready, the pot is unearthed, and you will be sure to have No. 1 baked beans—tender, rich and finely flavored, and an agreeable change while on the march. SHONGO.

## CHICAGO AND THE WEST.

*[From a Staff Correspondent.]*

CHICAGO, Ill., Aug. 11.—Mr. C. H. Warring, of Amsterdam, N. Y., writes me as follows: "I am very desirous of having some first-class chicken shooting. I want to go to some place where I can get good accommodations and where I can hire a man with good dogs. I noticed your letter in the FOREST AND STREAM, and if you could put me on any good shooting I would be very much obliged to you."

I gave Mr. Warring the address of my game pocket, which latter has proved to be a mighty convenient thing to have in the family. I do not know of any good chicken country on this sinful world where a man can get good accommodations and also be able to get good dogs. Singularly enough, in these days of advanced kennel interests, there are fewer good dogs in the Western country than there were twenty years ago. As the chickens disappeared the chicken dogs disappeared also. They have lots of fine dogs nowadays, they tell me, but of just plain chicken dogs, with no frills on them, but with kind hearts and hard feet, there is a large smallness.

Time was when you could go into almost any town, say in northwestern Iowa, or in Minnesota or Nebraska, and find a sort of stock dog that would hunt chickens for anybody. This dog usually belonged to the barber, and if the barber was too busy to go hunting with you, he would, provided you had your hair cut at his shop, let you take the dog and hunt him all the week. Of course on Sundays the owner of the dog would expect to do a little hunting with him himself. As for the dog, he enjoyed himself as well one way as the other, and just so he was hunting, he didn't care with whom. As for needing a special code of signals, or a regular handler, the poor, ignorant brute probably never dreamed of such a thing. He thought it was his business to find chickens, and not to chase them; to point, keep steady and retrieve the dead birds when the covey was all up. He did all this in a plain, straightforward way, and thought nothing of it. He liked it. He did it for one man just the same as for another. This dog, however, which I presume I may as well call the borrowing dog, failed to perpetuate himself. Like all immortal snaps, he was mortal and evanescent, and he is no more.

I recall such a dog which used to live on top the hill at the north end of Mud Lake, in Hamilton county, Iowa. He belonged to some one, the son of the man who owned the farm there. The dog's name was Don. I forgot the name of his master. Those were chicken days, and Don was a chicken dog, a big, orange and white fellow, of that sturdy strain which, in the '60s and '70s, was spread all over central Iowa, and known under the very vague name of "the Milwaukee dogs." This strain was said to be traceable to a pair of setters imported by a Milwaukee man, but when that happened, or who the man was none of us ever knew. Anyhow, we called Don one of the Milwaukee dogs, and in our camp we had another, a still better specimen of the same strain, which we called Rex. We came from a hundred miles below Mud Lake, but Rex and Don were only brothers whose paths had taken them apart. They affiliated at once, and how they did like to hunt chickens. It never occurred to Don's young owner but what it was all right for us to borrow Don whenever we wanted him, and we mostly wanted him; in fact, you had to tie Don up or he was bound to be out with the guns. And what a dog he was! Careful, methodical, business like, thoroughly master of his trade. I wish I had him now. He never wasted any time in a field. He just went right to where the birds were, because he knew their habits, and knew where the birds ought to be. I believe they call that bird sense now, or something of that sort. We didn't call it anything then. We just would rather hunt with that sort of a dog.

I can see old Don now, in the mind's eye, as he stood, head high up, solid as a rock, pointing a covey which we found on the hillside more than 200 yards away. And I can remember, too, there being some rivalry that day between Don's young master and myself, how we both shot into a bird just as it topped the grass out of that covey, and blew it out of semblance to a feathered fowl, much to Don's disgust. I wish I could think of that boy's name. He shot one of those old, side-bar Fox guns. I know there is a sore spot on my shoulder yet from carrying the 10¼lbs. Bonehill gun I shot that day. At that time the Bonehill gun was in our country thought to be the *ne plus ultra* of the shotgun kind. "They ain't no better gun except the Bonehill," said the small dealer who sold it to us.

Don and Rex, and the Bonehill, and Don's master are mostly memories now. If our inquirer had been on Mud Lake in those days and had offered Don and his master $2 a day to go shooting with him, he would have been regarded as an object of suspicion. But Don is dead now, and for his counterpart one must inquire elsewhere than here. Can any one help out?

CHICKEN COUNTRY.

If any one wishes to go to North Dakota for shooting, he will probably do well to go to Lakota, where within driving distance he will get good sharpie shooting. There is a Mr. Alexander at Lakota who takes parties out. Larimore, N. D., is another good point, if one wishes sharptails. Lakota is near the Devil's Lake country, famous for wild fowl. For a fall trip this should be a good point to head for. There is also good shooting on sharptails in eastern Montana now. The above information is given me by Mr. G. T. Sidway, o Monett, Mo., who spends most of his time in Chicag and shoots much over the country. Mr. Sidway says tha between the Seneca and Verdigris rivers in the Indian Na tions, on the line of the 'Frisco road, there are still a goo many chickens, though the shooting is unsatisfactory be cause contrary to the military regulations and liable to b stopped with a very round turn.

Mr. L. F. Loeb, of this city, will at the close of th month join a party of friends at Beatrice, Neb., for chicken hunt over pastures about twenty-five miles fro there, where plenty of birds are reported this week.

WILD PIGEONS.

My Missouri friend, Mr. Sidway, tells me that the wil pigeons visit southeastern Missouri every other year re ularly, and that he often sees large flocks of them. Th roost is west of the Ozarks, in the Indian territory. La year a man about thirty miles west of Fayetteville, northern Arkansas, fed and shipped to Boston 2,000 wil pigeons he had netted. The netting is no longer reg larly profitable, but the bird is not extinct.

For quail and wild turkey, and very good sport, say this same informant, one is perfectly safe to go to Ha rison, Boone county, Ark., going in via Eureka Spring The residents will furnish guides and the shooting is ve good. For fly-fishing the Elk, St. Francis, Gasconad Current and others of these Southern streams would pro ably open the eyes of many a Northern angler. F any one wanting a wild, romantic trip after big gam with a good working chance of getting shot by a nativ a trip to the Ozark Mountains would probably be alt gether satisfactory. I think the time is not far dista when Northern sportsmen will turn more and more Missouri and Arkansas for sport, either with rod or gu

Our friend Italian Joe killed 19 woodcocks one day th week near Willow Springs, right in the edge of Chicag

EARLY JACK SNIPE.

A most singular thing is the appearance of great nu bers of jack snipe all over northern Illinois and India in this first week of August. There are numbers alo the Kankakee marsh. Tolleston club on the Little C lumet reports that a good flight has come in there. have already mentioned them as abundant around Ha mond, Ind. About Summit, and below there on t De Plaines they are also in, and indeed there are doze of points which have reported them. The impression common that these are local bred birds, but this is hard possible. They have not appeared here so early in su numbers at any time, within my recollection, at least, a the fact attracts comment from old shooters.

E. HOUGH.

## THE HUNTING RIFLE AGAIN.

*Editor Forest and Stream:*

I see in your paper of June 23, that there is a renew by "Aztec" of the old controversy about large and sm charges for killing game. Doubtless there will alwa be differences of opinion as to what is really the b change for this purpose, but it is evident that a la bullet with a proportionate charge of powder, will l on the average of shots, more quickly and certainly th a small bullet hitting in the same place, because it cludes in its course through the body a larger numbe blood vessels and nerves, and often strikes a bone or la vessel which the narrower diameter of the small bu would avoid.

The only question then remaining to be decided is weight of rifle necessary to counteract the recoil of larger charge. As this weight should never be more th can be carried without discomfort, it and consequen the amount of powder and lead should vary in acco ance with the physical power, the endurance and nervous sensibility of the hunter. A powerful man w can go through great fatigue must necessarily have advantage in being able to carry a heavy and powe weapon. A weak man, or one who is very sensitive recoil, will bag more game with a lighter gun and sma charges, but should not delude himself with the idea t such charges are in themselves as effective as large.

Experience proves that men of average strength endurance cannot, especially under a hot sun, carry ri of more than about 9lbs. weight without being fatig and thus losing chances of killing game when very qu shots are necessary. Every ounce of weight tells u even the strongest man in a long tramp, on the princ admitted by trainers of race horses, that 7lbs. extra the back of a horse is equivalent to a length in a r race. Hence the weight of each man's rifle should reduced as much as possible provided the increase of coil does not cause inaccuracy of shooting.

"Aztec" says that with heavy charges (apparently ref ing to those between 70 and 120 grains) the recoil is pleasant unless the gun weigh about 12lbs. I used, many years, rifles of .45-gauge weighing from 8½ to 8¾ and carrying from 110 to 124grs. of powder and 280 to of lead. They did not kick severely at target prac and were unfelt when firing at game. Here is a poin which beginners in the use of hunting rifles are liabl err. They try a weapon at a mark, and finding the k rather unpleasant, immediately conclude that the we is not enough for the charge. If they fired at an ani the recoil would not be noticed at all. This is prob owing to the attention being concentrated on the ob aimed at and the rifle being held more firmly than us

Before express rifles were invented I owned a .45 bre loading carbine weighing only 6½lbs., the charge which was 55grs. of powder and 390grs. of lead. Ow to the stock being very short and straight, the rifle only kicked terribly but jumped upward so as to m my cheek swell when at target practice, yet when fi at game, or even vermin, there was not only an abse of perceptible recoil, but my cheek was never hurt in least degree.

I have for years been convinced that the chief rea why rifles in America are made much heavier tha this country is that the stocks are shorter and smalle the base, a peculiarity which originated in old ti when barrels were very thick and rifles were held their crescent-shaped butts against the upper arm ins of the shoulder. The Winchester .40 62 210 and the .40 60 260 are each of 10lbs. weight, while the British 85 230 has hardly any noticeable recoil at 7½ to 8lbs. is due to the stock being long and fitted with a sho butt, having a much larger bearing surface than the t

of most American rifles. Other things being equal, the longer the stock the less is recoil felt; and it can hardly be too long, provided it does not catch in the clothing when raised quickly for a snap shot. A length of 14½in. from the trigger to the center of the butt suits most men with arms of average length, if they do not wear very thick clothes.

The Winchester .50-95-300, as made for the English market, has a shotgun butt and weighs about 8¾lbs. I have found this accurate at a target and without any disagreeable recoil. The '86 model, taking the .45-90-300 cartridge, if fitted with the same kind of stock, could be fired with perfect comfort at 8¼lbs. weight.

I will here say that the Winchester .45 90 shell seems to me more nearly perfect for ordinary large game than any other shell in the market. Being cylindrical, it is less liable to stick or require swedging than those of conical or bottle shape. It holds sufficient powder to give a very flat trajectory and great shock, yet not enough to spoil accuracy at ranges below 150yds., as is the case with the 125-grain express shell. With a hollow bullet, properly proportioned, it is powerful enough for grizzly bear, and is not too powerful for ordinary deer. "Aztec" states that "even .38 bullets, unless carefully placed, will spoil half a deer's meat. I am puzzled to account for his experience, having never known .45 solid bullets, striking in any position, to tear to any extent worth noticing. Even .45 hollow bullets, if the hollow be of the proper size in proportion to the powder, tear badly only when hitting the haunch. When placed in the shoulder they make a small hole at entering, a large one in the lungs or heart, and spoil the flesh for perhaps 4in. in diameter at the opposite side of the chest. As few people eat the lungs this is of little consequence, but, at the worst, by submitting to the loss of 2 or 3lbs. of meat the chances become infinitessimal of having a long stern chase or of losing the deer itself.

As to the danger to people or cattle from using large charges of powder, the .50 or .45 hollow bullets if they miss the game are usually knocked out of shape on striking the ground and then stop quickly. The solid one of much smaller size is far more dangerous. I have seen even a .38 125grs. bullet, driven by only 14grs. of powder and fired without elevating the sights, make its first graze and knock up a small cloud of dust at fully 400yds. from the muzzle, and the .38 56-255 would probably be dangerous up to a mile. I believe that the diminution in large game in America is to a considerable extent due to the use of rifles of insufficient power. I came to this conclusion when out with hunters using very small bores years ago in Canada, and it was confirmed by my own experience with small game in this country. I tried .22 rim-fire cartridges, chiefly at rabbits, from a very accurate Maynard barrel, was very successful at first, but in the long run lost a rather large proportion of wounded which escaped into their burrows, although hit in the neck or shoulder. This was not from insufficient penetration, for the bullets passed completely through in any direction. I then resorted to a .30-14-75 rifle, have used it for three seasons, and lost one badly wounded animal, which staggered about six yards to a burrow. Another rabbit escaped which seemed slightly wounded, but all the remainder which have been hit in three years have been bagged. Exactly the same principle applies to large game. A hunter with a .32 or .38 40 rifle may hit three or four deer in a day before securing one if the bullets happen to strike a little way from a deadly spot. Had he used a .50 95 or a .45-90 cartridge, the first deer hit in the same place would have been killed quickly and taken to camp, the others being left unmolested.

This subject was discussed most fully and ably several years ago by Mr. Van Dyke in the "Still Hunter," a book which it would well repay any one commencing his hunting career to study carefully. J. F. MEYRICK.

DEVONSHIRE, England.

### The Quail Shooting Club.

Mr. Coleman, who has been organizing a club to secure quail shooting privileges in North Carolina, "dirt cheap," sends us this note of the temporary organization of the club. He tells us that his advertisement in FOREST AND STREAM has been answered from all parts of the country and last Monday a letter about it came to him from London, England. He writes under date of Aug. 17:

*Editor Forest and Stream:*

Members of the North Carolina Quail Club met last night, and formed a temporary organization, by electing Mr. A. Coleman President; Mr. Chas. J. Gayler (of the Inquiry Department, N. Y. City Post Office) Secretary and Treasurer; and Mr. James Moylan (civil engineer) of Jersey City, Chairman of Committee on Transportation, etc.

The membership, for the present, will be limited to 100, and the yearly membership fee to $15, every dollar of which will be devoted to paving for the lands now being leased by club members in North Carolina. The club will control over 30,000 acres, or some 46 square miles, of the choicest shooting grounds in the United States, and will be ready for sport by the opening of this season's shooting.

Those wishing to join must send in their names to the Secretary if they want to avoid disappointment, as applications are coming in from Maine to Illinois. Send names and inquiries to Chas. J. Gayler, Sec'y, Room 42, Post Office, New York.

### North Dakota Game.

GALESBURG, TRAILL CO., No. Dak., Aug. 11.—I fear your Mr. Hough's treasured game pocket will be at a discount this year. From observation and report I judge the Dakotas to be one vast game pocket about now. Game has not been so plentiful these ten years. The sloughs and lakes are full of water. One need not travel far to make a good bag. The open season begins Aug. 20. J. P. W.

THE FAVORITE LINE.—The Shenandoah Valley route to the South, comprised of the Norfolk & Western and East Tennessee, Virginia & Georgia Railways, is the sportsman's favorite line. The Washington & Chattanooga Limited," which is a solid vestibuled fast flying train, consisting of Pullman drawing room, sleeping cars, day coaches and Pullman dining cars, leave Washington 11:15 P. M. every day in the year, arriving Chattanooga 6:45 next afternoon, making close connection for all Southern points. Mr. B. W. WRENN, General Passenger and Ticket Agent, E. T., V. & G. R'y. Knoxville Tenn., will furnish free any information desired.—*Adv.*

# Sea and River Fishing.

*The* BOOK OF THE GAME LAWS *has all fish and game laws of United States and Canada. Price 50 cents.*

## FISHING UP "SALT RIVER."

IN THE BLUE GRASS OF KENTUCKY.—Aug. 11.—*Editor Forest and Stream:* Your instructions to "go up Salt River" fell upon most willing ears, and I am now prepared to tell the great army of would-be officeholders who may be relegated by unappreciative voters to go "up Salt River," that if they will actually go up or down the real Salt River, as it exists here in Kentucky, they will never regret the journey, provided they have one drop of real sportsman's blood in their veins and half an eye for the beautiful in nature. It is indeed a pleasant stream, and why should not a river flowing through the blue grass region of this most favored State be a gem among water courses?

Salt River has its start either in Mercer or Boyle county. Every man hereabouts is a partisan on that subject. If Cove Spring is the starting point, then Mercer county has the honor of starting the historic stream; but the country thereabouts is so full of purling brooks and delightful bits of clear, rippling runways, that the claims of the Boyle county men that Salt River has its start in a strong, cold, limpid spring in their county may be right after all.

In this region of the State at this season of the year no canoeist could ask for more sylvan scenes than those along Salt River. The blue grass pastures stretch away from either bank, and from the brink of Salt River many a fat shorthorn gets a cool refreshing drink, many a fair-faced, fine-limbed fawn-like Jersey comes down with swelling udder to draw in a supply of Salt River nectar and turn it out into the brimming pail at even tide as the richest and creamiest of high grade milk. Many a standard trotter, with a pedigree running back for generations, comes cavorting down to the borders of the much-talked-of stream, draws in a dainty drink of natural ale and turns for a frolic over the river pasture, presenting a picture to make the horse lover's eye dance with joy at the spectacle. The old home of Leonatus is visited up the bank, and the fliers of the Chinn and Morgan stock were raised in good part on Salt River water.

If there is a fondness for the historic and the weird in your nature, then come and look up the legends of Salt River. Its banks saw the earliest settlements of the white pioneers, and the border war between the whites and Indians waged long and bloody across these fertile fields. There are still the beautiful woodlands of walnut, blue ash, hickory, poplar and sugar-maple. There were more woodlands then and through them rang out the whoop of the marauding redskin, bringing dismay into the cabin of many a hardy Kentucky woodsman. There are Indian stories by the dozen clinging to the banks of Salt River, but there is nothing of a political significance about them. They are simply stories of love and hate, war and rapine, of brave deeds and fair maidens, and another decade will see these stories die out from the memory of the oldest of their narrators. The Indians have gone; those who have heard their storied lore are fast following after.

Some ten miles below Harrodsburg the river passes into Anderson county. This is, *par excellence*, the home and original birthplace of "old-fashioned-sour-mashed-copper-distilled" whisky. Eighteen or twenty whisky distilleries, turning out from 200 to 300 barrels per day, are operated in Anderson county, and most of them are supplied with water from Salt River or its tributaries. The river runs through this county in a northwesterly direction, and then passes into Spencer county, traverses its entire breadth, and entering Bullitt runs through it and finishes its course at the farther boundary of the county, and empties into the Ohio River.

It is not a long river. With all its graceful curves and sinuous meanderings it is not far from 100 miles long. At Harrodsburg it is perhaps 30ft. wide, at Shepardsville, the county seat of Bullitt county, it has broadened out into a stream of 400ft., fair to look upon, and with a carrying capacity far below the crowds who are yearly sent to float upon it. In talk that is, for really there is next to no travel on the clear, sparkling waters. If one wishes to navigate it he may come up its channel for a dozen miles to Pitt's Point in the small steamboats fitted to the work. In flood times boats have pushed up as far as Shepardsville, but this is generally a fording point.

In connection with the fish in the water, the dams come in for much attention. There are some half dozen or more at various points up the stream. Some of these are strongly built of hewn timbers and stone and give promise of permanency, and at all ordinary stages of the water it is impossible for any fish to pass over, through or under them. No fishways are provided, and the restocking of the stream has attracted little attention; yet it is an amusing fact that some years ago a practical (?) member of the Fish Commission turned out in this stream not far from its head, a few cans of salmon fry, telling the people that they would doubtless descend the river to the sea, but would as surely return to its headwaters to spawn.

The soil in Bullit county grows more flat, and sometimes, where loamy, it is very productive. The trees are being cleared off and the slopes turned into arable land. The light whitish clay soil is washed into the stream after heavy rains, to the destruction of the fish and the disfigurement of the river.

When the delegations arrive from the various political divisions of the country they will find that Salt River has a number of watering places awaiting their enjoyment. There is "old Paroguet Springs" near Shepherdsville (the buildings all burned). A very fine sulphur spring at Newton's or Milton's near Van Buren, and in Anderson county the "Boiling Spring," where is also located S. O. Hackley's distillery. There are many very pretty villages along the track of the stream, and no doubt some of the corner lot owners would gladly see the hamlets expand into cities even though the census roll was swelled with names taken from the minority ballots in the polling places of the people.

But after all what is a river good for except to fish in or from. Some people will say that a river of good pure wholesome water, such as this, is useful as a supply of drinking fluid. Well, those people are free to their opinion, but those people and those opinions are not found along this particular river. Others will argue that a water way is useful first and foremost as a means of communication, a sort of aqueous highway provided for those too lazy to build good roads and then to breed fast horses to drive on them. Salt River has not enough water to figure much on a highway of commerce, but it has water enough to furnish homes for the "finny tribe"—water snakes, soft and hardshell turtles, crawfish (some hard shells and some called peddlers), log-perch, sun-perch, goggle-eyes, hickory shad, eels, gars, carp (planted or escaped from ponds), suckers, some few white perch, yellow cats, black bass (called in Salt River "jumpers" or "jumping-perch"). I don't know whether small or large mouth, but I think the former), and the fish which was named by FOREST AND STREAM the crappie, called here "Newlight" or "Campbellite," calico perch, silver perch, bachelor perch, etc. Of course down toward the mouth there are other fish such as are found in the Ohio—buffalo, sturgeon, etc.

At Shepardsville there is a rocky fall in the river corresponding to the Ohio Falls, though not so long nor with so much fall; it is doubtless a continuation of the strata that make the falls at Louisville. Some years ago there was a high dam at this point, and it was told me by citizens living near that in the spring the fish trying to pass up stream were hindered by this dam, and accumulated in such quantities that horses would not cross the stream (the fish striking their legs), and the citizens would gather with teams and by using a short seine (some said pitchforks) would in a few minutes fill their wagons and haul them away.

The favorite fishing there and all along the river is for blue cats. Although there are some true anglers (*e g.*, Tom Floyd and Isaiah Yocum at Taylorsville), the fish are caught on trot-lines, and taken by "cooning," which is done in this way. During the spawning season, and while watching their young, in July and August, catfish burrow under broad rocks, clearing out beds under the rocks, and paths and entrance ways to the edges of the rock—two or three entrances. The fisherman locates these rocks and remembers them as a pilot runs the river, by an overhanging bough, a stump or some object on the bank; and having stopped all the holes but one, he reaches under with his hand. The fish, usually a large one, will seize his hand, and the fisherman quietly works his hand so as to grasp the fish by the gills and yanks it out, leaving the eggs or young unprotected and to be destroyed. Sometimes a long iron rod with a short, sharp hook at the end is used; when a fish is felt and located, the hook is put over it and with a short jerk fastened in the fish and it is thus drawn out. "Cooning" requires nerve, for a man might find something not a fish, and when the hand is seized it must not be jerked back, as this would take the skin off or make ugly scratches. I have never heard of fly-fishing in Salt River; worms and other baits are used for cats, perch and suckers; minnows for bass and crappie.

Away from Salt River it will not be necessary to travel far to get a shot at deer, and as for smaller game, it may be found all through the section.

You have asked for something of the history and surroundings of Salt River. I have given them to you, and you may begin to think that the candidate who is sent up Salt River is given a very pleasant journey after all. He finds fishing and frolic, boating if he is water fond, and the finest trotters in the world if he is one of that universal army of worshippers at the shrine of perfect horseflesh. There may be other so-called Salt Rivers, not so pleasant to travel upon, but this, the only original Salt River, is not of that sort. The tongue of the rabble makes it a place of unpleasant anticipation and regretful reminiscence. Nonsense; everything here assists in replacing the galling past with the all-satisfying present. The fiat of Jehovah has made it an elysium, and if the mob will still insist upon declaring otherwise, it is only one more illustration of the absurdity of the alliterative jingle, *Vox populi vox Dei.* BLUE GRASS.

## BLACK BASS IN ILLINOIS.

DR. S. P. BARTLETT of Quincy, writes that bass fishing at all points bids fair to be the best known for years in the State. Large strings are taken at Quincy every day, but the fish are mostly of the smaller size. To quote from the letter: "One thing is certain, I have never witnessed such a sight in my life as I did Sunday on the bay here. It seemed to me that every available log or sandy beach for its entire four miles of length was occupied by a man, woman or child with a fishing pole, and everybody caught fish."

"The water is fairly within its banks and affords an excellent opportunity for this sport, and Sunday is always a big day here with the working men and their families for a day's outing. The rivers are full of minnows, small hickory shad, and other food of the bass."

The following from the Chicago *Tribune* will serve to show what fishermen are doing in another portion of the State:

"Fox Lake, Ill., Aug. 6.—(Special.)—Fishing at the lake this season is breaking the record. They are being caught by the bushel, and the women are outdoing the men at the sport. Guests at Hotel Lippincott had their catches weighed and counted. It was found that W. E. Goodman of Evanston caught 150 bass, weighing 210lbs. Tuesday, and 146 bass, weighing 225lbs., Thursday. Mr. Munson and the women in his party caught 110 fish, weighing 163lbs., one bass weighing 6lbs. 3oz. Mr. De Sabe caught over 250lbs. of fish Thursday. At the Oak Glen Club it was reported that Henry C. Davis, brother of George R. Davis, caught 93 black bass in four days."

### Slaughter of Small Bass.

MR. W. L. POWELL, Treasurer of the Pennsylvania Fish Commission, sends an account of the depletion of Maiden Creek by fishermen who catch bushles of yearling black bass with small hooks. A veteran angler fished this stream recently with a fly-rod and in the course of a day took 60 bass ranging from 4½ to 6in. in length. All of them were lip-hooked and were liberated alive. The creek was full of yearling bass during July, and newspaper accounts mentioned their capture by the bushel, by means of hooks so small as to be readily swallowed by the fish. The absence of big bass even in moderate numbers is notorious, but in the light of this information it is readily explained.

## CHICAGO AND THE WEST.

*[By a Staff Correspondent.]*

CHICAGO, Ill., Aug. 10.—Mr. Addison Gumbert is one of the all-stars aggregation with which Capt. Anson defends the baseball honor of the city of Chicago, it being the specific duty of Mr. Addison Gumbert to cause the ball to assume unexpected curves, gyrations and deviations from its natural alignment. To master this intricate subject requires long and patient study, and leaves little time for anything else. Some people can never learn it at all, and many have not learned who think they have, and who draw salaries upon that supposition. It was hardly to be expected, therefore, that Mr. Gumbert, being a great pitcher, would be also a great fisherman. It was too much to ask of one man. Yet Mr. Gumbert accepted the invitation of some of the Mak-saw-ba boys to come down to the club and have a little fishing. This turned out to mean night fishing from a scow moored out in a bayou. It did not take Mr. Addison Gumbert long to prove the truth of his statement that he had never caught a fish in all his life before. That was evident when he had his first bite, the result of which was a ½lb. rock bass. This unfortunate fish Mr. Gumbert promptly elevated high in the air, where, the line being somewhat shorter than the rod, it dangled for some moments, in spite of Mr. Gumbert's sincere efforts to establish more intimate relations.

"What'm I going to do about it, boys?" asked Mr. Gumbert, as he looked longingly up at the fish.

*A Voice*—"Looks like you'd have to climb up the pole."

Mr. Gumbert did not like the idea of climbing so insecure a support, and spent some moments in deep thought. At length he hit upon a key to the situation. He reasoned that as, in the original relative positions of the fish and rod, the former had been in the water and the latter out, it would, in order to establish the proper status, be necessary to reverse the original positions; in which case, of course, the rod would be in the water. With a bright, glad smile upon his face, Mr. Addison Gumbert poked his rod into the water, and was pleased to observe that as the rod went deeper and deeper down into the bayou, the fish approached nearer and nearer to his waiting hand. At length he dropped everything, and allowing the fish to fall upon the bottom of the boat, sprang bodily upon it, and grasped it with both hands, calling aloud as he did so, "Judgment!" and "How's that?"

Mr. Addison Gumbert's young life had been so taken up with spherical trigonometry and allied lines of research that he had never learned that a rock bass has plenty of stickers on its back. This interesting fact he now discovered very rapidly and to his entire satisfaction. The next morning Mr. Addison Gumbert realized that his enthusiasm had given him a pair of hands which looked as though he had bearded a lion in his den, or gone against a corn sheller. Strange to say—and I say this the more to show the excellence of angling as a specific for all complaints, and so to lay a basis for this story—Mr. Addison Gumbert on the day after he had bearded the rock bass in his lair, went back to town and pitched such classic and refined ball that he shut out the opposing nine with only two hits, and so won a game for Chicago, something which had not occurred before for many moons. Mr. Addison Gumbert was heard to remark that the roughening up of the bark upon his fingers gave him better control of the ball. Thus doth the great and rational sport of angling appeal to all sorts and conditions of men.

THE BASS FISHING.

Along the Kankakee River the bass are now biting in great style, and the boys at Mak-saw-ba are enjoying the fun. Your uncle Joseph Card and Billy Mussey and Mr. L. R. Brown and Mr. John Hubbard, and about everybody else who has gone out fishing can attest to this. Mr. Card caught 28 bass one day, 24 the next and 15 another day. Mr. Brown caught 16 bass one day—a good many for a broken rod. Mr. Mussey has of late been averaging ten or a dozen bass daily and is living at the club. Nearly all these bass are big-mouths. It will be thirty days yet before the small-mouths begin to bite much, and through October there will be no big-mouths of consequence taken, though the small-mouths will then be biting ravenuously. I have never yet found any one who could explain the movements of the bass in this part of the Kankakee River.

The fact is that, for some reason or other, the bass have begun to bite all over this part of the country. In Fox Lake, Channel Lake, Lake Marie and all the chain of that country, heavy strings of bass are being taken daily by the casters. Lower down the system, in Pistaqua Bay, the fishing is also good. Here Mr. C. Blomgren caught a 6lb. pickerel yesterday, to the height of his delight, since he rarely aspires higher than sunfish or bullheads, while his brother, Mr. Oscar Blomgren, accumulated a vast number of bullheads, dogfish, wall-eyed pike and croppies, and also took several bass. Still lower down, in the Fox River, below McHenry, the bass have been biting well this week in spite of the hot weather, which is still at the frizzling point. At this point Mr. Charles Antoine, of Von Lengerke & Antoine, had some sport with minnow, deep fishing, day before yesterday. Unfortunately, Mr. Antoine has not been in good health for some time, and he came back yesterday with a bad fever. Not that there is any malaria along the Fox, for this is not the case.

The Fox River is now very low, at the opposite extreme of what it has been all spring and summer. The bass are now in the deep holes, which must be sought out among the overgrowth, and fished by still-fishing, if the best results are to be expected, as the fish do not rise much. Minnow, crawfish or helgramite they may take, but they will bite very gingerly and slow. Dragon fly might be good, and I verily believe that angle worms would be as good a bait now for small-mouths as anything.

Further north along the Fox, up Mukwanago way, the bass fishing should be good now. Billy Farmer brought down a 5lbs. bass from Eagle Lake, near Mukwanago yesterday, and also a number of brook trout from one of the streams near there.

Messrs. Fred Taylor and W. H. Haskell start next week for Johnson's ranch on the Little Oconto, via Ellis Junction, after more trout.

Spaldings show this season two mounted fish, a 2½lbs. brook trout caught in Gogebic Lake by Mr. C. Lester, and a 34½lbs. mascallonge caught in the State Line waters by Mr. Livermore. Mr. Lester and Mr. Armour are now at Manitou Springs, Col., and will try for trout in that neighborhood.

Mr. Lott, late of England, now in employ of Montgomery Ward & Co., has a quantity of fine English fishing tackle along with him, which several of us have taken much interest in examining. He has a ten guineas salmon rod, supposably a fine one, but a dreadful tool to an American eye. A greenheart fly-rod of the lot, also a high class article, felt as though it would pitch a fly, but the rod was terribly large and heavy. Even a pickerel rod, intended for a light one, must have weighed over a pound, we thought. All the rods seemed carefully and honestly made, but no one in this region could pick out a use for any one of them, and they appeared unspeakably clumsy to all accustomed to the fine class American rods. There were also two salmon reels and a trout reel in the collection, made of high polished wood, plain clicks, with no reel bars whatever, very simply made, though heavy and awkward looking, bearing evident marks of fine workmanship. These wooden reels ran as delicately almost as our casting reels, and were very interesting specimens. We were told that these were the best of the English goods of the sort. The impression was that English tackle makers are good at their station, but only in the infancy of angling ideas. The American implements of like nature are far and away superior in elegance, and of type altogether different from those here noted.

E. HOUGH.

## FISHING NEAR SYRACUSE.

*Editor Forest and Stream:*

According to promise, I send you a list of the fishing grounds in the vicinity of Syracuse which give us good fishing at our doors. Most any of them can be reached in twenty minutes, the furthest will not take over two hours' ride. From Syracuse, by R. W. & O. R. R., to Brewerton, 15 miles. On Oneida River and foot of Oneida Lake. Good bass, pike perch and pickerel fishing. From Brewerton to Caughdenoy, 6 miles; to Oak Orchard, 8 miles; good riffs all along the river and fine bass fishing. Brewerton to Oneida Lake, one mile; Constantia, 8 miles; South Bay, 5 miles; Shocketon's, 13 miles; along the shores both sides the lake, and around Frenchman and Durham's and all the other islands are fine bass and pike fishing. Opposite Shockelton Points there are two bars or shoals, about 5 miles long and one-half mile wide, where I think the finest bass and pike fishing can be had in the State. This week catches of black bass have been made as many as 88, twenty of them weighed 50lbs. Pike fishing in the grass this week, 30 to 50 fish per boat, some as large as 6lbs.

By Phœnix & Syracuse R. R.: Syracuse to Liverpool, 5 miles, to Onondaga Lake; good bass, pickerel and pike fishing. To Three Rivers, 8 miles; Phœnix, Oswego River, 15 miles; to Hinmanville, 19 miles; Fulton, 26 miles; at the above place all along the river are fine riffs and the best of bass fishing. Large catches have been made on flies this last week.

By Syracuse, Oswego & N. Y. R. R.: Pleasant Beach, Onondaga Lake, 4 miles; Maple Bay, Onondaga Lake, 5 miles; good bass, pike, pickerel and perch fishing at these points. Syracuse to Baldwinsville, 11 miles, Seneca River, the best of bass fishing directly in the village; below 4 miles, at Red Banks, one-quarter mile from the hotel. At B. I have known 55 bass taken in an afternoon, some weighing as much as 4½lbs. Above Baldwinsville, 10 miles, is Jack's Riffs, which are close to Cross Lake, anglers will find the best of bass and pickerel fishing; some pickerel weigh 15 to 20lbs. Good hotels and oarsmen at Baldwinsville. I know no better place for an outing and good fishing than this point.

The next station on this road is Fulton, twenty-four miles, Oswego River and Lake Como. This lake is noted for large-sized large-mouth bass and pickerel. At the next station, Minetto, on Oswego River, there are ten miles of fine bass fishing grounds. This is the favorite grounds of Judge G. N. Kennedy, who is one of the most expert bass anglers in central New York. Oswego is thirty-eight miles, where there is fine fishing on the river and close to many good angling resorts on Lake Ontario.

By New York Central & Hudson River from Syracuse, first station, Memphis, ten miles; then two miles by carriage to Jack's Riffs, Seneca River; Jordan, eighteen miles; two miles to Cross Lake and Seneca River; Port Byron, eighteen miles, one mile to river.

Montezuma, twenty-one miles, two miles to river; Savannah, twenty-four miles, two miles to river. All the above places have the finest of bass, pike and pickerel fishing, and are favorite places with Syracuse anglers. Some have cottages built there especially for fishing and shooting; among them are Senator Nichols and Hon. Wm. Kirk; the latter has leased several thousand acres of land for duck and snipe shooting. This was a favorite resort for a number of New York gentlemen years ago.

By this railroad it is easy to reach Sodus Bay, Little Sodus Bay, and other points on Lake Ontario; but its patronage is mostly from citizens of Rochester.

New York Central & Auburn Road, Syracuse to Skaneateles, eighteen miles; Skaneateles Lake has fine lake trout, bass and perch fishing.

To Auburn, 26 miles, 2 miles to Owasco Lake; fine trout, bass and perch fishing.

To Cayuga Lake, 37 miles; fine bass, pickerel and some lake trout fishing. All of the above lakes are fine resorts for the summer.

Seneca Lake, 52 miles, Canandaigua Lake, 74 miles; both of these lakes afford good fishing, but the writer has never visited them for angling. All other places I recommend from personal experience.

Syracuse & Binghamton Railroad.—Fair fishing at Tully Lakes, 18 miles.

Otisco Lake, 20 miles' drive; good bass and pickerel fishing.

Oneida Lake to South Bay, 13 miles' drive; Shockelton Point, 16 miles; Lakeport, 18 miles; the above places on Oneida Lake are favorite drives for the anglers of Syracuse when the weather is right. At South Bay last Sunday there were at least seventy-five carriages.

At any of the fishing grounds I have mentioned fair accommodations, oarsmen and boats can be had. It is early yet for large catches of black bass on Oneida Lake. Any information I can furnish the anglers will be furnished with pleasure by writing me at Syracuse.

HENRY LOFTIE.

## ANGLING NOTES.

### A New Trout.

DR. DAVID S. JORDAN writes me that in a few days he will send to the National Museum at Washington a description of the golden trout from Kern River or Mt. Whitney Creek, and he has decided to give it the name of this mountain, from the side of which the specimens were taken. The golden trout has no relation to the California trout, *irideus*, but is an offshoot of the *mykiss*, formerly called *purpuratus*, and has smaller scales than any trout yet on record, excepting the charrs. Mention of the golden trout was made in FOREST AND STREAM of June 8 last.

### "What Is a Peeper?"

This is a question that has been asked thousands of times I presume, and I do not know but it has been answered in a thousand different ways. Every fisherman has heard the peeper, but not every fisherman can tell what it is that does the peeping. There is a belief abroad in the land that a peeper is a very mysterious animal, and one evening several years ago when the peepers were doing some of their best work a sister asked me, "What is a peeper, anyway?" Truth compelled me to say that I did not know exactly, but I thought it was part bullfrog, part treetoad, part lizard, part cricket and a strain of bull pup to give it staying powers. I was immediately "sat upon" by the entire family and I then determined to find out about the peeper. Not long after I was at Cold Spring Harbor station of the New York Fish Commission and one evening while sitting on the verandah of Mr. Mather's house, the peepers themselves reminded me of my resolve. I asked Mr. Mather if the peeper was not a small frog, and he said it was and that he could and would catch one. Going down to the margin of one of the ponds he returned with a small brown frog not much larger than a copper cent. I put the little fellow in a tin box with wet moss and gave him considerable attention during the evening, but not a peep did I hear from him. When I came away I brought a lot of fish fry, but I put the peeper in my bag. At Albany I had to change the fish cans from one station to another and left the bag hanging in the express car of the New York Central. I sent back for the bag and it was forwarded to me, but when it arrived I was again away from home, and the bag was not opened for a week or more from the time the peeper and box were placed in it. The day that I returned I took the peeper, still in the box, to my sister, and that evening it was heard to peep and was taken to a near-by pond and liberated. Whether or not the peeper grows into a big frog I cannot say; but the one I brought home was just right so far as size is concerned for black bass bait, a pretty little brown frog.

A. N. CHENEY.

### The Cap Fitted Him.

IN the Muskoka news of the city papers there recently appeared a paragraph stating that Miss Blachford of Toronto had caught a 9¼lb. trout in Lake Rosseau. Details of the capture have just come to hand, and the only questionable part of the story is the small weight given the fish.

It appears that the young lady was rowing a small boat, in which her little brother was seated. The boy had a trolling rig out, but had caught nothing. He suddenly felt a tremendous strain on the line, and thinking the spoon was fast on the bottom asked his sister to stop the boat. As soon as the young lady ceased rowing the boat began to move in the opposite direction. Seeing that they had hooked a fish the anglers pulled on the line. They could not get the fish near the boat, however, so they tried to tow the fish to the shore. After great exertions they succeeded in getting to land, the boy having lost his cap overboard in the struggle. On reaching the boat house the pair hauled on the line, but as soon as the fish got near the shore the line broke and the fish took refuge under the wharf. A landing net was procured and the fish was dipped out, when it was found that the boy's cap was on the trout's head. The cap, it is supposed, had prevented the fish from escaping after the line broke. It is not stated in what manner the fish appropriated the boy's cap, but the story is vouched for by a number of church members.—*Toronto World.*

### A Dynamiter in Hard Luck.

PORTLAND, Ore.—This news note in a recent *Oregonian* contains a salutary warning—if only trout dynamiters were newspaper readers:

Archie Hutcheson, of Newcastle, met with an accident while fishing at the south end of Lake Washington yesterday. A stick of giant powder, with which he had been killing trout, exploded prematurely. His right hand was blown entirely off. He was alone and had to walk three miles to Newcastle, where his arm was amputated. His hat was blown to pieces and his clothing torn to shreds.

I am thankful to say that the mode of fishing mentioned is not the most popular in this country, despite our reputation for wildness and wooliness—for the brethren all know that we have Judge Greene and his dog Mike to keep up the standard of sportsmanlike angling—not to mention W. A. Storey, who thinks it cruel sport, but can kill 95 per cent. live pigeons without a pang of remorse.

MULTNOMAH.

### Pike Perch in the Connecticut River.

CHARLESTOWN, N. H., Aug. 14.—I can announce on the authority of one of my friends, the arrival of pike perch in the Connecticut River, opposite this village, as he informs me that he has caught two small ones of one half pound or so. The progenitors of these fish were, I believe, brought from Lake Massawippi, in Canada, about sixteen years ago, by my old friend and colleague on the Fish Commission, the late Albina H. Powers, of Grantham, who with some of his friends had been on a fishing trip to Canada. They brought back some of these fish alive, and placed them in some of the upper feeders of the Connecticut, I think the Passumpsic, and they have been taken for some years at Wells River, where the Passumpsic joins the Connecticut, but I have not heard of them so far down the river as this before.

*The* BOOK OF THE GAME LAWS *has all fish and game laws of United States and Canada. Price 50 cents.*

## THE RED-THROATED TROUT.

ONE of the most widely-distributed and best known of our native American black-spotted trout until a few years ago was called Clark's trout, in honor of the great traveler. Then it was found that Pallas had previously given the specific name *purpuratus* to this species of *Salmo* and the books carried it along under this designation until the still older name *mykiss* of Walbaum was revived for the fish, which is credited to Kamtchatka as well as Western America. Not having seen specimens of the black-spotted Kamtchatkan trout, I cannot speak positively as to its identity with the red-throated form of Alaska; but if Pallas's description may be depended upon, there is nothing of importance to separate the two.

The red-throated trout ranges from the Kuskoquim River in Alaska through British America, Washington and Oregon to California, where it has not yet been found common. It occurs in the Utah Basin and on both sides of the Rockies in Colorado, Montana and Wyoming. A trout closely related to this form is the most southerly species of *Salmo* in the world, inhabiting streams of the Sierra Madre in Mexico, near the boundaries of Durango, Chihuahua and Cinaloa, at an elevation between 8,000 and 9,000ft.

As might be expected, this trout runs into many varieties, differing in color, size of the scales and other characters. Until within a few years these varieties were discussed and figured under distinct names and represented about a half dozen nominal species. Perhaps some time in the future they may again be restored to their former dignity as our ideas of species happen to vary. It is worthy of note that the typical red-throat in Alaska, which is shown as one of the illustrations accompanying this article, has comparatively few large, roundish black spots on the body, chiefly above the lateral line and evenly distributed along the surface; the head bears a few black spots; the dorsal and caudal fins have a number of black, usually oblong, blotches. In the red-throat of the Rocky Mountains the black spots are usually small specks and abundant only on the second half of the body, while the scales are small.

RED THROATED TROUT (YOUNG). FROM COLORADO.

RED-THROATED TROUT (ADULT). FROM ALASKA.

In the mountain lakes and streams of Colorado this trout comes down to regions whose summer temperature reaches 60° to 65°, when it gradually disappears, extending its range much further, according to Jordan, in clear streams with gravel bottoms than in turbid waters or those with clay bottoms.

This trout attains to a weight of 25lbs., but adults will seldom average above 5lbs. or 6lbs., except among individuals from Lake Tahoe or seagoing examples.

Spawning takes place as early as March, but usually in May and June. Nests are made and the eggs guarded by the male only until the spawning is completed, after which they are left to work out their own future. In seventeen days after impregnation of the egg, the eye spots show, according to Gordon Land, and the hatching period is twenty-five days in water varying in temperature from 52° to 62° at midday.

The natural food of the trout consists of minnows, insects, water fleas and various small rodents which may fall into the water. Where salmon are plentiful the red-throat consumes vast quantities of their eggs. Dr. Yarrow says, "After spawning the trout invariably swim in schools in search of food, and are nearly always accompanied by mullets and suckers. The favorite localities for feeding in the summer are close to the mouths of rivers, the water of which from the mountains is ice cold, from 10 to 12ft. deep, and the current very swift." In the winter the trout retire to the deepest parts of the lakes, to escape the severe cold.

Dr. Yarrow found the best baits for this species to be minnows and grasshoppers. In Panquitch Lake the eye of a fish is considered a very tempting bait. When the genial "Piseo" invited me to join him in a fishing excursion at Sitka, we relied mainly on fresh salmon eggs, and usually tied them in a small piece of mosquito netting. In the small lake back of the village, however, we took all we cared for with pieces of fresh beef. Readers of FOREST AND STREAM will recall an amusing account, under the title "Trout and Mouse," of the capture of a very large and crafty red-throated trout, by floating down near him a small mouse fastened upon a chip. Prof. Gilbert, of the U. S. Geological Survey, recently told me how Mr. Henshaw once vanquished an angler of great local fame in Colorado, by a little judicious study of the stomach contents of a captured trout. There were small trout galore and anybody could take more than enough of them; but the big fellows, although plentiful, were too smart to be caught with the common grasshopper. A match was arranged and Mr. H. stipulated that the local angler should fish the stream one day and he should take his turn the following day. The angler went out, fished all day, and brought back one trout weighing 6lbs. Mr. H. was much pleased and volunteered to clean the trout for supper. In so doing he found that the fish had fed principally upon mice. He carefully saved all the fragments suitable for bait and put them away for use; he also shot a ground squirrel and added this to his stock. On the next day he fished the same waters, and invariably opened the stomachs of the big trout he caught and took out the fragments of mice contained in them. When the mice were exhausted he used the ground squirrel. At the end of the day's fishing he had sixteen red-throated trout ranging from 5lbs. to 6lbs. and upward, and was nearly used up after packing in the load; but he had beaten the record, and the local celebrity was "snowed under."

Willard Nye gives a lively account of his success with Utah trout by the use of extemporized flies. The FOREST AND STREAM Trout Supplement contains the story, and to this the reader is referred for the particulars. T. H. B.

[The illustrations of this trout were copied from the Bulletin, U. S. Fish Commission.]

## BOSTON FISHERMEN.

BOSTON, Aug. 13.—Mr. Clarence M. Reed, of the iron firm of E. P. Cutler & Co., of Boston, with several friends from Lowell, Mass., has gone on a fishing trip to Nova Scotia. His Lowell friends are W. P. Edwards, proprietor of the Union Iron Foundry, Henry Edwards, a brush manufacturer, and Frederic Silkes, connected with the Merrimac Corporation. They started on Tuesday last and are to be absent a couple of weeks or more. They go first to a lake about 20 miles from Yarmouth, noted for black bass. Here they will stay some days. But it is scarcely possible that so much of a trout sportsman as Mr. W. P. Edwards will allow so much of a good chance to slip without trying the trout of that part of the world. Mr. Edwards is a frequent visitor to the Rangeley waters, and he has a record of one of the largest, if not actually the largest, trout taken in those waters last year. It weighed over ten pounds. It was taken at the Middle Dam, Richardson Lake. In fact, Mr. Edwards is a lover of angling, and his friends say of him that he "he always has hooks, lines and flies in his pockets." Mr. Reed is not so very much of an angler, but the party he has started with this time will very likely start him off as an enthusiast.

Fly-fishing reports are very quiet just now from the Maine waters, but occasionally anglers start off, and enjoy the outing, even if no great numbers of fish are taken. There is a complaint that most of the good trout waters are occupied, that is, somebody is located there. At every noted pond, lake or stream—noted for its fly-fishing—there are one or more hotels or camps, and expert trout fishermen are camped there for the summer. No wonder the poor transient complains that the grounds are all occupied. The little fishing left for him is necessarily poor.

Mr. A. E. Aldrich, of A. P. Aldrich & Son, of the flour and grain trade at the Boston Chamber of Commerce; Jerome Hilbourne, president of the Melrose Club; H. J. Pettengil, treasurer of the Postal Telegraph Co., and vice-president of the District Messenger Service Co., and Roswell Taylor, of Boston, have gone an a fly-fishing trip to Kennebago Lake, Me. They will be quartered at the Kennebago Lake Camp for some days. Mr. Aldrich says that he cannot be absent many days, but some of the party will spend considerable time in that region. He was somewhat doubtful concerning the possibilities of trout, especially during the hot weather of last week, but he felt that he could not get away from business at any other time; so he was bound to make the best of the poorest of the season for fly-fishing—the midst of hot weather.

The Hon. Daniel Gunn, who has been the head of a noted Boston printing house for a great many years, has just returned from his annual outing. This outing he has made for two or three years in Nova Scotia among the sea trout. This time he fully expected a couple of friends to be with him, one from the city of Brotherly Love, but when the day for the steamer to sail arrived they were not at hand. Mr. Gunn got on board with his tackle, just the same. He went by steamer to Halifax, and thence by land to Antiganish. Here he hired a team and drove across the country some fifty miles to the vicinity of Island Harbor, Seal Harbor and Coddle Harbor. It was at Coddle Harbor that he had his best sport. But the fishing was generally good and all that reasonable mortals ought to ask for. He took in all over 100 sea trout. The largest ones weighed 3lbs., with a number weighing from 2¼ to 2¾lbs. Mr. Gunn is delighted with the country there, and declares it to be a paradise for sportsmen. Moose he says are very plenty. He came across an honest old guide at Coddle Harbor, John McDonald, and learned from him that he had killed in all, since he commenced the business, over 100 moose. He has on exhibition at this time the most beautiful set of antlers Mr. Gunn ever had the fortune to see. Mr. Gunn did not take his usual three fish at one cast this time, though all of his trout were taken with the fly. A few years ago he took, on the same cast, a sea trout, a perch and a haddock, and this was told of in the FOREST AND STREAM at the time. Now his only ambition is to take a sea serpent, a shark and a whale at the same cast, and when he succeeds the FOREST AND STREAM shall be made acquainted with the fact.

Mr. A. T. Waite, assistant managing editor of the Boston *Herald;* his brother, C. N. Waite, and Mr. and Mrs. C. T. Odiorne left Boston on Tuesday for a fishing and an outing of a couple of weeks or more. Byron, Me., will be their objective point, though they will make something of a tour through the fishing regions of Oxford county. They will visit the young and booming city of Rumford Falls, where Mr. Waite has a brother engaged in the boom all over. From thence they will go up the mountain road to Byron.

Mr. W. T. Farley, of Farley, Harvey & Co., dry goods jobbers of Boston, has just returned from a most delightful ocean trip to Prince Edward Island and Cape Breton. He was accompanied by Mrs. Farley, and by Dr. Clark, of Auburndale, and a Mr. Peabody, with their ladies. They left Boston by steamer, and actually made the steamer their home a good part of the time. Mr. Farley had intended that this was to be a good deal of a fishing trip, but the attractions of ocean voyaging in summer in good weather were almost too great. They landed at Charlottetown, and from that point they took a carriage over to Rustico and Seaside, there intending to have some fun fishing. On the way over and near the church at Rustico they came into what is actually almost an Arcadian village. The inhabitants are almost entirely the descendants of the Arcadians. As they neared the little church of the village on Sunday morning they saw that everybody was out in gala attire. The men all wore Derby hats, and the women, many of them, had white kerchiefs pinned over their shoulders and wore poke bonnets, in true Arcadian style. As the carriage neared the church the priest headed a procession and came out to meet the carriage. He came along with all dignity till he saw he had made a mistake. He had mistaken Mr. Farley for Cardinal Gibbon, of Baltimore, who was expected to visit the church that day. A carriage that would carry six was no usual sight in that country, and very naturally the priest had thought that it was the grand turnout of the Cardinal. He explained his mistake in a most genial manner, however, and invited the excursionists inside the church and to wait and see the Cardinal, who was expected every minute. The party staid and saw his holiness, and were much pleased. They wished him joy and that he might be the next Pope. Then they continued on their journey without further adventure than the delights of a summer drive over a country of such primitive loveliness. They stopped at Seaside, which is something of a summer resort. Here Mr. Farley and Dr. Clark engaged passage with a boat's crew of Arcadian fishermen, who were going out after mackerel at the unreasonable hour of 1 o'clock on Monday morning. Mr. Peabody and the ladies wisely, as it proved, concluded that it was too early for them. The sail down to the fishing grounds was a fine one, but alas the wind sprung up and there was a sea on. The moon had not gone down in the west and the sun was rising in the east. The boat was first down in the trough of the sea and then on top of the billows, and the Cardinal begun to be dizzy-headed, and concluded that he did not care to see the sun and moon both at once. They came to the mackerel fishing grounds and two anchors were thrown out, one at each end of the boat. These soon "brought her up standing," and in the worst position possible for landsmen of light stomachs. The Arcadians lighted pipes that were truly Arcadian. Then they threw out bait—clams and fish mixed—that was beginning to get Arcadianed very fast. Occasionally they would pump bilgewater from the hold, as almost every sea would let a little too much clean water into the craft, and this bilge water was worse than Arcadian. It was terrible. Mr. Farley and the Doctor begun to catch mackerel. The Doctor enjoyed the sport, but his friend soon gave in and begun to put his head over the boat on the lea side. The Cardinal was seasick. SPECIAL.

### Curious Catches.

IN the fish trap at St. John's Island, Yarmouth, Nova Scotia, a whale and three albicores were taken July 12. About six years ago the same trap took at one time a whale, four albicores and sixteen barrels of mackerel. A black calf whale about five feet long and weighing 40 lbs. was caught in a net about twelve miles off shore recently by a Cape Elizabeth fisherman. The calf died before reaching port; its mother was not seen.—*Gloucester Daily Times.*

## LEARNING A BETTER WAY.

After making preparations for a month's vacation and getting together rods, reels, flies, etc., my wife and I left Washington, via Washington & Ohio R. R., arriving at Round Hill, Va., at noon. Here we found that the stage would not leave for Castleman's Ferry until the next day, so I hired a private conveyance by which we reached Castleman's in time for supper. After leaving Round Hill the road passes through a very good agricultural strip of land before reaching the foot of the Blue Ridge Mountains; continuing along the pike and up the mountain the village of Snickersville is reached, a quaint old town situated in Snicker's Gap. Passing the village the summit of the mountain is soon gained and the descent on the other side is greeted by a vision that will not soon be forgotten. The little valley lying below, about one mile distant, and that beautiful little Shenandoah River appearing as a silvery thread here and there, as it winds around low hills and heavily wooded country, and what makes it yet more attractive to the lover of rod and reel is the knowledge that its waters abound with that gamy and most wiry fish, the small-mouthed black bass.

The old Castleman homestead is situated about 200yds. west of the river, on a very high hill, and directly overlooks the valley where many a sportsman and summer tourist enjoys the excellent fishing, good living and the hospitality of an old Virginian family. My first question on arrival was, "How are the bass biting?" "Biting very good to the spoon," was the answer. Not having provided myself with a spoon, you can imagine my feelings. However, after a good bath, a good dinner and a pipe on the broad veranda, from which we could see the flow of the beautiful river below, and watch it as it rushed and foamed over short rapids and then glide along through its snake-like path to take another plunge a few hundred yards further on, I felt as if I could overcome my chagrin at not having a spoon. Soon the sun disappeared and we passed the time away in conversation. Bass were quite plentiful I was told; suckers, pike and sunfish were also numerous. Being thus assured of good fishing, we retired for the night.

At daylight we were awakened by the crying of two pea fowls, which were on hand each morning, making the use of an alarm clock quite unnecessary and saving me considerable trouble, as I did not have to bother oiling and winding the birds. After breakfast I was soon on the way to the river, taking with me an old pair of pants, shoes, shirt and broad-brimmed hat. Having reached the river, changed my clothes and carefully hiding with grass the garments just put aside to circumvent any mischievous small boys who might be near, I waded in waist deep, and tying a fly to my three-foot leader was ready for business. What to do next I hardly knew, as I had never fished with the fly before and had not even seen them used. I naturally wanted to be alone, and alone I was. Pulling off about fifteen feet of line, and getting it well behind me, I brought the rod overhand with a swoop that would have done credit to a professional baseball pitcher. The movement reminded me of throwing a mud ball with a limber stick. The fly described a circle having a radius of say 22ft. and was stopped by an overhanging willow branch, the hook burying itself in a small branch, causing the rod to bend nearly double. I soon had the branch in hand, hook extracted, and a position far enough from shore to prevent another hanging. Looking around to make doubly sure that I had no audience, and being encouraged by the pleasant sight of a bass breaking water at frequent intervals to secure an unlucky fly or bug, I faced down stream and attempted another cast, throwing the fly, right, left, forward and back; in fact, lashing the water all around me within a 40 foot circle. Every time in recovering the line that hook would make straight for my head, keeping me dodging to the four points of the compass, and fearing every minute that a surgical operation might become necessary before I took my first bass with the fly. Talk about hard work with a 20oz. rod, an 8oz. reel, and my lunch tied between my shoulders, with the thermometer at 90. It would be hard to tell what portion of the human anatomy was the wetter, that in or out of the water. Wading down stream and keeping this acrobatic like performance up for three-quarters of an hour without any success, I finally came to the conclusion that it was time for a smoke and a rest; the smoke, too, might bring a change of luck.

If there hadn't been fish there, all around me, I might have consoled myself with the thought that my operations had been carried on in an intelligent and knowing manner; but the evidence was all against me. Suiting the action to the word, I stuck the butt of the rod between my legs, and just as I struck a match (and I didn't do it on the heel of my shoe either) my rod gave a jerk and the reel began to hum. Grabbing my rod, I was soon convinced that the fish was well hooked, and I gave him the butt as I had often read of parties doing in Forest and Stream, and reeling in as fast as possible I soon found that it wouldn't do, as there was entirely too much strain on my tackle: therefore I gave him a little more line. I had fine sport watching and feeling the line cut the water from left to right, now coming directly to me and giving me all I could do to keep the line taut, then nearly doubling the rod as he made great efforts to get away. Knowing that 6lbs. bass had been caught in the vicinity, I imagined that there must be a ten-pounder on the other end of my line. Now for the first time he breaks water, throwing himself fully 18in. in the clear, and what a beauty, not a ten-pounder, but about 2lbs. After playing him for several minutes and getting him pretty well tired out, I tried to get him in. Not having a net I was at a loss to know how the feat was to be accomplished without the risk of losing the fish. Gradually working my way to shore, making a grand rush over the last ten feet, I succeeded in safely landing a 1¾lbs. bass. I pinned him down with both hands and knees, and soon had a stout cord through his mouth. The hook, which was firmly fixed in the upper jaw, was soon extracted, and washing the bass thoroughly I laid him on the grass, lit my pipe and sat there admiring the beauty as he lay gasping for life. Having securely fastened the stringer to my pants, I again waded in to try for the bass that were still breaking water every few minutes. I had scarcely gotten the line into good play, when another bass struck. Feeling very much elated over the first capture there was little doubt in my mind that the second would be very easy to effect; but in my haste to secure the prize I caused him to at once break water, and while in the air he did the triple forward and back double summersault act and disappeared. To make matters worse, my lunch came untied and got a thorough soaking before I could regain it. Spreading it out on a flat projecting rock to dry, I, too, took a sun bath. If any of you have ever eaten water-soaked lunches you can sympathize with me.

Having spent a good half hour in drying and trying to eat that lunch, I went into the stream again. Close to a small riffle, in water knee deep, I had a strike and landed a sunfish or tobacco box, as they are here called. Before leaving the spot I hooked and landed three more, and was surprised to find how readily they took the fly. Starting for the house and while following a narrow trail, I could hear the splash of hungry bass as they jumped for their prey and I could not withstand the temptation to go back several times and try for them. Finally, when near the starting place, I saw signs of a large bass. Wading slowly out and casting the fly as best I could I managed to hook myself in the seat of the pants. The hook was soon cut out, and casting from right to left I soon saw a rush and for an instant it seemed as though my hook had caught in the limb of a tree; but no, it was a bass, and a big one, too, as I knew when he started down stream. I followed and gave out line as fast as I could, fearing that I would lose my tip or line, and worst of all, the fish, if I attempted to hold my ground and rely on science of manipulation. The bass soon lured me into a trap in the form of several large boulders, which were hidden from view by about one foot of water. Gradually the fish worked his way in and around the stones, and the thin silk line not being strong enough to stand the sawing motion against the sharp-edged rocks, soon parted. I saw the bass as he made a dart down stream, taking my fly and about eight feet of line with him. This was tough luck for a beginner, and, gentle readers, you will sympathize with me when I tell you that the string holding my whole day's catch had worked loose in the excitement attending the play of the departed bass and was perhaps drifting a half mile down stream before I discovered the loss. Their loss is all I did discover, never heard of the fish since. I was mad clean through, and getting into my clothes I started up the hill toward the house.

Passing a blacksmith's shop where a half dozen idlers were attending the shoeing of one horse, I was hailed with a query as to the whereabouts of all my bass. Having truthfully explained to them that I had caught one bass and four sunfish they all laughed. One of the party said, "I am going after bass to-morrow; come and go along and I will show you how to hook bass." I crossed the road and entered the shop with the intention of telling them what I thought of them, but they were so good natured about their jokes that it put me in good humor also. I made arrangements to accompany two of them fishing early the next morning. On my way to the house, tired and hungry, I debated what would be best to tell them. If I told them that I had caught some fish but that they all got away it would raise a laugh, so I concluded to say that I hadn't caught any.

Reaching the house there they all were, the ladies reading and the men lounging around waiting for the supper bell to ring. "Hello, I see you are not loaded down with fish," says one. "I thought you were going to have bass for supper," said another. So it went the rounds, when one gentleman more observing than the others discovered fish scales on my hands. Then they all began to search me, saying that I had caught a fish. One insisted it must be in my mouth, others turned my vest pockets inside out, looking in my watch pocket, and in short did many little annoying things. Supper was soon announced, after which we adjourned to the veranda to take a smoke. A party of us made arrangements to go gigging the following night. Having set my alarm clock, which I always take with me on such trips, I turned in.

Five o'clock rolled around very soon, it seemed, and I was up and dressing. Hurrying down stairs I found breakfast and a good lunch waiting for me, and was soon at the appointed place of meeting. Starting off without delay we walked along down the river for about one-half mile to a point my companion styled the starting. These men were familiar with the section, being old residents, and were good fishermen. I was determined to take their advice and try to learn something.

The signs were favorable for good sport my guides said. Reaching a pretty little spot under some overhanging willows and grape vines, we changed our clothes; an old pair of pants, an undershirt, a pair of hob-nailed shoes and a broad-brimmed hat was all that was required. We were soon in the water, three abreast, and casting down stream. I always considered it necessary to keep quiet when wading, but my friends, Horace and Joe, on the contrary kept up a continual noise, singing, whistling and hallooing as we went along. I felt sure that they would drive all of the fish out of the river. To my query as to the effect of such noise, they answered that it would have no effect whatever. Being the tallest of the three, my position was in the middle, in the deepest water, often ranging from my waist to the shoulders. Joe hooked and landed the first bass; two minutes later Horace followed suit, landing a ¾lb. bass.

It being the first time I had ever seen a fly cast I was spell-bound for the time being and thought it one of the prettiest sights I had ever looked at. Being about 6:30 A. M., the air was fresh and pleasant, counteracting the heat from the water, which was very warm at that time of the year, and the river looking exceptionally pretty that morning, with its banks overhanging with rich foliage; beyond all it was pleasure to watch my companions casting the fly, as they did it to perfection. At no time did the fly seem to reach 4 or 5ft. above the water, with 40 or 50ft. of line out. The line would seem to pass over their shoulders within a few inches of their heads and touch the water at the full length of the line with hardly a ripple. It was especially pretty to see one or the other approach near an overhanging tree, with its branches touching the water, where you could almost count on one or two bass lurking around a sunken log or half hidden boulder, shielded from the rays of the sun. There is in most every case an opening in the branches and into this space they would put the fly without touching a leaf, and on an average of two times out of five they would be rewarded by hooking a fine bass.

While watching them with intense interest, holding the rod over my shoulder with the line trailed straight out by the swift current, I was surprised by the sudden whir of my reel. My companions being near, called to me to give him the butt, which I did by bracing myself and pointing my tip up stream. As my rod began to double they called to me to give him line, which I proceeded to do until there was none left and I had to follow on down stream, when I found out to my disgust that a drift log passing had fastened itself to my hook. Having out about 75ft. of line and following as fast as possible, taking in all the line I possibly could, Horace told me to make shore at my left as there was deep water below. I promptly started, but the log being large and heavy would not be guided so easily. Being then in water up to my shoulders and not being willing to lose my only line, I decided to swim a distance of about 150yds. to shoal water at the edge of a small rapids. As ill luck would have it the log got there first, and over the rapids it went parting the line at the leader. Putting to shore I soon had on a new leader and flies and joined the party, who now had five nice bass.

Having decided to cross the river and fish the other side, which was better, we joined hands and started across the edge of the rapids. The bottom was very rough and the water waist deep, but we managed to get over all right, and we at once resumed our fishing. This time I was near shore. Coming to a log that was barely covered with water, I cast my fly a few inches on the opposite side of the log, when there was a rush and a whirl, and my first bass for that morning was hooked. In about five minutes I had him on my string. Casting again exactly in the same place I had another strike, and hooked my second bass and had some fun with him. Horace and Joe stood close by coaching me. The water being perfectly clear, we could see every movement of the fish when reeled up close. He was finally landed and proved to be a fine specimen, weighing 1¾lbs.

Being thus encouraged, and with a promise of better fishing grounds below, we strung out and started casting again. This time I was in the middle, and only a few minutes elapsed when I hooked Joe in the collar and came very near treating Horace in the same way. Then the boys decided to give me a wider berth. By this time we could see bass breaking water all around us, and not getting many strikes we decided to change our flies to ones of a more yellowish hue. This change had a good effect, for as soon as Horace cast he had a strike, and fastened and landed a 1¼-pound bass in two minutes, while almost at the same time Joe hooked and landed his fish. By this time we came to rapids again, and, the water being too deep below on that side, we decided to eat our lunch and then cross over and fish below where the water was shallow.

Under the grateful shade of some sycamore trees we ate our lunch, smoked our pipes and watched our ten bass as they plashed around in the water. One thing I learned of my companions, which has proved of very much importance to me, and that was now to string bass or any other kind of fish. Instead of stringing them through the gills, and drowning them in a very short time, as I had been in the habit of doing, they cut them under the lower jaw, back and under the large muscle forming the lower part of the mouth, which is formed of very thin skin. By stringing them this way they will not only live hours while in the water, but a day or more. Being ready to start again, we attempted to cross the rapid in single file, Horace first, myself about 25ft. behind, and Joe bringing up the rear. The water was a little less than waist deep and coming down with a rush.

When near the opposite shore Horace told me to look behind, and turning around quickly I beheld a very funny and ridiculous sight. There was Joe, who had stepped on a loose rock and lost his balance, making rapid progress down stream in the shape of a ball, first his head and then his heels being in sight. He continued on in this way for a number of revolutions before regaining a foothold. It was a sorry sight to see him continue his march shoreward, his fishing-rod broken, to which he held manfully, hat gone and blood running down the side of his head, which was slightly cut by the sharp edge of a rock. The first word uttered by him was, "Thank the Lord, I ate my lunch." To his as well as to our surprise his fish were still fastened to him.

All hands being again on terra firma, we set to work splicing and wrapping Joe's rod, which was soon in working order again. Being ready once more to proceed, Joe noticed a yellowish tint in the water, which we found out to be mud, my companions claiming that there must have been rain up the country the night before. The muddy water they said often confines itself to one side of the river, not mixing with that of the other side for several hours. So hurrying down stream for some distance we crossed over and found the water perfectly clear, there being a distinct line near the middle; one side was now clear and the other was so muddy that we could not see six inches below the surface. Not losing any time we went to work with a will. It seemed as though the muddy water had the effect of driving the bass over to the clear side of the river and we had good fishing for about three hours, Joe catching altogether thirteen bass, Horace eleven, and I eight bass and a sunfish. As the water was getting muddy on our side, and having had glory enough for one day, we decided to start for home. Taking up our line of march we followed in single file a narrow trail along the banks of the river. When about half way home Horace proposed that we go to a pond about 100yds. to our left and try to catch some bullfrogs. Joe and I being in for it we were soon there. The pond was, say, 100x50yds. in size and full of lilies, grass, etc. Bringing our rods and flies into operation, we soon had five large bullfrogs.

Tired, hungry and hot, we again took up our line of march toward home. Leaving the banks of the river, we took the road leading past the smithy. There were several of the same parties at the shop who had guyed me the day before. They now came out to congratulate me.

At the house, as on the previous evening, the folks were all congregated enjoying the cool breezes. I walked up with the air of a lord. My eight bass, one sunfish and three bullfrogs, as they lay on the green grass, made a sight to gladden the heart and satisfy the soul of any man, woman or child who has the slightest inclination for such sport. It is needless to say that we had fish and frogs for supper, and fish for breakfast. My better half was the only lady that we could induce to partake of the frogs.

I can cast the fly now more gracefully and with better effect, at the same time those two days of my first fly-fishing will linger in my memory until I enter that sphere where fly-fishing is unknown. Cliff.

Washington, D. C.

## Forest and Stream's Fishing Postals.

"DROP US A LINE" ON A POSTAL CARD.

Fishing News, Place to Catch Fish, Fish Caught, Fishing Incidents.

WENT into country trouting. Place advertised: "Lovely trout streams right at door. Several. Milk, butter, eggs. Team will meet you." Went. Friend, too. Reception cordial; $1.25 to meet us. Own team. Very cordial. But streams protected. Man or woman waiting in every field. Shotguns. Bad language. Effective. Other streams fished to death. Three and 4in. But 'way over yonder 15 miles fishing lovely. Whoppers. Glad to take us. Guess not. Interest in us fading. Small boy would dig worms. Guess not. Fading, still fading. Faded away. Home; $1.25 to depot. Lost interest.

O. O. S.

WATERBURY, Vt., Aug. 8.—Friend S. while trout fishing last season caught a fine trout which he slipped in his pocket, intending to transfer it to his basket later. But the trout had other plans and promptly flipped out, regaining the stream. A few days since S. was fishing in the same place and caught a good one, which he placed in his pocket only to have the trout flip out as before. S. figures it out that this was the same one he caught before and thinks him fully "educated." F. E. A.

THE Columbia Fishing Club, Jr., of Washington, D. C., arranged to leave the city on Sunday for a two weeks' trip to the lower Potomac. The members who will make the cruise are: W. G. Walde, Geo. F. Smith, Dr. E. Burke, Rev. E. Atherton, Joseph Barres, Ben Bryan, John Burns, E. Gorman, John Harbin, G. F. Lewis, Fred Lewis, E. McDonald, S. Murphy, W. Murphy, J. L. Neurath and James Walsh.

MR. EDWARD M. EARLE is managing director of a company formed for the development of the fisheries of Jamaica. Readers of FOREST AND STREAM are aware that Jamaica has a wonderful wealth of food and game fish as well as other useful marine animals. Among the objects of the company are to catch, cure and sell fish, to supply the local markets and others outside with fish, mollusks and their products, to plant and cultivate oyster beds, and to establish and protect turtle nurseries. Mr. Earle has labored long and persistently to develop the Jamaica fisheries and he certainly deserves a generous reward and success.

## Fishculture.

### REARING TROUT FOR DISTRIBUTION.

*Editor Forest and Stream:*

It is to be presumed that a public journal of the character of FOREST AND STREAM is interested in giving to its readers all the light that can be thrown upon questions in which they are interested, and that it will accord fair and impartial treatment to the advocates of all questions which are of public concern.

The columns of your valuable paper have been open to the advocates of yearling or fingerling planting of fish for a year or so, and they have been given opportunity to publish their ideas upon the theories they hold. The paper itself has rather seemed to lean toward the advocacy of this theory in such expressions as it has given. It is fair to presume of course that there is no pride of opinion in this matter, however, which would prevent you giving a full opportunity to the other side to be heard.

The question of fry vs. fingerling is a question in which all intelligent and progressive fishculturists should be interested, and the public should be given the benefit of such experience as they may have, and the question should be met fairly and discussed with a view of determining in a candid and fair manner what is best, because after all the public are most concerned in the questions of economy and results, and care nothing for fine-spun arguments and pet theories.

As the papers presented on this question before the meeting of the American Fisheries Society, which met last May in New York, were not printed in full, as were all the other papers presented at the meeting, and as the general argument contained in my paper seems to me to have considerable weight in determining this question, will you kindly permit me to briefly state my position upon this matter.

The two points which have the most bearing upon this question are:

1. Has fry planting been a success or failure in the stocking of public waters?

2. Has it been expensive or economical?

As to the first point, it would seem that it has been successful beyond controversy. This is attested by the successful stocking of innumerable streams with the brook trout (*Salmo fontinalis*) in the Eastern, Middle, Northern and Northwestern States. Its entire success in the Lower Peninsula of Michigan and some portions of Wisconsin is beyond all cavil or chance of dispute. In 1841 the Lower Peninsula streams were barren of brook trout, and none ever existed in them, with perhaps the bare exception of two or three streams on its extreme northeastern shore, until they were artificially introduced. The result of fry planting in this peninsula has been to stock hundreds of streams which have for many years since such stocking furnished most excellent fishing. This is also true of certain portions of Wisconsin, while the thousands of streams of the Eastern and Middle States which have been thus stocked furnish incontestible proof of the success of fry planting.

The Penobscot, the Hudson, the Delaware, and other rivers of the Atlantic coast have demonstrated beyond all question that the fry of the anadromous fishes like the salmon and shad may be planted in them successfully and with the certainty of a satisfactory result. This stocking of these rivers has been even a more trying test of the success of fry planting than the stocking of our inland streams. Not only must this fry encounter the natural enemies they find in the stream, but the vastly greater number to be found in the ocean itself, and yet the statistics which have been published of the fishing on these rivers show that great results have been secured.

Hon. Eugene G. Blackford, who is now sojourning on the Pacific Coast, in an interview in the San Francisco *Chronicle* of May 24, furnishes one of the strongest arguments upon fry planting. He says: "Fifteen years ago the United States Fish Commission procured from New York and sent here 80,000 young fry of the shad, less than half an inch in length, in charge of Seth Green. They were planted in the Sacramento River, and were the first shad ever seen in Pacific waters. To-day, I should say, judging from the price, that shad are more plentiful here than in the East. Within the week the price has been one and a half to two cents a pound wholesale for shad of an average weight of 5lbs. I have seen many shad here weighing 12lbs., and one exceptionally large one weighing 15lbs. Now I think that is remarkable when you consider that the average weight of our Connecticut River shad in the East is 4½lbs., and that the largest of which there is any record is 11lbs."

"Then, too, I would like to say a word about your striped bass. Only nine years ago there was not a striped bass in your waters. At that time I was president of the New York Commission, and at the request of the United States Commissioners I procured 1,500 small fry about an inch in length. They were sent out here and planted, I think, somewhere near the mouth of the Sacramento River. Now I find them in your markets in such quantities that they are sold as low as 15 cents a pound. They would probably bring a higher price if your people were as well acquainted with the merits of the fish as we are in the East, where they readily bring from 30 to 40 cents a pound, when the supply is at all light."

There is no question that the planting of fry is always successful where the streams are suitable. The elements of proper water and food are the main things to be considered. If these do not exist the stocking will be a failure, whether the stream be stocked with fry or yearling or adult fish.

As to the cost. No person familiar with fish breeding and rearing will contend it is not vastly cheaper to stock with fry. A calculation of the cost of hatching and planting to the Michigan Board of Fish Commissioners for the seasons 1888-9, 1890-91, shows that the expense per thousand per fry for these two seasons respectively was 10 51-100 and 10 50 100 cents per thousand.

These were not exceptional years, and I have no reason to believe that with some slight variation these figures cannot be equalled by any other board engaged in breeding equally large quantities. Certainly these figures are low and the State can feel that the money devoted to its fishcultural interests is spent with reasonable regard for economy.

The strong argument for the original instalment of hatching stations by the States in the early inception of these enterprises was the economy in maintenance and the maximum of results. With the greatly reduced numbers of fish which would have been the result of attempting to stock the streams and waters of this country to the extent to which they are now stocked, generations would have been born and passed away before present results would have been attained.

To persons who can afford private preserves it is as a rule of not much consequence what the original cost of stocking preserves may be. It matters little to them whether the fish needed cost ten cents a piece or ten cents a thousand. Such persons are as a rule more interested in securing a quick result from plants, and if they can secure a year advantage in time by planting yearlings they do not count cost. But to the greater body of the people who look to large results at a reasonably small outlay, the fry planting appeals as being entirely satisfactory in results from every point of view. HERSCHEL WHITAKER.

DETROIT, Mich., July 14.

### ROD AND GUN AND CAMERA.

As a recognition of the important place of amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, the FOREST AND STREAM offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.

The subjects must relate to FOREST AND STREAM'S field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of FOREST AND STREAM.

All photographs will be submitteed to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities; and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the FOREST AND STREAM. This applies only to the particular prints sent us.

From time to time we shall reproduce by the half-tone process samples of the work submitted, and should the interest in FOREST AND STREAM'S Amateur Photography Collection prove to be what is anticipated, we may ask for an expression of opinion by a vote of all our readers after the manner of the successful and famous "Camp-Fire Flickering Vote." Such popular vote will be quite distinct from the award by the committee.

### Low Rate Harvest Excursions.

THE announcement that the North-Western Line, comprising over 8 000 miles of thoroughly equipped railway, has arranged to run two low rate Harvest Excursions during the months of August and September, will be gladly received by those who are interested in the development of the great West and Northwest, as well as by those who desire to visit this wonderfully productive region at a season of the year when exact demonstration can be made of the merits and advantages it offers to home seekers and those in search of safe and profitable investments. These excursions will leave Chicago on Aug. 30 and Sept. 27, and tickets can be purchased at the very low rate of one fare for the round trip to points in Iowa, Minnesota, North and South Dakota, Nebraska, Wyoming, Colorado, Utah, Idaho and Montana. They will be strictly first-class in every particular, and will be good for return passage at any time within twenty days from date of purchase. Full information concerning rates and arrangements for these excursions can be obtained upon application to any coupon ticket agent, or to W. A. THRALL, G. P. T. A., Chicago & North-Western Railway, Chicago.—*Adv.*

### The Adirondacks.

Sportsmen and others intending to visit the Adirondacks should send to J. W. Burdick, general passenger agent of the Delaware & Hudson R. R., Albany, N. Y., for the company's illustrated guide to the Northern resorts, which will be sent post paid on receipt of six cents.—*Adv.*

"Papa," said a little Washington girl, "tell me a story." "Well, I'll tell you a true story." "I don't like true stories." "I don't know any other kind." "Oh, yes, you do. Tell me 'bout the last time you went fishin'."—*Washington Star.*

## The Kennel.

### FIXTURES.

DOG SHOWS.

Sept. 12 to 16.—Fourth Annual Dog Show of the Toronto Industrial Exhibition Association, at Toronto, Canada. C. A. Stone, Sec'y.

Sept. 19 to 22.—Third Annual Dog Show of the Kingston Kennel Club, at Kingston, Canada. H. C. Bates, Sec'y.

Sept. 20 to 23.—Western Michigan Kennel Club, at Grand Rapids Mich. H. Dale Adams, Galesburg, Mich., Superintendent.

Sept. 27 to 30.—Dog Show at Ottawa, Can. Alfred Geddes, Sec'y.

Oct. 25 to 28.—Omaha Kennel Club, at Omaha, Neb. E. L. Marston, Sec'y.

Nov. 22 to 25.—Brooklyn. H. W. Huntington, Sec'y, 148 South Eighth street.

1893.

Jan. 5.—Gloversville, N. Y. F. B. Zimmer, Sec'y.

Feb. 21 to 22.—Westminster Kennel Club, New York city. Jas. Mortimer, Supt.

June 13 to 17.—World's Fair, Chicago.

Sept. 7 to 10.—Hamilton, Ontario. A. D. Stewart, Sec'y.

FIELD TRIALS.

Aug. 31.—Manitoba Field Trials, at Morris, Man. A. Holloway, Winnipeg, Man., Sec'y.

Sept. 5.—Northwestern Field Trials Club, at Morris, Man. Thos. Johnson, Winnipeg, Man., Sec'y.

Oct. 25.—Third Annual Field Trials of the National Beagle Club, at Nanuet, N. Y. Bench show of the club Oct. 24. H. V. Jamieson, Sec'y.

Nov. 7.—International Field Trials Club, third annual trials, at Chatham, Ont. Amateur Stake, Nov. 7. Open Stakes, Nov. 8. W. B. Wells, Sec'y.

Nov. 7.—United States Field Trials, at Elizabethtown, Ky. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 8.—New England Field Trials, at Assonet, Mass. E. Knight Sperry, New Haven, Conn., Sec'y.

Nov. 14.—Fourth Annual Trials of the Brunswick Fur Club, at Princeton, Mass. J. H. Baird, Sec'y.

Nov. 15.—American Field Trials, at Columbus, Ind. W. J. Beck, Sec'y.

Nov. 21.—Eastern Field Trial Club Trials, at High Point, N. C. W. A. Coster, Sec'y.

Nov. 28.—Philadelphia Kennel Club Trials, at High Point, N. C. F. G. Taylor, Sec'y.

Dec. 5.—Central Field Trials, at Lexington, N. C. Col. Odell, Sec'y.

Dec. 19.—Irish Setter Field Trials, at Lexington, N. C. Dr. G. G. Davis, Philadelphia, Pa., Sec'y.

1893.

January.—Pacific Coast Field Trials, at Bakersville, Cal. J. M. Kilgarif, Sec'y.

Feb. 8.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y.

### ABOUT THE BEAGLE CHALLENGE.

*Editor Forest and Stream:*

Under date of Aug. 7 the Hornell-Harmony Kennels, per "Uncle Dick," replies to my "Challenge to Beagle Owners" and he opens up as follows, viz: "Any man, woman or child can buy good dogs if they have the cash, but it requires gumption to breed prize winners," all of which is duly noted.

I fully agree with our "Uncle" that a win to the credit of your own breeding is highly pleasing and encouraging.

Supposing you buy an unmatured youngster at a long price, bring him out as your representative in puppy or open class, do you consider the rewards of your anxiety or anticipations less valuable simply because you did not actually breed the bitch?

I contend that the man who speculates on the puppy based on long price, is the man who possesses the "gumption," and not the man who breeds the bitch and turns the puppies out in a pen for better or for worse. The Hornell-Harmony Kennels ask that I change the wording of my challenge to read five dogs, but three must be bred by owner. If you have five beagle dogs and I have five, are yours better or mine poorer, or *vice versa*, because three of yours or three of mine are our own breeding?

My challenge was issued for the express purpose of making it a matter of record as to who had the best five beagle dogs scored on their respective bench qualities.

My challenge further reads that dogs must be over 12in. and under 15in. Why our "Uncle" should confess being puzzled as to my two extreme sizes I am puzzled to know. A beagle under 12in. is not bred for the size he has obtained, but is simply a "happenstance," and in eighty per cent. of such cases he was the dwarf of the litter and cannot possibly be considered a good, strong and healthly stock-getter. A dwarf may happen pretty as well as ugly, but he certainly is lacking in bone and substance which is so essential a quality for a good producing stud.

In conclusion and further reference to my challenge I would say that bench show qualities was the only point which I sought to make this time. I will say, however, that if any one has any desire to march his beagles against others for field qualities, a properly issued challenge would be in order, as that would give every one an equal opportunity of accepting. H. L. KREUDER.

NANUET, N. Y., Aug. 16.

### GOOD WORDS FOR THE IRISH SETTER.

*Editor Forest and Stream:*

The red Irish setter dog Don F., advertised in your columns last March, which I bought from Mr. John Fox, of La Fayette, Ind., was in very poor health for two or three months after he reached me, owing to the extremely cold weather experienced in transit here; but he is now in very good form.

I brought him out on July 2 to the Allamuchy Game Farm, Warren county, N. J., kept by Mr. Donald McVicar, who had been formerly keeper for the Duke of Argyle, Scotland, and the Duke of Leinster, Ireland, and keeper of Rutherfurd Park, New Jersey, for the last five years.

I went out to the farm on Saturday, July 30, to find that another red setter, Flash, also advertised for sale in your paper, which I bought from Dr. A. P. Hull, of Montgomery Station, Lycoming county, Pa., had arrived there two days before. He was in fine working condition, and we took both dogs out to the field, where Don F. got a point and Flash backed him beautifully on a covey of English partridge, eighteen in number, the brood being a little larger than full-grown quail. They flushed and crossed a fence into an oatfield adjoining, when the dogs got several points, alternately leading and backing, both working magnificently. They also got a point on a covey of quail, but the little beauties could not fly more than 4 or 5yds.

I think it would be well worth the time and the expense of the trip to go out there and see Mr. McV. raising English pheasants by hand. He has now about 200 of them, varying from a month to three month old. He is also raising Belgian rabbits. Any sportman wanting a competent trainer or breaker to attend to his dogs would do well to call upon him, as he is both trustworthy and efficient in management of all kinds of sporting dogs. P. K.

BROOKLYN, N. Y.

A valuable dog belonging to a resident of the hill bit a drunken man the other day and the anxious owner is thinking seriously of having the animal treated at a Keeley institute.—*Brooklyn Eagle.*

## POINTS AND FLUSHES.

CHICAGO, Aug. 13.—I had recently the pleasure of reading a few paragraphs in "The Practical Kennel Guide," by Gordon Stables, M.D., C.M., R.N., the first time I had seen the work for many years. It served to impress me very positively that doggy literature in all its branches has advanced and improved to a really wonderful degree in the last few years. The conclusions deduced from the imagination are much more rare at present, exposure and ridicule following any attempt at spurious instruction. Not that there is at present a uniform agreement on all subjects or that the knowledge of every individual is of the first quality, but there is greater precision in all knowledge. The advancement has been great. The literature abounds in facts, and it has a greater elegance and finish. I felt this forcibly on reading the following in the work mentioned, the subject being "grass." The learned author, whose name is adorned with many letters, says: "If dogs are permitted, they generally doctor themselves; and what they consider an infallible remedy and panacea for all the ills that can befall canine flesh in the shape of disease, is grass."

Here is some information of inestimable value. First, dogs will doctor themselves if permitted to do so. Observe what a saving would be made and what suffering avoided were this valuable fact known. Learned works on diseases and their treatment would be unnecessary, dog doctors and medicines would be useless, and nurses would have no occupation. Give the dogs a chance. The remedy is grass, free, green grass, winter and summer. I have seen dogs which were apparently in good health eat grass, and I have seen some sick ones which would not, but I believe that the dogs were in the wrong in the matter in the light of the knowledge quoted. It is good "for all the ills that can befall canine flesh in the shape of disease." It will be observed that diseases have "shape." "But," continues the erudite author, "dogs ought always to have free access to grass, and be allowed to help themselves. Grass has no doubt tonic and anti-scorbutic properties. It leaves the bowels in a half-digested condition, and mechanically not only increases the flow of mucus in its passage through the intestines, but also increases the peristaltic motion of the bowels, thus acting as an aperient. Grass is sometimes used by dogs as an emetic, when they swallow anything that disagrees and does not easily leave the stomach."

To sum up, grass is an "infallible remedy and panacea," has "both tonic and anti-scorbutic properties," "increases the flow of mucus and peristaltic motion of the bowels," "acts as an aperient," and is used "as an emetic." What I object to, or rather would like to have seen more precisely explained, is that "it leaves the bowels in a half-digested condition." Dogs with half-digested bowels would suffer discomfort or possibly inconvenience, according to modern beliefs.

There is one paragraph which impressed me very forcibly for the tone of liberality and justice in it, and which we of this land should specially consider, for the sentiment among a certain class of show-goers is very exacting in regard to hedging a judge up with every safeguard against possible favoritism. Following is the paragraph referred to:

"At a little south-country show—Selkirk, I think—was first inaugurated the custom of giving the judges open catalogues to judge from. Several other shows followed suit, such as Maidstone, Jersey and Cork, and I hope to see the day when such will be the general custom. It is, at all events, treating judges as gentlemen, which *most* of them are, and *all* ought to be."

I never could understand the objection to the use of a catalogue by a judge. In the first place, it casts an imputation of unreliability on the judge from the beginning. Second, it accomplishes nothing in the way intended, since the judges know the ownership of the greater part of the dogs, and know the ownership of all the winning ones.

Even if the judge does know the ownership of every dog, there is no inference from it that he would be guilty of favoritism. Of course there would then be no possibility of the judge reversing his decisions of the open class, when he judged the same dogs again in the novice class, if he was furnished with a catalogue. But the difference between a dog which gets c. or he. in any class is very small, and generally could be reversed or withheld without doing any injustice to any dog or owner.

Withholding a catalogue from a judge directly intimates that the judge is unreliable. True, no club, so far as I know, embodies such restriction in its rules; but there is a law of custom and public sentiment which governs the matter. Some judge, of courage sufficient for the occasion, should break away from the time-honored fallacy and unjust restriction and dare the issue. The judge is always open to fair, honest criticism in the event that there be any imperfection or errors in his work, which is safeguard enough. No one, gentleman or man, will do his work up to his best ability, conjointly with good, cheerful feeling, if he rests under suspicion of trickery. While judging is done openly before the public as it is done in this country, petty restrictions are as unnecessary as they are useless. It is hardly to be supposed that any bench show management would employ a judge if he was supposed to be untrustworthy.

On the subject of judging by points, scoring each dog and then comparing the scores, he mildly disapproves of it by saying that "the very best judges of the day admit that judging by points is not at all practical in the show ring." The Beagle Club, I believe, is the chief supporter of judging by points in this country. It has brought out some most ridiculous incidents, such as a dog being scored twice with widely varying results, the second scoring being due to the act of some mischievous exhibitor presenting his dog twice for judgment; and the judge, failing to recognize the dog, scored him again. Nothing shows the fallacy and insufficiency of such a system more than an incident like this. That a judge should vary ten or fifteen points on one dog in scoring him twice is the best proof against its utility which could be offered. In addition to its inaccuracy, the scoring consumes an unreasonable amount of time, so much so that it becomes wearisome. No judge alive can put the relative value of a number of dogs in figures. There is a certain harmony or its absence in the relation of parts and expression which he cannot put in figures. If he could, no one could follow the mental processes by which he reached his conclusions, therefore the figures would be valuable to himself alone. The column of figures, which is supposed to score a dog's value, represents no idea to the reader who is not acquainted with the dog represented. He can form no idea whatever of the dog's form, color, disposition, action, etc. Yet this venerable fallacy still finds its supporters and advocates.

In conversation with a doggy friend a day or two ago, among other matters the powers of dogs' eyesight were discussed. He held the view, which I believe is the popular one, that dogs possessed extremely limited powers of vision and placed but small reliance on that sense, trusting more to the sense of smell to determine any doubts in respect to the identity of a person. He cited the many instances, which are a matter of common knowledge, of the house dog barking at his master as he returns to his door, the dog not recognizing him by sight; but the dog's hostile demonstration is changed to joyous and welcome antics when he recognizes his master by the sense of smell.

I believe that the dog has the keenest of eyesight. The peculiarities mentioned are probably the result of carelessness, or from a habit of using the nose so much that dogs trust to it constantly.

But, on the other hand, there are the many well-known instances witnessed by all duck and upland shooters of dogs sighting ducks at great distances, even when they were mere specks in the horizon, and marking wounded birds accurately at great distances. The comparatively low height of dogs is a great disadvantage in distinguishing objects at any great distance on the same level as that on which they stand. Squirrel dogs when hunting will watch squirrels in the highest trees and note their every movement, a most difficult feat to perform. B. WATERS.

## BEAGLES ON THE TRAIL.

THE following correspondence will no doubt prove interesting to breeders of beagles who may in their experiences meet with similar instances:

*H. L. Kreuder, Esq.:*

The delay in my writing you has been owing to the fact of our having had lately such poor weather for hunting. The first day I took Rabbi out he had to work on quite a stiff crust, strong enough in places to bear the rabbit but not strong enough for his own weight. With the work he did under these circumstances I was well satisfied; he picked up a track, none too fresh, and worked it long and patiently. But I have been puzzled and disappointed by his work yesterday and a day or two ago, the only other occasions on which I have had him out. We have had a fresh fall of snow, a trifle deep, but not too deep for Rabbi to work in, nor deep enough to prevent a friend of mine from shooting yesterday morning four rabbits ahead of a small native-bred dog. I had Rabbi out alone, he worked indefatigably. I found a fresh track and was waiting for an opportunity to put him on, when out he comes from the swamp on this very track, giving good tongue. He works in hearing for a few minutes, then his voice grows fainter in the distance, once or twice at intervals I hear a distant note. Then in about twenty minutes I am exceedingly surprised to have him come running along silent on his back track. This is a fair sample of the work he has done for me. He hunts well and intelligently and has no difficulty in getting his rabbit up, but he won't stick to him. Granted the fact of his having legitimately lost his track on a road or something of the kind, nevertheless he should not give it up so willingly and quickly, he should show more stick-to-it quality. It is natural that the dog should at first be puzzled and thrown out in this doubtless new kind of work, but I hate to see this lack of perseverance. I know very little about the hunting powers of beagles, but certainly without perseverance they will never do for this country. I am disappointed so far, and would like the benefit of your opinion and advice. My having kept Rabbi so long makes me his owner, at the same time if you have a dog you think would be better for my work I should like to hear on what terms you would make the trade.

I am very anxious to introduce, if possible, beagles to this country; for the hunting of rabbits and deer, for my own use and for the general improvement of the stock. The native-bred dogs are of a most nondescript nature, now and then you will find a rattling good hunter, but breeding from mongrels is, as you know, absolutely uncertain and very unsatisfactory. Mr. Randolph has had an experience very much like mine. O. H. PALMER.

SARANAC LAKE, N. Y.

*O. H. Palmer, Esq.:*

Your esteemed favor of the 22d inst. at hand. Your account of the doings of Rabbi I find highly interesting and instructive. You ask my advice and opinion on the shortcomings of the dog.

In the first place new owner and surroundings must be considered. Secondly, the dog has been accustomed to running in a pack and in a measure dependent upon a pack support. Working up on an old trail, making the start and trailing first heat are strong and essentially good qualities for an individual dog to do with satisfaction. After the game has the trail and angles at will, then the most difficult work of accurate trailing begins, and at this point the individual dog misses the pack support. I deem it quite natural that a single dog at this point becomes disheartened after many efforts to recover the trail and finally becoming fearful of having strayed too far from the gun, returns. In a strange locality the surer course for returning is on his own track.

Under such circumstances the dog should be taken back and every possible support should be given him for a fresh start and so on until the game is bagged. Due allowance should be made for nature and condition of ground where the game is lost. If hard and flinty, possibly a windy knoll where scent is rapidly removed, then a dog as well as the gun should range wide, and if persevered in the game is usually found with head and ears pressed low. During our recent field trials I have seen good dogs run over an angling point and then range wide. A dozen and more, however, would scatter about and game finally start in the very center of the group.

When I sent you Rabbi I never was more earnest in sending out a thoroughly good dog, and I still remain in the belief that I fulfilled my purpose. Do not consider though that in your expressions of disappointment, etc., that I misconstrue your meaning, as on the whole I feel rather pleased with the result of Rabbi's doings, for I otherwise construe what you now deem essential defects. Let the dog become thoroughly familiar with owner, ground and game, and give him the assurance that he works the game for your gun and not for pastime, and if after a fair trial under such conditions you still consider him not the dog for your purpose, I will cheerfully accept his return and pay expenses for his homeward trip.

Kindly keep me advised from time to time and greatly oblige. Yours very truly, H. L. KREUDER.

NANUET, N. Y.

## NOTES AND NOTIONS.

THERE are few greater annoyances to a conscientious dog owner than his dog being a "roamer;" the dog is not at home when wanted there, generally being at some place where he is not wanted.

An excellent cure for this habit is to induce persons on whom the dog may trespass, to tie a tin pan to his tail and turn him toward home; the experience is so terrifying to the dog, and is so directly connected with absence from home, that it almost invariably effects a cure.

Sentimentalists among dogmen, the variety who rant at any punishment being inflicted on their dogs, may exclaim at encouraging such cruelty as attaching a tin pan to a dog's tail, but no force is to be found in any such contention. Whether anything is cruel, depends on the purpose in view; tying a tin pan to a dog's tail for amusement, is as vile a piece of cruelty as can be named, but if done as a remedy, it is perfectly proper.

Most dogs can be frightened out of trespassing on any particular premises by shooting them, carefully gauging the powder, shot and distance so that the dog will only be stung, not "shot," and The Onlooker has known of dogs being thus kept away, when the ground was covered with snow, and no trace of blood could be found in the path of the fleeing dog. A persistent ravager may be struck with stones, clubs, etc., and only learn caution and cunning thereby, but the shot rarely fails as a remedy. The Onlooker's theory for this is, that it is the sting of the shot, accompanying the report of the gun, that terrifies the dog.

THE ONLOOKER.

# DOG CHAT.

### Shipping Dogs.

In *Pacific Field Sports* this last week the editor speaks very severely as to the state that the St. Bernard Lady Hibernia was in when she arrived in San Francisco, and it will be a lesson to Californians not to import dogs, etc., etc. We sent Mr. Booth the paper and asked for an explanation. He writes us that he can bring witnesses who saw Lady H. before she was shipped and will secure their affidavits. Mr. Booth says: "The bitch was all right on shipment. She never had a skin disease, and as to being in whelp, if a swollen udder and the other indications—tired and lazy—are not sufficient to justify my thinking her in whelp, what is? Another thing, she was not guaranteed in whelp. I merely told him (Mr. Heffernan) there was every indication of it. The price was not $300 or near it—it was $235. I had a special desire of her arriving in good condition and sold her at so low a price because I thought there being no good St. Bernard on the other coast it would lead to a good deal of business. That was my only object in sending her that distance. I never really wanted to part with her. The only spot she had on her was a sore on her ear about the size of a bean and she was also casting her coat. The only way I can account for the humor on arrival must be the close confinement for six days and a seizure of acclimation fever which all St. Bernards are liable to." It would be well to think a little before condemning a shipper. Six days in a crate, with the attention dogs are likely to receive on Western roads, and in such torrid weather as we have had lately, would not be conducive to the good health of any dog, and it is entirely problematical if the dog was fed or watered during the journey.

### Mr. Mortimer Returns.

Mr. James Mortimer returned from his European trip on Sunday last on the s.s. Alaska. Mr. Mortimer must have had his hands full during the voyage over, as he brought quite a big list of dogs, and good ones, too. Additional interest was lent to the voyage by the race between the Aurania and Alaska, the former arriving two minutes ahead of the other. The dogs came over in good shape and were taken from the ship Sunday afternoon. Among the dogs Mr. Mortimer had with him were the pointer Glenbeigh for Mr. Huber, of San Francisco, Cal., and from Mr. Norrish's kennel the very promising young dog Sandford Druid, that is both a show dog and a fielder. Besides these a number of collies were brought chiefly from Rev. Hans F. Hamilton's kennels. The best is Conrad II., by Charlemague out of Grace III. This dog has won a number of prizes. Then there are two bitches Woodmansterne Trefoil and Deborah from the same kennel. From Mr. Thos. H. Stretch, the noted collie breeder, Mr. Mortimer bought Ormskirk Susie, who won three firsts at Belfast just lately, and Julia, second novice and Derby at the late K. C. show in London. Two bulldogs by ch. Harper now owned by Mr. Mariner were also included in the team. Their names are The Heathen and Wat Hampson. The Irish terrier Fenian Boy, second at the Liverpool show just held, completed the list. According to the *British Fancier* Mr. Mortimer has made many friends and he looks as if he had had a good time.

### Mastiffs.

Mr. James W. Whitney, the mastiff man, was at last accounts in Paris. Mr. Hughes tells us that he has now got the dogs and the kennels into good shape, but the strange puppy fatality in this kennel still seems to hang on. This is a sample of it: "I lost every puppy but one, which I now have, and that one is Caution's Own Daughter's baby. Lady Coleus had one dead pup that had been dead in her about ten days. Lady Pamelia had nine, seven of them died a few minutes after birth, one lived nine hours, and the last one eleven hours. Black Sal had four—one dead at birth, one died in a day or two and another I kept alive for eight weeks, and it died of worms in the stomach. Exeter Dirce had nine, and they all died within a few days of birth except one I took up to the house and kept him alive for a few weeks, and then it died of worms, too." Then comes a tale of sleepless nights that makes one yawn for very sympathy. The pups, he says seemed to lack vitality. Why is this thus? There must be something wrong. Perhaps a change of kennel quarters would alter this, and a liberal use of charcoal to bitches in whelp and to pups.

### English Shows.

The *Stock-Keeper* this week has reports of no less than twenty shows, some of them K. C. shows and with large entries; Darlington, for instance, with 860. This gives some idea of the state dog showing has reached in the past few years. The Darlington one-day show was certainly the most interesting, and as usual, well managed. Beagles were very good, and so were St. Bernards. Keeper and Lola IV. were the challenge winners, the latter beating champion Peggoty. Kingstonian Beauty, that won in novice bitches, is very well spoken of as a bitch with a future. This bitch is by Lord Bute out of Altonetta, a sister to Altonette, and owned by Mr. A. H. Moore. Kingstonian Hero is another one that Mr. Booth, of Hull, bred from bitches now in America. This one is by Scottish Prince out of Miss Hannah, and won third in the dog novice class at the same show.

### Canada Represented at Darlington.

Our Canadian readers, of whom we have so many, will be pleased to see the following from *Stock-Keeper:* "At Darlington we met Dr. Griffin, of Hamilton, Canada, a great friend of Mr. A. D. Stewart, president of the Canadian Kennel Club. A good and cheery sort, too, is the doctor, who is over for a holiday, at the same time that he is on the lookout for something good (canine) to take back. Dogs are booming in Canada just now, and with such men as Mr. Stewart and Dr Griffin behind them, up they will continue to go. One thing we continue to note—our foreign friends will have none but the best; and they know when they see them, too! So in a short time we may expect canine visitors from their shores, and when they come they will have to be reckoned with.

### It Would Cost but a Cent.

A correspondent who wrote a letter to the advertiser of a dog in our Kennel Special columns, complains that he has received no reply, presumably for the reason that the dog had already been sold, and he submits that even if the dog had been sold the advertiser should have had the courtesy to advise him of that fact in reply. We have repeatedly been assured that advertisers received more applications than they had dogs to sell; and it certainly would be a courteous thing to postalcardize those who come too late, explaining that the dogs have been sold. This would make better feeling all around.

### Death of Champion George.

Old show goers who were around in the early 80s will remember the pug champion George, and especially his charming mistress, and how she fought for what she thought were the dog's just dues. This was in the Rhoderick and Joe and George days. Old champion George is dead. This may surprise many people, as his long retirement led one to believe that his course had been run long since. George died about Aug. 10, having been overcome by the heat. He was nominally owned by Mr. Edwin A. Pue, of the Comp-

troller's Office, Philadelphia, Pa. Mr. Pue received the dog as a gift from the late George H. Boker, February, 1879, on the latter's return from Russia. He was exhibited for the first time in 1881, and was a familiar face at the principal shows till 1888. At the New York show in 1881, when he first came out, Dr. Niven was the judge, and placed Dr. Cryer's Rhoderick first; this so displeased the fair owner of George that she presented the judge with a copy of "Stonehenge," to give him a chance to read up on pugs. In 1883, when George beat Rhoderick under Mr. Kirk, it was the occasion of quite a demonstration in the ring. The late Mr. Lincoln presented George with a laurel wreath, and George made his then to be final bow to the public, while somebody delivered a neat speech in his honor. In 1885, however, he came out once more at the Philadelphia show, and under Mr. Mortimer was beaten by Mr. Geo. H. Hill's champion Joe. How time flies; we can almost fancy that we can hear Mrs. Pue's voice still ringing in our ears as she told us what she thought about it. This was champion George's last appearance in public. George was by Muggins out of Coquette, and was whelped December, 1878.

### Pacific Kennel Club Meeting.

The regular monthly meeting of the Pacific Kennel Club was held at 21 Kearney street, San Francisco, Cal., August 3, and was well attended. Nearly half of the members being present, President R. E. Wilson presided. Mr. James Mortimer was unanimously elected delegate to the American Kennel Club. The president appointed the following Committees for the ensuing year. Finance: Messrs. H. Bier, F. S. Butler and John Heffernan. Committee on Admission to Membership:—Messrs. William Murdock, James E. Watson, Herbert Spencer, E. W. Briggs and Henry Huber.

The Pacific Kennel Club has 90 members at present and from three to ten new names are presented at every meeting. The club is in a good strong condition and promises well to be the strongest kennel club in California. It is composed entirely of gentlemen of good standing in the community and the members propose to build it up to a large membership. At the last meeting a motion was passed offering a reward of $50 for the conviction of any party or parties caught stealing or poisoning any dog or dogs belonging to members of the club.

### New Chestnuts.

Mr. Jarrett, owner of the Chestnut Hill Kennels, is taking his ease these days, but still getting his due modicum of enjoyment out of country life. We all know that Mr. Jarrett runs the kennel portion of the Pembroke Hunt, and this week he writes us that the hounds are getting very fit. "We have just come in from a good exercise hunt. We found a fox, probably one that was let loose last season; he gave us a rattling run of fifteen minutes and went to ground. We left him at rest and will try him again in a few days. We are out every morning at daybreak—great fun!" Mr. Jarrett has purchased from Mr. John McLachlin, Estill, Mo., the collie dog Commander (The Squire ex Active). Active is a bitch the Chestnut Hill Kennels imported and sold in whelp to The Squire. Friend Jarrett having arranged to go to the fairs at Youngstown and Columbus, O., with some of the high-jumping horses owned by Mr. Harrison, will be unable to attend the Canadian shows, as the dates conflict. This will be good news for other collie men. He will send a strong team to Mount Holly show in charge of his kennelman. The dogs are all looking well and some "grand" puppies are coming on, as he has been very successful with their breeding this season.

### Wire-Haired Fox-Terriers.

Mr. Smith expects his new wire-haired champion Daylesford Broom, by Bushy Broom, to do a good deal of good to the breed over here; he is also getting two or three good bitches over as well, information about whom we shall be able to give later on. It is to be hoped that this whilom greyhound man will be as successful in the new fancy as he was in the old. There is plenty of room. Daylesford Broom was purchased through Mr. Geo. Raper, and was to be delivered after the Gloucester show, where he won third in a strong lot. He is said to have very good legs, feet and body, and his coat is of the best.

Speaking of wire-haired fox-terriers the new crack in England, Bolton Woods Perfection, is, according to all reports, not at all misnamed. Mr. Rotherham Cecil has just purchased him from his former owner, a Mr. Smith, for $500, and the latter stated that could he have afforded to keep him $2,000 would have been his figure. Bolton Woods Perfection was originally picked up at the Leeds show for $75. We all know that Brittle, now at the Rochelle Kennels, has sired some good ones, but being the sire of this new crack adds still further to his reputation. Mr. Smith is quoted as saying that he defied any judge of the breed to find any palpable fault in the dog.

### West Michigan K. C.

The West Michigan Kennel Club held a meeting Aug. 5 at the Kalamazoo House, Kalamazoo, Mich. Among those present were M. C. Byers, of Grand Rapids, Charles K. Farmer, of Indianapolis, Ind., and H. Dale Adams. A storm has been brewing for some time past and it culminated in a very interesting session. There are two factions, one favoring the bench show at Grand Rapids and the other the location at Muskegon. The feeling has been very bitter, but it was believed that at the meeting held last month the matter was finally decided in favor of Grand Rapids. At this meeting, however, an effort was made to change the decision of the former meeting, and it was 4 o'clock on Saturday morning before the contending factions smoked the pipe of peace and declared in favor of continuing the arrangements for the Grand Rapids show.

### Death of Boz.

Our valued correspondent, Bradford S. Turpin, writes us of the death of his Irish setter Boz. "He was an old dog and has not been hunting for a couple of years, but in his palmy days he had a local reputation which extended over a good part of Cape Cod. He had great speed, a fine nose and no end of bird sense. As a retriever from water he was great, and many a duck he has brought out of the surf for me. Many who have shot over him will feel an interest in hearing of his death. He knew everything that a dog ought to know and was a gentleman always."

### California Items.

Californians are particularly strong in well bred greyhounds, that is for coursing purposes, the coursing men evidently taking little interest in the bench shows. Mr. Tiernan has just bred his well-known greyhound bitch Catherine Hayes, by Ben Ali out of Dougherty's Daisy, to Mr. James E. Watson's Saturday, and this dog is by Friday Night out of Mother Demdike. Such a combination of the best imported and the best Californian blood should produce something that will make up for the young greyhound Mr. Tiernan lost by an overdose of areca nut.

### Water Toughs.

About a year ago the Humane Society of Detroit placed a large number of little tubs about the streets of the city to be kept filled with water for dogs, and already the good results are apparent. Next summer they will have 150 of the tubs out. An officer of the society said he had not heard of a single "mad" dog since they put the tubs in the street. This particular officer knew what he was talking about when he remarked, "I do not believe there would be any frothing animals running and snapping on the streets if the dogs had all the water they wanted. A great many people make a mistake about dogs in this particular. In the extremely hot weather dogs eat very little, but they want lots of water, and will go almost any distance to get it. If everybody owning a dog would keep a pan of water in his back yard and renew it daily his dog would never go mad. Why, dogs come here for a drink from every direction, and there are over a dozen of them that I call my regular customers."

### California Kennel Club.

The California Kennel Club held a meeting Aug. 3 at 436 Montgomery street, San Francisco. John B. Lewis presided and J. J. Jamison acted as secretary. Piercy McPartland, W. J. Blattner, Dr. F. W. Neif and Joseph Kruft were elected members. A committee on recommending names for officers to be voted for at the annual election, to be held the second Wednesday in next month, was appointed. The treasurer presented his official bond in $4,000, which was accepted. President Lewis congratulated the club on the success that had attended the club's various bench shows, and on the fact that it could boast of being free from debt.

### Cockers Again.

WESTCHESTER, Conn., Aug. 13.—*Editor Forest and Stream:* My cocker spaniel, Rex Obo, was stolen last Friday night, and on Monday night at 9 o'clock he came home minus the name plate on his collar and with a piece of clothesline attached to his collar, showing that he had chewed the rope in two and escaped, and then made tracks for home. He knew his business all right when he got his liberty. E. A. CARRIER.

### Toronto Show.

Among the specials offered at the coming Toronto show, Mr. Geo. Fisher, of Baltimore, Md., offers the services of his Calumet Ben d'Or for best toy spaniel in the show. Mr. Henry Brooks, of West Medford, Mass., donates the following specials: Kennel Scotch terriers, four or more, $10; best Scotch terrier dog, $10; best Scotch terrier bitch, $10. The Adams Express Co. will return all dogs free to original exhibitor who has prepaid regular rates going.

### American Field Trial Judges.

The judges of the trials of the American Field Trials Club for this year will be W. A. Thompson, J. M. Freeman and Royal Robinson. Over 1,700 acres in the "Haw Patch" just north of the city of Columbus, Ind., have been leased for the trials.

### Another Trust.

This is an age of trusts. The latest is a "mud-slinging trust," and the FOREST AND STREAM "ain't in it."

A correspondent writes: "I am glad to see you keep your columns clean, and do not court this later day style of personal blackguardism under the cover of *nom de plumes*."

When Chicopee Lass killed the hare in the final contest at Great Bend, Kan., last year, "bunny" was saved and has now been mounted, and is in the possession of Mr. M. Ryan of San Francisco. We are told by the San Francisco *Call* that the animal is much larger than the general run of California jacks found on the famous coursing plains of Merced.

We are sorry to hear of Mr. Eugene Glass's serious illness but trust he will soon be on the mend again. Meanwhile *The Dog Fancier* for August will not be published but will be combined with the September number.

In our business columns we notice that George Thomas is making every effort to get a good team for the Canadian shows. When these are over he will take a trip to England, and this affords those who wish to buy a dog or two, an opportunity of having a man select for them who knows something about a dog.

Mr. Michael Flynn we are pleased to see has not entirely given up his dogs, but bad luck still haunts him, as he lost by distemper three dogs and five bitches out of the litter by Glen Jarvis out of the well known bitch Sedan.

Mr. Hedley Chapman, from whom Mr. Reick purchased Princess Florence, has sold his residence and kennels at Maplecroft Hall in Bath, England, to Dr. Inman, who owns the St. Bernard Siegfried. Mr. Chapman is going to live in British Columbia, so *Stock-Keeper* says.

The same journal in its report on Duke Maplecroft, at Darlington, says his eyes are the sort that are now becoming so prevalent, *i. e.*, small and showing a good deal of the haw. This, we should think, is not by any means an improvement in a St. Bernard.

Mr. Brodie, the Irish terrier man, is coming on a visit to America and will probably bring his dog What Care I with him.

The Mount Holly Fair is always a notable gathering of country folks and agricultural stock, and when they hold out such good inducements for the dog show we are sure many dogmen will pay it a visit. Contrary to the custom of our regular bench shows, with the exception of the W. K. C. and the N. E. K. C., we have received our admission card and general invitation already. This reminds us that our show secretaries are very remiss in this respect as a rule. At all the shows last spring, with the exception of those mentioned, we had to cool our heels at the door while we craned our necks to catch a glimpse of some well known committeeman who could give the password and let us in.

Mr. Chapman, president of the Beagle Club, has left Boston on a trip to Maine, and expects to pick up a good beagle or two for the Toronto show. He expects to move the greater part of his kennel to Orland, Me., where there is unlimited range and plenty of game. This place is situated four miles from Bucksport, Me.

Mr. A. E. Foster, of New York city, has purchased from Mr. Rowland P. Keasbey his well-known field spaniel, Beverley Negus. This is a good move on Mr. Foster's part as it gives him a still firmer hold on the Field Spaniel Challenge Cup, which he holds by the aid of Judex at the N. Y. show last spring. Mr. Foster will show both at Toronto when the cup is put up again and is out for blood this time. We are glad to see this fancier coming into the fold again. He was the last owner of old champion Benedict.

One of our largest and best known exhibitors writes us this week, "Thanks very much for sending the paper, it has saved me a trip to town each week as F. & S. is not on sale on the stand here." Our friends want the best and spare no trouble to get it.

Mr. Phœbus does not wish people to suppose that he was "trying to fly with pin feathers where only full-fledged birds can soar" when we stated that some of his dogs were quartered at Tuxedo Park. He has, however, thirteen couple of them in Bill Marriott's hands not far from Tuxedo. He will take them South soon and use them there during the entire winter and spring.

We are told that Mr. T. S. Bellin has put up several prizes at the Rochester show and that Mr. Otis Fellows will superintend and also judge sporting dogs. At the Mohawk Valley Fair Mr. Fellows will also judge the dogs. Following this he will take in Kingston and Toronto, so "Uncle Dick" may be said to be fairly in it.

Mr. E. B. Bishop writes: "It seems that I was very previous in announcing the purchase of Erne II.: Mr. O'Callaghan later priced me her litter sister Elphin, and as the latter did creditable work in the Kennel Club's Derby she was much preferred, and the exchange was made. She is beautiful in appearance, in other words, she strikes me 'all in a heap'." They are waiting for rain before they start after the chickens again, as Irwin did not find two dozen on the previous excursion. Mr. A. C. Waddell, the veteran sportsmen and breeder, will soon be at Mr. Bishop's kennels and will assist in looking after the youngsters.

Berkshire county, Mass., has been troubled this year with sheep and fowl-destroying dogs that have already done $1,600 worth of damage. Now they are paying their attention to snapping at and chasing horses. A bulldog and a mongrel were seen the other day to attack a mare heavy with foal. The bigger dog brought the mare to the ground and the dogs were not driven off until the mare had sustained serious injury. The wounds will prove fatal to the foal and possibly to the mare. Two dogs have been caught "on suspicion," and short shrift should be their portion if found guilty, for these are the animals that give a dog a bad name and lead to obnoxious and prejudiced legislation.

Our call for an outcross from Plinlimmon blood has been the occasion of bringing several dogs, and quite good ones, to our notice, who possess the necessary blood qualifications. It would, of course, be invidious to mention them here unless their names were to be found in our business columns.

In our list of Derby entries of the P. K. C. and Central trials the owner of the pointer Bradley should have been given as Geo. N. Paine and not G. H. Price.

We have received a nice little photograph of Mr. Rathbone's Beverwyck Punster, that did so well in the spring shows. This young dog has filled out nicely since then and will do to show again. By the way, we did not say anything about the capital little picture that we published last week of Mr. Rathbone's fox-terriers. This gentleman pressed the button and we did the rest. Making a guess at the dogs' names we got one Tippler instead of Fizz. But, as Mr. Rathbone says, "one is now in heaven and the other in Canada," it does not much matter. He has some rather promising puppies coming on, but expects them all to go to pieces before the spring shows, "they generally do."

Mr. A. M. Hughes, now manager of the Flour City Kennels, will judge the St. Bernards at Brooklyn. Without any discourtesy to those who have so ably judged the St. Bernards the past few years we may say that a little change will be beneficial. Mr. Hughes has had lots of experience with St. Bernards, and as he is thoroughly unbiased and is personally unknown to many of the newcomers, there is no reason why he should not have a generous support at the Brooklyn show in November next.

Those who are interested in the Irish setter trials will find very useful information in our business columns this week. Those who have dogs to enter should remember the dates of closing of entries, and the liberality of this enthusiastic club, which now, we are pleased to see, has no need to go down on its knees for subscriptions. The Irish setter field trials is an annual institution now, and the thanks are due in great part to Dr. Davis.

Dr. Foote has been in communication with the Express Conference authorities in Chicago, as chairman of the committee appointed by the A. K. C. for that purpose, but gives little hope of any amelioration of present hardships that shippers must put up with. He has been trying to get the companies to reduce charges to single rates on dogs to shows and return free, and also single rates each way for bitches sent to stud dogs, but the companies fail to see that they would gain any increased custom by the concessions. They seem to entirely forget the injustice of their exorbitant charges.

Mr. William Tallman will probably judge sporting classes at Kingston and Ottawa shows.

The Ottawa club meeting report, held Aug 3, was received too late for publication this week. There is no further news in it than that given by our Canadian correspondent if we except the notice that the Canadian Pacific and G. T. roads will carry dogs to show at usual excess baggage rates and return free.

Probably the peculiar way in which we worded our par. about Henry Jennings leaving the New York St. Bernard Kennels, may have led some people to suppose that Jennings had done some heinous wrong. This is not so, it was simply a difference of opinion between employer and employee.

New advertisements are still coming in, showing the appreciation of the dogmen for FOREST AND STREAM as a selling medium. F. H. Perry has broken Irish setters; C. A. Paetzel, a number of well-bred and trained pointers; Lock Drawer 14, pointer bitch and puppies; H. V. Jamieson, trained beagles and pups; C. F. Lambert, pointer pups by King of Kent; F. Clinton, well-bred English setter, P. Mayher, broken pointer. In the stud we draw attention to V. L. Bossa's English setter Bow Bondhu, also Edward Brooks' new Dandie Dinmonts Amphion and Laird o' the Heather. Wants: Wm. H. Atwood, a well-broken setter dog; Henry Jennings, situation as kennel manager.

## SHOULD JUDGES BE THEIR OWN CRITICS?

*Editor Forest and Stream:*

The kennel press has existed a good while, and I fancy that the editors have tolerably correct ideas as to their wisest course, and it is somewhat startling to find a novice undertaking to point out new departures as exclusive paths of propriety.

It is all nonsense that a judge will be more careful if he knows he has to report on his classes. The true judge, who knows his business, is careful in his judging and lets any report take care of itself. The wildest judging I ever saw was followed by a still wilder report.

To exclude all communications over nom de plumes, would be a pattern absurdity. Some of the very, very best work for the kennel world ever done, was done by anonymes. If a man's public course as to kennel matters requires comment, it is far better to have it over a nom de plume, less acrimony is raised, the exposed cannot vent his enmity on his crucifier, enemies are not thereby made, and the knight of the hedge expresses himself with greater freedom. Personal attacks, not based on public facts, are the sort that should be over the writer's name. W. WADE.

HULTON, Pa., July 30.

## PSOVOI—BORZOI.

THE following remarks of Baron Kursel are very interesting as showing the unsettled state of the Psovoi breed even in Russia at the present time. Primarily this translation is given to show the doubting Thomases that the dogs are spoken of by the Russians themselves as Psovie in distinction to the "swift dogs"—Borzie, among which, it will be noticed, is counted the English greyhound. It is further worthy of remark that according to this article swiftness is not altogether the point most desired, and that the greyhound is all very well for the hare and fox work in the open, but not for the rougher country and wolves. We have not altered in any way the original quaintness of the translation:

REMARKS ON THE ARTICLE OF MR. W. S. TOLSTOI IN NO. 12 OF "THE JOURNAL OF THE HUNT":

The remarks of Mr. Tolstoi touched me to the quick as a hunter, and I cannot pass it in silence. The trouble is, that Mr. Tolstoi is not satisfied with the decision of the conclave of *Psovie* hunters, to divide the coursing grounds for each breed separately.

(The author is mistaken, even if the conclave asked that the *English Borzoi* should be entirely excluded from the grounds for trial runs.)

The object of the trial grounds was to show *which of the Borzie* was the more mettlesome and to recompense the most mettlesome with a prize. On the trial grounds the *English Borzoi* beat and beats yet the *Psovoi;* so the question, *which of the Borzie* is the most mettlesome can be regarded as decided. Then why speed the Psovoi with the *English* on the trial grounds?

There are, thank God, prizes for all breeds in the Fall—let them then compete if they can.

Traditional rough-coated Psovoi, as in olden times, of a phenomenal swiftness, they are no more, and therefore let us not try what we cannot accomplish at present, *i. e.*, to beat the English in swiftness on the coursing grounds. Let us on the contrary try to breed in time from the pitiful remainder of former Psovie, swifter dogs; if we succeed in this, then let us compete. At present we are not yet able to compete, as in general the present breed of *Psovie* is a poor one, even if it must be acknowledged that among *really* blooded exemplars there happen to be very swift ones. By such means, I think, by a judicious crossing of very swift and full-blooded ones, without hurrying and not expecting in one year the growing up of this breed, we will attain that which we had formerly, when they were not over anxious to try conclusions with the English dogs against ours.

(We are convinced that in the field it is yet the case, in particular late in the fall, which opinion the author later on sustains in speaking of Crimean dogs).

Admitting that the English dog is swifter than the *Psovoi*, let me put another question: Is this one quality—swiftness—sufficient to give the preference to the English dog? That the full-blooded English dog does not give satisfaction in all respects of a hunt with dogs nobody will dispute with me, I hope. Let me see only one such a pack, consisting only of greyhounds; take something else except gray hares, foxes, and accidentally perhaps a young wolf. I do not believe that the expectations from a perfect pack would be satisfied with such small demands.

Let us now look at the *English Borzoi* from a different point of standing. Of how much advantage are they to a single hunter, who hunts exclusively by trailing? Only this one fact that the majority of them only use *southern breeds of Borzie*, even if cross-bred with Psovies, even if, but very rarely, full-blooded Psovie shows that the English dog does not fulfil their expectations. Still, there are found, if even seldom, English dogs with single hunters, but on broken ground they run (hunt) worse than the Krimki, and if even tearing their toes, they are not faster in general. In cold weather it is even difficult to hunt with them, as they always shiver and whine. In general the English cannot satisfy the hunter, even if they take the greatest care with them—thick cloth blankets, warm housing, etc., etc.; on the contrary, the Krimki and Gorki stand the most severe frosts easily. I maintain firmly that the full-blooded Gorka by far beats the pet English.

I do not understand the reproach which Mr. Tolstoi makes to the *Psovoi* If Mr. Tolstoi aims at 33¼in. Pobedim I., of S. S. Karejeff's, it must be remarked that such remarks have no foundation whatever, as it was known that Pobedim I. was very swift and staying and caught gray hares singly. Those Psovie of whom I wish to speak do not belong to this class of dogs, but to the common class of *Psovie* about 30in. high and have not a drop of blood from the English breed. Some of these dogs, certainly not all, had strong legs, gameness and swiftness. I have hunted with them, and yet hunt with them, alone, and for all that I get old hares, and they do not get away because that the dogs were winded. When sometimes gray hares escaped it happened in a very wooded part or in the winter on a frozen snow crust, which carries the hare but not the dog. Under such conditions a hare can escape from any dog whatever. I am entirely satisfied that for a hunt of the gray hare or fox only, the English dog is more fitted than the more robust Psovoi, which proves that the stronger build of the Psovoi does not give him the lightness of the smaller English. But I warrant that the Krimka and Gopka beat them in this respect, and I believe that the small bitches of the Gepmoloff—Matchewarianski breed do not stand much inferior to them. As to baiting (on short distance) with Psovie, they are far more effective than the English. There are certainly Psovie which are not able to catch a gray hare, but the more should we prize the disappearing ones that can, an opinion which Mr. Tolstoi will not hold, as he rather prefers to them the swift English ones. We shall have need of English dogs when there shall be no hunting in Russia and she has become one field for sport and sportsmen. I do not think we shall live to see it, therefore it is too early to provide ourselves with English dogs, and even should we live to see it, we can till then develop our coursing dogs. Therefore let us rather pay attention to our Psovoi dog, or else we may lose him as we lost the famous Kostromski hound. What will be the good of it, if we shall be compelled to import in time the Psovoi from England, as at present the Bessarabian hunter George Basilievitch Kolmutzki was compelled to import a leash of foxhounds because he could not acquire a decent lot. Different black and tan celebrities, which cost him a great deal of money, did not satisfy even a not very high expectation. Now, gentlemen hunters, is it not a shame that for a Russian hunt with dogs there have to be bought foreign dogs? Thanks to the old hunters, that they preserved yet more or less pure breeds of Borzie. I do not speak at all about the defunct Matchevarianoff Germoloff, whose memory will always be preserved in the hearts of all Russian hunters, but also S. S. Karejeff has preserved to us full-blooded Psovie, whatever they may say of him. His dogs showed themselves also to advantage at the bench shows, and on the coursing grounds for swiftness and for wickedness.

Does Mr. Tolstoi really not know the A B C of breeding, that the mixing of the English breed with the Psovoi only gives in the first generation something likely? If he does not know then I allow myself to repeat this truth, and if Mr. Tolstoi does not believe me then I ask him to show to me authentic mixing of the *English* and *Psovoi* which ever acquired any renown. I on my part will point out the dogs of Duke Galitzin, Mr. Protasieff Germoloff, Matchevarianoff, Schusharieff, Moscharoff, N. A. and S. S. Karejeff, Tschebesheff, Imperial Hunt, Durasoff, Baljtzoff, Ozeroff, Tzvetkoff and many others. These dogs acquired well-deserved renown, even if they did do without the prescriptions of Mr. Tolstoi. I have seen Psovie take singly an old wolf and a gray hare. I had myself one such dog, and at the present time I know two such dogs; but perhaps Mr. Tolstoi's dogs are still better. It would be interesting to see them in action and not on paper.

BARON H. K. KURSEL.

P. S.—To take an old (full-grown) wolf single-handed I understand to be this way: The dog takes and throws him down, holds him some time, certainly not as long a a yearling, which a likely *furibund* can even strangle. K.

## FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Can.—Mr. Stewart has called a meeting of those interested in the proposed Fox-Terrier Club for Canada, for Tuesday, Sept. 13, at 8 P. M., in the Walker House, Toronto, and on Wednesday, Sept. 14, same time and place, will be held the first meeting of the proposed Canadian Breeders' Association. The objects of the latter are to be as Mr. Stewart writes me, "the encouragement of local breeders and the holding of annual bench shows at which entries will be confined solely to Canadian breeders."

Mr. W. B. Palmer, Woodstock, who judged spaniels at Ottawa last year, will again take these classes. The top row of benches in the show building has been removed and the committee must this year positively limit the entry to 230. Any coming in after the limit is reached will be returned.

Kingston is offering the same money as last year, *i. e.*: $7 and $3 with diploma for third; $20 is offered for the handler or kennel making the largest number of entries.

"Dealing in futures" seems to be coming into vogue with our kennel clubs. Kingston now claims the week following Toronto for its show of 1893 and also claims the same week in perpetuity. H. B. DONOVAN.

Mr. H. E. Twyford sailed yesterday morning on the S.S. Mohawk. A number of his friends gathered in the dining saloon Tuesday evening to bid the genial "Brockenhurst" and his better half *bon voyage.*

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

### NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*Wait Awhile, Power, Bradley, Uncle Dick and Sedan II.* By Glendyne Kennels, Bristol, R. I., for red Irish setters, four dogs and one bitch, whelped April 13, 1892, by Glen Jarvis (Elcho, Jr.—Maid) out of Sedan.

### BRED.

☞ **Prepared Blanks sent free on application.**

*Enterprise—Gully the Great.* Wagtail Kennels' (Jamesport, N. Y.) bull-terrier bitch Enterprise to F. F. Dole's Gully the Great (Gladstone—Florie), July 20.

*Nellie Hunter—Bow Bondhu.* V. L. Bossa's (New Canaan, Conn.) English setter bitch Nellie Hunter (Ben Hill—Daisy Hunter) to his Bow Bondhu (Gus Bondhu—Bo-Peep), Aug. 3.

*Christenia—Bow Bondhu.* Wm. Scofield's (Bridgeport, Conn.) English setter bitch Christenia to V. L. Bossa's Bow Bondhu (Gus Bondhu—Bo-Peep), Aug. 10.

*Broomfield Madge—Broomfield Sultan.* Rochelle Kennels' (New Rochelle, N. Y.) bla k and tan terrier bitch Broomfield Madge (Jackson's Patrick—Jackson's Queen) to their champion Broomfield Sultan (Broomfield Turk—Broomfield Belle), Aug. 1.

*Meersbrook Maiden—Broomfield Sultan.* Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch champion Meersbrook Maiden (Meersbrook Chance—Meersbrook Empress) to their champion Broomfield Sultan (Broomfield Turk—Broomfield Belle), July 30.

*Rochelle Majestic—Merry Monarch.* Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch Rochelle Majestic (champion Broomfield Sultan—champion Meersbrook Maiden) to their Merry Monarch (Halifax Charlie—Nell), July 21.

### WHELPS.

☞ **Prepared Blanks sent free on application.**

*Fiomont.* Jas. B. Blossom's (Morrisania, N. Y.) Gordon setter bitch Fiomont (champion Beaumont—Countess Flo), Aug. 3, seven (four dogs), by his Heather York (champion Heather Harold—champion Belmont).

*Rochelle Carmencita.* Rochelle Kenuels' (New Rochelle, N. Y.) black and tan terrier bitch Rochelle Carmencita (The Senator—Rochelle Nadjy), July 9, four (two dogs), by their champion Broomfield Sultan (Broomfield Turk—Broomfield Belle).

*Maid of Borstal.* N. McIntosh's (Providence, R. I.) Irish setter bitch Maid of Borstal (champion Inchiquin—Onota Belle), Aug. 7, seven (three dogs), by J. J. Scanlan's champion Inchiquin (champion Shandon II.—Iona).

*Sedan.* Glendyne Kennels' (Bristol, R. I.) Irish setter bitch Sedan (Chester D. Herald—Nancy), April 13, thirteen (seven dogs), by their Glen Jarvis (Elcho, Jr.—Maid).

### SALES.

☞ **Prepared Blanks sent free on application.**

*White Wonder—Winning Wagtail whelp.* White, small spot around one eye, bull terrier bitch, whelped Aug. 7, 1891, by Wagtail Kennels, Jamesport, N. Y., to D. E. Williams, Brooklyn, N. Y.

*Dakota.* White bull-terrier dog, whelped Aug. 7, 1891, by White Wonder out of Winning Wagtail, by Wagtail Kennels, Jamesport, N. Y., to W. F. Gardner, West Union, Ia.

*Rochelle Mamzelle.* Black and tan terrier bitch, whelped July 1, 1891, by champion Broomfield Sultan out of Broomfield Madge, by Rochelle Kennels, New Rochelle, N. Y., to Louis Colomb, New Orleans, La.

*Rochelle Salts.* Black and tan terrier dog, whelped Aug. 11, 1890, by Broomfield Sultan out of English Lady, by Rochelle Kennels, New Rochelle, N. Y., to S. G. Myers, Chicago, Ill.

*Broomfield Sultan—Meersbrook Maiden whelp.* Black and tan terrier bitch, whelped Feb. 19, 1891, by Rochelle Kennels, New Rochelle, N. Y., to C. B. Sutter, Cedar Rapids, Ia.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.*

O. H., Brooklyn, N. Y.—Please give pedigree of pointer bitch Gift (A.K.R. 5921). Ans. Whelped Aug. 20, 1887. Sire—Mainspring, by Salter's Mike (Bang—Stella) out of his Romp, by Chang out of Brockenbury's Romp. Dam—Lulu, by imported Leonard Jerome out of Vansise's Swan, by Orgill's Rush out of Hedeman's Swan.

P. G., Toronto, Can.—Probably your dog was affected by the heat. It is very foolish to exercise dogs during the middle of the day this weather; better keep them shut till night if you have not the time to exercise in the morning. When the dog has a fit again, or shows any signs of being affected, apply cold water to the head and carry to a cool place. Do not feed too heavily or so much meat.

H. F. M.—The insect you sent us is a common tick. They are often found on dogs in country districts, and also are the direct result of dirty kennels and bedding and general neglect. Look the dog carefully over and remove the ticks, and then apply this lotion: Flowers of sulphur, 1lb; unslaked lime, ½lb.; water, 1 gallon. Slake the lime in the water, stir in the sulphur, adding water gradually until it is of a creamy consistency, then add the remainder of the water and boil down to half a gallon. Let it stand till cold, pour off the clear liquid and add cold water till you have altogether two and a half quarts of liquid. Saturate the dog with the lotion and leave on for ten minutes, then wash off with warm water and soap and thoroughly dry the dog. This is an excellent and safe remedy for mange and any kind of fleas.

### From a Subscriber With His Renewal.

I TAKE this opportunity to congratulate you on the great improvement in the paper. It has been my favorite journal for years, and I should not know how to get along without it now.

# Yachting.

## FIXTURES.

AUGUST.

19. Winthrop, 3d and 4th Classes, Winthrop.
20. Roy. N.S., Ruth Cup, Halifax.
20. Corinthian, Marblehead.

24. Commonwealth, Cham., Dorchester Bay.

OCTOBER.

1. Corinthian, Atlantic City.
15. Buffalo, Closing Cruise.
9. Jersey City, Ladies' Day, New York Bay.

THERE seems to be a doubt on the part of some Eastern yachtsmen as to the exact location of Bristol, R. I., with regard to the Hub of the yachting universe. When Harpoon and Merlin won the Goelet cups Boston was one place and Bristol another, Boston being still a long way ahead; but when the news comes by cable of repeated victories for the Herreshoff Wenonah on the Clyde, together with the good work of the little Bristol half rater, Wee Win, at Southampton, Boston tenderly nestled little Bristol under her motherly wing, along Roxbury, Duxbury, Dorchester, Jamaica Plains, Chelsea and the rest of her suburban brood, and is ready to place the name of Herreshoff beside those of Sullivan, Emerson and Lowell.

AFTER the following amusing account of a recent yacht race in England it will be well to "ask of the man in the moon," or to "seek the answer in the stars," before accepting as true any statements of the New York *Sun*. The race in question was sailed by Queen Mab, Thalia and Varuna, at Cowes:

"MELBOURNE, Aug. 3.—The race for the Australian cup, the great Australian turf event, was won by Queen Mab, Thalia being second, Urana third and last."

## NEW YORK Y. C. CRUISE, 1892.

THE cruise of the New York Y. C. terminated on the evening of Aug. 10, after a brilliant reception on the flagship to the members of the fleet and their guests, together with the members of the Eastern Y. C. Prior to the reception a meeting of captains was held, at which the formal disbanding of the squadron took place, though the festivities continued until a late hour. On Thursday at 5 A. M. the Electra weighed anchor and sailed for Newport, leaving some of the yachts to start in the special race of the Eastern Y. C. The cruise has been a most successful one from the time the flagship cutted her anchor off the club station at New York on Aug. 2, until she passed to sea by Marblehead Rock nine days later, there was no mishap or interruption, everything ran smoothly, and the weather was as nearly perfect as can be had for nine consecutive days. The racing on the whole has been satisfactory both in the number and quality of the starters and in the general fairness of the conditions, and the fluky weather of the beginning of the first two runs, as well as the late start and unsatisfactory finish of the Goelet cups race, were forgotten after the rattling runs from Newport to Vineyard Haven, and thence to Marblehead.

### Commodore's Cups, Aug. 10.

MARBLEHEAD—E. Y. C. COURSE.

The last race of the cruise was for two cups, of $1,000 and $500, offered by Com. Gerry for yachts of the New York or Eastern clubs, under the rules and allowances of the former. Lasca went back to Vineyard Haven, leaving six schooners to start, Merlin, Marguerite, Mayflower, Constellation, Alcæa and Iroquois. With Gracie left behind at Vineyard Haven with a broken topmast, and Katrina minus hers, there was nothing in the 70ft. class, leaving the 46-footers alone to fight for the smaller cup, Wasp, Gloriana, Harpoon and the Fife boat Barbara.

Wednesday morning was bright and clear, with a perfectly smooth sea and little or no wind, a light S.W. breeze springing up before the start. The flagship came out of the harbor flying the flag of the State of Massachusetts at the fore, Governor Russell being among the guests on board. Ituna ran out and anchored off Half Way Rock. The course was one frequently sailed by the Eastern Y. C., a 36-mile triangle, the first 12-mile side to Harding's Bell Buoy, the second to a mark boat, and the third back to the Rock.

When the starting gun for the smaller yachts sounded at 10:55:00, the wind had strengthened, a light clubtopsail breeze from S.S.W. making a beat over the first leg. On the second the wind went round to the south, making a close reach and a run over the greater part of the third leg, backing a little toward the end of the race, and calling in spinakers.

Gloriana and Harpoon hung about the weather end of the line, the former going over shortly after the gun, but Harpoon, after coming to the line on Gloriana's weather, stood back and waited for a late start. Wasp and Barbara crossed from opposite sides, but at the same second, the times being: Gloriana 10:55:55, Wasp 10:57:32, Barbara 10:57:32, Harpoon 10:59:06. There was an interval of 10 minutes before the schooners crossed, they being timed: Iroquois 11:01:10, Merlin 11:01:51, Constellation 11:02:30, Marguerite 11:02:33, Alcæa 11:03:50, Mayflower 11:05:21. Iroquois crossed first, followed by Merlin and Marguerite, Constellation cutting in between the later pair and calling for some sharp handling. Alcæa and Mayflower were slow in starting.

Gloriana led the fleet inshore toward Tinker's Island, Wasp following and gaining on her, while Harpoon, also in chase, failed to hold either. Barbara left the others from the start, and chose a course of her own, offshore on starboard tack, which she held for a long time with good results. Iroquois followed Barbara offshore, Merlin and Constellation sailed a medium course, and the other two went close inshore. The wind was quite light along the shore, but outside it freshened and went to the southward, helping Barbara and Iroquois, while it left some of the others in a very bad box. Wasp left Gloriana to take care of Harpoon, and went in chase of Barbara, but failed to catch her. Gloriana broke the footyard of her clubtopsail, which hindered her considerably.

The times at the first mark were:

| | | Elapsed. |
|---|---|---|
| Barbara | 1 00 27 | 2 06 45 |
| Merlin | 1 07 17 | 2 09 27 |
| Constellation | 1 07 44 | 2 09 19 |
| Wasp | 1 08 38 | 2 13 13 |
| Iroquois | 1 08 54 | 2 11 50 |
| Marguerite | 1 10 13 | 2 11 42 |
| Mayflower | 1 12 23 | 2 11 07 |
| Gloriana | 1 19 30 | 2 27 40 |
| Harpoon | 1 20 00 | 2 24 45 |
| Alcæa | 1 25 05 | 2 25 20 |

On the reach, and with more wind, Wasp began to overhaul Barbara, while astern, Harpoon caught and passed Gloriana, the latter

being obliged to shift her damaged topsail for a smaller one. When Barbara had covered about a third of the leg her bobstay gave way and she was obliged to withdraw and return to the harbor, leaving Wasp with a safe lead. Constellation passed Merlin, and Marguerite sailed fast, passing both Iroquois and Mayflower, so that the times at the outer mark were:

| | Elapsed. |
|---|---|
| Constellation | 2 22 35 — 1 14 51 |
| Merlin | 2 28 07 — 1 20 50 |
| Marguerite | 2 28 55 — 1 18 42 |
| Mayflower | 2 31 11 — 1 18 48 |
| Iroquois | 2 32 35 — 1 23 41 |
| Wasp | 2 37 52 — 1 29 14 |
| Alcæa | 2 30 40 — 1 14 35 |
| Harpoon | 2 40 50 — 1 29 50 |
| Gloriana | 2 30 32 — 1 31 02 |

Spinakers were set to port and balloonjibtopsails sent aloft, but when near the last part of the course the wind headed sufficiently to bring in all spinakers. The full times were:

| | Start. | Finish. | Elapsed | Corrected. |
|---|---|---|---|---|
| Constellation | 11 02 30 | 3 56 24 | 4 53 54 | 4 53 54 |
| Alcæa | 11 03 50 | 4 15 18 | 5 11 28 | not meas. |
| Merlin | 11 01 51 | 4 03 18 | 5 01 26 | 4 53 58 |
| Mayflower | 11 05 21 | 4 06 58 | 5 01 37 | 4 51 55 |
| Marguerite | 11 02 33 | 4 06 26 | 5 03 53 | 4 49 58 |
| Iroquois | 11 01 10 | 4 11 43 | 5 10 33 | 4 55 42 |
| SLOOPS. | | | | |
| Barbara | 10 57 32 | ..... | ..... | ..... |
| Wasp | 10 57 32 | 4 18 56 | 5 21 24 | 5 21 24 |
| Harpoon | 10 59 06 | 4 29 35 | 5 30 29 | not meas. |
| Gloriana | 10 55 55 | 4 34 29 | 5 38 34 | 5 37 30 |

The elapsed times on the run in are interesting, the conditions being then very fair.

| | | | |
|---|---|---|---|
| Constellation | 1 29 41 | Iroquois | 1 34 30 |
| Merlin | 1 31 03 | Harpoon | 1 35 36 |
| Alcæa | 1 31 31 | Wasp | 1 36 56 |
| Mayflower | 1 31 39 | Gloriana | 1 39 48 |
| Marguerite | 1 33 22 | | |

Marguerite wins easily, taking the $1000 cup, while Wasp wins the $500 one.

## Eastern Y. C. Special Race, Aug. 11. Off Marblehead.

The race for the Gerry cups nominally ended the cruise, but the race on the following day, Thursday, was practically one of the same series of cruise races, though entirely an Eastern Y. C. affair. Com. Forbes first made an offer of cups of equal value with those offered by Com. Gerry, but the entries were not numerous, only the 46-footers being willing to start. A $250 cup was promised them, and finally the four schooners, Constellation, Marguerite, Iroquois and Mayflower, made up a sweepstakes of $100 each, and started. The regatta committee of the Eastern Y. C. managed the race from the tug Dudley Pray and with a light S. S. W. wind selected the Nahant-Gloucester course; from Halfway rock southwest by west, one-quarter west, seven miles to a mark off Nahant; thence east by south, one-half south, 8¾ miles to the E. Y. C. turning buoy; thence north by east, three-quarters east, 9½ miles to the whistling buoy off Eastern point, Gloucester; thence southwest by west, one-half west, 6¼ miles to the finish at Halfway rock.

This course is almost an isosceles triangle, the start and finish being in the center of the long side; as the wind held it gave a beat, then a quartering run, then a dead run, and finally a close reach home.

The start was made at 11 A. M., a one-gun start for the 46-footers and a time start five minutes later for the four schooners. Barbara was not ready, and only Wasp, Gloriana and Harpoon started, the three going over with a rush within less than a minute, all on port tack inshore, Gloriana leading, with the other two just astern, abeam of each other.

The schooners made the usual deliberate start—Constellation, 11:08:29; Iroquois, 11:09:39; Mayflower, 11:10:43; Marguerite, 11:12:51. Marguerite carried a peculiar little maintopmaststaysail for windward work, a triangular sail. All crossed on port tack, but Constellation soon went about and stood off after Wasp and Harpoon, together working seaward, while the other three schooners headed in toward Nahant, in the wake of Gloriana.

Wasp gained on Harpoon and was able in a short time to cross her bows, tacking seaward, but soon made another tack inshore to meet Gloriana. The latter held on until close to Pig Rocks, tacking and crossing the bows of Wasp, then going on starboard tack to windward of the others as they stood in for Nahant. Constellation held offshore for a long time, leaving the other schooners to follow the 46-footers, Mayflower catching Iroquois near the Pigs. Both Wasp and Gloriana overstood at the Nahant mark, Harpoon astern seeing their mistake in time to profit a little by it. Mayflower was now the leading schooner, Constellation being second, having made the whole leg offshore alone. The times at the Nahant mark were:

| | Elapsed. |
|---|---|
| Wasp | 12 32 30 — 1 31 10 |
| Gloriana | 12 34 15 — 1 33 45 |
| Harpoon | 12 37 49 — 1 37 00 |
| Mayflower | 12 45 32 — 1 34 49 |
| Constellation | 12 48 43 — 1 40 14 |
| Marguerite | 12 50 19 — 1 37 28 |
| Iroquois | 12 54 25 — 1 44 46 |

Mayflower rounded with a protest flag flying, claiming that Iroquois had not given way to her.

The next leg, 8¾ miles, with a moderate breeze abaft the beam, was run with no change of place and little of position, Harpoon gaining on Gloriana. The times at the E. Y. C. mark, the white buoy, were:

| | Elapsed. |
|---|---|
| Wasp | 1 38 35 — 1 06 25 |
| Gloriana | 1 42 45 — 1 08 30 |
| Harpoon | 1 44 50 — 1 06 51 |
| Mayflower | 1 46 40 — 1 01 08 |
| Constellation | 1 48 28 — 0 59 45 |
| Marguerite | 1 52 20 — 1 02 01 |
| Iroquois | 1 58 00 — 1 03 35 |

The next leg, 9¼ miles, was so nearly before the wind that it was a question as to which was the side for the spinaker. Harpoon set hers to port, all the schooners but Mayflower following her. Wasp and Gloriana chose the starboard side, which proved to be the wrong one. The wind was increasing all the time, the boats travelling fast, and Harpoon steadily gaining on Wasp. The latter shifted her spinaker to port, but Gloriana kept hers to starboard. Harpoon finally caught Gloriana, the latter when near the Eastern Point mark having to run by the lee to take her spinaker in. When she finally jibed, after taking it in, there was a delay with the backstay and her topmast went over the side. The times at this mark were:

| | |
|---|---|
| Wasp | 2 52 48 — Constellation — 2 58 23 |
| Harpoon | 2 54 40 — Marguerite — 3 00 03 |
| Mayflower | 2 55 42 — Iroquois — 3 10 55 |

On the last leg, 6¼ miles, the wind was quite fresh, and so nearly ahead that the singlestickers could just lay their course, the schooners making a short hitch to weather the finish line. The full times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| SCHOONERS. | | | | |
| Marguerite | 11 12 51 | 3 57 28 | 4 44 37 | 4 28 45 |
| Mayflower | 11 10 43 | 3 51 24 | 4 40 41 | 4 28 45 |
| Iroquois | 11 09 39 | 4 09 42 | 5 00 03 | 4 42 53 |
| Constellation | 11 08 29 | 3 53 56 | 4 45 27 | 4 45 27 |
| SLOOPS | | | | |
| Wasp | 11 00 00 | 3 49 27 | 4 49 27 | 4 49 27 |
| Harpoon | 11 00 00 | 3 55 25 | 4 55 25 | Not meas. |
| Gloriana | 11 00 00 | Disabled. | | |

Marguerite wins the $400 sweepstakes, unless a remeasurement should change the result. Wasp wins the Forbes cup. While the wind was shifting and fluky, the race was in the main a very fair trial, and taken with the preceding ones of the cruise, places Wasp as the first of the 46ft. class.

## Newark Bay Boat Club.

The Newark Bay Boat Club, a large and prosperous organization with two fine club houses at Bayonne, N. J., on Newark Bay, sailed its first race on Aug. 6. The club house was crowded during the afternoon by members and friends, and a varied programme of sailing, rowing and swimming races was successfully carried out under the direction of Messrs. Amerman, Higgins and Woodward. The sailing race was over two rounds of a five mile triangle, in a good S. W. breeze, the times being:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| SLOOPS. | | | | |
| Coquette, F. H. Hobbs | 3 13 10 | 4 54 04 | 1 40 50 | 1 40 54 |
| Gracie, J. A. Serrell | 3 11 50 | 5 04 45 | 1 52 55 | 1 42 05 |
| Hilda, L. Burritt | 3 12 20 | 5 33 29 | 2 21 09 | 2 08 59 |
| CATBOATS. | | | | |
| Our Own, J. Vreeland | 3 15 35 | 5 09 13 | 1 53 38 | 1 53 38 |
| Nadjy, J. Dewey | 3 12 00 | 5 13 52 | 2 01 52 | 1 55 31 |
| Trankie, W. Moore | 3 14 05 | 5 37 03 | 2 22 58 | 2 15 28 |

## New York Racing Association.

The programme of the fourth annual regatta of the New York Yacht Racing Association, to be sailed on New York Bay Sept. 5, is as follows:

CLASSIFICATION.

Schooners.—Class A, all schooners 40ft. and over.

Cabin Sloops and Cutters.—Class B, all 62ft. and over 54ft.; class C, all 53ft. and over 45ft.; class D, all 45ft. and over 38ft.; class E, all 38ft. and over 32ft.; class F, all 32ft. and over 27ft.; class G, all 27ft. and under; class H, yawl rigged yachts.

Open Jib and Mainsail.—Class 1, all 32ft. and over 27ft.; class 2, all 27ft. and over 23ft.; class 3, all 23ft. and under.

Cabin Cat-Rigged Yachts.—Class 4, all over 23ft.; class 5, all 23ft. and under.

Open Cat-Rigged.—Class 6, all 32ft. and over 27ft.; class 7, all 27ft. and over 23ft.; class 8, all 23ft. and over 20ft.; class 8, all 23ft. and over 20ft.; class 9, all 20ft. and over 17ft.; class 10, all 17ft. and under.

In each class at least two yachts must start or no prize will be awarded in that class.

Entries must be made in writing and delivered to or sent in time to be recived by Mr. George E. Gartland, chairman regatta committee, No. 11 Wall street, New York, not later than Monday, Aug. 29, at 12 o'clock, midnight.

The start shall be a flying one for all classes and will take place as near 11 A. M. as practicable.

The starting and finishing line of all classes shall be an imaginary one between Oyster Island Buoy No. 13 and a stakeboat anchored to the eastward of that buoy.

To avoid confusion, if the wind be from the south, it is requested that all yachts cross the starting line on the port tack.

Preparatory signal will be given by a long blast of the steam whistle and raising blue peter on flagstaff of regatta committee steamer at as near 11 A. M. as practicable.

Ten minutes later, long blast of whistle and raising a large white flag will be the signal for Classes A, B, C, D, E, F, G and H to start.

Ten minutes later, long blast of whistle and raising a large red flag will be the signal for Classes 1, 2, 3, 4 and 5 to start.

Ten minutes later, long blast of whistle and raising American yacht ensign for Classes 6, 7, 8, 9 and 10 to start.

Ten minutes later, long blast of whistle will be given as handicap signal and N. Y. Y. R. A. signal will be raised and remain flying.

All yachts not having crossed the line within ten minutes after the signal for their class will be timed as starting at the expiration of said ten minutes.

Course 1.—For Classes A, B, C, D, E and F. From the starting line to and aroung Red Nun Buoy No. 12 (Perch and Ball), located N. W. by W. ¼ W. of and distant 1½ nautical miles from the point of Sandy Hook, leaving the same in turning on the port hand and return over the same course. Distance, 27 statute miles.

Course 2.—For classes G, H, 1, 2, 3, 4, 6 and 7 from the starting line to and around Swash Channel (red) bell buoy, located 1¼ miles N.W., ¾ W. from Roamer Shoal Light, leaving the same in turning on the port hand and return over the same course. Distance 21 statute miles.

Course 3.—Classes 3, 5, 8 and 9, from the starting line to and around Black Buoy No. 9, located ¼ mile E.N.E. from Swinburne Island, leaving the same in turning on the port hand and return over the same course. Distance 15 statute miles.

Dourse 4.—Class 10 from starting line to and around Black Buoy No. 11, ¾ mile S. by E. from Fort Tompkins, leaving the same in turning on the port hand and return over the same course. Distance 12 statute miles.

All yachts must keep to the eastward of all West Bank buoys, Nos. 7, 9 and 11, except in cases of rounding. In the absence of the committee steamer at the finish time will be taken from stakeboat.

The steamer Albertina, provided for the guests of the Association, will accompany the yachts over the course and make the following landings: Foot Franklin street, N. R., N. Y., 9:30 A. M. Foot Morris street, Jersey City, N. J., 10 A. M. Foot Fulton street, N. R., N. Y., 10.30 A. M.

## Royal Canadian Y. C.—Lansdowne Cup.

TORONTO.—LAKE ONTARIO.

The race of the Royal Canadian Y. C. for the Lansdowne cup on Aug. 6 was one of the prettiest matches sailed this year on Lake Ontario, being practically confined to the two new Fife boats Zelma, 40ft. sailing length, and Vedette, 30ft. The other two starters, Erma and Wa-Wa, were outmatched and did not finish. The course was across a line from a buoy off the town club house, thence around one at the Island club, returning around the starting buoy, through the westward channel four miles to windward or leeward and return in the lake, and back through the channel, finishing over the starting line, all buoys to port, making 12 miles in all.

The day was fair, calm throughout the morning and with only a moderate N.W. breeze when the gun fired at 2:30. Vedette, steered by Mr. Æmilius Jarvis, was over promptly, Zelma, steered by Mr. Norman Dick, was half a minute later, Erma fouled the buoy as she crossed, sailing short-handed and with ladies aboard, but followed the others. Wa-Wa was last over. The short leg across Toronto Bay to the Island buoy was made with wind abeam, Zelma passing Vedette. At the first turn Vedette was hindered by Erma, who turned the buoy with her. Zelma still led on the reach back to the city buoy, and the beat out through the channel to the Lake, spinaker being set for a time. At the outer mark, with 6m. lead, Zelma seemed to have the race in hand, but with a stronger breeze and some clever handling, helped by a little delay to Zelma through some damage to her jib sheets, Vedette made up a good part of her loss, enough to bring her over the line well within her allowance. The times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Vedette | 2 33 00 | 4 50 05 | 2 23 05 | 2 14 15 |
| Zelma | 2 30 00 | 4 46 05 | 2 16 05 | 2 16 05 |
| Erma | 2 30 00 | Withdrew. | | |
| Wa-Wa | 2 30 00 | Withdrew. | | |

## Congressman W. J. White.

The despatches for Aug. 9 have the following interesting news:

"CLEVELAND, O., Aug. 9.—The Hon W. J. White, the millionaire manufacturer of chewing gum, was nominated for Congress by the 20th district Republican convention to-day on the first ballot, the vote standing 163½ for White to 7½ for Burrows, of Painesville. White has the Republican plurality (2,000) back of him, and nomination is equivalent to election."

Mr. White is well known as the owner of the steam yacht Say When, a world wide cruiser, and doubtless the fastest boat on the Great Lakes. Even more widely known than Say When is that Yucatan gum, which many a yachtsman, cruiser and camper has made part of his stores. Yucatan gum binds Mr. White to the people very nearly, and his election will be a popular one.

## YACHT NEWS NOTES.

The following are the winners in the Beverly Y. C. open regatta, the 187th, of July 29. Our first report was in error in stating that Chapoquoit withdrew, she found both marks and made the whole course, her three competitors failing to do so. First prizes won by Chapoquoit, Beatrice. Second prize won by Susie. Fourth class prizes are taken by Alpine and Marchioness but which gets first would be decided till Marchioness is measured. Third Class Cat Race will be re sailed Aug. 1. Third Class Sloop and Special Class prizes both go to same boats. On the face of returns both firsts go to Alpha. Both seconds to Freak. Both thirds to Catspeed but Freak protests Alpha for setting two jibs at once and Alpha protests Freak's start. The B. Y. C. rule as to sail differs from E. Y. C. B. Y. C. rule reads boats may carry jib and mainsail and the Committee in advance defined a jib to be jib shaped sail set to end of bowsprit or on jib stay, and hoisted by jib halliards or halliards no higher up. Circular permits booming out, provided tack of sail is kept at end of bowsprit. The Committee decided a sail so set was a jib and not a spinaker.

We have received from Messrs. Estes & Lauriat, Boston, a large volume entitled "The Official Register of American Yachting," compiled by Mr. Wm. B. McCleham, secretary of the Boston Y. C. The work is a complete yacht register on a new plan, the yachts being grouped according to their clubs, full information concerning the officers, stations, dues, etc., of each club, with date of building, dimensions, and all the usual particulars concerning each yacht. The club pennants and private flags are handsomely printed, and the list is very complete. The volume also contains much useful matter of a miscellaneous nature, the signal code, fog signals, "wig-wag" signals, rules of the road, list of fixtures, etc. Altogether it is a most useful work of reference for all interested in yachts and yachting.

In consequence of the unexpected extension of the New York Y.C. cruise to Marblehead, the Corinthian Y. C. has been obliged to postpone its annual sweepstakes off Newport to Aug. 22.

There was considerable interest at the Indian Harbor Y. C., Greenwich, Conn., in a match race on Saturday, Aug. 6, for a cannon, between the cutter Estela, formerly Wilful (Mr. C. S. Somerville), and the sloop Marie (Mr. Jas. B. Smith). Course was from black buoy off east end of Little Captain's Island to black buoy off Matinicock, and return. Wind fresh S.W., making it a dead beat to windward. The Estela, with new rig, her boom having been lengthened 4ft., sailed very well, easily outpointing Marie, and rounding Matinicock 8m. ahead. Coming home, with baloon jibtopsails set, Marie gained somewhat, the Estela winning, however, by 6m. 14s. corrected time. The race was under the auspices of the Indian Harbor Y. C., the regatta committee having it in charge.

The Delavan Lake Y. C., of Delavan, Wis., was organized Saturday night, Aug. 6, with the following officers: J. C. Howell, Commodore; L. B. Jones, Vice-Commodore; C. V. Bachelle, Secretary; John Koelling, Treasurer, and F. B. Noyes, Measurer. The colors of the club are orange and black. There are to be three races sailed this season, the prizes are pennants. The first class winner will take blue silk pennant. The red pennant goes to the winner in the second class.

# Canoeing.

## FIXTURES.

AUGUST.

4-25. A.C.A. Meet, Willsborough Pt
15-20. A. C. A. Meet, race week, Willsborough Point.
27. Rochester, 4th Trophy Race, Irondequoit Bay.

SEPTEMBER.

3. Springfield, Cup, Springfield.
3. Brooklyn, Visiting Cruise, Passaic River.
3. Orange, Ann., Arlington, N.J.
5. Arlington, Ann., Arlington, N.J
5. Ianthe, Annual Regatta.
8. Rochester, Fall Regatta, Irondequoit Bay.

OCTOBER.

1. Springfield, Cup, Springfield.

## The A. C. Meet.

The 13th annual meet of the American Canoe Association has been in progress since Aug. 4 at Lake Champlain, the attendance at the start promising one of the largest and pleasantest meets yet held. The number and importance of the recent yacht races of the New York Y. C. cruise has delayed our reports of the meet, but we shall give the usual complete reports of the camp and the races in the following numbers of the Forest and Stream. The races will occupy the present week.

## Northern Division Meet.

Friday, July 22, opened bright and very warm, with a few new arrivals. The regatta committee were hard at work all day arranging a programme for the following week. In the afternoon Mr. Thompson called upon us and invited us to visit his large lumber mill and to a sail on Lake St. John on the following morning. Saturday saw the members up bright and early. Canoes were soon pushed out from shore, and after a short paddle in the boiling sun we reached Longford Dock, where Mr. Thompson had waiting for us a team and a hay rack, and in about twenty minutes we were landed at the mill, where we were conducted through the different departments of their large business.

Again boarding the hay rack, we drove to the steamboat landing on Lake St. John, where a tug was waiting for us; and we steamed away northward up the beautiful lake. After passing large booms of logs, we arrived at the "portage," where, by the aid of steam and an endless chain, the logs are transported overland from Lake Couchiching to Lake S. John, about a quarter mile. Returning we reached camp in time for lunch, greatly pleased with forenoon outing and the kindness shown us by the owner of Geneva Park.

Immediately after lunch active preparations were gone into for the reception of Commodore Winne, who was expected over by the afternoon boat from Orillia. Many suggestions had been offered as to the form the reception should take, but by a large majority of the members it was decided to have a procession to meet the boat and escort the commodore to headquarters. Stock being taken for material to form a procession, we found the following available candidates: One horse, two donkeys, two goats, two peacocks, hens, duck, etc. The horse was placed at the head of the procession ridden by a canoeist in a bathing suit with sugar loaf straw hat. Next came the donkey attached to his little buggy driven by another canoeist in a red blanket and painted face, with a vacant seat for the Commodore, closely followed by a guard of honor consisting of twelve stalwart canoeists with paddles on their shoulders and dressed in gorgeous array, the remaining part of the procession being made up of the rest of the canoeists. The time prior to the coming of the boat was spent in active rehearsals by the guard of honor. The procession started for the dock and reached it as the boat steamed in, but no commodore appeared, much to the regret of the canoeists, but feeling it would be too bad to spoil the fun the vice-commodore spotted the stalwart form of Dr. Powell, of Toronto, who was seized by him, and with the aid of the guard of honor was safely placed in the vacant seat reserved for the commodore. The procession being now complete they started down through the avenue of trees to the ladies' camp, thence to headquarters, where they were received with blowing of horns, cheers of the canoeists and braying of the donkeys.

Feeling sure that Com. Winne would arrive by the evening train the vice-commodore went over to Orillia to meet him, but much to his regret failed to see him, he having in the meantime arrived at Orillia and driven to the camp, coming in by the rear. Soon a campfire was lighted, and every canoeist in camp assembled to meet the jovial commodore and to hear Mr. Fluffy's Canoe and other recitations.

Sunday was quietly spent in camp, some members enjoying themselves in sailing, others paddling in different parts of the lake; and the balance taking frequent baths to keep themselves cool. In the evening a camp fire with hymns by the choir, lead by Com. Winne.

Every person in camp regretted the arrival of Monday morning, for at 9:30 o'clock the boat was due to leave and take with it the commodore, who had been the life of the camp for the last two days.

A light but sure wind blowing from the southeast the regatta committee ordered the racers to be ready at 10:30 o'clock for the free-for-all sailing race, the following canoes started:

| | |
|---|---|
| Chas. E. Archbald, canoe Mab. | Roy Sweny, canoe Gwen. |
| C. Fraser, canoe Una. | J. W. Sparrow, canoe Eel. |
| W. A. Fraser, canoe Mac 90. | R. Tyson, canoe Boa. |
| Harry Ford, canoe ——— | H. F. McKendrick, canoe Mac 89. |
| D. B Jacques, canoe Waif. | |

The canoes got away well together with Una in the lead on the reach to the second buoy; rounding the buoy for the close-hauled work they soon spread out, Una still keeping the lead, closely followed by Waif. Turning the third buoy for the free run home, Mab showed great speed with her 150ft. of sail, passing both Eel and Waif and shortening the distance between herself and Una. On the next leg Waif again passed Mab, taking second place. This order was maintained until Mab fouled the buoy at the jibe, shortly after capsizing, thus putting her out of the race. Time: First, Una, 44m.; second, Waif, 45m., and third, Eel, 46¼m.

The next event called was the open canoe single blade half-mile paddling, which was won by J. H. Carnegie, with Harry Ford second.

In the afteraoon the combined sailing and paddling race was called at 2:30 o'clock, a good stiff breeze blowing. The following was the result: First, D. B. Jacques, canoe Waif; second, J. W. Sparrow, canoe Eel; third, Roy Sweny, canoe Gwen, with H. Ford and J. H. Carnegie in open canoes fourth and fifth.

About 6:30 o'clock large black clouds were noticed in the northwest, and in less than half an hour we had a terrific thunderstorm, accompanied by a gale which blew over some of the tents, postponed the camp-fire and kept the rest of the camp driving tent pegs and tightening guys.

Tuesday the first race called was the open canoe sailing, 3 miles, won with ease by Chas. E. Archbald, with H. R. Pratt second. At 10:30 o'clock was the tandem paddling, won by Archbald and Pratt, with Carnegie and Ford second, and Sweny brothers third. The first event in the afternoon was the record sailing race, started in a good northwest wind, which gave the sailers all they wanted to do to handle their large sails. The Waif took the lead, closely followed by Mab, and was never passed, finishing in the following order: First, Waif, second Mab, third Gwen, fourth Eel, fifth Una and sixth Mac.

H. F. McKendrick did not finish, having come to grief by the breaking of his hiking seat.

Second event was the upset sailing, distance half a mile, with wind abeam. The sight of the canoes in this race was beautiful from headquarters as they kept coming in abreast, and at equal distances apart. When two-thirds distance on their course the signal was given to capsize, all the canoes going over almost together. C. E. Archbald was first to right his canoe, giving him the lead which he held to the finish, closely followed by Colin Fraser with Will Fraser third. Immediately after the upset sailing race, while some of the canoeists were still wet, a trip was made to the steamboat dock to start the hurry scurry, which was admirably adapted for the purpose, the canoeists having a good run down the dock and a swim of about 25yds. to the canoes which were anchored, then to paddle around a buoy and back to the dock, finishing with the follow-

ing results: A. H. O'Brien first, with J. H. Carnegie about a half a boat length behind and Roy Sweny third.

Wednesday, the first thing was the meeting of the nominating committee. At 10 o'clock the record paddling race was called, there being six entries, and the result: J. H. Carnegie first, H. Ford second Roy Sweny third. At 10 o'clock the club race was started, the course being two miles to windward around Horse Island and return. The canoes started for the beat to windward, in a light baffling wind which dropped altogether as they neared the island. Fearing it would take all day to complete the course at this rate of going the contestants decided to abandon the race and paddle back to camp. Before they had gone far the rumblings of an approaching storm were heard, so they decided to take shelter in the lee of a small island, reaching it just in time to escape a gale of wind and to see the rain fall in torrents. Mr. Will Fraser, who had started back for camp was not so fortunate as the rest; he was caught by the storm and capsized, finally reaching shore by the aid of an open canoe.

At 2:30 o'clock the weather was somewhat settled, so that the regatta committee decided to start the great race of the meet, the Orillia Cup race. Heretofore the race for this cup has generally been sailed in a stiff breeze, but this year was the exception, the wind being very light and changeable. The first leg of the triangle was a reach, on which Una got a slight lead, rounding the second buoy, Una, Gwen and Eel stood off on the port tack, while Mab and Waif went about to starboard. For a while it seemed as if the three first named canoes were going to round the third buoy first, but Waif taking advantage from another quarter came about on the port tack, heading off the other and rounded the buoy first. On running down to the home buoy the wind was some time abeam or directly abaft of the canoes.

The positions at the end of the first round were: Waif first, Una second, Eel third, Gwen fourth, Mac fifth, Mab sixth. This remained unchanged until the third round, when Gwen took third place, passing Eel on the first leg of the fourth round, Una and Waif having been close together all through the race. Una took advantage of a slight slant in the wind and sailed ahead, which she held to the finish. Eel in the meantime having again taken third place.

The following is the result: First Una, C. Fraser, 1h. 31m.; second Waif, D. B. Jacques, 1h. 31m. 45s; third Eel, J. W. Sparrow; fourth Gwen, Roy Sweny; fifth Mac, Will Fraser. Chas. E. Archbald did not finish.

Immediately after the race for the cup the paddling upset was started, A. H. O'Brien winning, with Roy Sweny second.

This event was followed by gymnastic, which was won by Roy Sweny. The record winners were: First, D. B. Jacques; second, Roy Sweny; third, J. W. Sparrow.

In the evening the steamer Longford arrived at the dock to take the canoeists out for a sail on the lake, some of them enjoying themselves with dancing while others stayed on the upper deck and admired the scenery of the lake. After a pleasant sail of an hour or so the members returned and had light refreshments, which were supplied by the ladies at the mess tent.

Thursday morning the general meeting of the Division was held at headquarters, with the vice-commodore in the chair. The nominating committee brought in their report, as follows, the nominees being unanimously elected: Vice-Com., J. N. McKendrick, Galt; Rear-Com., M. F. Mims, Bobcaygeon; Purser, Colin Fraser, Toronto; Executive Committeemen, Chas. E. Archbald, J. H. Carnegie.

A discussion took place as to the charging of camp dues at the division camps, some of the members arguing that the fee of $1 was insufficient to defray the expenses of the division. The following resolution was adopted, "That in the opinion of this meeting the divisions should be empowered to charge camp dues at division meets and that the executive of this division be requested to take steps to secure the necessary amendment to the constitution."

An expression of opinion was taken as to the camp site for 1893 and it was the unanimous opinion that the general meet should be held at the Thousand Islands.

After a vote of thanks to the retiring officers and to Mr. Thomson for placing Geneva Park at the disposal of the division, and for his kindness to the members while in camp, the meeting adjourned.

The remaining part of the day was spent in packing up and getting ready to leave for home, and by the evening the majority had left, after expressing the pleasure they had in camp and the hope of meeting on the St. Lawrence next year. J. W. S.

### Aid for the Cruisers.

*To the Commodore and Officers of the American Canoe Association:*

GENTLEMEN—While each year the racing rules are vigorously discussed and many alterations considered, while weighted plate, housable centerboards and self-bailing closed cockpits are being devised and legislated about for the benefit of our racing brethren, the cruiser being less boisterous and given more to the quiet of the narrow river or open bay, away from the excitement of crowds is somewhat forgotten by our fully occupied officers and committees and little is done for a large contingent of our warmest supporters and best members.

Among the most prominent members have we had good cruisers, and seven of our twelve commodores have been known well for their cruises. The Richelieu, Otonanee, Connecticut, Delaware, Susquehanna and Hudson rivers have been written about by Alden, Edwards, Nickerson, Oliver, Gibson and Rogers, and I doubt if the pleasures of their cruises were any less than the flush of victory even in such racers as Edwards, Nickerson, Oliver or Gibson.

But coming right to the point it is hereby suggested that the newly elected commodore appoint in each Division one member who together with the librarian be a committee on cruising and whose duties would be that of a general scope committee to consider and devise ways and means by which each individual cruiser would be benefited. In the first place this committee could arrange the mass of matter now in the hands of the librarian, preparing it in such a manner that the full particulars with charts showing where railroads are, how long a carry from river to station at certain points, location of springs, dangerous points, etc. One such cruise a year would justify the committee's existence and see of how much utility such information would be. Then I would suggest that a similar committee of four be appointed as a committee on transportation whose duties would be apart from the regular camp transportation committee and who could specially look up all such subjects as the setting of a certain regular rate upon which canoes could be carried on rail roads, boats, etc., and all similar subjects.

Men ask now of what use is the A. C. A. to a man who can't attend the meet, and a good answer to this question could be given if we had such committees.

I send this open letter so that all the members of the Association may have an opportunity to see and consider it. With kindest wishes. ROBERT J. WILKIN.

BROOKLYN, Aug. 9.

### A. C. A. Membership.

THE following gentlemen have applied for membership in the A. C. A.: Central Division—M. H. Smith, Frank Taylor, Geo. P. Wetherbee, C. P. Parker.

### Wants and Exchanges.

Certain individuals are born under a lucky star and gain something material each time they make an exchange. Others have the faculty invariably to lose. It does not follow, however, that in every exchange some one must come out at the small end of the horn, for both parties in such a transaction may be gainers and both frequently are so.

If Mr. Smith has an express rifle and lives in New Jersey, and if Mr. Jones has a .22 cal. gun and lives in a big-game infested region, they can make an exchange, very likely, that will be of profit to both. All that is necessary is to bring Mr. Jones and Mr. Smith into communication with each other; and this can be done by an advertisement in FOREST AND STREAM.

FOREST AND STREAM—advs. and all—is read by sportsmen the world over, from Kamtchatka to Kalamazoo. Many of them have articles of value which nature or environment has made it impossible for them to use and which they would be glad to dispose of, while others have cash or equally valuable articles to exchange. All that is needed to accomplish a transfer and make both parties happy is to put them into communication with each other. FOREST AND STREAM, as noted above, stands ready to do this. For the price of a telegram (3 cents per word) it will advertise your want, or the article that you think will supply some one else's.

A woman who is camping in the Adirondacks sent out this message: "No one can fully value a frying-pan until one is taken to the woods. Our guide fries bacon, and he does it in the frying-pan. He boils potatoes, and he does it in the frying-pan. He bakes bread, and he does it in the frying-pan. He sweeps up the floor, and he does it in the frying-pan."—*Boonville Herald.*

The esteemed correspondent who writes on both sides of the paper means well but should do better. The way to do better is to write on one side of the sheet only.

# Trap Shooting.

**All ties divided unless otherwise reported.**

## FIXTURES.

**If you want your shoot to be announced here send in notice like the following:**

Aug. 18-19.—Riverside Gun Club tournament, Youngstown, O.
Aug. 18-20.—West End Gun Club tournament, at San Antonio, Texas.
Aug. 23-24.—Greensboro (N. C.) Gun Club tournament.
Aug. 23-24.—Hackettstown (N. J.) Gun Club tournament.
Aug. 23-26.—International tournament, Des-chree-shos-ka Island, Detroit, Mich. Live birds and targets.
Aug. 24-28.—California State Shooting Association tournament, Conord, Cal.
Aug. 25-26.—Rockville Gun Club tournament, at Rockville, Md.
Aug. 26-27.—Sparta Shooting Club tournament, Sparta, Ill.
Aug. 29.—Parkway Rod and Gun Club open shoot and picnic Dexter Park, Long Island.
Aug. 30-Sept. 2.—Standard-Keystone Target and Trap Co., fifth annual tournament, at New London, Conn.
Aug. 31.—Kingbird tournament under the management of Cortland County Gun Club, Cortland, N. Y. E. C. Rindge, Sec'y.
August.—Niles Gun Club tournament, at Niles, Mich.
August.—Connecticut State League, at Bristol, Conn.
August.—New Jersey State Trap-Shooters' League eighth monthly tournament, Harrison, N. J.
September.—Saratoga (N. Y.) Gun Club, annual tournament.
September.—Rocky Mountain Sportsmen's Association annual tournament, at Denver, Col.
September.—Conneaut (O.) Gun Club tournament.
Sept. 1.—Atlantic (Ia.) Gun Club tournament.
Sept. 5.—Frankfort (N. Y.) Game and Fish Protective Association, first annual tournament.
Sept. 5.—Muncie (Ind.) Gun Club amateur tournament.
Sept. 5-7.—Pier Gun Club tournament, at Atlantic City, two days at targets, last day at mud hens.
Sept. 6-8.—Central Illinois Sportsmen's Association annual tournament, at Jacksonville, Ill.
Sept. 7-8.—Piffin (Ohio) Gun Club tournament.
September (second week). — Interstate Manufacturers' and Dealers' Association tournament, at Auburn, N. Y.
Sept. 27-Oct. 1.—Grand five days' tournament at Mt. Sterling, Ky.
Sept. 29-Oct. 1.—Peekskill (N. Y.) Gun Club tournament.
Oct. 5-6.—West End Gun Club tournament, at Ottumwa, Iowa.
Oct. 5-7.—First annual tournament of the Riverside Gun Club, at Red Bank, N. J. First two days targets, last day live birds John P. Cooper, Sec'y.
Oct. 18-20.—Highland Gun Club annual fall tournament, at Des Moines, Iowa.
Oct. 19-20.—Somerville Gun Club tournament, Somerville, N. J.
Nov. 23-26.—Milwaukee (Wis.) tournament; targets and live birds.
May, 1893 (last week).—Knoxville Gun Club tournament, three days targets, last day live birds; $1,000 added to purses.

## DRIVERS AND TWISTERS.

THE August meeting of the Rochester Rod and Gun Club was held in the Court House, August 5, and a good number of members were present. The matter of arrangements for the State Shoot, which will take place in that city in June, 1893, was referred to a committee consisting of President W. J. Mann, E. D. Hicks and H. M. Stewart. The second annual tournament of the club will be held in the early part of September, the arrangements for which are in the hands of the Executive Committee. The secretary was instructed to issue a challenge to the Auburn Club for a shoot to come off as soon as possible. H. M. Stewart issued a challenge in behalf of President Mann, L. V. Byer and himself to shoot any three members of the club. The challenge was accepted by E. D. Hicks, who will choose his two associates. Ex Supervisor S. W. Bradstreet, of Parma, formerly of Rochester, was elected an honorary member of the club.

* * *

A largely-attended meeting of the West Side Gun Club, of Saginaw, Mich., was held August 5, to take action in regard to the State tournament, which is booked for this city. The state management has granted an extention of time to enable the home club to make the necessary preparations, and accordingly the affair is postponed until the second week in September, and will probably be of three days' duration. The Andre Driving Park on Court Street has been selected as the place for holding the shoot, but owing to lack of hotel accommodations on the west side the clubs will probably be compelled to make shooters' headquarters on the east side, in which case the league convention will also be held there.

* * *

The Baltimore Gun Club has organized a pistol club, the first one ever established in that city. The officers are: Dr. Heber Smith, president; J. A. Hartner, vice-president; H. E. Kelly, treasurer; J. R. Malone, field captain; Dr. S. Fort, secretary; D. Cantler, recording secretary. The scores made at the initial shoot were as follows: Out of a possible 25—Kelley, 20; Dr. Smith, 22; Malone, 24; Hartner, 24; Cantler, 21; Dr. Fort, 23; Richardson, 15. The range was 25 yards, and the shooting was fine for the first time. They will hold their shoots at Acton's Park and at Tolchester.

* * *

In spite of the excessive heat on August 11, several members of the Newark Gun Club put in an appearance at Erb's Park. In the club shoot the scores were: Castle, 10; Breintnall, 8; Lane, 9; Holis, 6; Lmith, 9. In a ten-bird sweep Castle killed 8; Breintnall, 9; Lane, 8 and Smith, 10. The entries were $5, with two moneys.

* * *

The New Lisbon Rod and Gun Club will go into camp at Bale's Run, on Saturday. The membership comprises James Charters, M. L. Nace, Ira Young, P. B. Young, Charles Huston, James Costello, Frank Farrell, S. E. King, F. M, Benner, J. S. Bowman, D. M. Miller and E. F. Moore.

* * *

The first fall tournament of the Peekskill, (N. Y.) Gun Club will be held September 29 and 30 and October 1; the first two days at blue rock targets and the third day at live birds. The club grounds are very conveniently located and well equipped.

* * *

In the match for the live bird championship of Pennsylvania, F. P. Smith forgot to put shells in his gun on the fourth round and lost his bird. This probably lost him a chance to shoot off for the badge, as he killed all the rest of his birds.

* * *

The South End Gun Club, of Albany, shoot every Thurhday afternoon on Parr's Island opposite the Albany Hotel. The members of the Forester and West End Gun Clubs have been invited to take part in the sport.

* * *

Messrs. Allen, Fearne, Faurote and Warden, of the Dallas, (Texas) Gun Club, recently shot a match at twenty live pigeons. Fearne and Allen scoring 18 each, Worden and Faurote 17 each.

* * *

The Muncie, (Ind.) Gun Club announces an amateur tournament for September 5. The shooting will be at U. S. targets thrown from five U. S. traps under the rapid-firing system.

* * *

With over a thousand members on the roll, it would seem as if the Pennsylvania Association should have had more than thirty-one entries for the State championship match.

* * *

The obnoxious Inter-state handicap was enforced at Reading on the opening day. This handicap should be ignored by all level-headed managers.

* * *

William T. Canon went all the way from Newark, N. J., to enjoy some live bird shooting at Reading and had a chance to shoot at only twelve birds.

* * *

During the last day of the Reading tournament a half-grown rabbit ran across the field and was followed by half a hundred shouting men and boys.

* * *

In his Des-chree-shos-ka programme Jack Parker makes very pleasant allusion to FOREST AND STREAM and its trap department.

W. K. Park and E. H. Kniskern, who represented the Wilkes-Barre Gun Company at Reading, shot in good form.

* * *

James L. Smith wants to see "everybody" at the Hackettstown (N. J.) tournament next Tuesday and Wednesday.

* * *

Henry Matz says the Reading Shooting Association will hold no more tournaments unless it be on inclosed grounds.

* * *

The Rockville Gun Club and Billy Wagner will attract a big field of entries to Rockville, Ind., on August 25 and 26.

* * *

Live bird shooters from all over America will contest for the International championship at Des-chree-shos-ka.

* * *

Charley Ross will travel all the way from Knoxville to Detroit to take part in the Des-chree-shos-ka shoot.

* * *

Enoch D. Miller was never known to lose control of his temper until the Pennsylvania shoot.

* * *

The Riverside, (Ohia,) Gun Club will hold a target tournament tomorrow and on Saturday.

* * *

During the New London shoot a canvas fly will be stretched over the firing points.

* * *

During the last two days at Reading, Gus. Greiff lost only 17 out of 260 targets.

* * *

The Conneaut (Ohio) Gun Club proposes holding a tournament in September.

* * *

William Wagner has secured the patents on his new loading machine.

* * *

Fred Quimby was full of life as usual at Reading.

* * *

Saint Peter, Minn., now boasts of a gun club.

* * *

Morse, Ia., has a gun club, just organized.

C. H. TOWNSEND.

### San Francisco Clubs.

SAN FRANCISCO, Aug. 6.—The shoot to-day was the long-talked of match between the Country Club of this city and the Alameda County Sportsmen's Club. It was a good day, rather warm, at first making lazy birds, but later a sharp wind sent the birds in a hurry from the trap.

The Country Club, owing to the absence of Mr. Kittie, who is laid up with an injured leg, was minus one of its most reliable supporters.

Those who used 12 guns shot at 28 yards. Only one 10-gauge breech-loader was represented, and the handler of the larger weapon (H. A. Skell) retired with a clean score.

Fifteen birds per man, trophy valued at $50 to be subscribed for by losing team.

| Country Club. | | Alameda Co. Sportsmen's Club. | |
|---|---|---|---|
| F L Wooster | 15 | W W Haskell | 15 |
| R E Wilson | 14 | C M Osborn | 12 |
| F W Tallant | 13 | W E Mayhew | 12 |
| R A Eddy | 13 | S E Knowles | 10 |
| W C Murdock | 9 | H Schroeder | 10 |
| E L Bosqui | 11 | H F Adams | 11 |
| J D Grant | 8 | Lichtenburg | 8 |
| R H Spague | 12 | T R Barney | 14 |
| F R Webster | 11 | L P Bolander | 11 |
| E Donohue | 13—119 | F B Norton | 13—116 |

### The Lynchburg Gun Club.

LYNCHBURG, Va., Aug. 10.—The Gun Club held a regular shoot yesterday afternoon. The weather has been so very hot that only a few members ventured to the grounds. A ra n of short duration came up during the afternoon, but soon passed away, leaving the heat almost as great as before. The following scores were shot:

First event, 9 singles and 3 pairs: Nelson 14, Dornin 12, Terry 8, Cleland 12, Moorman 13, Christian 6. Nelson winning clean score and Siverthorn medal.

Second event, 9 singles and 3 pairs: Nelson 13, Dornin 12, Terry 6, Cleland 14, Moorman 10, Christian 4, Stearns 9, Owen 10, Durphey 6. Cleland winning bottle of cologne.

Third event, 10 singles, rapid-fire, expert rule: Nelson 4, Cleland 4, Terry 2, Owen 4, Moorman 4, Stearns 5, Dornin 6.

Fourth event, 10 singles, rapid-fire, expert rule: Christian 6, Owen 5, Stearns 6, Durphey 6, Langham 1.

Fifth event, rapid-fire, 5 singles: Nelson 5, Cleland 5, Terry 3, Moorman 3, Dornan 5, Durphey 5. D.

### Omaha Scores.

OMAHA, Aug. 6.—The Bemis Park Gun Club held its weekly shoot this afternoon, and notwithstanding the fact that the mercury was boiling, there was a large attendance. The grounds have been greatly improved since the previous shoot. A substantial board flooring has been put down over all the space from the shooting shed to the traps, and a broad plank walk laid from the motor station to the stand. Another week will witness still greater improvements, with a commodious club house, with bath and individual lockers, the club being determined to possess the best shooting grounds in or about Omaha. The condition of to-day's shoot was fifteen live birds to a man, 30yds. rise, 80yds. boundary, from 5 unknown traps, modified English rules. The birds were an exceptionally fine lot, hardy and swift of wing, and as a consequence the general average did not reach its customary altitude, Colonel "Stocky" Heth leading the van with 12 kills. The scores are appended: Loomis 9, McDougall 10, Galbraith 9, Blake 11, Heth 12, Reed 9, Reinhart 10, J. J. Dickey 10, Lyle Dickey 10, McFarlane 10, Hawks 8, Salisbury 10, Chubbuck 12, Smead 11, Dumont 11, Peters 9, Brown 8.

### Hollywood Shoot.

LONG BRANCH, N. J., Aug. 12.—The most brilliant and exciting live pigeon shoot of the season took place this afternoon on the Hollywood Gun Club's grounds before a large and fashionable assemblage. The event was the midsummer handicap, with eight entries.

The entries and their handicaps were: S. Williams, L. S. Thompson, Capt. A. W. Money, Edgar G. Murphy, Frederick Hoey, H. Yale Dolan, all at 30yds.; P. Hazard, 28yds; W. P. Thompson, Jr., 27yds. Mr. Hazard was the first to drop, he missing four out of nine; Capt. Money followed at twelve, Mr. Williams failed at fifteen, Mr. Hoey at seventeen and W. P. Thompson, Jr., at twenty. This left Messrs. Thompson, Dolan and Murphy in, with but one miss by Thompson and Dolan and two by Murphy on the third and fourth birds. Dolan reached his limit at twenty-nine, leaving the other two to fight it out. Murphy was shooting remarkably well, and when Thompson missed his second bird on the thirty-fourth shot he was the favorite to win, but a remarkably swift bird was too much for him on the forty-eighth round.

### Massachusetts State Shoot.

ORDERS for the official matches at Framingham of the Massachusetts National Guard have been issued: The team match will be shot Sept. 6, and the distinguished marksmen match will follow the next day over the same range.

The regimental teams, however, comprise only such officers or men as have made qualifying or requalifying scores as first-class marksmen during the current target year. It has been found, to secure safety in a match, necessary to restrict regimental teams to first-class marksmen. This will do away with the individual trophies for the three highest scores in the junior class. The distinguished marksmen competition will be conducted on similar lines to that followed in 1891.

### Ohio Trap Shooters.

CLEVELAND, O., Aug. 11.—There was a very good attendance at the regular shoot of the Cleveland Gun Club this afternoon. Redwing won first and Flick second badge in class A, and Curtiss first and Watts second badge in class B. The following were the scores made:

Tamblyn 23, Flick 24, Sterling 21, Redwing 27, Elworthy 16, Rage 18, Curtiss 23, Alberts 18, Watts 22, Holt 20, Williams 16

## PENNSYLVANIA STATE SHOOT.

PROMPTLY at 9 A. M., on Tuesday, Aug. 9, was fired the first gun ushering in the second annual tournament of the Pennsylvania State Association for the Protection of Fish and Game, held under the auspices of the Reading Shooting Association, on its fine grounds near the Black Bear Inn, under the shadow of the Stauffhead Mountain. The grounds were splendidly equipped for the occasion and their naturally picturesque appearance was enhanced by the pitching of a number of tents, among which were those belonging to subscribers to the Interstate Manufacturers' and Dealers' Association. The grounds are very pleasantly located in a basin just below the Black Bear Inn, three miles from Reading, and is reached by a well-equipped electric car line, running up the northern side of the Neversink Mountain. There is some magnificent scenery en route. The inn is just at the foot of the Neversink Mountains, and from the shooting grounds can be obtained views of Mount Penn, Guldin's Hill, and other lofty peaks, all clad in the greenest of summer verdure. Between the grounds and Guldin's Hill is the valley through which flows Antietam Creek, while to the southward is Oley Valley.

The members of the Reading Shooting Association had spared no labor nor expense in the completing of arrangements for a well attended and successful affair and had provided two sets of ten and one set of five Keystone traps, all of which worked perfectly during the entire shoot. The club house, an excellent cut of which accompanies this article, had recently been treated to a fresh coat of paint and presented an inviting appearance. Immediately to the left of the clubhouse was the cozy tent of FOREST AND STREAM, after which in order the arrangement of tents and stands was as follows: *American Field* wall tent; American Wood Powder Company's tepee; Henry C. Squire's big wall tent; Reading Shooting Association visitors' tent; cashier's and press stand; Harrisburg Shooting Association tent; Williamsport Rifle and Gun Club tent; Tatham Brothers' tent; Standard Keystone Target Company's tent; refreshment stand; "S. S." Powder Company's tent; Union Metallic Cartridge Company's tent; Colt Patent Firearms Company's tent; Von Lengerke & Detmoid's tent.

The attendance of the opening day fully satisfied the management; seventy shooters entering for the various events. In the first State event there were thirty-five entries, and in the first open event there were forty-three entries. The weather was intensely hot, and long before noon some of the contestants were obliged for their own safety to leave the grounds and take refuge in the shade of the trees. About 500 spectators visited the grounds, a large number of ladies being included.

Among those who were on hand at the opening hour were E. D. Miller of Springfield, N. J.; Neaf Apgar of Plainfield, N. J.; W. Fred. Quimby of Newark, N. J.; Gus. Greiff of New York City; H. A. Penrose of New London, Conn.; W. R. Fieles of Christiania, Pa.; Jas. Wolstencroft and W. H. Wolstencroft of Frankford; Jos. Thurman, Jr. and Harry Thurman of Germantown; C. E. H. Brelsford, Budd Kinzer, J. M. Worden, Commodore Nutt and J. S. Dustin of Harrisburg; W. R. Treadway, H. David, E. David, French and Lane of the Philadelphia Shooting Association; H. E. Buckwalter of Royersford; R. T. Clayton of Tamaqua; J. M. Millspaugh and N. A. Hughes of Williamsport; A. C. Krueger of Wrightsville; Elmer Shaner of Pittsburg; R. W. Park and E. H. Kniskern of Wilkesbarre.

The main event of the day was the contest for the team championship of Pennsylvania, prize a silver trophy, valued at $200, donated by the Harrisburg Shooting Association, to be contested for annually under the following conditions: Teams shall consist of six men, *bona fide* members of any club or association in the State Association. An entrance fee of ten dollars shall be charged each club, one-half of which shall be in payment of targets, the balance, 50 per cent., to holders of the trophy, the balance, 30 and 20 per cent. to the next teams in order. Twenty-five targets per man, 150 per team shall be shot at, known angles, rapid firing system, 10 and 12 gauge guns at 16 yards rise. A bond in the sum of $200 shall be given by the winners to the club under whose auspices this association shoot is given for its return to the club under whose auspices the next association shoot shall be given.

The scores follow:

Before the above contest was finished a protest was made against the trophy being awarded to the Keystone Shooting League, who had made the highest score. The protest was based on the fact that H. David, who shot on the Keystone team, had previously, in the same contest, shot on the team of the Philadelphia Shooting Association. The rules, as will be noted above, state that "teams shall consist of six men, *bona fide* members of any club or association in the State Association," and does not state that no man shall shoot on more than one team. The management, however, accepted the protest and hold the trophy subject to a decision from the sporting press. This decision can not be other than favorable to the Keystone League under a technical interpretation of the rule. In contests of this kind a man should be barred from shooting on more than one team, but this should be stated plainly in the rules.

On this day was also shot the first two contests of the series of six for the American Wood Powder trophy, the first of the State sweepstakes at 20 targets per man and a series of open to all sweepstakes. In order to give a better idea of the work in the contests for the American Wood Powder trophy the results will be left to the finish. Below is the result of the State sweepstake at 20 Keystones, $3 entry.

Below is a table giving the results of the eight open events, the conditions being as follows: Nos. 1, 4, 6 and 8, at 10 singles, $1 entry; Nos. 3 and 7 at 15 singles, $1.50 entry; No. 2 at 20 singles, $2 entry; No. 5 at 20 singles, $3 entry. One-half a cent for each target shot at in these contests went to make up four equal prizes for the first to fourth best average in all events. First went to Harry and Sullivan; second to Landis; third to Rohrbach and fourth to Trego and Wellington. The table:

MEETING OF THE STATE ASSOCIATION.

The meeting of the Pennsylvania State Shooting Association was called for 8 o'clock at H. C. W. Matz's, but it was 9 o'clock before the body came to order with President C. E. H. Brelsford, of Harrisburg, presiding. By unanimous consent it was agreed to admit the representatives of the press. Chairman Brelsford, of the committee on securing a charter, stated that one had been secured, and on motion of H. C. W. Matz, the committee was discharged with the thanks of the Association. Secretary Worden was tendered a vote of thanks for the faithful performance of his duties. Under the head of new business, Chairman Brelsford said that he thought a discussion of the subject of "the preservation of game in Pennsylvania" would be in order. D. B. Faust was of the opinion that the Association should know what they wanted before they asked for it, and when they so decided they should present the petition to the Legislature and back the matter up individually. Charles Matten said that the State Association had spent the most of their time at trap shooting instead of game shooting, to the detriment of the latter sport. R. T. Clayton said that in his vicinity many of the residents were ardent sportsmen, and that they had spent much money individually in punishing transgressors.

J. C. Nutt moved that the present officers of the State Association and five others be appointed a committee to draft a law to present to the Legislature and also asking for an appropriation for the purpose of protecting fish and game. Charles C. Matten asked that it be amended to read that a committee be appointed to be known as the committee on legislation, to whom all grievances shall be submitted and that the committee present the same to the Legislature with full power to act. It was unanimously carried and Chairman Brelsford said that the incoming president should name the committee.

Elmer Shaner, of Pittsburgh, asked that the game laws be amended to make them more uniform.

When the question of naming the place of meeting for next year came up, R. T. Clayton, of Tamaqua, presented the name of Allentown, stating that the grounds were easy of access and that the people were of a hospitable nature and that as the society was young it should be encouraged. Harry Thurman, of the Keystone Shooting League, presented the name of Harrisburg. H. C. W. Matz named Pittsburgh. Mr. Shaner, of Pittsburgh, thanked Mr. Matz for his courtesy and then withdrew the name of Pittsburgh.

Mr. Nutt, in behalf of Harrisburg, said that that association was the root and branch of the State Association and had gone to great expense, and further, that they had the assurance that the city railway company would have electric cars by next spring, therefore he felt that in the interest of the State Sportsmen's Association the next meeting should be held in Harrisburg. Mr. H. C. W. Matz then seconded Harrisburg and Mr. Fieles seconded Allentown. The vote resulted: Harrisburg 18, Allentown 4. The selection of Harrisburg was made unanimous.

It was then moved and carried that the club giving the shoot be allowed to name the date and that the State Association be given six months notice of their decision.

On motion of Mr. Matten, C. H. Brelsford was made a member and chairman of the committee on legislation. A resolution that all State shoots hereafter the winners in each event should shoot the next event at known traps, unknown angles. Mr. Matz moved to amend unknown traps and angles, as the Reading Club could not arrange the traps to-day. The motion, which was made by Mr. Hughes, was then amended to read "after the 15th inst.," and then carried unanimously.

The next subject which came up for discussion was the selection of targets for next year. Mr. Shaner, of Pittsburgh, moved that the Keystone target be adopted. This was amended by Mr. Millspaugh to read that "the targets be of as good quality as any other and at as low a figure, and that the club giving the shoot be allowed the privilege of selecting the targets." Mr. Millspaugh's amendment, so far as the purchase of targets was concerned, was adopted.

H. C. W. Matz, in the name of the Reading Shooting Association, the American Wood Powder Company, and J. W. Wolstencroft, presented the trophies offered by them to the Association. Charles Matten, of Pottsville, made the presentation speech.

The final business of the Association was the election of officers, and resulted in the re-election of the old officers with the single exception of corresponding secretary; H. F. M. Worden, of Harrisburg, was elected, as the constitution says that officer must reside in the city in which the annual tournament is to be next held. The board of directors elected were: E. E. Shaner, Pittsburgh; Harry Thurman, Germantown; C. C. Matten, Pottsville; W. H Wolstencroft, Philadelphia; I. H. Milispaugh, Williamsport.

*The Second Day*

was another scorcher, but nevertheless it brought a number of new shooters. The day was several degrees hotter than the preceding one, and the shooters suffered accordingly. Among the new arrivals were Milton F. Lindsley, of Hoboken, N. J; Wm Garvin, J. A Mills and B. Greenland of Philadelphia; G. Wilson, of Franklin; F. W. Cooper, of Tamaqua; Fuller Wordan, of Harrisburg, and J. L. Smith, of Hackerstown, N. J.

The principal contest of the day was for the Wm. Wolstencroft & Son's trophy, for the individual championship of Pennsylvania, at targets, under the following conditions: Fifty single targets, entrance $3. Keystone rules—10-gauge guns 18yds., 12-gauge guns 16yds; entrance money to be divided as follows: First, 25 per cent. of purse and the trophy; second, 40 per cent. of purse; third, 20 per cent. of purse; fourth, 15 per cent. of purse. The prize to be held by the winner each year in trust; to be accounted for to the Pennsylvania State Sportsmen's Association. Should the said association at any time disband, this trophy shall then revert to the donors. This medal is of the value of $100.

The result:

The average winners were Wm. Wolstencroft, first; E. D. Miller, second; Landis, third, and Dinger, fourth.

An extra open event at 10 targets, $1 entry, with 36 entries was shot, the winners being: Schenck, E. H. K., Miller and Treadway 10 each, White, Mills, David, Cooper, Landis, Thomas and Fieles 9 each, Kinzer, Shaaber, Ritter, Sullivan, Lane, Dinger, Trego, French, Harry, Nutt and Greiff 8 each, Greenland, Hill, Brewster, Rohrbach, Hagenbuch, Dustin and Evans 7 each.

On this day occurred an incident which for downright "cheek" excels anything that has happened on a shooting ground for many a day. In the open to all events all were shooting at known angles. E. D. Miller was shooting in good form and for some reason or other this excited the ire of Budd Kinzer of the Harrisburg Shooting Association, who kept nagging at Miller about the injustice of being put on a level with "amateurs," insinuating that Miller was a pot-hunter, etc. All of this Miller stood until finally when patience ceased to be a virtue he warned Kinzer to keep away from him, advising him to take his complaints to the management and to stop annoying the shooters. Kinzer kept up his annoying tactics until finally James Wolstencroft lost his patience and gave him a first-class "tongue-lashing," after which he asked Kinzer how much he had lost. The reply was "$25." "Well," said Wolstencroft, "here's $25. Put it in your pocket and start for home or you'll get a trouncing." Kinzer, to the surprise of everyone, took the $25 and left the grounds and did not reappear during the shoot.

*The Third Day*

was much more pleasant than the second, a comfortable breeze from the mountains keeping the party comfortable. The principal event of the day was the contest for the $200 trophy offered by the Reading Shooting Association, to be contested for annually under the following conditions: Teams to consist of five men, *bona fide* members of any club or association in the State Association. Entrance fee $10, one-half of which shall be in payment of targets, the balance 50 per cent. to the donors or holders of the trophy; the balance 30 and 20 per cent. to the next teams in order. Twenty-five targets per man shall be shot at known angles, rapid firing system, 10 and 12 gauge guns at 16yds. rise. A bond in the sum of $200 shall be given by the winners to the club under whose auspices this Association shoot is given for its return to the club under whose auspices the next Association shoot shall be given.

First average money was won by Greiff, second by M. H. R. and Miller, third by Wolstencroft and fourth by Fieles.

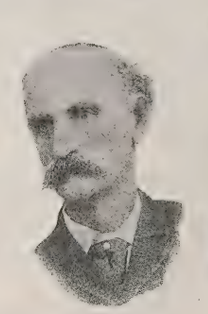
*Friday, the Final Day.*

This was live-bird day and the clerk of the weather must be favorably disposed toward this branch of trap shooting, judging from the fine weather conditions dealt out. From early morning until along toward 5 o'clock the air was dry and there was a good stiff breeze to help the birds in their flight. The attendance both of contestants and spectators was very heavy. Shortly after dinner the number of spectators was estimated at fully 2,500, and of these a large number were ladies. The room of the club house as shown in the cut is formed into an elevated pavilion and this was filled with lady visitors who were very enthusiastic in applauding an exceptionally good shot.

The club had about 1,500 birds on hand, these being what could be classed as fair summer birds. Some were rattling good flyers, some were veritable duffers, but the majority were up to the standard for the season.

The first event of the day was an open to all sweep at 5 birds, $5 entry, four moneys. All live bird events were shot under American Association rules.

The results follow:



| | | | |
|---|---|---|---|
| Fieles | 12222—5 | Thurman | 22222—5 |
| Apgar | 11110—4 | Clayton | 00111—3 |

| Quimby | 10210—3 | Buckwalter | 11222—5 |

THE STATE CHAMPIONSHIP CONTEST,

which was next in order was the big event of the meeting, calling out thirty of the crack Keystone marksmen. The entrance fee was $10 per man, birds extra, each man snooting at fifte n birds. First prize was a magnificent diamond badge, costing $250, presented by the citizens of Williamsport. Last year's winner, E. D. Fulford, received 40 per cent. of this year's entrance money, his share aggregating the neat sum of $125. Of the balance 50 per cent. went to second score; 30 per cent. to third and 20 per cent. to fourth. The scores are given below:

| | | | |
|---|---|---|---|
| Wilson | 10110121112210010—11 | Hughes | 12120122110020—10 |
| J White | 11001020021211—10 | Smith | 22101222121111—14 |
| F Thurman | 10102122222111—13 | Millspaugh | 11201122012212—13 |
| Kleintz | 22122111112201—14 | Rohrbach | 01021110100111—10 |
| Clayton | 11212010102010—10 | Armstrong | 22121212220111—14 |
| Melot | 22112012222220—13 | Williard | 12121011102211—13 |
| Spicer | 21211001111201—12 | Dustin | 21102121011121—13 |
| Denning | 02101022210.0—9 | Essick | 10121111121111—14 |
| Swartz | 11110211120111—13 | J Thurman | 22120020101111—11 |
| Hinerschitz | 22121112021111—14 | Runk | 00020212020002—7 |
| Cooper | 11121121112020—13 | Schmeck | 20111220101122—12 |
| Wordon | 22102122121221—14 | Buckwalter | 11222222222222—15 |
| Fieles | 22202201122220—12 | Dinger | 12100112112100—11 |
| Mertz | 00111e01011001—9 | Hepler | 10221220111010—10 |
| Geisinger | 01112110200200—9 | Wolstencroft | 11211100022222—12 |
| Rothaker | 12201201011122—11 | | |

Thus it will be seen that Harry E. Buckwalter, of Royersford, won the badge and the State championship. Up to and including the sixth round he was tied by Kleintz, Hinerschitz, Cooper, Armstrong, Spicer, Melot, and W. H. Wolstencroft. On the seventh Melot got a dead out of bounds, and Spicer also lost.

JAS. THURMAN, JR.

JOHN SHAABER.

Hinerschitz fell out on the tenth round; Wolstencroft on the ninth; Cooper on the thirteenth; Armstrong on the eleventh, and Kleintz on the fourteenth.

The final event on the live bird programme was a sweep at 7 birds, $7 entry, four moneys. The scores:

| | | | |
|---|---|---|---|
| Swartz | 1110111—6 | Clayton | 0110111—5 |
| Smith | 1011111—6 | True Clayton | 2200111—5 |
| Canon | 1111100—5 | Armstrong | 1102211—6 |
| Essick | 1111111—7 | Huff | 1121100—5 |
| Kleintz | 1110121—6 | Webb | 1110011—4 |
| Worden | 1111112—7 | Bolton | 2021001—4 |
| Willywollly | 0f'0001—2 | Lindsley | 1222221—7 |
| Ducker | 0211102 5 | | |

The target events shot during the day called out very light entry lists, as the majority preferred to stick to live bird shooting. During the week almost 27,000 targets were thrown.

## Madison County Meet.

CAZENOVIA, N. Y., Aug. 3.—A more glum lot of shooters never looked upon the morning of Aug. 2, than those who came to attend the shoot. Rain, rain, all day long; it came down not slowly but thickly; but despite it a few "sweeps" were shot and the regular county shoot postponed until Thursday. When Wednesday morning came the sun showed itself, and once more the shooters looked happy.

Contest No. 1, 10 single kingbirds, entrance $1: Mosher 10, Knowlton 10, Lefever 9, Rindge 6, Hill 9, Mayhew 8, Luther 10, Wheeler 9, Thompson 9, Squiers 2, Gain 5, Barrett 9, Courtney 10, Schemerhorn 10, Dwyer 3, Petrie 5, Lansing 9, Berry 7, Card 8, Cruttenden 9, Strong 4, Hallery 3.

Contest No. 2, 15 single kingbirds, entrance $1.50:

| | | | |
|---|---|---|---|
| Mosher | 111110001111111—12 | Lefever | 111110101111111—14 |

| Luther | 11 11 11 01 00— 7 | Courtney | 11 11 11 11 10— 9 |

No. 8, 15 kingbirds, R. T., entrance $1.45: Barrett 15, Luther 15, Hill 14, Lansing 13, Squires 8, Mosher 13, Courtney 15, Knowlton 15, Schemerhorn 10, Flattery 5, Wheeler 12, Rindge 9, Mayhew 15, Petrie 14 Thompson 14, Cruttenden 15, Lefever 15, Duyer 14, Strong 9, Crain 9, Card 10.

No. 9, 10 single kingbirds, R. F. K. T. U. A., entrance $1.30: Mosher 9, Rindge 8, Luther 9, Mayhew 9, Dwyer 7, Wheeler 8, Petrie 6, Lansing 7, Berry 8, Hollaway 4, Mowry 6, Lefever 9, Courtney 9, Barrett 10, Knowlton 10, Card 6, Strong 2, Schemerhorn 7, Cruttenden 7, Elliott 8, Ayling 6, Thompson 9.

No. 10, 15 kingbirds, T. T., entrance $1.45: Mosher 15, Courtney 15, Luther 15, Petrie 15, Berry 13, Schemerhorn 14, Ayling 12, Mayhew 15, Holloway 14, Cruttenden 13, Thompson 14, Strong 4, Lefever 11, Barrett 12, Elliott 13, Lansing 13, Knowlton 14, Rindge 12, Wheeler 12, Mowry 13, Hill 14, Prettie 7, Card 8.

The averages were won by J. G. Knowlton, $6; A. G. Courtney, $3.50; C. O. Barrett, $2; W. M. Mayhew, $1.75; G. C. Luther $1.

*Aug. 4*.—Yesterday was a perfect one in every respect, but the clouds once more hung around the horizon, and before the day was out had gathered, and it rained quite a little at different times; but the entire programme was shot out and some extra sweeps indulged in. Promptly at 9:30 the ball opened. This was the regular county shoot with some extra prizes for outsiders:

No. 1, 10 single kingbirds, R. F., entrance 80 cents: Dwyer 5, Rindge 10, Thompson 9, Schemerhorn 8, Markham 8, Berry 7, Bass 8, Petrie 9, Potter 5, Card 7, Squires 3, Cruttenden 8, Atwell 8, Maxwell 8, Wheeler 9.

No. 2, 15 single kingbirds, R. F., entrance $1: Schemerhorn 15, Potter 10, Dwyer 11, Cruttenden 11, Bass 8, Card 11, Rindge 14, Squires 6, Petrie 7, Thompson 12, Markham 14, Maxwell 13, Berry 12, Atwell 9, Wheeler 12.

No. 3, 10 single kingbirds, R. F. K. T. U. A., entrance 80 cents.

| | | | |
|---|---|---|---|
| Schemerhorn | 1111111111—10 | Maxwell | 1111111111—10 |
| Markham | 1111101111— 9 | Potter | 0000111101— 5 |
| Dwyer | 1111100100— 6 | Thompson | 1111111101— 9 |
| Cruttenden | 1111001111— 8 | Squiers | 0001100001— 3 |
| Atwell | 0101110110— 6 | Wheeler | 1111110111— 9 |
| Rindge | 1100111101— 7 | Berry | 1111100001— 6 |
| Card | 1100101110— 7 | Petrie | 0011101111— 7 |

No. 5, 15 single kingbirds, R. F., entrance $1.25: Schemerhorn 13, Maxwell 14, Dwyer 12, Petrie 10, Berry 14, Rindge 12, Wells 8, Squiers 7, Torry 3, Cruttenden 9, Card 11, Atwell 13, Wheeler 13, Thompson 14, Potter 11, Markham 11.

Team championship for Madison county, 15 singles and 6 pairs, entrance $3 per team for four men. First prize, silver cup valued at $150; second prize, silver cup valued at $60; third prize, score book, donated by Keystone Target Co., valued at $3.50. Outsiders may enter a team for targets only or for such money as they choose to put in purses:

| | | | |
|---|---|---|---|
| **Canastota Team.** | | | |
| Barrott | 1011011111111111 | 11 11 11 01 10 11—23 | |

| Cavana | 0111101011111 | 00 01 11 11 11 11—20 | |
| Markham | 1111101111111111 | 10 11 10 10 00 10—20—84 | |
| **Cazenovia Team.** | | | |
| Atwell | 1010111110000001 | 11 10 10 10 10 10—15 | |
| Wheeler | 0111110010110 0 | 11 11 10 10 11 11—19 | |
| Berry | 1111111111111111 | 10 10 10 10 11 10—22 | |
| Card | 1111011111111111 | 01 00 01 10 10 11—20—76 | |
| **Cazenovia Team.** | | | |
| Cruttenden | 1111101111111111 | 11 11 10 11 11 10—24 | |
| Thompson | 0010101110111111 | 10 11 10 11 11 11—21 | |
| Dwyer | 1101011001111111 | 11 10 10 10 11 11—20 | |
| Petrie | 0111110111111110 | 10 11 10 10 01 11—20—85 | |

This gave the first prize cup to the Cazenovia team, and as it is the first time they have been at the head they feel quite proud, especially when the birds were thrown harder than in any previous contest. Oneida won the second cup and consoled themselves by saying, "You only beat us one bird and this cup is a daisy." True, but one in this case is as good as a thousand. The score book was won by the other Cazenovia team.

No. 5, 10 single kingbirds, R. F., entrance 80 cents: Schemerhorn 9, Markham 8, Duyer 9, Rindge 7, Berry 10, Atwell 7, Petrie 9, Wells 6, Potter 9, Maxwell 8, Thompson 8, Wheeler 8, Bass 6, Card 8, Cruttenden 7, Squiers 2.

No. 6, 15 single kingbirds, R. F. K. T. U. A., entrance $1:

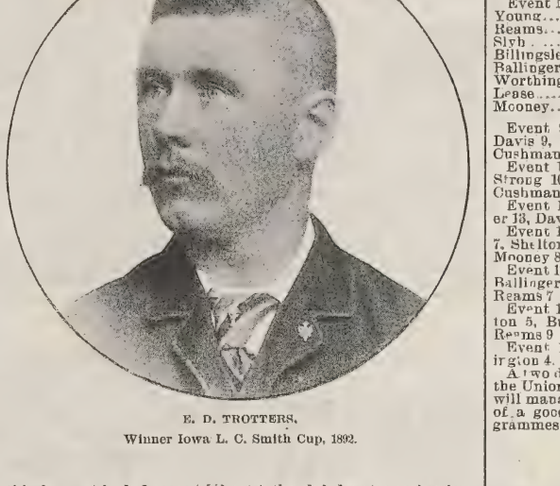
| Thompson | 110101110101111—11 | | |

No. 7, 10 single kingbirds, R. B., R. F., entrance 80 cents: Petrie 10, Atwell 9, Rindge 5, Schemerhorn 8, Markham 10, Duyer 7, Squiers 3, Cruttenden 7, Wheeler 10; Card 8, Berry 10, Maxwell 9, Potter 6, Thompson 9, Wells 5.

No. 8, 15 single kingbirds, R. F., entrance $1.25: Duyer 13, Berry 11, Wheeler 13, Poter 11, Squiers 3, Maxwell 12, Cruttenden 14, Thompson 14, Card 10, Rindge 15, Atwell 14, Petrie 13, Schemerhorn 14, Markham 14, Wells 9.



Members of each club in association making highest averages in shoots 1 to 8 inclusive will be entitled to first choice by lot of prizes. The next their second choice in same manner and so on. Member of Cazenovia Club making poorest average 10 shaves.

Space in your valuable paper will not permit of awarding the prizes as won. All were satisfied in the association with what they won and went home each with a souvenir of Cazenovia. For outsiders A. M. Schemerhorn won the bass rod and E. C. Rindge of same place, the smokeless shells, and as no more outsiders shot in all the events, the other prizes went to the club.

James Markham of Oneida won badge until next meet of County Association. Second prize was won by E. B. Roberts of Canastota, N. Y., a shooting vest. Third prize, box of cigars was won by Tuttle Maxwell Cavana of Oneida, Ward of Canastota and Card of Cazenovia. Fourth prize, oak stand, was tied for between Petrie and Cruttenden of Cazenovia; a "Bland" was produced. Petrie took it odd and Crutty got left. Fifth went to G. T. Atwell of Cazenovia Club.

To the shooters making five highest averages in both days events

E. D. TROTTERS,
Winner Iowa L. C. Smith Cup, 1892.

(this does not include county shoots), the club donates cash prizes: A. M. Schemerhorn, Cortland, first, $6; Wm. Cruttenden, Cazenovia second, $5; J. C. Rindge, Cortland, third, $4; Fred Berry, Pompey Hill, fourth, $3; Frank Petrie, Cazenovia, fifth, $2.

Notwithstanding the shoot was postponed it was a complete success. The new expert kingbird traps were used and worked to perfection. The next meet will be at Canastota or Eaton. The price of entrance includes the birds and money divided, 35, 30, 20, 15. HAMMERLESS.

## Garfield Gun Club.

CHICAGO, Ill., Aug. 6.—Following are the scores of Garfield Gun Club in their regular shoot to-day.

Shoot Nos. 1, 2, 3, 15 singles, unknown angles. No. 4, 5 pair doubles:

| | No. 1 | No. 2 | No. 3 | No. 4 | | No. 1 | No. 2 | No. 3 | No. 4 |
|---|---|---|---|---|---|---|---|---|---|
| Hicks | 9 | .. | .. | 5 | Pilz | 9 | 11 | .. | .. |

Tefft won class A medal. Ackerman won class B medal. Paterson won class C medal. GEO. H. BROWN, Sec'y.

## Colt Hammerless Gun Club Medal Shoot.

THE following scores were made at Hartford, Conn., Saturday, Aug. 6, by members of the Colt Hammerless Gun Club, 25 bluerocks, 5 angles. The scores:

| | |
|---|---|
| Fred Risley | 01111111111111111111111101—23 |
| John Alger | 11110111111111111111111101—23 |
| J C Capen | 11111111110111101101011—21 |
| F H Whittelsey | 11110111100111101111111—21 |
| C H Burbidge | 11110111110011110111111—20 |
| Allen Willey | 01010110111011111111011—19 |
| O B Treat | 11110111110010111101110—18 |
| S B Douglas | 11101111000001010111111—17 |
| Fred Olmstead | 10101110001011010010110—14 |
| Charles Higby | 11100101101111010001111—14 |
| Morgan E White | 10010101101101010111010—13 |
| S T Colt | 00001001101010110101111—10 |
| A C Collins | 10100101000100101000100— 8 |

The tie between Risley and Alger was not shot off. The annual meeting of the club will be held Saturday, Aug. 20, at 3 P. M. at the club house.

## Toronto vs. Oshawa.

TORONTO, Aug. 8.—The Oshawa Gun Club gave a bluerock shoot at their grounds to-day, Oshawa's civic holiday. Ten Toronto shots went down and had a friendly shoot with the club. It is needless to say that the visiting team were treated to the best in the land, and returned feeling in good spirits after their outing. The Oshawa men will return the visit on Monday the 22d. The scores:

| Oshawa. | | Toronto. | |
|---|---|---|---|
| J Hastings | 13 | H George | 13 |
| J Millar | 13 | D Rlea | 19 |
| T Finnie | 16 | S Sloper | 12 |
| T Hastinos | 19 | J L Cox | 16 |
| P Mothersell | 14 | B Pearsall | 15 |
| D Mackie | 15 | C Norris | 16 |
| D Vanzant | 11 | W Bugg | 16 |
| J Sykes | 13 | T S Bayles | 12 |
| E Everson | 11 | O Simpson | 16 |
| M D Campbell | 13—138 | W McDowall | 17—152 |

Sweeps were also put on to fill out an enjoyable day.

## Milford Center Shooting Tournament.

MILFORD CENTER, O., Aug. 11.—The largest event of its kind so far this season in this vicinity was the tournament held recently at this place under the management of C. W. Tway, of Irwin, O. Too much credit cannot be bestowed upon the management for the manner in which the tournament was conducted. The tournament was held at the baseball park, between the C. C. C. & St. L. and P. C. C. & St. L. railroads. These are ideal shooting grounds, with clear backgrounds and good boundaries. Ten traps were used, facing northwest, one set open to all events and one set open for amateurs. The programme was shot out with a number of extras. A large crowd assembled to witness the tournament and a number of shooters from a distance attended. Among the noted shooters present were Messrs. Hughes, Strong and Young, of Springfield; Lease and Reams, of Zanesville; Davis and Billingsley, of Dublin; Money, Slyh, Roby, Ballinger and Worthington, of Plain City; Cushman, of Fountain Park; Shelton, of East Liberty; Pierce, of Marysville; Burnham, of Mechanicsburg; Bennett, of Irwin, and many others not called to mind at present. Tents were up, refreshments served on the grounds and everything was comfortable for the shooters. Shooting commenced at 9 A. M. and lasted until it was too dark to see the flying targets. Scores:

Event No. 1, 10 singles: Davis 9, Billingsley 7, Reams 10, Mooney 9 Shelton 7, Burnham 7, Slyh 5, Cushman 7, Lease 9.

Event No. 2, 10 singles: Cushman 10, Mooney 9, Davis 9, Slyh 5, Burnham 5, Reams 8, Billingsley 5, Sanderson 2, Lease 6, Shelton 6.

Event No. 3, 10 singles: Cushman 6, Mooney 9, Slyh 6, Davis 9, Billingsley 8, Shelton 3, Reams 7, Brannon 3, Burnham 9, Tway 7, Lease 5.

Event No. 4, 10 singles: Mooney 5, Slyh 8, Shelton 2, Davis 9, Burnham 9, Billingsley 10, Cushman 9, Reams 7, Lease 7.

Event No. 5, 10 singles: Slyh 9, Strong 9, Davis 8, Mooney 6, Billingsley 9, Young 7, Cushman 4, Reams 7, Tway 7

Event No. 6, 10 singles: Young 9, Strong 8, Slyh 8, Mooney 8, Davis 8, Billingsley 6, Cushman 8, Shelton 4, Hughes 7, Burnham 5, Reams 6.

Event No. 7, 10 singles: Young 8, Reams 8, Davis 7, Strong 9, Burnham 4, Slyh 7, Mooney 5, Billingsley 7, Cushman 8.

Event No. 8, 10 singles:

| | | | |
|---|---|---|---|
| Young | 1111111001— 8 | Davis | 1011111111— 9 |
| Reams | 0111111110— 8 | McIlroy | 0101101110— 6 |
| Slyh | 0000001110— 3 | Strong | 0101111110— 7 |
| Billingsley | 0111111101— 8 | Hughes | 0010100001— 3 |
| Ballinger | 1111111110—10 | Roby | 1111111110— 9 |
| Worthington | 1110111110— 8 | Cushman | 1010110100— 5 |
| Lease | 0100101100— 3 | Shelton | 0110011101— 6 |
| Mooney | 1011100111— 7 | Bennett | 0000000001— 1 |

Event 9, 10 singles: Worthington 6, Ballinger 9, Slyh 5, Roby 7, Davis 9, Strong 5, Young 9, Mooney 6, Billingsley 8, Hughes 5, Cushman 5, Howard 6, Reams 7, Bennett 5.

Event 10, 15 singles: Ballinger 10, Roby 12, Worthington 11, Strong 10, Davis 14, Young, Slyh 8, Billingsley 11, Reams 11, Cushman 8.

Event 11, 15 singles: Worthington 13, Roby 8, Young 14, Ballinger 13, Davis 9, Mooney 11, Strong 9, Billingsley 12, Reams 12.

Event 12, 10 singles: Howard 5, Billingsley 9 Pince 4, Burnham 7, Shelton 1, Worthington 4, Roby 8, Young 9, Strong 7, Davis 8, Mooney 8, Ballinger 9, Kennedy 6, Hughes 3.

Event 13, 15 singles: Burnham 11, Shelton 8, Worthington 12, Ballinger 11, Young 13, Davis 8, Strong 10, Billingsley 14, Roby 12, Reams 7

Event 14, 12 singles: Ballinger 9, Young 11, Roby 9, Worthington 5, Burnham 10, Kennedy 5. Shelton 4 Strong 10, Tway 8, Reams 9 Billingsley 9.

Event 15 5 pair doubles: Young 9, Strong 6, Ballinger 5, Worthington 4.

A two days' tournament will be held soon under the auspices of the Union Gun Club at this place. Messrs. Tway and Cushman will manage the tournament and visiting shooters will be assured of a good time. Persons desiring further information and programmes should write to Mr. C. W. Tway at Irwin, O.

A. W. T.

## The Trap in California.

SAN FRANCISCO, Cal., Aug. 8.—The Recreation Club held their sixth regular match for the monthly prizes yesterday afternoon at the Oakland racetrack. Although the sky was cloudy and hazy the shooting was good, and the birds were very good flyers.

Following is the result of the match:

| | | | |
|---|---|---|---|
| Worth | 101112011101— 9 | H. C. Golcher | 2212221102 02—10 |
| Allen | 0011012111 12— 9 | Gere | 2211111022 21—11 |
| Barney | 0111121102 10— 9 | Slade | 1221002212 20— 9 |
| W. J. Golcher | 1221102022 021— 9 | Kyle | 1222202121 26—10 |
| Eddy | 1011012122 21—10 | Randall | 1201210011 21— 9 |
| Liddle | 1011010000 00— 4 | | |

Dr. Gere won the first prize, a handsome silver smoking set, with a score of 11. This is Dr. Gere's first season at trap-shooting, and his success yesterday augurs well for his future prize-winning.

Eddy, H. C. Golcher and Kyle shot off for the second, third and fourth prizes. At the fourteenth bird Kyle dropped out through an error of judgment and took fourth prize. The bird dropped within the bounds and the dog went to fetch it when it flew out of the bounds. Kyle had retired without discharging his second barrel under the impression that the bird was killed. Golcher missed his seventeenth and eighteenth birds. Eddy missed his seventeenth but killed his eighteenth, winning second prize, Golcher third.

## Kansas City.

KANSAS CITY, Aug. 13.—The Forester Gun Club held its monthly medal shoot at the Shooting Park, Friday. The club shoots at 15 live birds, and, while the birds were slow flyers on account of the heat, there were many clever kills made at long range. Barton and Groves tied on 14, and in the shoot-off the former won the medal. Jones won the second medal on 13. The score:

| | | | |
|---|---|---|---|
| Whipple | 1201121011011 9—11 | Mohr | 1020101210 02001— 8 |
| Groves | 1212211211011 21—14 | Young | 0001201211 10100— 8 |
| S arritt | 0001100 21010221— 8 | Barton | 2222011112 22222—14 |
| Nofsinger | 2200222220 21211—12 | Graham | 2100011022 02002— 8 |
| Knoche | 2120011012 21212—12 | Jones | 0112120211 21212—13 |
| Harrison | 0102022212 11110—11 | Flowere | 0112022211 11201—12 |

The Belt Line Gun Club had its monthly shoot last Wednesday. Following is the score, at 20 bluerocks:

| | | | |
|---|---|---|---|
| Mumma | 00101111001110001001—10 | Van Horn | 01111011111010010010—12 |
| Peck | 01101011000100001110— 9 | Sonnsch'n | 01000100100100100111— 8 |
| Reinholdr | 11011010110111011100—13 | Baer | 11001100001000100001— 7 |
| Hintsche | 10110110101010101000—10 | C J Neff | 10111101010111010100 12 |
| Kelley | 11011001111111111111—17 | Winters | 01100101101000100010— 8 |
| Neff | 11010101011111101111—15 | | |

You ought to hear Senator Frye tell his latest fish story—the story of how he caught the biggest trout ever taken at Rangeley Lake, and if we mistake not (although we have not the Senator's authority for the assertion and get this story second-hand), the biggest square-tailed trout ever taken anywhere. It was only the other day, and Mr. Frye sat at ease in his camp, known all over the lake region. Looking off toward the lake, he saw a trout jump from a pool in among some logs, and not very far from his camp. He was surprised at his size and at the splash and splurge he made. The day passed and the same big fish jumped again and again. The afternoon Senator Frye passed in looking at his tackle, and making it strong beyond all peradventure. He reasoned that the big fish would not quit his retreat, and he sized up his tastes in the matter of the fly. About 7 P. M. he called his guide; announced what he had seen; told him that as soon as the fish should strike and he should give the word, he (the guide) should pull for the lake, and, thus arranged, they went forth to the campaign. Mr. Frye's first cast was followed by a break of the pool, the swish and swirl of the big trout as he leaped to the fly. For a moment he saw the head and body of this wondrous fish, and then there was business. The guide rowed with all his speed to open water, and Mr. Frye led his trout that way, holding the fish up to the taut of the line. After that the fight was on in clear water, with no favors, and the huge fish, over 10lbs., we believe, was landed at last.—*Lewiston (Me.) Journal.*

# Rifle Range and Gallery.

## New Jersey Rifle Shooting.

[Specially Reported for Forest and Stream.]

Miller Rifle Club, Hoboken, N. J., Wednesday evening, Aug. 10, at headquarters, 432 Washington street. The scores of to-night are appended below. The conditions were 10 shots, off-hand, 25 ring target, possible 250:

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| D Miller | 25 | 25 | 22 | 25 | 25 | 24 | 24 | 24 | 23 | 23 | —243 |
| G Schlicht | 25 | 25 | 25 | 25 | 25 | 25 | 24 | 23 | 23 | 22 | —242 |
| A Meyns | 25 | 25 | 25 | 24 | 24 | 22 | 22 | 23 | 22 | 21 | —235 |
| J H Kruse | 25 | 25 | 25 | 24 | 24 | 24 | 23 | 23 | 21 | 20 | —234 |
| L Sohl | 25 | 25 | 24 | 24 | 24 | 23 | 23 | 22 | 22 | 22 | —274 |
| D Peters | 25 | 25 | 24 | 24 | 23 | 23 | 23 | 23 | 22 | 20 | —233 |
| H F Meyer | 25 | 25 | 24 | 24 | 23 | 23 | 22 | 22 | 22 | 22 | —232 |

| H Wirth | 25 | 25 | 24 | 23 | 22 | 20 | 20 | 18 | 18 | 17 | —212 |
| J Schneider | 25 | 24 | 23 | 22 | 21 | 20 | 20 | 18 | 18 | 18 | —209 |

The Palisade Rifle Club of Jersey City Heights is just now busily engaged in shooting for gold class medals every Thursday evening.

In regard to Messrs. C. E. Bird and A. Steuber of the Hudson Rifle Club being termed a team of "shooters" in Forest and Stream a few weeks ago, it would not, perhaps, surprise many to know that a typographical error is the cause of the mistake. I had it written for shooters. The gentlemen named do not like the idea of being "boomed up" as a pair of shooters hard to beat.

## St. Louis Sharpshooters.

The St. Louis Club held their king shoot at Creve Cœur Lake, Aug. 7, and there was a large attendance, all of the local clubs being well represented, although it was one of the warmest days of the year. Mr. A. McBean, formerly an active member of the club, but for some time past a resident of Chicago, came down to see the boys and incidentally captured first prize on the ring target. Come again, Mack.

The event of the day, the king shoot, was won by Wm. Bauer, who was presented with the king medal and crowned king. Fourteen more prizes were also distributed in the following order: Second, L. Priester; third, G. Roth; fourth, F. Knapp; fifth, L. Schweighoefer; sixth, J. Bardenheier; seventh, C. Mueller; eighth, C. K. Dunkerley; ninth, C. Meisbach; tenth, Wm. Mackwitz; eleventh, S. G. Dorman; twelfth, F. Lendi; thirteenth, G. Alexander; fourteenth, A. Mende; fifteenth, J. Hof.

Ring target, points:

| | | | |
|---|---|---|---|
| McBean | 66 | Dorman | 57 |
| Dunkerley | 62 | Mueller | 56 |
| Schneidewind | 61 | Priester | 55 |
| Kaar | 59 | Morf | 55 |
| Kurka | 58 | Steffen | 55 |
| Wiget | 58 | Bauer | 55 |
| Schweighoefer | 58 | Rapp | 55 |
| Stettner | 54 | | |
| Meisbach | 52 | | |
| Bethmann | 52 | | |
| Alexander | 51 | | |
| Frank | 49 | | |
| Baptie | 48 | | |

Man target, points:

| | | | |
|---|---|---|---|
| Kaar | 94 | Schweighoefer | 84 |
| Bauer | 94 | Kurka | 83 |
| Dunkerley | 87 | Zimmerman | 82 |
| Rapp | 86 | Mende | 81 |
| Most | 85 | Alexander | 81 |
| Meisbach | 85 | Frank | 80 |
| Schneidewind | 84 | Bethman | 77 |
| Knapp | 76 | | |
| Erdman | 75 | | |
| Schottlander | 72 | | |
| McBean | 71 | | |
| Baptie | 68 | | |
| Steffen | 60 | | |

Point target, points:

| | | | | | |
|---|---|---|---|---|---|
| Dorman | 358 | Dunkerley | 150 | Rapp | 87 |
| Schneidewind | 255 | Kaar | 131 | Kattseiper | 71 |
| Bauer | 252 | Baptie | 121 | | |

Namrod.

## New York Revolver Shots.

New York, August 13.—At the regular Saturday afternoon shoot of the New York Revolver and Pistol Club, the following scores were made at the 50-yard range, Washington Park, 50 shots per man, 6 sighting shots:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Geo. E. Jantzer | 8 | 10 | 8 | 9 | 10 | 8 | 10 | 8 | 8 | 9—90 |
| | 10 | 9 | 7 | 7 | 9 | 7 | 9 | 7 | 8 | 10—83 |
| | 8 | 10 | 8 | 10 | 8 | 8 | 8 | 10 | 10 | 9—89 |
| | 7 | 7 | 9 | 7 | 10 | 7 | 8 | 10 | 10 | 8—83 |
| | 9 | 8 | 10 | 7 | 9 | 7 | 7 | 7 | 7 | 9—80—425 |
| C. Bishop | 9 | 9 | 6 | 7 | 6 | 10 | 6 | 9 | 6 | 8—76 |
| | 6 | 6 | 8 | 9 | 8 | 10 | 7 | 7 | 8 | 9—78 |
| | 8 | 10 | 10 | 9 | 8 | 7 | 7 | 10 | 10 | 10—89 |
| | 7 | 7 | 6 | 8 | 7 | 7 | 10 | 9 | 9 | 7—77 |
| | 8 | 7 | 10 | 7 | 8 | 8 | 9 | 8 | 8 | 8—81—401 |
| B. Walther | 7 | 6 | 6 | 6 | 6 | 6 | 6 | 10 | 6 | 7—66 |
| | 7 | 8 | 10 | 6 | 6 | 8 | 10 | 10 | 9 | 7—81 |
| | 8 | 8 | 8 | 7 | 7 | 7 | 7 | 7 | 8 | 7—74 |
| | 5 | 7 | 8 | 6 | 9 | 7 | 8 | 8 | 8 | 8—74 |
| | 6 | 6 | 8 | 5 | 7 | 9 | 5 | 7 | 7 | 10—71—366 |
| H. Oehl | 7 | 9 | 9 | 7 | 9 | 8 | 9 | 7 | 7 | 10—82 |
| | 10 | 8 | 7 | 8 | 8 | 7 | 7 | 8 | 8 | 5—76 |
| | 7 | 8 | 8 | 9 | 7 | 8 | 7 | 7 | 7 | 9—77 |
| | 7 | 10 | 9 | 8 | 10 | 6 | 8 | 8 | 6 | 7—79 |
| | 10 | 8 | 8 | 7 | 7 | 7 | 7 | 8 | 8 | 7—77—391 |

Mr. Bishop used a Smith & Wesson .38-44, the others S. & W. .44 caliber.—F. Hecking, Sec'y.

## Lischke Rifle Club.

Jersey City, Aug. 13.—The Lischke Rifle Club had a grand time at their last meeting, it being Capt. A. Lischke's fortieth birthday, and the club's first birthday. The medals were awarded to the best marksmen of the three classes as follows: first, A. Lischke; second, R. Reicherz; third, O. Schulte. Very little interest was shown the last month, the weather being so hot, but we have started again and ordered three new medals for the next six months. The score of Aug. 5 was as follows, of the 5 best members, 110ft., 25 ring target:

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| A Lischke, Capt | 25 | 25 | 25 | 24 | 23 | 23 | 22 | 22 | 21 | 21 | —232 |
| H Dyroff | 25 | 24 | 24 | 23 | 23 | 22 | 19 | 19 | 19 | 17 | —215 |
| O Schulte | 25 | 22 | 22 | 22 | 21 | 20 | 20 | 20 | 20 | 19 | —208 |
| H Strater | 25 | 24 | 23 | 23 | 22 | 21 | 20 | 18 | 17 | 16 | —208 |
| F Steidel | 25 | 22 | 22 | 22 | 22 | 22 | 21 | 20 | 17 | 14 | —207 |

O. Schulte.

## The Muzzle vs. Breech Contest.

Syracuse, N. Y., Aug. 4.—*Editor Forest and Stream:* Regarding the contest between muzzle and breechloading rifles proposed by our club and published by you June 10, we have received no entries, but have received a letter from H. V. Perry of Jamestown, N. Y., inquiring as to entries and stating that there were three or four in their club using muzzleloaders who intend to enter if any breechloaders come to the front, but he states that he has no "confidence or expectation" that the breechloaders will "whack up." But if they do the Jamestown parties will gladly send their money and meet them at the butts.

F. A. M. Ball, Sec'y, Syracuse Rifle Club.

## Quebec Rifle Association.

Montreal, Aug. 9.—The twenty-fourth annual meet of the Province of Quebec Rifle Association opened at the Cote St. Lac range this morning with fine weather, but the afternoon brought heavy showers. There was a good showing of the recent Bisley team there and a good delegation from Ontario.

Some of the best shooting of the day was done by the Ontario men, and the chief event, the military competition for the Houghton cup in skirmishing and volley firing by squads of various corps, was won by the Royal Grenadiers, of Toronto. In the extra series, 500yds., Staff-Sergt. Simpson, of the 12th Rangers, made a possible of 25. Lieut. T. Mitchell, of the 12th, and Lieut. A. Elliott, of the 12th, made 24 in the extra series. In the 600yds. Pvt. Smith, of the Royal Scots, made a possible 25.

Aug. 10.—A sunny dawn and a violent thunderstorm later in the day were the weather conditions to-day. The active militia match was fired at 200 and 500 yards in very hot weather, but the opening squad in the Merchants match struck a black storm, completely obscuring the targets. The council met and decided that the entire match should be shot over on the next day, whereat there was much grumbling.

The Ontario men again showed up well in the day's shooting, taking many of the best prizes.

In the active militia match, the Queen's Own, of Toronto, led the teams with a score of 444, closely followed by the Royal Grenadiers, with 441. If the Montreal Jubilee Challenge Cup had not been confined to Montreal the Queen's Own would have received it, as they headed the list in the team shooting.

At a meeting of the council of the association in the afternoon the following officers were elected for the ensuing year: President, Sir Donald Smith; Vice-Presidents, Lieut.-Colonel Macpherson, A.D.C., Lieut.-Colonel Brosseau, Major Jones, and Hon. John McIntosh. Council, Lieut.-Colonel Stark, Lieut.-Colonel Martin, Major Bond, Major Sims, Major Busteed, and Captain Spearing.

*Aug. 11.*—The Western marksmen again carried everything before them at to-day's meeting of the Province of Quebec Rifle Association. They have already won all the principal events, and to-day the Carslake trophy was added to their laurels. The cup was won by the Royal Grenadiers' team with a score of 630 points, the Queen's Own Rifles' team following closely after with a score of 622 points. The shooting to-day was carried on under great disadvantages. The rain came down freely, making the ground a swamp, and enveloping the butts in a thick mist. Despite the weather some very good shooting was done.

The following is the scoring in the Carslake trophy match:

Royal Grenadiers.

| | 200yds. | 400yds. | 600yds. | Total. |
|---|---|---|---|---|
| Capt. Bruce | 25 | 33 | 27 | 85 |
| Lieut. Pringle | 16 | 33 | 21 | 70 |
| Staff-Sergt. Dent | 21 | 31 | 25 | 77 |
| Staff-Sergt. R. McVittie | 25 | 32 | 25 | 82 |
| Staff-Sergt. Brooks | 21 | 28 | 30 | 79 |
| Col.-Sergt. Fowler | 25 | 33 | 28 | 86 |
| Corp. Windatt | 28 | 33 | 22 | 83 |
| Pvt. McVittie | 17 | 31 | 20 | 68 |
| Totals | 178 | 254 | 198 | 630 |

| | 200yds. | 400yds. | 600yds. | Total. |
|---|---|---|---|---|
| Queens Own Rifles | 188 | 238 | 201 | 627 |
| 43d Battalion, Ottawa, first team | 172 | 253 | 173 | 598 |
| Sixth Fusiliers | 193 | 234 | 157 | 584 |
| Royal Scots | 167 | 247 | 160 | 547 |
| Victoria Rifles | 171 | 237 | 156 | 564 |
| 12th York Battalion | 189 | 238 | 126 | 553 |
| 43 Battalion, Otta, second team | 143 | 230 | 142 | 516 |
| Montreal Garrison Artillery, 7 men | 145 | 216 | 140 | 501 |

Capt. Bruce, the veteran captain of the winning team, has been shooting on the Grenadiers team and acting as captain for the past ten years. He has coached his men to many victories, but feels prouder over winning the Carslake than any other of his many successes.

Staff-Sergt. McVittie may be said to be one of the most widely known rifle shots in Canada. He shot for a great many years at Wimbledon as a Scotchman; but when he came to Canada he decided to cast in his lot with the Grens, and has never been sorry that he did. He has shot into the second stage of the Queen's eight times, which has only been beaten by one man. He has been on every winning team which the Grenadiers have sent out during the past four years.

## Hartford Rifle Club.

Hartford, Conn., Aug. 15.—I inclose you scores made by the Hartford Rifle Club at their opening shoot at Union Grove on Saturday. The club shot last winter at 50yds. gallery, but this is our first outdoor work as a club, although a number of our members are old hands. We start in with several new men at rifle shooting, but their crankiness is evident, and as all members are of that description, it is hoped and expected that the club will be successful, and our days long in the land.

In our medal match the club offers a bronze medal for 10 scores of 70 or better, a silver medal for 10 scores of 80 or better, and a gold medal for 10 scores of 85 or more.

We have also taken up pistol shooting at 50yds. for the first time in Hartford, and although our scores were low, owing to our unfamiliarity with this weapon, it is believed that the future will show rapid improvement.

50 Shot and Medal Match.

## Oakwood Rifle Tournament Programme.

Dayton, Ohio, Aug. 9.—The Second Annual Oakwood Rifle Tournament is to be held here Tuesday and Wednesday, Aug. 23 and 24, the committee of arrangements being composed of members of the Dayton Sharpshooters' Society and Greenville Rifle Club. Executive Committee: Gustav W. Sander, of Dayton; and Dr. A. J. Marling and John Charles Hahne, of Greenville. Ashley Brown, of Dayton, is the corresponding secretary. All programme matches are at 200yds., and the six regular matches each day are for four money prizes, 25, 20, 15 and 10 per cent. of entrance money. Telescopic sights are barred, and there is no restriction as to trigger pull. Three shots in all matches.

*First Day.*—First match off-hand, shooting 9 A. M. to 12:30 P. M., German ½in.-ring target, 12in. bullseye.

Second match, 9 A. M. to 12:30 P. M., muzzle rest, shooter standing, gun held to shoulder, German ½in.-ring target, 12in. white bullseye.

Third match, 9 A. M. to 12:30 P. M., bench rest, one white and one black bullseye.

Fourth match, 1 to 6 P. M., off-hand, German target.

Fifth match, 1 to 6 P. M., muzzle rest, conditions same as match No. 2.

Sixth match, 1 to 6 P. M., bench rest, conditions same as in match No. 3.

*Second Day.*—Six regular matches, two of them off-hand, two muzzle rest and two bench rest, same as to time, conditions and prizes as in the first day's programme, are to be shot on second day.

Special matches A, B and C are to be contested through both days, 9 A. M. to 6 P. M., for $150 in gold.

Special match A, off-hand, German half-inch ring target, 12in. bullseye, guaranteed purse $50 in gold; first prize $25, second $15, third $10.

Special match B, muzzle rest, position standing, gun at shoulder, German half-inch ring target, 12in. white bullseye; gold prizes same as in special A.

Special match C, bench rest, same conditions as in special B, except that one target has white and one a black bullseye; gold prizes same as in special matches A and B.

Ten dollars in gold for best two off-hand tickets by same shooter, one ticket to be shot first day and one on the second day.

Buckeye.

## Rochester Schuetzengilde.

Rochester, N. Y., Aug. 12.—The Rochester Schuetzengilde finished its annual shoot at Rosenbauer's to-day. On account of the unpleasant weather those from Syracuse and other places who were expected to be present as guests did not come. The rain, however, did not prevent the marksmen from carrying out their programme as they had expected, for they shot from under a tent. Shooting offhand in separate strings with a possible 50 in each string. The highest scores made Thursday and to-day were as follows:

Hoehn 39, C. Harvey 44, F. Schwickert 44, Schmitt 43, Cook 43, Kercher 39, Halstrick 38, Zenner 40, Bernhard 40.

Shooting with what is known as a "peg rest" in strings as before mentioned with a possible 50 in each the following scores were made: Hoehn 51, Harvey 53, Bernhard 56, Schmitt 52, Zenner 53, Kercher 55, Wackerle 41, Neuhart 57, Halstrick 51, Perry 45, Cook 52, Schwikert 53, Dr. Habenstreit 45.

The King badge was awarded to Thomas Henley, and he will be entitled to wear it for the coming year. It was won by him hitting the exact center of an 8in. dial at a distance of 175yds., shooting with a "peg rest."

Sept. 4 and 5 the Buffalo Schuetzengilde will have a tournament for which great preparations are already being made. It is expected that a large delegation will attend from the organization here.

## A Revolver Challenge.

In the *Shooting Times* of London, a weekly sporting paper, there appeared the following on July 9, last: "M. Journu, the famous French amateur pigeon shot offers to shoot a revolver match, 100 shots, for £500 against all comers."

In the next number of the *Shooting Times* July 16, it says: "If M. Journu, after the Bisley meeting, is still open to carry out his challenge one of our readers would accept it under the following conditions:

First. "Business" revolvers and ammunition, to be used (not less than .44 bore and 13grs. of powder and conical bullets), and not less than 4lbs. trigger pull.

Second. The target shall appear and disappear at intervals of three seconds, or the target shall be in sight for twelve seconds for each series of six shots.

There being no answer from M. Journu, on July 30 the *Shooting Times* says: "Mr. Walter Winans authorizes us to state that it was he who in the *Shooting Times* of July 16, offered to accept M. Journu's challenge. A meeting between two such sportsmen would be worth going a long journey to see."

Here the matter rests at present.

## South London Revolver Scores.

Now that Bisley is over, the attention of the crack revolver shots of London is directed toward the Staines Range, where the South London Rifle and Revolver Club holds its matches. The revolver championship of this club, now held by Mr. Walter Winans, is decided by the five best selected scores made on separate days, one score only on each day to count; to be shot at 20yds. with military ammunition, no restriction as to sights but 4lbs. trigger pull.

To-day (Aug. 4) there were two revolver competitions in connection with the usual weekly shoot. The weather was very windy, and Mr. Walter Winans, who shot there for the first time, was not able to make more than 40 at the stationary 20yds. target. This, though winning first prize, is yet one point behind Major Mackerrell's best score for the revolver championship of the club, made earlier in the season. Mr. Winans also won first prize at the disappearing target with 37.

The top scores for the championship now stand to date, as follows: Major Mackerrell 41, Walter Winans 40, T. W. Heath 37, C. F. Lowe 36.

## Cincinnati Rifle Scores.

Aug. 14.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores as appended. Conditions, 200yds., offhand, at the standard American target. The scores:

| | | | |
|---|---|---|---|
| Gindele | 84 | Gindele | 81 |
| Best | 76 | Best | 72 |
| *Weinheimer | 66 | *Weinheimer | 68 |
| *Wellinger | 70 | *Wellinger | 66 |
| Drube | 76 | Drube | 75 |
| Payne | 78 | Payne | 80 |
| Speth | 77 | Speth | 74 |
| *Brumbach | 67 | *Brumbach | 75 |
| Topf | 59 | Topf | 56 |
| Gindele | 90 |
| Best | 71 |
| *Weinheimer | 61 |
| *Wellinger | 64 |
| Drube | 71 |
| Payne | 82 |
| Speth | 71 |
| *Brumbach | 61 |
| Topf | 68 |

*Military shooting.

## Garden City Rifle Team.

The Garden City Rifle Team met for their weekly contest Tuesday evening, at Burley & Erickson's shooting gallery, 146 South Halsted street, Chicago. Conditions were: 25yds., 25 shots each, open sights, free off-hand position, Massachusetts paper target. Possible 300 points:

| | | | |
|---|---|---|---|
| W J Gibbs | 266 | J C Martin | 265 |
| A Sorensen | 265 | Ed Pierce | 259 |
| John Polites | 256 |
| F Erickson | 255 |

After the regular shoot a sweepstake was shot for and won by Mr. J. C. Martin, making a score of 112 points out of possible 120.

B.

## Dayton, O., Tournament.

The second annual tournament of the Dayton Sharpshooters will take place Aug. 23 and 24. Nine running matches have been provided, with percentage prizes in several and $160 in gold prizes besides. The conditions have been liberally drawn, with off-hand, bench and muzzle-rest matches.

# Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

H. M., Bridgeton, Me.—How can landlocked salmon be caught in deep water in August? Ans. The same fish is taken in some New Hampshire lakes by deep trolling with the smelt. The latter are caught with small hooks in considerable depths.

R. J. R., Lakeside, N. Y.—Please let me know if large-mouth bass bite at night at troll or minnow? Ans. They feed at night and under certain conditions may be caught in the ways you suggest, but they do not take bait well until the sun is several hours high. When the moon is about full they can be caught at night with artificial flies.

R. M., Wis.—1. What size grain of Dupont's Eagle ducking powder do you consider best for use in a 12-guage gun where very close, strong shooting is required, as in duck shooting? 2. Will a coarse-grained powder give better penetration than a fine grain? I have seen conflicting statements as to which is best. Will you please state about the maximum size attained by the wild goats found in the Rocky Mountains? Ans. 1. Use No. 2 grain. 2. For duck shooting the coarser grain is preferable, being less subject to dampness, and while slower, puts less strain on the gun.

A. S. S., Ellisburg, N. Y.—All of our county papers in publishing the game laws wind up by saying that it is no longer a misdemeanor to trespass on private parks; all that the owner can do is to sue for damages. Is this correct? Ans. The section prescribing penalties for trespass reads: Sec. 217. Violations of the provisions of this article subject the person violating to exemplary damages in an amount not more than $25 for each violation, in addition to the actual damages sustained by the owner or lessee. An attempt to violate the provisions of this article shall be deemed a violation thereof.

G. D. L., South Boston.—Will you be so kind as to tell me in your Answers to Correspondents the cause of occasional wild shots in a shotgun? Barrels well choked, and it makes a fine pattern of from 280 to 320 pellets in a 30-inch circle at 40yds., with 1⅛oz. No. 8 shot. But at frequent intervals it makes a very wild shot, sometimes not more than 25 or 30 pellets going into the target. I load the shells with the greatest of care, precisely alike, and with the same amount of crimp on the shells. Will you please tell me the cause of these wild shots, and can they be prevented? Ans. It is probably due to the bunching of the shot if the holding is correct. The whole batch goes off at a wide angle upon leaving the muzzle. A defect in wadding will also permit the gas to get into the shot, and then the scattering is so great as to produce the poor pattern.

**SAVE YOUR TROPHIES.**

Write for Our Illustrated Catalogue

**"HEADS AND HORNS."**

It gives directions for preparing and preserving Skins, Antlers, etc. Also prices for Heads and Rugs, Birds and Fish, and all kinds of work in Taxidermy.

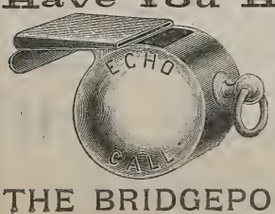
**MEPHISTO**



331-333 BOWERY, BET. 2d & 3d STREETS.

New York, July, 1892.

Our "ONDINA" all Havana tobacco **NEW YORK made** cigar, our world-renowned "**MEPHISTO**" and all other finer grades of cigars made by us are superior in many ways to those made in the tropics. In addition to all the tobacco markets of the earth to which we have access, New York City always commands the best of every material as well as labor. **OUR** New York factory is a perfectly ventilated, clean abode. No sort of uncleanliness is permitted, and our cigars, therefore, are not liable to contain matters other than tobacco, and smokers may confidently and safely use our cigars, not needing a mouth-piece or a cigar holder to prevent unpleasant consequences. **To protect consumers from imposition, every "MEPHISTO" cigar is banded.**

EDWARD BOOTH, Manager.

Challenge Irish Setter
**INCHIQUIN**
Imported. Has proved the most successful stock dog in America, who has only been 18 mos. in stud and has shown 1st prize winners at N.Y. and Boston. Sire of Avondale, winner 1st N. Y., 1st Washington, 1st Pittsburgh, only times shown. Sire of Minnie L. and Frank L., winners 1st and 2d at Boston. Sire of Maid of Borstal and Alice Kent, winners at all the large shows whenever shown. Puppies by this unequalled sire out of prize winning bitches, comprising the best blood both of Europe and America, constantly on hand. Stud fee, $25. Send for pedigree and cut. JOHN J. SCANLAN, P. O. Box 339, Fall River, Mass.

Great Dane at Stud.
**CHALLENGE PEDRO**
A.K.C.S.B. 20,425.
Sire, Mentor II. Dam, Minerva.
To a limited number of approved bitches.
SHOQUOQUION KENNELS,
Lyons, Iowa.

## Why They Need It.

COURT HOUSE, Hamilton, Aug. 11.—*Editor Forest and Stream:* I have much pleasure in informing you that at the last meeting of the board of Ontario Game and Fish Commissioners it was unanimously resolved that in future the Commissioners should be supplied regularly with copies of the FOREST AND STREAM.

Your paper has reached such a standard of excellence, treating as it does, both popularly and scientifically, all that appertains to the protection, preservation and propagation of game and fish on this continent, that the Commissioners feel that they cannot be without it.

You will therefore be good enough to place on your subscription list the following names, to whom you will send your paper regularly until further notice. [Here follow the names.]

A. D. STEWART,
Sec'y Ontario Fish and Game Commission.

## *ILLUSTRATIONS OF WILD LIFE.*

WE have in preparation a series of illustrations of American wild animals, to be published as supplements of the FOREST AND STREAM.

The drawings are by Mr. Ernest E. Thompson, whose previous work in this line is well known; and we are confident that the merits of his successful delineation will be recognized. The subjects already drawn are of the Felidæ, and they will be published as follows. See that your newsdealer has the numbers:

Sept. 8. THE PANTHER.
Oct. 6. THE OCELOT.
Nov. 3. THE CANADA LYNX.
Dec. 1. THE BAY LYNX.

In connection with the illustration of the panther will be given some notes of observation of that creature by Mr. George H. Wyman, and Mr. O. O. Smith's story of how he won his cougar skin trophy in Oregon last year.

## *OUR COLUMBUS NUMBER.*

THE FOREST AND STREAM of Oct. 20 (the day before the Columbus celebration) will be a special Columbus number. The contents, both text and illustrations, will relate largely to the age of Columbus, and will be as interesting as unique.

What is a "family paper?" Certainly not every one which flies the term "family" at its mast-head can rightly be classed as such. There are so-called "family" journals which one would never permit to get into his home, rather let the house burn down first. And then there are journals which not one man in a hundred, unfamiliar with them, would class as "family" papers, but which are such indeed. The FOREST AND STREAM, for instance. A "sporting" paper it is called, yes, but—a *fin de siècle* phenomenon—a "family" "sporting" paper. And why not? The subjects it treats of, are they not of interest to all, old and young? And the manner of their treatment, is it not acceptable to the most exacting? As a matter of fact—and we rejoice in it—this is a "family" paper which goes into thousands of homes every week in the year, and no one ever thinks of scrutinizing its contents before laying it where all may read. The subscriber soon comes to have faith in this quality of the FOREST AND STREAM; and—on our side—the faith is never broken.

## *FAMILIAR ACQUAINTANCES.*

### VI.—THE FOX.

AMONG the few survivals of the old untamed world there are left us two that retain all the raciness of their ancestral wildness.

Their wits have been sharpened by the attrition of civilization, but it has not smoothed their characteristics down to the level of the commonplace, nor contaminated them with acquired vices as it has their ancient contemporary, the Indian. But they are held in widely different esteem, for while one is in a manner encouraged in continuance, the other is an outlaw, with a price set upon his head to tempt all but his few contemned friends to compass his extermination.

For these and for him there is an unwritten code, that, stealthily enforced, gives him some exemption from universal persecution. They, having knowledge of the underground house of many portals where the vixen rears her cubs, guard the secret as jealously as she and her lord, from the unfriendly farmer, poultry wife and bounty-hunting vagabond. Confiding it only to sworn brethren of woodcraft, as silent concerning it to the unfriendly as the trees that shadow its booty-strewn precincts or the lichened rocks that fortify it against pick and spade. They never tell even their leashed hounds till autumn makes the woods gayer with painted leaves than summer could with blossoms, how they have seen the master and mistress of this woodland home stealing to it with a fare of field mice fringing their jaws or bearing a stolen lamb or pullet.

They watch from some unseen vantage, with amused kindliness, the gambols of the yellow cubs about their mother, alert for danger, even in her drowsy weariness, and so proud of her impish brood, even now practicing tricks of theft and cunning on each other.

They become abettors of this family's sins, apologists for its crimes, magnifiers of its unmeant well-doing.

When in palliation of the slaughter of a turkey that has robbed a field of his weight in corn, they offset the destruction of hordes of field mice, they are reviled by those who are righteously exalted above the idleness of hunting and the foolishness of sentiment.

At such hands one fares no better who covets the fox, not for the sport he may give, but for the tang of wild flavor that he imparts to woods that have almost lost it and to fields that lose nothing of thrift by its touch.

You may not see him, but it is good to know that anything so untamed has been so recently where your plodding footsteps go.

You see in last night's snowfall the sharp imprint of his pads, where he has deviously quested mice under the mat of aftermath, or trotted slowly, pondering, to other more promising fields, or, there, gone airily coursing away over the moonlit pastures. In imagination you see all his agile gaits and graceful poses. Now listening with pricked ears to the muffled squeak of a mouse, now bouncing upon his captured but yet unseen prize, or where on sudden impulse he has coursed to fresh fields, you see him, a dusky phantom, gliding with graceful undulations of lithe body and brush over the snowy stretches; or, halting to wistfully sniff, as a wolf a sheepfold, the distant hen-roost; or, where a curious labyrinth of tracks imprint the snow, you have a vision of him dallying with his tawny sweetheart under the stars of February skies; or, by this soft mold of his furry form on a snow-capped stump or boulder, you picture him sleeping off the fatigue of hunting and love-making, with all senses but sight still alert, untouched by the nipping air that silvers his whiskers with his own breath.

All these realities of his actual life you may not see except in such pictures as your fancy makes, but when the woods are many-hued or brown in autumn, or gray and white in winter and stirred with the wild music of the hounds, your blood may be set tingling by the sight of him, his coming announced by the rustle of leaves under his light footfalls, or unheralded by sound, he suddenly blooms ruddily out of the dead whiteness of the snow.

Whether he flies swiftly past or carefully picks his way along a fallen tree or bare ledge, you remark his facial expression of incessant intentness on cunning devices, while ears, eyes and nose are alert for danger. If he discovers you, with what ready self-possession he instantly gets and keeps a tree between himself and you and vanishes while your gun vainly searches for its opportunity.

If your shot brings him down, and you stand over him-exultant, yet pitying the end of his wild life, even in his death throes fearing you no more, he yet strains his dulled ears to catch the voices of the relentless hounds.

Bravely the wild freebooter holds his own against the encroachments of civilization and the persecution of mankind, levying on the flocks and broods of his enemy, rearing his yellow cubs in the very border of his field, insulting him with nigbtly passage by his threshold.

Long ago his fathers bade farewell to their grim cousin the wolf, and saw the beaver and the timid deer pass away, and he sees the eagle almost banished from its double realm of earth and sky, yet he hardily endures. For what he preserves for us of the almost extinct wild, ness, shall we begrudge him the meagre compensation of an occasional turkey?

## *SNAP SHOTS.*

THE condition of things prevailing on Salt River, as described in our columns last week, is fairly typical of the state of fishing interests in all parts of Kentucky. With abundant opportunities for a generous supply of food fish, the waters have been rendered comparatively unproductive by unwise and improvident methods of fishing. It is discouraging to note that there is little prospect of reform. The Legislature has again failed to pass the fish bill, and the practices it was intended to suppress will continue. The measure forbade the damming of streams without providing suitable fishways, the employment of set-nets, seines, bush-drags, drugs and dynamite; and gigs. In this effort made by the enlightened part of the community to reform fishing methods there is not a whit of sentiment; the impelling force is common sense. A time must come when forethought and wisdom must prevail. If some of the money and time and eloquence devoted to a political campaign were to be spent in educating the masses in fishery economy, a change would come in short order. Keep up the "campaign of education."

It appears that in the Sunday fishing case alluded to last week, the defendant, charged with fishing on the Sabbath, contended that he was guilty of no offense, because according to a decision (in the case of the People vs. Denin), "to constitute the crime the act must disturb the repose of the community." It was not shown by the prosecution that the fishing disturbed anybody, nor indeed did it attract any attention, nor was it witnessed by any other than the complainant.

But Judge Cullen held that since the statute prohibited "all shooting, hunting and fishing," this applied to private fishing as well as public fishing, and the disturbance of the public repose was not involved. It is well worth noting in this connection that the complaint in this case was made out of spite. The same thing happened last year when some Jamaica Bay net fishermen out of spite complained of certain Sunday line-fishermen. This New York fishing law is a practical and absolute dead-letter except as an engine for spiteful prosecutions.

A writer in *Our Animal Friends* holds up the sportsman as a bloody-minded creature whose enjoyment in the field or on the stream consists wholly in the killing of game or fish. This is not in line with our knowledge of the American sportsman of this generation as we know him. If, as the writer declares to be the case, the essence of sport with the gun were "the enjoyment of death and bloodshed," few gunners would tramp fields and force their way through brush, when the poultry yard at home would supply all the "bloodshed" they wanted; and fewer still would cross plains and climb mountains when a visit to an abattoir would sate them with "enjoyment of death." The fact is that the writer who sets out to depict sportsmen as bloodthirsty monsters must shut his eyes to the truth and evolve a fancy picture. And it would be so much better to tell the simple truth.

We print to-day a valuable resumé of information about wild rice, by Mr. E. E. Thompson. The cultivation of this food cereal has been successfully accomplished in numerous instances; and wild-rice planting is one of the most sensible and satisfactory enterprises open to wildfowlers. The frequent requests which come to us for information on the subject give evidence of widespread interest, and Mr. Thompson's text and drawings must prove of practical use.

# The Sportsman Tourist.

## THE OPEN AIR LIFE.

Give me the life beneath an endless sky,
Whose blue afar the darker of the lake
Meets in horizon kisses; here may I
The echo of primeval hollows wake,
And in a joyous and exultant cry
My effervescent spirits partly slake,
Nor fear man's pigmy interdict. Here I may be
Like that which is around me—boundless, bold and free!

'Tis some small comfort in this fettered time,
When man within convention's prison broods,
To feel I am not harnessed to the rhyme
And jingle of her brainless platitudes;
But that in freedom I may boldly climb
With Nature to her most majestic moods;
Scale mountains—stand alone—or, eager, feel
My pulses answer some swift moving keel.

This is the grandest life that man can live;
And happy he who knows it from his birth!
The freest and the best old earth can give—
For 'tis indeed earth-given. 'Twixt the worth
And meaning of these words—which are the sieve
Through which we drain our pleasures—world and earth,
There is a difference which doth not savor
Of much within the world—or the world's favor.

And here the camp is pitched; and on the shore
The boats 'gin glimmer in the light and blaze
Of merry camp-fires, round which goes a roar
Such as the Titans laughed in olden days.
And tales are told—what though their years be more
Than those gaunt trunks the pioneer did blaze?
They'll blossom, too, and will revivify
Beneath the influence of this life and sky.

Charles Gordon Rogers.

## AS THE HOURS PASS.

Bluish haze, that seems to absorb the fervent rays of the sun, a "saturated solution" of heat as it were, envelops the landscape. The very leaves hang motionless and limp, in silent protest against the melting heat.

Quiet reigns, save in the swamps where birds are bathing on the margin of the still pools; there an occasional twitter is heard, subdued and peevish as though the little fellow who voiced it were ill at ease.

Only the cuckoo is indifferent to the prevailing lethargy which holds all animate nature. This fellow is in his element, and industriously "paddles" himself from tree to tree, through the glowing atmosphere, pausing to utter at intervals that resounding *koo! koo! koo! koo!* which testifies to his enjoyment of the torrid heat. He meets with encouragement from the locust, who answers his call with a peppery *bizz----z!* This bird and the locust are associated in my mind with hot weather, the voice of either is sufficient to recall hours of humid suffering.

At last relief is at hand. A murmur of delight in the tree-tops, a whisper of welcome to the sea breeze, whose gentle breathing they are quick to catch. Now it is rollicking among the boughs and dancing in a thousand tiny ripples on the erstwhile lifeless water. All nature revives, a new life courses the veins.

---

The shadows lengthen with the westening sun. The birds, though active, are more composed in their movements, much of the vigorous life of early morning has apparently deserted them, and an "I'm in no hurry" manner takes its place. The *biz-zzz zzz* of the locust, long-continued and loud as before, is more jerky and irregular, as though the poor fellow had wearied of the monotony of his one song, and vainly essayed to add variety to the refrain.

For the last hour we have heard the pipes of the swamp robin, a few rich notes *pianissimo*. Like the musicians in an orchestra preparing for the overture, which ushers in the evening's performance, these retiring birds are tuning up for the concert at sunset. Indescribably sweet, these open air concerts, enjoyed by performers and audience alike, until the fading twilight rings the curtain down.

---

The last faint blush of sunset melts into dusk. The *bzeep-bzeep* of a nighthawk flapping overhead in erratic flight, falls with strange distinctness as we listen. Soon it is lost in the distance and the hush of night is upon valley and hill.

---

The querulous chirrup of a toad announces that a new phase of life has entered into activity, and quickly the darkness is resonant with little voices. From the damp coverts on every hand come curious noises, quirks and trills of insects and the rhythmic croon of crickets, while a pungent earthy odor, redolent of ferns and mosses, steals about us. Now it is a whippoorwill who chants his love song in the gloom.

The quiet chuckle of an owl arouses me, an instant his silhouette is seen as he darts by on velvet wing to vanish in the shadows.

A sudden commotion among the leaves; sharp, shrill cries of bird agony speedily silenced, apprise us that a tragedy has been enacted. It is safe to assume that owls were present; but as they never will tell, we shall be none the wiser.

The hours pass! Woodfolk rest! All save little Phœbe, as Lowell so beautifully tells us:

Ere pales in Heaven the morning star
A bird, the loveliest of its kind,
Hears dawn's faint footfall from afar,
While all its mates are dumb and blind.

It is a wee sad colored thing,
As shy and secret as a maid
That ere in choir the robins sing
Pipes its own name, like one afraid.

It seems pain prompted to repeat
The story of some ancient ill,
But Phœbe! Phœbe! sadly sweet
Is all it says, and then is still.

* * * *

The plaint of the little voice is unspeakably sad as it floats upon the night, owing to the falling inflection with which it ceases. The emphasis is given in the first syllable *Phœ-be!* a cry of entreaty, it seems to say "*won't* you answer?"

---

The cool light of morning is awakening the eastern skies! Among the heralds of the dawn the robin takes "the right of line." His is generally the first voice to sound the call. While shadows still linger in the woodland we wait impatiently his cheery shout. "Half-past 3 o'clock! There it is! Get up! get up! You are late! you are late!" he calls, and the cry is repeated by scores of his kind. Now the ear catches the flutes of thrush and catbird, their sympathetic voices mingle with the *fortissimo* of the robins, and lend a sweetness to the echoes.

A swamp robin (*T. mustelinus*) sings just under my window, his liquid tones fall like grace notes among the bird voices that fill the dawn with melody.

While the twilight lasts these songs continue. As morning hurries to the sunlit day the jarring cries of English sparrows make discord, and harmony is gone. "Early to bed and early to rise," etc., is good doctrine, no doubt, and as far as retiring is concerned this ubiquitous nuisance lives up to it, but thank fortune, he rises late, and we are therefore spared the infliction of his irritating presence during one enjoyable half-hour. Gradually the songsters cease, and shortly the feathered orchestra is at breakfast.

The birds with few exceptions are faithful sun worshippers. Full of music though they be at all times, their very souls seem inspired at the rising and setting of the sun.

Another day is begun! "Fall in! fall in!" ring the bugles of orioles in the treetops, where they flash their golden wings in the sunlight. "Fall in! fall in!" Alas! that I have to obey the command, but there is no use in repining, so away to the daily grind.

Wilmot Townsend.

Bay Ridge, N. Y.

## AN EXPLORATION.

There is a chain of nine—or, as some say, fourteen—connecting lakes, not too difficult to be reached from our camp. Eight of these I knew from having visited them. There are trout in all but one of them, but mostly those great gray *namaycush*, which I do not care for. They are good to eat, especially when fresh from the water, but taking them is no sport for me. I would rather like to pull out a 29-pounder, as was done through the ice last winter, but where *fontinalis* are plenty I will not troll for *namaycush*.

But there was one lake of the chain that we did not know about. Lumbermen's tales reported that there were splendid trout there. It was at the head of the chain, and there is where I look for the best fish, but to get to it involved several portages, and moreover I did not know exactly where it was. I had only been there once, in winter, and then Damase took me across country, over roads where canoes don't go easily in summer. Afterward I had tried three times to find it, but failed in all. Twice my guides were no good and the other time the muscles of my athletic but youthful companions gave out under labors too heavy for their years.

But now we seemed to be well equipped. Accident had favored us. First, we had Nazaire, and Nazaire can find any lake in existence. Besides him we had three passable boatmen and two canoes, and we were only three passengers. There was the Professor, he who makes straight for Lac Clair every time that his teaching duties let up a bit. And with him this time came another Professor, who had never thrown a fly or seen one thrown in his life. We christened him "Fontinalis" before we were done with him, so great did his enthusiasm grow. So we determined to find this unknown lake or perish in the attempt.

We were off at 6 A. M. A twenty minutes paddle across Lac Clair, half an hour to get canoes and baggage down the cliff 300ft. into Lac Long, forty minutes to repair damages and get suitably packed for portaging and then we were fairly under way.

It was an hour to Lac Goujon and another forty minutes were used up in getting up its inlet and over the dam into Lac Marie. It was another twenty minutes paddle across and we came to another inlet, more portaging and more canoeing into Lac Rat Musqué (Muskrat Lake). This is a curious place, the water being nowhere more than about a couple of feet deep and having a narrow channel, a dozen feet wide or so, with a very moderate current and all the rest of the lake, perhaps a couple of hundred acres all covered with the rushes called *prelles* by the Canadians, but I do not know their English name. I have seen this lake later in the summer when these rushes were dotted as full as they could be with white water lilies, a plant which is rare in these parts. They reminded me of stars in a winter's sky. I had not then seen them anywhere here except in these connecting waters, but have since found them once elsewhere. My men had never before noticed them.

Over another short portage and a dam we reached Lac Travers and after that some more of the same took us into Lac Aux Pins, where we took dinner, for somehow we had used up a good deal of time. Next was quite a portage, where the baggage was carried, but the canoes were handed up the stream *à la cordelle*. It was rather a nasty stream to get canoes up, but being light they suffered no great damage. So over another dam we got into Lac à Damase and across that we came to a little rapid with a beaver dam at the top of it, the whole not making more than 10 or 12yds., but giving us all the trouble of unloading and loading the canoes. The next lake ought to have another name but it is still called Lac à Damase.

We left the outlet of the Lac des Isles on our right and continued through a very pretty bit of water to where we found the outlet of the lake we were after.

There were remains of an old lumber road which half an hour's work made into a rough but practicable portage, and at length we reached Lake Pas de Nom, or the lake without a name. A canoe was carried over first, and while the men went back for the baggage Nazaire and I explored for a good camping ground, which it took us a full hour to find, for the shore was mainly composed of holes and boulders, which I do not like to sleep in or on. Moreover, the narrow part of the lake toward the outlet was so full of fallen timber that we had to get over as best we could, disembarking three or four times in a few hundred yards.

By the time we had found a camping place the baggage was over to the edge of the lake. The Professors and I smoked our pipes till it was brought up, and then the men all set to work making a bark camp. My Professor and I took the canoe and pushed off. Had we come up there for nothing after all?

I began casting.

Once—Nothing.

Twice—Nothing.

Three times—Nothing, but I thought I heard a little splash somewhere.

Four times—Another splash and a strike. In due time a trout was in the boat, and then a shout went up such as Lac Pas de Nom never echoed before. We had no scales, but I knew he would weigh well over a pound. I held him up in sight of Nazaire, who immediately added another section to the camp he was building, for he knew then that this was not at all likely to be my last visit there. The Professor and I kept on till we had seven fish, enough for a taste all round, and we were decidedly hungry. So we went back to camp and ate them.

After supper, although it was rather late, we went out again but got very little. My Professor took one. The other Professor smashed his tip over another and lost him.

We went to bed, Nazaire and I agreeing that at 3:30 A. M. we would be out again. At that time I was up. Nazaire heard me preparing my morning cup of coffee and got up too, but the good old fellow looked as if he would prefer another hour's sleep to anything else and I sent him back to bed. But by this time my Professor was up and we two went out but had not much luck. The other Poofessor said he wouldn't fish any more, thinking his lack of skill was responsible for his lack of fish, his broken rod and his tangled lines, but after breakfast we made him go and he took the largest fish of the cruise.

We could not spare much more time, and as the weather looked threatening and the main object of our excursion had been accomplished, we turned homeward.

On the way up there had been some singing of canoeing songs, but on the way down there was a constant succession of them. They were sung in the regular voyageur manner and some of them lasted a good while. Sometimes a voice on one boat would sing one line, which would be repeated in chorus from the other, then another line sung and likewise repeated, and then both air and chorus would be taken by both boats together. This made the dozen or fifteen verses, of which many of these songs consist, carry us over a good deal of ground. It was very interesting and pleasant, for although I had heard most of the songs sung around camp-fires, in lumber camps and elsewhere, I do not think I ever heard them where they were so completely in accord with all the circumstances and surroundings.

The other men teased and bulldozed poor Nazaire until he had to contribute his share to the general entertainment.

Now, I had never heard Nazaire sing anything except "L'Alouette," in which noise and vigor are of more importance than music, and I would for my part have very willingly excused him. But he commenced, and he continued. When he had sung about fifteen or twenty verses I was strongly tempted to cry out, "Haul le slack," but the song was so evidently a reminiscence of the days of his youth that I could not find it in my heart to stop the dear old fellow, who kept on to the end and was rewarded with general applause.

The two Professors also tried to sing, and although both of them had excellent voices and could sing in various languages, unfortunately they couldn't remember more than two consecutive verses of any one song. So they failed utterly.

We paddled softly and gently all the way down Lac Long and finally reached our home camp just as the sun was going down.

That was the evening when no lamps were lighted and every man of us was in bed by 8 o'clock.

But we were immensely pleased with our excursion, having satisfied ourselves that there are fine trout in Lac Pas de Nom, and that they will take the fly.

Aside from the principal object of our expedition was another that I have not mentioned. I wanted to see if there were any good places that I didn't already know about in which to place the fry of the ouananiche. I had already placed a good lot in waters more or less remotely connected with these lakes. They had done well in some places, when last seen, but in one spot some were found dead when grown to be about 6 or 7in. long. I found that lake to be very shallow, and am satisfied that the water got too warm in summer, and was not pure enough for them.

Last week we saw some that were turned out about the first of June of this year. They had already grown to about 3in. long and were lively as crickets.

Of those previously turned out in other places than the one just mentioned I do not expect to see anything for a year or two at any rate, and perhaps longer. Ten thousand fish would not make a great showing in 20 square miles of water, if they should ever do so well. They have a good chance and I have no doubt will thrive.

We did not find any good place not known before, but I had excellent success in hatching the eggs, and see no reason why with time and patience any suitable waters may not be stocked with this splendid fish.

G. De Montauban.

August, 1892.

### "Useful Information."

Perth Amboy, N. J.—From a "Manual of Useful Information" widely distributed in the interest of Dr. So-and-so's wonderful liver pills, I cull the following astonishing statement under the heading of "Notes of Interest:" "The Condor of Peru has a spread of wings 40ft., feathers 20ft., quills 8in. round." Whew! And here is another:

"The flight of the swift is estimated at 200 miles an hour, the swallow 60 miles, and carrier pigeons 38 miles."

While on natural history, it may not be out of the way to give one more "Interesting Fact," from the same high authority:

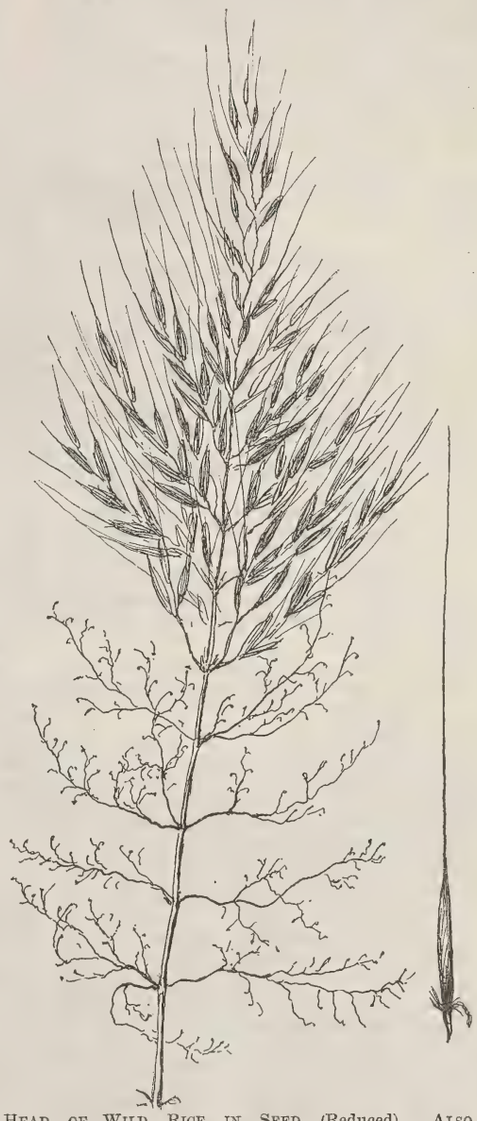
"A Bull is one who operates to depress the value of stocks that he may buy for a rise. A Bear is one who sells stocks for future delivery, which he does not own at the time of sale."

K.

# Natural History.

## WILD RICE.

THIS is what Prof. Asa Gray has to say about wild rice in his 1862 handbook:



GRAMINÆ—GRASS FAMILY.

*Zizania*, Gronov. Water or Indian Rice.—Flowers monœcious. The staminate and pistillate both in one-flowered spikelets in the same panicle. Glumes wanting or rudimentary, and forming a little cup. Paleæ herbaceo-membranaceous, convex, awnless in the sterile spikelets, the lower tipped with a straight awn in the fertile ones. Stamens, six. Stigmas, pencil-form. Large and often reed-like water-grasses. Spikelets jointed with the club-shaped pedicels, very deciduous. (Adopted from *Zizanion*, the ancient name of some wild grain).

WILD RICE. ADAPTED FROM TRANSACTIONS LINNÆAN SOCIETY.

1. Head of rice plant, 2ft. long. 2. Stem and root. 3. Leaf. 4. Male glume, with anthers, magnified. 5. Female glume, magnified. 6. Female glume, opened, showing pistillum. 7. Rice grain, 1½ size.

HEAD OF WILD RICE IN SEED (Reduced). ALSO SEED (Enlarged.)

Adapted from plate in Agricultural Report, 1870.

*1. Z. aquatica*, L. (Indian Rice. Water Oats.) Lower branches of the ample pyramidal panicle staminate, spreading; the upper erect, pistillate; pedicels strongly club-shaped; lower paleæ long-awned, rough; styles distinct; grain linear, slender. An annual plant. (*Z. clavulosa*, Michx.)—Swampy borders of streams and in shallow water, common, especially northwestward. Aug.—Culms 3ft.-9ft. high. Leaves flat, 2ft.-3ft. long, linear-lanceolate. Grain ½in. long; gathered for food by the Northwestern Indians.

*2. Z. miliacea*, Michx. Panicle diffuse, ample, the staminate and pistillate flowers intermixed, awns short, styles united, grain ovate. A perennial plant—Penn.? Ohio and Southward. Aug.—leaves involute.

According to Beck, the botanist, wild rice is found from Canada to Florida and west to Missouri. Canada is a vague term when used as a northern limit, and we may better comprehend the distribution by remembering that it has long grown in great luxuriance at Rice Lake in Ontario and the Lake of the Woods, and also, as we shall see, has lately been successfully introduced into Lake Nipissing marshes.

The appearance of the plant will be sufficiently known by the illustrations herewith, and its economic importance is attested by the early notices of travelers in America and the extensive literature extant on its uses, value and mode of propagation.

The earliest important notice that I have met with is by Carver, the American traveler. It dates about 1766, or even before that, and is as follows:

Wild Rice.—This grain, which grows in the greatest plenty throughout the interior parts of North America, is the most valuable of all the spontaneous productions of that country. Exclusive of its utility as a supply of food for those of the human species who inhabit this part of the continent and obtained without any other trouble than that of gathering it in, the sweetness and nutritious quality of it attracts an infinite number of wild-fowl of every kind, which flock from distant climes to enjoy this rare repast, and by it become inexpressibly fat and delicious. In future periods it will be of great service to the infant colonies, and it will afford them a present support, until in the course of cultivation other supplies may be produced; whereas in those realms which are not furnished with this bounteous gift of nature, even if the climate is temperate and the soil good, the first settlers are often exposed to great hardship from the want of an immediate resource for necessary food. This useful grain grows in the water where it is about 2ft. deep, and where it finds a rich muddy soil. The stalks of it, and the branches or ears that bear the seed, resemble oats both in their appearance and manner of growing. The stalks are full of joints and rise more than 8ft. above the water. The natives gather the grain in the following manner: Nearly about the time that it begins to turn from its milky state and to ripen, they run their canoes into the midst of it, and tying bunches of it together just below the ears with bark, leave it in this situation three or four weeks longer, till it is perfectly ripe. About the latter end of September they return to the river, when each family having its separate allottment, and being able to distinguish their own property by the manner of fastening the sheaves, gather in the portion that belongs to them. This they do by placing their canoes close to the bunches of rice, in such position as to receive the grain when it falls, and then beat it out with pieces of wood formed for that purpose. Having done this, they dry it with smoke and afterward tread or rub off the outside husk; when it is fit for use they put it into the skins of fawns or young buffalo taken off nearly whole for this purpose and sewed into a sort of sack, wherein they preserve it till the return of their harvest. It has been the subject of much speculation why this spontaneous grain is not found in any other region of America, or in those countries situated in the same parallels of latitude, where the waters are as apparently adapted for its growth as in the climates I treat of. As for instance, none of the countries that lie to the south and east of the Great Lakes, even from the province north of the Carolinas to the extremities of Labrador, produce any of this grain. It is true I found great quantities of it in the watered lands near Detroit, between Lake Huron and Lake Erie, but on inquiry I learned that it never arrived nearer to maturity than just to blossom; after which it appeared blighted and died away. This convinces me that the northwest wind, as I have before hinted, is much more powerful in these than in the interior parts, and that it is more inimical to the fruits of the earth, after it has passed over the lakes and become united with the wind which joins it from the frozen regions of the north than it is farther to the westward."

The next important contribution to the subject is dated 1804, and is by Aylmer Bourke Lambert, Esq., who published in the Linnæan Society's Transactions the plate from which the above is adapted (Trans. Linn. Soc., Vol. VII., 1804, XVI., p. 264), and comments as follows:

The seeds of *Zizania aquatica* in a vegetating state from America was long a desideratum among the botanists of this country, for although seeds were received here at different times, yet none of them grew. At last Dr. North by the desire of Sir Joseph Banks sent them from the lakes of Canada, put up in jars of water. As soon as they arrived they were sown in a proper situation, where they came up in a few days, and the plants ripened their seeds extremely well in the autumn. In a pond at Spring Grove Sir Joseph Banks has a great quantity of this plant growing annually, ripening its seeds and sowing itself round the ledges; and I am persuaded that it might be sown with some advantage in Great Britain and Ireland, especially in the latter country, where I have seen several extensive lakes which appear well suited for the purpose. It grows in great abundance in the lakes of Canada, and the seeds, which are as large as oats, and perhaps as nutritive, are used by the Indian for food, as may be seen in "Carver's Travels in America," and also in "Kalm's Travels," vol. 3, pp. 32 and 54.

What effect was produced by this article in the most important of English botanical journals I do not know, but public interest seems to have been directed toward the plant later in America, and the early Patent Office Reports (U. S. Agriculture) contain numerous references to the wild rice of the Northwest. From these I select the following, 1847: "Gen. Verplank, late Commissioner of the Chippewa Indians, pronounces it better than Southern rice. The kernels are larger and its flavor is better; for when boiled and stewed and left to cool, it forms a consistent mass like good wheat bread, and more nutritious. It is stated that very great quantities grow on all the lakes in this northern country. The outlets and bays are filled with it. It ripens in the month of August, and is the main reliance of the Indians during the winter months for their subsistence."

In the 1848 Report is a note by Prof. Randall, of Cincinnati, testifying to the economic value of the grain. "It is considered by him superior in taste and far more nutritious than the Southern rice. * * * An Indian squaw will gather from five to ten bushels per day. It will grow in water, we are informed, from 6in. to 5ft. deep, when it finds a muddy soil." Comparing it with the commercial rice of the South, Prof. Randall says that "the Minnesota rice ground produces as much to the acre, and will at no distant period compete with the Southern production."

Interest in the plant seems to have grown steadily. Quantities of seed were distributed, but the silence of the Reports regarding the results is ominous.

In the Report for 1855 is a note by John B. C. Gazzo, of La Fourche parish, Louisiana, as follows: "The water

oat or wild rice (*Zizania aquatica*) is an interesting plant, exceedingly prolific, the roots of which are perennial, it grows at the edges of our prairies and bayous. Stock of every description are fond of it, when green or cured as hay. The first settlers of Louisiana called it *folle avoine*. It is also found wild in all the Southern States, grows tall, and will yield two crops a year of good hay." Clearly the writer confounds the two species, the one he refers to must be *Z. miliacea*, but his statement is none the less interesting. We learn from a later report that an attempt was made to introduce the species into Russia, but it appears to have failed.

In the Report for 1863 is a note from Mr. O. H. Kelly of Itasca, Minnesota, remarking the unaccountable disappearance of the wild rice from his neighborhood, within eight years.

The Report for 1870 gives a good plate of the plant in seed (reproduced in FOREST AND STREAM, Oct. 10, 1889), and the following:

Wild Rice (*Zizania aquatica*, Plate 9).—The Sioux call it *pshu*, and the Chippewas *man-om-in*. It is a constant article of food with the Northern Indians of the lakes and rivers between the Mississippi and Lake Superior. This plant delights in mud and water 5 to 20ft. deep. When ripe the slightest wind shakes off the grain. After being gathered it is laid on scaffolds about 4ft. high, 8ft. wide and 20 to 50ft. long, covered with reeds and grass, and a slow fire is maintained beneath for thirty-six hours, so as to parch slightly the husk, that it may be removed easily. Its beard is tougher than that of rye. To separate it from the chaff or husk, a hole is made in the ground, a foot wide and one deep, and lined with skins; about a peck of rice is put in at a time; an Indian steps in, with a half jump, on one foot, then on the other, until the husk is removed. After being cleaned the grain is stored in bags. It is darker than the Carolina rice. The hull adheres tightly and is left on the grain, and gives the bread a dark color when cooked. The hull is easily removed after being exposed to heat. In Dakota the men gather this grain, but all other grain the women collect. An acre of rice is nearly or quite equal to an acre of wheat in nutriment. It is very palatable when roasted and eaten dry.

Prof. Hind, who explored the Manitoba region in 1857, dwelt much on the silence and birdlessness of the woods traversed between Lake Superior and Lake of the Woods, until the rice grounds were reached, when he says (pp. 115, 116-118):

Below James Falls the poles of wigwams are numerous and many Indians were seen at the foot of the different rapids, engaged in fishing. The scarcity of animal life of all kinds was very remarkable. Eagles and fish-hawks, ducks and rabbits being the only representatives seen. This scarcity is, however, confined to the autumnal months, as to time, and to the Great Winnipeg River in respect of area. Some distance from the river the extensive rice grounds cover many thousand acres and continue for miles on either bank. Here the game congregates, and reveling in the midst of such an abundant supply of nutritious food, vast flocks of ducks, geese and all kinds of aquatic birds common in these regions, are to be found. It is here too that the Indians assemble at stated periods amidst the rice grounds, procuring without any difficulty, in favorable seasons, a large supply of food for winter consumption. * * * * * The Indians described the appearance in favorable seasons, of the ground through which we were hurrying, as a vast expanse of waving grain, from which they could soon fill their small canoes by beating the heads with a stick."

In the early part of his report he says also: "Wild rice (*Zizania aquatica*) grows very abundantly in the marshes bordering the Lake of the Woods. It is an important article of food to the Indians. They gather it about the end of August and the beginning of September, and lay up a store for winter consumption. A soup made of wild rice and blueberries is a very palatable dish and eagerly sought after by those who have been living on salt food for several weeks."

The following letter written to Mr. Chas. Gilchrist and published in FOREST AND STREAM of Oct. 26, 1882 (Vol. XIX., p. 246), is of interest as showing an effort to cultivate the plant in England:

BULCHRYCHAN, Llangbythen, N. S. O., South Wales.—Dear Sir: I fancy you must have been rather surprised at my long silence about the success of the wild rice, but the fact is all our experiments last year, 1881, were a failure; I gave it to several friends, but none seeded excepting in one instance, two or three very small weak seeds being the result. The seeds you kindly sent me by post last fall, and the bushel subsequently sent I again divided. The first seed sent by post began to sprout in February in the house, and I sowed some of it in small tubs, which I placed out of doors, and some in pans in the house. The latter sent, or at least what I kept myself of it, I sowed thickly in a pond, but it has not done any good. That put out of doors in tubs has much of it blossomed, but there does not appear to be any chance of seed forming. Either it is too cold or the winds we have had have blown the flowers off. I am glad to say, with what I have in the house, in a cool room, I am succeeding quite beyond expectations. Some of the plants have grown quite 5ft. high, and to my intense delight, two or three days ago I discovered that seeds were forming on several of them in quite an unexpected way. I looked for the seed at the lower part of the truss of flowers, whereas I find they all form at the point. I expect to gather from fifty to one hundred seeds. They fall most quickly I find, and I have been obliged to put something under to catch them. In one of the ponds in which I sowed a lot of seed, both last year and this, there is no sign of anything, and I much fear the rats and water-hens have taken the seed. I sowed some of the seeds you sent me in the spring of 1881 in another pond, but none came up, so I did not put any there this year; however, to my astonishment about six weeks ago I noticed five or six plants showing above the water and looking well and healthy. Alas, in one week's time they were all nipped off either by rats or water-hens. I was down at the pond this afternoon, and there are now twenty plants up, but I fear it is much too late for them to do any good; in fact never were two summers more against the experiments—wet, cold and stormy, and scarcely any sun. A friend to whom I gave some in Berkshire succeeded very little better with the first seed I gave him than myself, his gardener getting only two or three weak seeds, and when I paid him a visit on July 13 his gardener had a number of strong and healthy plants growing in a pot in a well-sheltered pond, and one or two were then showing for flower. I have not heard the result, but am in great hopes to have a satisfactory account in a day or two. I must say I am now (as we get a little more acquainted with the habits of the plant) very sanguine as to acclimatizing it with your kind assistance. Am determined to persevere. I think one mistake I have made in the pond is the sowing it in deep water, and so there is not sufficient heat to make it vegetate early enough.—JOHN PUGH VAUGHAN PRYSE.

In FOREST AND STREAM for Nov. 5, 1891, appeared the following:

Last fall I gathered about six bushels of wild rice at Rice Lake, Ontario, Canada. I took the same with me to Lake Nipissing and planted it, about the middle of September in one of the marshes in South Bay. On my return there this fall I found (to use the words of Mr. Hough) the result simply amazing. I found rice growing abundantly over the entire marsh, thousands of yards away from where any had been sown. How it spread itself in this manner is a puzzle to me. Formerly the marsh was full of a sort of joint grass, of which I don't know the proper name. I planted the rice wherever I found an open hole in this, and very much feared that the joint grass would choke it out, but instead of that the rice has choked out the joint grass, and there is scarcely any of it left. I also planted some in several small creeks, and in every case it did well, except in one place where the bottom of the creek was clayey, and where in spring there must be rather a swift current. ("Nipissing," Boston, Mass., Nov. 2).

In Vol. XXXI., No. 9, of FOREST AND STREAM (Sept. 20, 1888, p. 166) appeared the following brief but important article:

I have handled wild rice seed for several years, in fact was the first person to advocate planting it in waters where it did not grow naturally. I have never known it to grow well when planted in the spring, and the sooner it is planted after it is harvested in the fall, the better. After the seed has been gathered for some weeks, the enamel on the outside of the kernel seems to crack, and this I believe accounts for failure in spring planting. It should be planted on a mud bottom; where there is little if any current, and if possible where there is no other vegetation. As it grows only in the water, it should not be planted on ground that goes dry in midsummer. It will grow in water from a few inches to 4ft. in depth, but does best in shallow water. Before sowing I always soak the seed for an hour or so, in order that it will sink at once. I also think it best to sow very thickly, rather than to scatter a small amount of seed over a large space. RICHARD VALENTINE.

Those who wish to follow further the literature on wild rice may do so by turning up the following pages in FOREST AND STREAM: Vol. IV., p. 39; Vol. IX., p. 148; Vol. X., pp. 430, 447; Vol. XI., pp. 8, 170, 429; Vol. XV., 168, 251, 269, 331; Vol. XVII., pp. 49, 91, 128; Vol. XIX., 246, 325, 364, 385, 427; Vol., XXI., p. 46; Vol. XXIII., p. 4; Vol. XXV., p. 208; Vol. XXIX., p. 106; Vol. XXXI., p. 166; Vol. XXXIII., pp. 87, 226.

Rice has been found doing well on prairie sloughs of Minnesota, the water of which is more or less tinctured with alkali; it has been successfully introduced into many of the salt marshes of the Hudson River and Long Island, and it grows well in fresh-water marshes and on the banks of slow-running streams.

Its failure to grow in so many cases is due to the fact that the vitality of the seed has been impaired by too long keeping, and in a number of cases the seed used had been threshed by the Indians, who scorch the grain to facilitate the operation. A few months seems sufficient to destroy the vital germ, so that, though spring sowing has succeeded in some few cases, the trial of winter storage is usually too much for this delicate grain.

A perusal of the evidence already cited, as quoted, points to the following conclusions:

Wild rice is a plant of very great importance. It is useful as food to both man and game, and well worthy of a wider dissemination. It is very prolific and grows annually on the same grounds, requiring no care to cultivate. It will grow well in almost any water that has a muddy bottom, is not too cold, and has not a strong current and is not more than 8ft. deep. It will succed in any of the Middle States and Northwest as far as latitude 50°. The vitality of the seeds is extremely delicate and is readily destroyed by too long keeping, by rough usage in threshing, or by complete or too rapid drying. The proper time for sowing the seeds is immediately after it is gathered ripe, *i. e.*, in September. The plant is hardy, prolific and aggressive, and usually more than maintains a footing once established, but it is readily extirpated by cutting it for fodder while yet in flower or while the seed is in the milky state. ERNEST E. THOMPSON.

## MAKING POISON ARROWS.

CRIPPLE CREEK GOLD MINES, Col.—About the most vile use of which the rattlesnake is the vital factor is in brutal practice among several tribes of Indians in Arizona and New Mexico—that of poisoning the points of arrows. I was an eye-witness at one time to the manufacture of these much-to-be-dreaded instruments of torture and death. Part of the summer of 1884 I spent in Arizona and western New Mexico, and about ten days of that time in the neighborhood of the Comanche and Apache Indians. As I wandered one day up to one of their tepees I perceived a number of Indians standing around some newly slain cattle. Being at all times in search of new things in the shape of knowledge, I soon found out the cause of such a proceeding. The Indians had slain two full-grown beeves and were taking the livers out of them very carefully. When this operation was at an end, a box containing several large rattlesnakes was brought and placed on the ground near the almost smoking chunks of liver. An aged buck standing near by, who seemed fully to understand his business, procured a piece of blanket, and with its aid succeeded in taking one of the largest snakes out of the box. Then unfolding the blanket so as to expose the head of the snake, he procured a forked stick and pinned its head to the ground, while another Indian took a small switch and tapped it gently upon the head until it was aggravated almost beyond endurance; then taking a chunk of the still steaming liver they let the snake bite it repeatedly until it had turned to an almost purple hue. Then the arrow points were thrust into it about one-half inch deep and left a few minutes. When withdrawn there appeared a scum on the points thus inserted. Afterward the arrows were laid in the sun to dry, being ready in a short time for such use as the owners of them saw fit: whether it was to take human life or not, it mattered but little to them. BUCKSKIN HARRY.

## HUMMINGBIRDS.

NEW YORK, Aug. 18.—*Editor Forest and Stream:* I do not like to oppose a statement made in good faith, but this new hummingbird question cannot pass unchallenged.

Mr. Hallock says, "Observers here in Cummington [Mass.] assert that they are visited very often by two kinds, etc." So this is a second-hand matter. It has not only been stated, but it is still stated that there is but one species this side of the Rocky Mountains, and this statement can only be disproved by securing a new one and submitting it to the inspection of a competent authority. I have repeatedly been told that at least two distinct species have been seen, but a little questioning has always settled the matter.

The throat of the male in our bird, in certain lights, is like a coal of fire, while in other lights it is almost black.

The whole of the under part of the female is white, but the wing and tail coverts of both are green.

Now, why these strangers, on two successive summers, should have favored the little town of Cummington, exclusively, with their visits is unaccountable. And why should they visit that place in pairs? I have lived a great many years, have had a great many tamed and have studied their habits from boyhood up, but I have never seen them traveling round in pairs. The only time when one will tolerate the presence of another is at the mating season, and even then they are seldom seen together except at the nest.

I thought it best before replying to this Cummington puzzle to hear from Mr. Geo. N. Lawrence, who is probably the most scientific authority on hummingbirds in this country, and I find that we agree in the opinion that the parties there have in some way deceived themselves. He says, "Such a bird could hardly escape the wide-awake New England ornithologists. I cannot place such a bird with any known one, and my collection contains 320 species. It can only be settled by a speciman being procured and submitted to competent authority."

As an instance of how easily a person who does not make these things a study can be deceived: A writer some time ago described, in one of the daily papers, a sparrow fight, where four or five of our common sparrows attacked a smaller one of another species, and now the little one successfully defended itself against such odds when he expected to see it killed. Now, this was simply a little courting scene of every-day occurrence. The rival males spread their feathers and strut around the female, while she with her drapery gathered so close about her that she seems but half their size, tries to fight them off, sometimes holding on to one of them while he drags her around, but they never attempt to hurt her.

DIDYMUS.

# Game Bag and Gun.

## MASSACHUSETTS GAME.

BOSTON, Mass.—The season for shore birds in Massachusetts is open, was open on July 15 in fact, but the gunners have done very little yet. The weather has been remarkably hot, and the lovers of the shore bird shooting on ordinary seasons confess that the exertion, or the bare thought of it, has been too much for them. It is not so all along the coast, however. Reports from Chatham speak of a fusilade of shot that every bird has to run that dares to fly by that point. No good bags are reported yet, however. Mr. Charles Canterbury is reported to have killed a large number of "big birds" already. By "big birds" the local gunners mean every bird bigger than a peep. It seems that Mr. Canterbury first tried Chatham, but the gunners were to many for him, and he has since been seeking his own grounds farther north, along the shore, and has been having excellent sport. At the "dumping ground," the inner bay at South Boston, a good many birds are reported. They are chiefly yellow-legs and peep. But it is against an ordinance of the city to shoot there, and a local gunner says that the birds seem to know it; they are as tame as chickens at that point. Even the small boy presumes to pelt them with stones.

Mr. Al. Chiffin and C. E. Davie, of Reading, have lately made a most remarkable bag or two of woodcock. Mr. E. M. Gillam, of the Boston *Advertiser*, is a friend of Mr. Davie—one of the most noted gunners in this part of the country, and better known as Charlie. Mr. Gillam introduced him to Mr. J. C. Frost, of the Boston flour trade. Now Mr. Frost has a beautiful place at Vernon, Vt., and he is aware that there is some excellent shooting there. The result of the introduction was an invitation to Charlie and his friend to come up after the woodcock season opened, Aug. 15 in that State. They came, and at the same time a couple of gunners from Springfield. The result of a couple of days shooting of the four was thirty-two woodcock. Charlie and his friend Al. think that they shot the larger part of the birds, though all shooting together the second day, they were unable to be certain of the number to each gun. It was a most remarkable shoot to say the least, and a surprise to the local gunners. The fact of well trained dogs had a great deal to do with the success of the party. It is also altogether likely that the first flight of woodcock was hit at just the right time.

The gunners at Vernon, Vt., mentioned above, found partridges to be remarkably abundant. They saw flock after flock, and the chicks were well grown for so early in the season. Indeed, the reports concerning partridge shooting for fall are good from all directions. This is the reverse of last year, which was pronounced by all the worst season for years. It was thought that ticks, or bad weather, or some other cause had destroyed the young birds. This year the reverse is true, if reports have not been exaggerated or those who have seen the birds have not mistaken their eyesight. Large coveys of partridges are reported in almost every direction in the State of Massachusetts, and the same is true of southern New Hampshire.

Reports are yet meagre and uncertain from Maine, but so far as received, they indicate that grouse are very plenty. It is hoped that these reports have not been overdrawn, and that on the beginning of the open season, partridge shooting may be the best for years. From quail the reports areal so good. A gentleman tells me that on a single ride from Bayfield to Newburyport he started five or six bevies of quail, the most he ever saw on the same road, and it is one with which he is familiar. The same is true on the Cape, and in the western part of the State. SPECIAL.

### Florida Bears.

DUKE, Fla., July 24.—I have killed three bears in little over a month's time. Mr. Bryant and myself went down on the edge of Graham one rainy evening. In the huckleberry patch, where we had seen the sign before, we had some fun. We got two cubs apiece, but did not see either one of the old ones. But last week I got into it right. I was down in the swamps with the dogs. I heard something coming, the trees fairly snapping off, and I got ready. The old bear was coming, and had the dog in the lead. You know I did not have time to climb either, so you know how my hair was; but I fired one barrel of my gun at her, and shot her down. Up she got; did not have time to catch my breath before she was on me; but the last barrel I shot her brains out. Mr. Will Raulerson killed one of her cubs, so that hunt was completed. To-day we had a little fun, but it was calm. Just after sunrise we heard a hog squealing about one mile off. We gathered our guns and heeled it to Graham. We got there in time to kill the bear. E. A. E.

### Kansas Wild Geese.

SEDGWICK, Kans., Aug. 19.—Last evening about 6 o'clock a large flock of wild geese known in this locality as "big Canadas" passed over this city on their way south, and this morning quite a number of people report having heard wild geese passing over during the night. This is something unknown before here, and may possibly interest some of your readers. A. G.

## A HUNT IN THE ROCKIES.

IN THREE PARTS—PART III.

Oct. 19, Camp on Robinson's Fork.—After leaving our lovely camp on Warm River, en route for this point, we were obliged to work our way through gorges, scale mountains and cut trails through thickets. This stream is about half the size of Warm River, and its bed is composed of boulders, some of which are quite large and furnish ideal pockets for myriads of trout. The water is several degrees cooler than Warm River, but strange to say, not more than 60ft. from our camp boils up a spring, the water of which is as cold as ice water. We are about fifty miles from the nearest habitation.

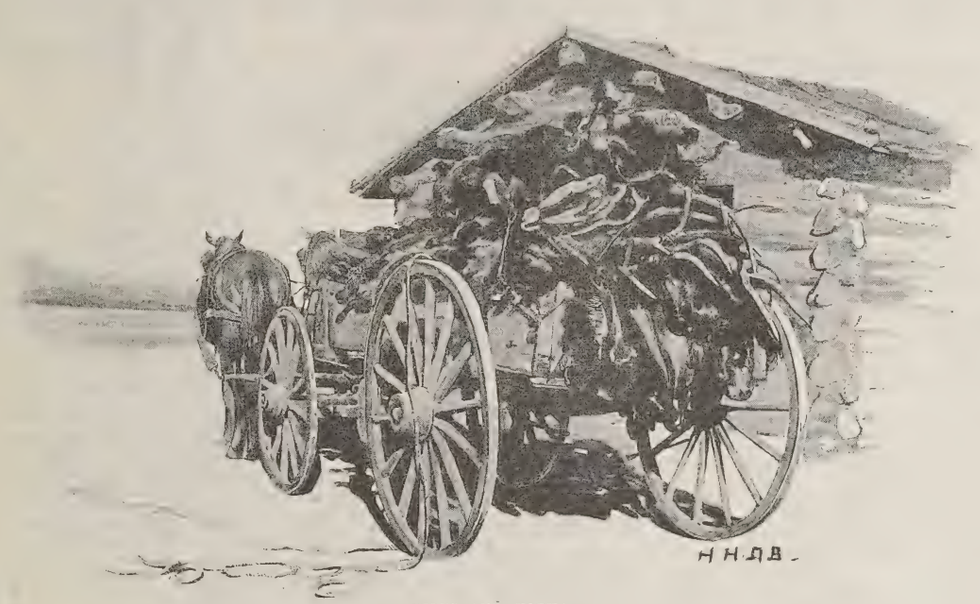
On Thursday, the 17th, and the day after arriving here, Rea and the writer left with two days' rations to look up game signs, returning yesterday morning, the 18th. We traveled over a large extent of country, ascending one of the highest ranges composing the continental divide, and in our ascent we went up places so steep that small rocks, starting to roll, would gain such velocity that they would jump from 20 to 60ft. at a bound before reaching the bottom of the cañons. Our trusted cayuses never missed a step. Warrior would nip bunch grass when descending places so steep that he seemed to be standing on his head. Our camp is within about fifteen miles of the Park line, and while on our scout yesterday and day before we were not more than eight miles from the Park line. Up to yesterday afternoon the weather was of the same character, heavy frosts at night and quite warm during the day. In the afternoon about 3 o'clock it began snowing, which was followed in half an hour by rain.

During our absence of two days Bush and Weber have been amusing themselves fishing and shooting small game in the neighborhood of the camp, and they have been quite successful, as is evidenced by a supply of fresh meat and several pelts on stretchers and tacked against trees near by. Yesterday evening on our return toward camp we struck a fresh elk trail, and this morning Rea, Bush and Weber started in pursuit, I concluding to remain in camp to write up my journal, repair some tents in my wardrobe, and arrange for an early march.

*Fall River, Wyoming, Thursday Morning, Oct. 22.*—Saturday afternoon about 4 o'clock Rea and Weber returned to camp and reported having found a fresh-washed water hole by elk and moose, and we at once started for the vicinity, with blankets and provisions for two days. The game did not materialize, though we remained in ambush until long after dark. Weber and I were at the blind before daybreak and on the lookout. Rea scoured the hills and saw an elk, but he was too far off to get a shot. He killed a pine martin and shot a lynx, but too far back, and he was lost. We returned to camp about noon, empty-handed, solely on account of having no snow by which we could track the game. During the night a bull elk came within 75yds. of our bivouac, and kept us awake by disturbing the stillness of the night with his peculiar whistle, well known to hunters where the wapiti abounds. The only water we could get had to be taken from the water hole which we had come to watch, and it was so saturated with the excrement of the animals visiting it that when our coffee was ready our friend of German descent could not drink it, neither could Rea and I without tasting more of the animal than the coffee flavor.

We spent all of Sunday afternoon getting ready to move early on Monday morning. I set two traps along the fork, and in the morning I had a fine specimen of the pine martin, which I carefully skinned for setting up, and it now adorns a secluded spot in my sanctum. Monday morning we were astir early, and made this camp about 4 P. M. We are camped in a beautiful cañon through which Fall River flows. Yesterday evening we caught in a short time all the trout we wished, and some of them weighed as much as 2lbs. They are of the salmon variety. Yesterday it rained all day and was somewhat unpleasant, until about 8 P. M. it cleared up, and to-day the sun is shining bright and warm. Six of the fifteen miles we traveled yesterday was through a burned district, and no signs of game were to be seen except what was made before the fire.

We are heading for Jackson's Hole on Lake Wyoming, and as we will get an early start and have but about twenty miles, we hope to make it to-day. Bush, the mighty angler, is out whipping the stream, and by the time the packers are ready to start I expect him in with as many trout as he can take care of.



*Tuesday Evening, Oct. 22.*—As I expected, Bush came in with a fine string, and they tasted good for supper. We had some rain to-day, but it cleared off during the afternoon. To-day we passed over what is known as the Continental Divide, which puts us east of the grand old Tetons, which still loom up into the clouds, looking as grand and majestic as they did thousands of years ago, no doubt. On our march to-day we passed through what is known as the Teton Range, and at one point one of the spurs seems to have been cut abruptly off, leaving a beautiful meadow of say a hundred acres where the base of the mountain would have been. Imagine a spur of mountains ending in a perpendicular wall a thousand feet high, with here and there a stunted jack pine clinging to the rocks, its rootlets sucking an existence out of the interstices. Along the base meanders a small stream alive with trout, and soaring above its rocky summit were a dozen eagles, keeping watch over their favorite hatching places.

We are camped on the right bank of the Snake River, Wyoming, about six miles west of Jackson's Hole, celebrated for the size of the trout caught in it and the seemingly inexhaustible supply.

*Wednesday Morning, Oct. 23.*—We had intended to take up our line of march for the lake this morning, but after a consultation Rea and myself concluded to take a hunt, the other boys, Rush and Weber, electing to remain in camp and fish at leisure.

*Friday Morning, Oct. 25.*—Here I am in camp alone—no, not altogether alone, for within 10ft. of where I sit are two members of that peculiar bird family well known to hunters and prospectors as camp robbers, picking up bits of meat, and just at this moment they are quarreling about a choice morsel. Although these birds are called robbers, no true hunter will harm them. More than once have I sat on a log or stone eating my lunch in the wilderness, not conscious of any living thing near me, when—as if by magic—one or a pair would appear, and frequently within a few feet of me.

As I was the sole occupant of our camp last night and of necessity my own cook and chief "bottle washer," I have just finished a royal breakfast—good coffee, hot biscuit, and elk steak of my own killing. The history of this hunt in the Rockies, marred by the presence of almost universal forest fires, and the absence of snow, which was due over a month ago, only proves again that perseverance is always crowned with a certain degree of success, even under the most unfavorable circumstances.

HIDES AND HORNS.

Drawn from an amateur photograph.

Now to Wednesday's hunt, which will explain why I am alone in camp. But before I proceed further it might be well to call attention to the locality in which we were encamped, Uintah county, Wyoming.

Jackson's Hole, in Lake county, is a continuation of that region beginning with the Washburn Range in the Yellowstone National Park, and continuing south and southeast, embracing the Teton Range, Wyoming Mountains and Wind River Range, for a distance of about 180 miles to the Sweet Water Mountains in southwestern Wyoming. I am fully convinced that there are more mountains, mountain gorges, deep cañons, high snow-clad peaks, beautiful lakes and less park land here than any other section in which we have traveled. Directly east and across the Snake from our camp ran a range north and south, cut through with a deep cañon. We determined to make the summit, which could be seen covered with snow from the little valley below—the snow line being about midway between the summit and the foothills at the base, through which the Snake rippled over the pebbly bottom toward the lake.

An early start and a fearful ride through thickets, over high rocks and around cañons in an unbroken wilderness, brought us to the highest point of the range by 11 A. M. Here we dismounted, dropped our reins, and gently moved in the direction of the bluff or point where we were in a position to get a view of the country below us. We did not advance more than 50ft. until we were enabled to see over the whole top of the range—a country on top of the mountains. Below us was a scoop-out or basin, as near as we could calculate about two and a half by three miles in diameter, with a ridge or hog-back running through it from northeast to southwest. This basin was composed of small hills, open parks and clumps of stunted pines, with here and there a boulder, the general elevation being between 8,000 and 9,000ft. From our location we could see into nearly every nook of the territory composing the peculiar cup-shaped cavity.

For several minutes we scanned every part of the picture with our natural eyes, and just as I was about removing my field glass from its holster I thought I caught sight of four small objects which seemed to move, though they seemed not larger to the eye than a half-grown sheep, but dark in color. I said, "George, I've found them; look just this side of the divide, emerging from that clump of pines—what are they?" and handed him the glass. His practiced eye was not long in solving my enigma. "Elk! Game at last! See, they are still coming out of the clump of lines—5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18! Now for business!" One fine old bull with magnificent antlers, thirteen cows and four spring calves; they are our meat; we are entitled to it, and we need it. Keep cool and your powder dry, we will outgeneral them sure, if we can get down off this mountain and into the basin on the other side of the little divide. There we will leave our horses and slip on to them, and the battle will begin. They will get rattled and we may be able to drive them into the rocks beneath our feet, and bag the whole band. No time is to be lost! The top of the range was bald, that is to say without trees along the edge of the precipice, and for a distance varying from 50 to 200yds. to the timber line, tolerably well covered with bunch grass, and that with about 6in. of snow.

We were soon mounted, and after a brisk ride of about two miles, all the while on the lookout for a place to descend, we came upon the tracks of two elk. After following their trail for some 300yds., we were not surprised to find them good guides, as we suspected they had business in the basin, and they knew well where they could descend. Though very steep, we knew where elk could get down a cayuse could also.

Dismounting, we landed safely in the basin, and on the east side of the divide, after which we soon found a clump of trees in which to leave our horses. They were soon secured with the picket ropes. "Now," says George, "we will take off our coats, but all the ammunition we have must go along, for if we came up to that band of elk there will be a regular old-fashioned serenade, and that is what we want—follow me."

Stealthily, though as rapidly as was prudent, we descended the west side of the divide, slipping from one clump of trees to another and pick over one little gulch to the top of another, until we came to their trail, which indicated that though being pursued they knew it.

Soon they turned to our left, toward the rocky range from the top of which we discovered them. "That is what we want," whispered George, "we will bear off to the west and head them off." To our right was a gulch running in the right direction. Hurrying down it 100yds. we crept up to where we could get a view of the situation. The guide was some 20ft. in advance of me, and creeping on his stomach; suddenly he dropped his head and came running back. "I got sight of them just above us, and about 200yds. distant, and from the way they act I am convinced that they have winded us, but they are unable to locate us, as the currents of air in these basins have no regular course, one moment the elk would get a whiff of air from us, the next would be as like as not vice versa. Now we will follow this depression and get nearer, as we must make sure work."

In a few minutes more we had by crawling on hands and knees gained our place of attack, and peering over the rise, our whole band was in full view at about 100yds., bunched or huddled together as closely as they could get. What a picture for a hunter! Eighteen of the noblest game in the Rockies, each one trying to see, hear or smell danger, which they felt was present, but no one of them being able to solve the mysterious disturbance of the atmosphere, and to complete the picture and make it still more interesting, on the opposite side of the herd from us towered the antlers of the only bull, who stood in a cowardly position, protected by the presence of the band of cows between him and our unerring rifles.

"Have you got your wind yet," asked the guide as I lay flat in the snow on his right; "when you have, make sure work of that big cow in front. I'll take care of the big one in front of me: perhaps my .45-90 will go through her and kill or wound another. When you are ready say fire, and off she goes."

"Fire," and the two cows fall. Still the herd stand, and quickly two more shots go into the band, both hits, and now they scamper up the mountain, which I omitted to mention was thinly wooded up to within about 200yds. of the rocky ledge, the point from which we first sighted them.

"Now come on, we will drive them to the rocks," and off goes the giant, sixty years of age and six feet tall, bounding up the steep mountain like an antelope in pursuit. Were it to save my life I could not have followed him at his pace. In time I, too, got there, and I shall never forget the spectacle that met my gaze. Under two immense boulders as large as a 12ft. wall tent, at the very top of the mountain and some 200yds. from the timber line where we were, stood half of what was left of the band, including the bull. Some 50yds. lower down were the remaining half. We opened fire again, and it was not long before all save the four spring calves had shared a common fate.

Just as we had finished, a trapper named Joe Kemp, attracted by the firing, came to us and rendered valuable assistance in removing the entrails from the fourteen elk. It was 2 P. M. when we began, and at 5 P. M. we had succeeded in getting the bodies out from among the rocks and slid down to the foot of the range. By 5:30 we were ready to start down the mountain, a task which we feared would be not only dangerous but impracticable in the

dark. Each of us strapped a hindquarter of elk behind his saddle for our hungry companions. Our new helper went with us, and after many detours over a terrible country, we at 10:30 reached the snow line, when the darkness of the night and the roughness of the route prevented further progress. We could do no better than build a fire and bivouac for the rest of the night, and without water for ourselves or horses.

In the morning, as soon as it was light enough for us to see our way, we started for camp, being obliged to follow the bottom of a gorge and in many places cut logs in order to make it possible to get through. Arriving at 9:30 A. M., we soon gladdened the hearts of our companions with the tale of our hunt, and at once set about organizing the pack train and getting it off to the scene of the killing.

Fortunately, within a mile of our camp the only other inhabitants of the section for many miles were in the trapper's camp, Joe and his companion. A day or two before our arrival two men with a wagon had brought in their supplies for the winter, and were waiting to get meat and hides for a back load to Ricksburg, Wyo., as near as I can tell, about 105 miles from where we are located.

At 1 P. M. I had the satisfaction of seeing the whole outfit off for the top of the mountain, consisting of 9 men and 17 horses—5 of the horses ridden by our party, and 12 to be used for packing the hides, horns and meat. Some one had to remain in camp, and the writer preferred to fill that position, and that accounts for my being alone.

*Sunday Morning, Oct. 27.*—The skinning out and packing in the meat, heads, horns and hides of fourteen elk proved to be more of a task than was first supposed, and our people did not get back to camp until Saturday at 2 P. M. The hides we kept and as much of the meat as we could make use of on our march home, and the rest we gave to our trapper friends, who were glad for so valuable a back-load. During my lonely vigil in camp I had full satisfaction with the rod and line, fishing in the Snake, and was not obliged to go more than a few hundred yards from the magnificent pool just in front of our quarters. The largest specimen weighed 3¼lbs., caught with a small spoon bait. He made a good fight, and became the subject of a photograph, also of the process of skinning.

While up the mountain the outfit came in sight of another herd of twenty-six elk, most of which could have been killed, but we had all that could be taken care of, and there was no object in pursuit except wanton destruction, and that ingredient did not enter into our composition.

The antlers of the bull elk proved to be of unusual size and perfect in every particular. It took me two hours yesterday to prepare the head for transportation on the animals, as it had to be sawed through its center and the flesh carefully trimmed off, our German artist making a good picture of the operation during its progress.

Yesterday evening we built a fire on the point of a small peninsula in the river, and tried the experiment of fishing by firelight. In three-quarters of an hour we caught 26 very fine trout by casting the line down stream as far as we could and then reeling up, when scarcely a single cast failed to get a strike, and mostly a fine trout.

To-morrow morning (Monday) the trappers' team will start for their destination, and if the snows do not come they will get through inside of a week. This will afford us the first opportunity of sending out mail since leaving the ranch, and by arrangement we are to deposit the letters in a Royal Baking Powder can at the end of a log two rods north of the trappers' camp, they being up the mountain bringing down the balance of the meat which they were unable to transport yesterday.

*Rea's Ranch on the Shotgun, Idaho, Nov. 2.*—We arrived here yesterday at 4:30 P. M., after a continuous march of six days. We did no hunting or fishing, except the catching of a few fish as we needed them, and picking up a few ducks and an occasional wild goose while on the march.

The only incident worthy of note occurred one morning as we were nearly ready to take up our line of march. Three swans came flying along; Bush, who happened to have his gun in his hand, made the remark that he would have swan steak broiled for his supper, and as he made the remark he stepped a few feet from the fire, took aim and fired—and to the utter astonishment of all present the last swan in the row toppled and fell dead to the ground just 210 steps from where he stood. Swan invariably fly in single file and he averred that he aimed about 4ft. in front and 3ft. above the first swan. Upon examination it was found that the ball had passed through the neck 2in. behind the head. This was one of the most remarkable chance shots on record, at least in my experience, as the ball did its work not less than 16ft. further back than where it was aimed.

All hands were now busy attending to the hides, photographing the horses and their riders and arranging for the departure of Bush and Weber, who started for home next day. I remained a few days until the hides were in a condition to ship, when Rea and I took up our line of march to Beaver Cañon, where they were crated and shipped by freight East. As I write the sightless glass eyes of the bull, two cow elk and a black-tail buck appear to be looking down upon me from the walls of my office, and continually remind me of my most remarkable outing in the Rockies. SHONGO.

LANCASTER, Pa.

## AN AROOSTOOK REMINISCENCE.

THE first time I ever went deer hunting, I was successful. I admit at the start, however, that luck was a more potent factor than skill in bringing about the result.

Ever since I was first able to lug around a gun, it has been my practice to spend at least a few days, generally a couple of weeks, in the fall hunting.

For some time I made my uncle's farm, not far from Portland, my headquarters, where I got a fair number of partridges and gray squirrels with an occasional duck in the river, and at the same time had the pleasure of revisiting old friends and relatives. But a business boom struck the town and it settled up rapidly, and finally one fall some years ago, after hunting several days without capturing either fur or feathers, I realized with regret that the hunting ground of my boyhood days was played out.

Well, I laid my gun aside and made my stay somewhat shorter than usual that fall, and next year when the hunting season drew near, I began to look around for a new field of operation.

The result of my search was that I brought up in a little hamlet of some half dozen houses in southern Aroostook the first day of October. The ruffed grouse was the main object of my quest, and I found him in greater numbers than had ever before been my fortune to encounter, getting from three or four to as high as a dozen in a day's hunt. After my arrival there I found what I had not known before that this was quite a noted locality for deer.

I had never hunted any for large game, but was considered a fair shot with a rifle, and the first few days of my stay the new report of several deer being killed within a radius of a few miles stimulated me to make the attempt myself. Just at this time a party of three sportsmen from Massachusetts came to the house. They were very fly young men, and were going to kill all the game in the region. They procured the best guides to be found, hunted two days, saw several deer, but failed to secure any, and at the end of the second day gave it up and returned home disgusted.

The second day was Friday, and that evening one of the guides dropped into my hostelry, and conversing with us on the result of the late expedition, said that there were plenty of deer over the route they had traveled, if anybody was smart enough to get them, and that he meant to try it again to-morrow. Another young man who was present offered to accompany him. I had had a pretty good session with the partridges, and being invited to go also, concluded to make the third member of the party.

We did not get a very early start, leaving the house about half an hour after sunrise. I had a Winchester .34, belonging to the house, which I had used some, Ernest, the guide, had a Kennedy .44, and Arthur, the other man, had my double shotgun. We walked up the main road about a mile, then by a crossroad through the woods half a mile, to an arm of the lake. Here we took a batteau, our route for some two miles and a half being by water. One rowed and another paddled, the third man by turns relieving the others. The wind was dead against us and it was no slight job to make any headway with the batteau, as any one who has used one of these craft can testify. They are sharp at both ends, the bow and stern overhanging, about twice as large as a common dory, and weigh something less than four tons each.

The arm was half a mile long and reaching the end, I got my first view of the lake. Good judges have pronounced it one of the loveliest in the country, and I could but admit, not without reason. It was of oblong shape, some three miles long and a half mile wide at the widest point, surrounded on all sides by ridges heavily wooded with a birch, beech and maple growth, which had already begun to put on its autumn regalia of brilliant colors. No sign of previous human occupancy was to be seen from our point of view, and we could easily imagine ourselves a hundred miles from the nearest habitation of civilized beings. The smart breeze blowing had ruffled up the surface of the water into waves of quite respectable size, but by perseverance we finally reached our landing place, in the lee of a point putting out into the lake, and where an old logging road ran back into the woods.

We hauled the batteau up a little on the shore, took our guns and started up the logging road, following it in a westerly direction about quarter of a mile, when it turned to the north and ran up over a ridge. Here the hunt proper began. I kept the road, Ernest took a position about 100yds. to my left, and Arthur the same distance to my right, and we moved slowly up over the ridge, occasionally catching sight of each other to direct our movements, the programme being to keep somewhere near in line, and if either jumped a deer somebody would stand a chance of a shot.

We walked along slowly and cautiously, I keeping the road, and after proceeding a quarter of a mile I discovered that I had lost both companions, but I had taken the lay of the land and knew I could easily get back to the boat, and pushed on. A few hundred yards more brought me to the edge of a little clearing some sixty yards square, which was evidently the end of the road. I could see some distance through the forest in all directions, and thinking it probable that by reason of better walking in the road I had get ahead of my companions, I sat down on a log and waited for them to show up. I had not sat there more than two or three minutes, when I heard a shout and then a rifle shot to my left, apparently a couple of hundred yards away. I cocked my rifle and waited. Presently, in the direction of the shot, I saw a small white object bobbing through the woods, coming straight toward me. I did not know that it was a deer's tail, and thought at first that it was an extra large robin. Then I saw that it was too high in the air, and the idea struck me that it might be a deer. I put the rifle to my shoulder and sighted it on the object as near as possible. In a few seconds a deer jumped over a fallen spruce about forty yards away, into the clearing in plain sight. I covered him, and the instant he struck the ground I fired. The only effect it apparently had was to increase his speed, and he went by me like a streak, I getting two more shots at him before he got out of sight. I was just about to follow him when I heard a call from Ernest; I answered, and presently he came up and said he had jumped a bunch of three or four deer, but failed to get a shot, and knowing that one had gone in my direction had shouted and fired to warn me.

I told him my experience, and we went to the place where the deer was when I first fired, and followed his track to where he reëntered the woods. We found no blood or hair, and I could see that he thought I had missed him clean. But I knew that I had not lost my nerve, and felt sure that I had not missed the bigness of a deer at 40yds. So we entered the woods, he taking the lead and I following close behind. The deer showed no signs of giving up, and after tracking him nearly 200yds., Ernest stopped and said, "It's no use, I guess you didn't touch him."

I was about to acquiesce, when looking ahead I saw about 50yds. away just one of his ears sticking up behind a little hillock. I exclaimed, "There he is!" and instantly aiming in the direction of the ear, fired two shots in quick succession. I admit that I was a little excited then, and was about to let go a third time, when the guide said, "Don't shoot, partner, don't shoot; he's down." And so it proved.

He was dead when we reached him, having bled inwardly. It was a yearling buck and weighed, we estimated, 125lbs. Having bled him we looked for the shots, and found but one hole in him and no place where the ball came out. We afterward found that the ball had struck his right shoulder, breaking it, traversed him lengthwise and lodged in one of his hips.

So it was my first shot, as he was nearly head on when that was fired. My second and third shots were missed as he skipped by, which somewhat lowered my pride as a marksman. The two last could not be expected to reach him, as he was all out of sight behind the hillock except the ear. The fact that he had traveled 300yds. with such a wound, spoke wonders for their vitality.

We tied his legs together, cut a sapling and ran through and each took an end on his shoulder and started for the boat.

It was a pretty severe job getting him along that rough old road and over fallen trees, but I was not in a mood to complain; and Ernest was a powerful fellow, used to such work, and made no bones of it. We reached the boat in due season and found it was only 11 o'clock. We rested a while, ate a lunch, and then struck out again. Arthur was quite deaf; he had evidently heard nothing of the scrimmage, and it was useless to try and call him back. We hunted several hours, but found no more deer and returned to the boat to find Arthur not yet arrived.

We interviewed the grub basket again; and after another rest went back into the woods a little way, where we had seen a flock of partridges in the morning. In a short time we got three, shooting their heads off with rifle balls. Two of them came my way and Ernest shook hands with the other. Then finding no more we returned to the lake shore and waited, occasionally making a trip to the grub basket, and glancing into the batteau, where the deer lay in state with the partridges, minus heads, arrayed on either side, giving us the comforting reflection that the day had not been spent in vain. It was nearly sundown when Arthur showed up. He had not heard the shots and had spent nearly the whole day trying to find us. We set out at once, Ernest and I rowing, and Arthur taking his turn at the basket.

The wind was with us this time and we made pretty good progress to our landing place, put up the batteau, lugged our game out to the main road, hung the deer up in a tree, and reached the house soon after dark. We harnessed a horse, went back and brought him home in triumph.

So I got my deer after all, and even now the recollection of that day forms perhaps the most pleasing reminiscence of my hunting career. E. W. L.

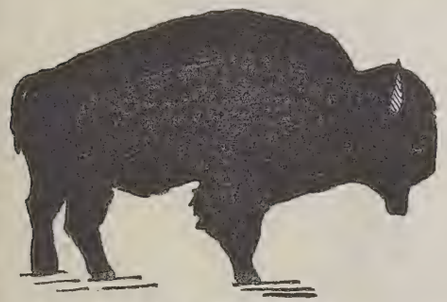
## HUNTING RIFLES AND BULLETS.

*Editor Forest and Stream:*

Regarding hunting rifles for large game, I have read statements of sportsmen who have had some experience in hunting, advocating the use of rifles from .38 to .40cal. and in some instances single shots in preference to repeaters, saying that the single shot can be made much lighter and therefore easier to carry, also that such a rifle shooting a fair charge of powder and a solid bullet will kill any game liable to be found in such localities as Maine, northern New York and the Provinces, if the bullet is put in the right place.

Now in my opinion this if is a good deal larger than it may generally appear. Suppose you are still-hunting deer on the first snow, and find the track of a buck and follow, sometimes directly on the track, if you are a still-hunter keeping some distance to leeward if you have reason to think you are getting handy to your game. Often the deer is lying down in some fallen treetop or similar place. It is ten to one you will not see him until he gets up, and if he gets up it is usually because he has heard you or has reason to suspect some danger. He may be in such position that you can put your bullet right in the center of his shoulder, or you may be flurried and shoot high and break his spine. In either case you won't have any more trouble with him. Suppose, however, he is in such position (and the chances are more than even that he will be), that you only see a patch of gray. You ought to shoot at what you see (that is if you know it is the game you are after); it is not safe to move so as to get a better chance. You shoot and put your solid .38 or .40 bullet through his body. If it goes through anywhere between the shoulders and hips and does not touch the heart or spine, you are likely to have a long tramp before you get him, and the chances are good you will not get him at all. I can give a number of instances occurring in locations where I have been hunting when deer were lost in this way when shot through the body with .38, .40, .44 and .45 solid bullets. Some were followed all day and some were left until the next day in hopes that they would either die or get stiff during the night.

When I am hunting I prefer to get my game as quickly as possible after shooting at it, and I therefore believe in a rifle which may be considered heavy, but which shoots a charge of powder and a bullet which I have found by practical experience to do its work effectively. A very light rifle and small bullet will do it occasionally. I saw a handsome buck which was killed with a single shot from a 12in. .22 Stevens pocket rifle. The buck was running fast through hard-wood timber, and was dropped at once at 70yds. with a .22 short cartridge. It was a pure case of luck. The man who did the shooting couldn't hit one deer in ten under similar conditions, and wouldn't get one in twenty if he did hit them.



Last winter I spent a night in the camp of a friend, a young man who is as good a woodsman and still-hunter

considering his age, as I know. On the night I refer to he was feeling rather blue; he had been out that day and found the track of a large buck and followed it about two hours, when he saw him get up about 30yds. away, behind a fallen treetop. All he could see was the middle of his body, and he put a bullet from his .40-65 through him, but did not get a chance for a second shot until he had followed him some distance. He struck him in the neck the second time, then spent nearly all the rest of the day following, and finally lost him by his taking to some open water. This man killed a buck the next day, also a two-year-old moose while on the trip, and had to shoot several bullets into each before getting them.

The rifle I have used durinng the last four seasons is a Winchester .45 90 half magazine weighing 9¼lbs. I had it made to order and hesitated at the time between a .45 and .50. I load my cartridges with 100grs. of powder and a 300grs. Keene express bullet. My old bone-breaker has done good work so far, I have killed fourteen heads of game such as moose, caribou, bears and deer. None of it has gone 50yds. from where it was shot at. I have been fortunate in getting a number of good shots, but I think some of my game would have gone quite a distance if the caliber had been smaller or solid bullets used. A rifle of 7lbs. is easier to carry on a long tramp, but if you do much hunting you are pretty sure to make up for the 2lbs. or so of weight in the number of miles you will travel after some of your wounded game. Also I believe in a repeater, although I have never been obliged to call on the magazine for more than a second shot, except once; in this case I saw two bears at quite a distance on an open barren; I crept up within 25yds. of them and found there were three, they were in some low scrubby bushes. No. 1 sat up and got shot, so did No. 2 and 3; it was pretty quick work—less than ten seconds. I did not want a single-shot rifle just then. It was very easy, about like shooting at three flour barrels at less than 25yds., only they were bears.

I have talked with parties who questioned the penetration of the bullets I use, some of them saying they did not think they would be effective on a moose at distances over 100yds. My companion on my first trip to Nova Scotia used a rifle, a duplicate of mine, and cartridges of my loading. He killed two moose one afternoon, one at 295yds. and the other at 175. (We measured the distance.) The first dropped at once, got up and staggered a few yards and went down to stay; was struck back of the shoulder just over the heart. The second was struck at base of ear and dropped in its tracks. Last fall I shot a bull which came to our calling; he came without answering and was working around to get to leeward of us. We suspected he was trying something of the sort, so we tried still-hunting him and came unexpectedly on him at close quarters in some quite thick timber. I could see parts of him, but not his shoulders, and shot at what I took to be the center of his neck; afterward found it was his head. The bullet struck him fair in center of side of head. He wheeled around in his tracks and I put a second bullet in his shoulder; he just folded his knees under him and went down. The penetration of the Keene bullet with 100grs. of powder is not as great as a heavier solid bullet with less powder. The trajectory is pretty flat, and I have found them very killing. They will not go through a moose. On the caribou and deer they went clean through, coming out in from three to five places. They will spoil some meat, but not more than several small solid bullets would.

I was told that some members of the Massachusetts Rifle Association tried the Keene bullets at targets and

THREE BEAUTIES OF NATURE.
I.—The Buffalo.

found them very erratic. I have used between 200 and 300 of them at targets from 50 to 400yds. when testing my rifle, and I never saw any signs of their spreading before reaching the targets. At 50, 75 and 100yds. I shot at sheets of cardboard dipped in melted wax; the holes were clean cut, with no sign of spreading. Before starting on a trip after game I always test my cartidges, rifles and sights to be sure they are all right. When you are on the hunting grounds and in presence of game, it will not lessen your chances of securing it if you know your tools are to be relied on.

As for hunting sights, those usually put on American rifles as sold by the trade, consisting of a chunk of brass or copper at the muzzle and a sort of buckhorn with high sides and a fine notch at the bottom for a rear sight are about the worst. Good hunting sights should show clearly and quickly and as uniformly as possible in different lights. I think this can hardly be claimed for the above. In different lights the reflection from the front sight will vary considerably, also when shooting quickly you are very likely not to get down into the fine notch of the rear sight, causing over-shooting. A good deal of game is missed at very short range, and two-thirds of it by shooting too high. I have experienced a good deal with various so-called hunting sights and have not found anything equal to Lyman's, and I have used the latter on all my hunting trips. I think the Winchester express sights are pretty good, and should choose them next to Lyman's. It may take a little practice to get accustomed to the latter; but as I have said, it is well to test both your rifle and sights before starting on a trip. Do not start off as I have seen parties do with rifles they had just bought, with no knowledge whatever of their shooting qualities except what they had been told by the salesman.

Mr. O. and I expect to be on some good moose ground the latter part of next month. We may not get the game we are after, but we expect to, and at all events we shall try.

C. M. Stark.

Dunbarton, N. H.

## CHICAGO AND THE WEST.

*[By a Staff Correspondent.]*

Chicago, Ill., Aug. 18.—The biblical names seem to be out of luck on South Water street. Last year it was B. Aaron & Son who were found with a couple of barrels of illegal prairie chickens in their clothes. And now come Moses Gray & Co., of the same delectable neighborhood, and admit in open court that they had twenty-five illegal chickens secreted on their persons last week. Warden Bortree developed this fact. Justice White assessed the outfit $125 and costs, which caused patriarchal tears to flow last Wednesday when the case came up for trial. The way of the poor but honest South Water street man is growing harder every year. It looks like some of them will have to take to work before long.

The new president of the State Sportsmen's Association, Mr. R. B. Organ, has been doing a lot of quiet hustling in game protective matters lately, and while it would not be wise to disclose his plans; it is safe to say that he will fully sustain the work so ably inaugurated last year by Mr. Price. This week Mr. Organ got wind of some illegal prairie chickens in the hands of the Adams Express Co. here, three boxes consigned to a

THREE BEAUTIES OF NATURE.
II.—The Moose.

South Water street firm. He went to the superintendent, who made examination, and opened not three but five boxes of illegal chickens. All these were destroyed and the promise of the company was given that they would not knowingly handle any such game. This will not save game unless in the form of an order extended to local agents along the line, and such an order should be issued.

Last week ccmplaints came in that a great many young ducks were being killed along the marshes of the Calumet, now lying within the corporate limits of the city. Mr. Organ entered complaint to Chief of Police McClaughry, who at once detailed some officers and the Calumet duck shooting came to an abrupt close. It would be well if Chicago would extend her limits fifty miles further out still.

WORLD'S FAIR COMMITTEE.

President Organ has announced his choice of an executive committee, upon whom will fall the arduous labors of preparation for the World's Fair Tournament of 1893, on which much interest centers. The names are as follows: F. C. Donald, chairman; W. J. Edbrook, M. J. Eich, H. D. Nicholls, E Hough. The fair committee will be, W. N. Low, chairman; F. S. Baird and B. F. Cummings.

CHICKEN COUNTRY.

Perhaps some light can be thrown on the Forest and Stream's want for good chicken country. My "game pocket" man writes me that he has sold out his former ranch and will start on the 23d of this month for Laramie, Wyo. I asked him to state something about the game prospects, and also to give me a few addresses of good chicken points outside of his country, which I could publish for the general. He replies as follows:

"Chickens are too thick for sport, only fit for murder. Ducks are fine and lots of 'em. Snipe in countless numbers; tatlers, etc., *ad lib.* Deer are more plentiful than for some time, and lots of moose and a few elk. Caribou further north.

"Grass very heavy, you want good dogs and lots of 'em. Thanks for your kind references. Business unfortunately prevents my remaining. I think there is lots of game in Wyoming. Will write you on arrival.

"Write Ed. Cavileer, Pembina, N. Dak.; tell him I said so, and he'll answer you all right. There is a fine place some twenty-five miles west of Pembina. He knows it.

"W. B. York, of Badger P. O., Kittson county, Minn., will guide men over to good shooting on chickens. I don't advise ladies to go anywhere there without a tent."

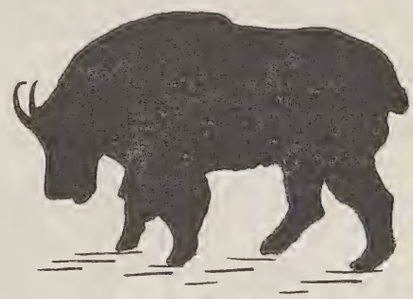
I think that the above addresses will secure good chicken shooting to any one who cares to go after it; but I have been having so much fun all by myself over my game pocket that I do not intend to give the name of my man or of his sacred game pocket publicity. I will gladly inform any proper inquirer by mail as to the whereabouts of this mysterious spot, which I verily believe just a leetle lays over anything up to date.

As to the chickens nearer home, it is feared that the wet spring wrought great damage. Reports come in from Du Page, De Kalb and other counties of this State that there are very few young chickens yet apparent. Of quails, however, the greatest abundance is reported. There is every reason to believe that this fall will bring unusually good quail shooting all over northern Illinois and Indiana, contrary to the earlier impressions.

Major J. M. Taylor, well known authority on dogs, was this morning talking with me after reading my remarks last week on the old-fashioned chicken dog.

"I am a firm believer in the excellence of the modern dog," said he, "but you want to give him a chance. Your old dogs were tough because they had the exercise. You can't take a soft city dog out in the country and expect him to do the work of a country cousin that is in constant training."

That may do all very well for an excuse, but it doesn't explain everything. Now, the Major is going to publish a fine book about field trial dogs. He showed me the picture of the first field trial winners in America, a big, husky, stout dog, about as big as a yearling ox. That's the sort of dog for me—the kind you can run a wagon over without making 'em holler. No dog is a good chicken dog unless you can run a wagon over him with impunity to the dog; the wagon to take its chances. Turn loose a lot of your flyers in that "high grass" my chicken man speaks of, and see what they will do on a warm day. They'll be hunting a place to die in a patrician way, and I'll guarantee it'll take two generations of them before they learn to stay. When they do, they'll be wider out, and higher through, and plenty tougher than they are now. Try running the wagon over your modern dogs. That's the way to see whether they're any good or not. I used to run over my old dog, every once in a while, when he was busy thinking of something, and he never seemed to mind it much. That's what I call a good dog.



SHOT A FOX.

A friend of mine in Indiana writes me the following in regard to an incident which in the West or South would naturally be thought to require explanation or apology. Out here we do not hunt foxes with a gun. It would seem that the fox in question was aware of that fact. The worst of it is, I had loaned my friend the gun with which he did this deed. This constitutes a lawful taboo for that instrument, and I reckon now he'll have to keep the gun. His letter is as follows:

"Landersdale, Ind., Aug. 17.—I would have written you sooner but have been busy hunting squirrels. Was out yesterday and killed five squirrels, a big black snake, a ground hog and a big red fox. I didn't intend to shoot the fox, but he kept passing in front of me till I got mad. He had passed the third time, and I said to myself as I put a shell containing some No. 4 shot in the gun, 'Now, you cross my way again and I will try to kill you.' In a short time I saw him in a canter in front of me. It was a good long shot, but I blazed away. Old Mr. Fox jumped it seemed to me about 6ft. high. I did not think I had hurt him much, but my dog lit out and soon had him in her mouth. He was a fine specimen of fox, but he crossed my path once too often."

If there can be any consolation for the owner of a disgraced and tabooed gun, it may lie in the reflection that the latter proved itself a good shooter, even in the ways of crime. I always thought that used to be a good gun, when I was on speaking acquaintance with it, and I will say that now, though henceforward our ways must part.

Speaking of squirrels; another friend and I tried for some this week when we were out fishing. We had along two .22cal. rifles, splendid little arms, accurate to a hair. We found nine squirrels and got seven of them. I can not call it right to shoot squirrels with a .22. The head is not always visible, and unless you hit a squirrel fair in the throat with a .22 bullet, you will not kill it outright one case in ten. We shot one squirrel six times. This seems to me cruelty. A .22cal. may be big enough to shoot deer, but a .32 is none too large for squirrels. The old whirling-round ball of the muzzle-loading squirrel

THREE BEAUTIES OF NATURE.
III.—The Mountain Goat.

rifle used to take a squirrel out of a tree if it ever barely touched him, or perhaps if it did not even touch him. I shall use my father's old squirrel rifle next time, before I would use a .22 on squirrels.

TOLING ANIMALS.

In an interesting little brochure, "The Development of a Pawnee Myth," Mr. Grinnell continues the idea of one of the stories of his earlier book, "Pawnee Hero Stories," and tells of the way the Indians "called the buffalo." That buffalo could be called, or toled into a surround will, I imagine, be news to many white men in these days. Incidentally the author mentions the toling of canvasback ducks as practiced on the Chesapeake Bay. I remember that "old man Wood," a well-known character around Senachwine Lake, in this State, once told me he used to tole flocks of mallard ducks up to shore, by the use of a dog trained to play up and down along the edge of the water. This is the only instance I ever heard of where mallards were toled, and perhaps I mentioned it in Forest and Stream at the time.

E. Hough.

### Three Beauties of Nature.

"I don't wonder they shoot at you," said the young Moose to the Mountain Goat.

"If I looked like you I'd join a menagerie," said the Goat.

"Humph! there'll be some beauty left in the world after you are both gone," said the Buffalo.

The silhouettes are from photographs of living specimens: that of the moose (a young female) was sent us by Mr. Henry Austen, of Nova Scotia.

### Adirondack Game Notes.

NORTHWOOD, N. Y., Aug. 16.—*Editor Forest and Stream:* There are several deer and bears wandering around this town.

A few inhabitants here would like to have the FOREST AND STREAM tell them why a bounty was put on bears. No one was ever killed or wounded in the Adirondacks so far as we know. They have killed no domestic animals or tramped down any grain.

One was seen walking leisurely away from a large flock of sheep a dozen rods away. He had not touched one though he passed within three or four rods of them.

A guide who was in the Moose River region for three months from April 1 this spring says he did not know of any deer dying of starvation and that there was enough feed for ten times as many deer as there are there.

Woodchuck oil is used in preference for all others by backswoodsmen here for keeping their guns in condition.

A farmer complained of the partridges which were eating up his buckwheat.

I saw a black-headed doe on Moose River three weeks ago. Another deer seen at about sixty yards was so thin that its ribs could have been counted. All deer are in poor condition now.

"Johnny" Jones measured the leap of a panther on a fly of Big Brook a few years ago. It was just 36 feet; the jump was on a level. Mr. Jones who saw the leap made said he went in the air about ten feet.

RAYMOND S. SPEARS.

### The Rhode Island Association.

THE Long Island Association for the Protection of Fish and Game publishes for gratuitous circulation the Rhode Island game and fish laws and adds: "In presenting the game laws of the State in the present form for distribution, the Association deems it proper to state its general object. First—We propose to enforce the laws for the protection of game, fish and song birds within this State. Secondly—To protect the farmers and land owners against persons who mutilate stock, tear down fences, or shoot and fish on forbidden premises. We desire and ask for the co-operation of our farming friends throughout the State, believing the object sought beneficial alike to the farmer and sportsman, whom we aim to protect from a class of law-breakers who have in the past defied them, and have killed and trapped birds, taken fish, and trespassed regardless of all laws.

"Therefore we request any person who knows of violations of these laws, to make complaint of such offenses to the Association, which complaint will be carefully investigated and action taken. All communications will be treated as strictly confidential, and should be addressed to

A. L. ANDREWS, President,
75 Westminster street, Providence, R. I."

### My First Goose.

ONE morning in the early part of November while I was camped on Lake Ingalls I looked out from my tent door, and behold! I saw coming across the lake a flock of ten Canadas. As they were coming directly toward me I loaded my gun and stepped down to the edge of the lake and hid behind an old stump, hoping that they would come near enough to give me a chance to kill my long coveted first goose.

I had no sooner gotten well hidden when I saw that my wish was going to be gratified, for on they came, very low and directly toward me. At the head of the flock was an old honker who looked to my young eyes to be big enough to swallow me. *Honk! honk!* he said to the rest of his feathered friends, and as if a bugler had sounded an order, the flock broke their V-shaped form and straightened out in a line.

Now I was pleased, for in this shape it looked as if I could kill the whole flock with but one shot, so just as they got within good range I pulled on the one nearest me. Spat! fell the bird, but instead of the whole flock only one had fallen to my gun. I had shot at the nearest instead of shooting down the line. When I saw but one fall I was so surprised that I forgot I had another load, so nine out of the previous ten went on their way toward the sunny South as if nothing had happened; and as they went they seemed to laugh at me and say: "Honk! somebody got tooled." I wonder who it was. J. M. M.

### Bolting Woodchucks.

*Editor Forest and Stream:*

"Woodchucks" exist here in large numbers and are a nuisance to the farmers. I believe that good sport could be had killing them with terriers, but as we have many stone walls and as the animals remain in their burrows all day and only come out at night, we have seldom succeeded in killing any. The most desirable way would be to drive them from their holes and have the terriers ready when they come out. How could this be done? Can you or any of your readers tell me? Could they be smoked out? If so, how could this be done? Some of our farms are absolutely undermined by woodchucks, and I do not see why there should not be a great chance to see some pretty terrier work. Could ferrets be used?

O. W. D.

BOSTON, Mass., Aug. 11

### New Jersey Reed Birds.

PERTH AMBOY, N. J. Aug. 22.—Yellow-leg snipe are reported to be on the Raritan River meadows. No reed birds have as yet been observed flying over. The law on rail and reed birds is off on Aug. 26. They are fairly numerous along the South River, and feed is abundant this year.

### Low Rate Harvest Excursions.

THE announcement that the North-Western Line, comprising over 8,000 miles of thoroughly equipped railway, has arranged to run two low rate Harvest Excursions during the months of August and September, will be gladly received by those who are interested in the development of the great West and Northwest, as well as by those who desire to visit this wonderfully productive region at a season of the year when exact demonstration can be made of the merits and advantages it offers to home seekers and those in search of safe and profitable investments. These excursions will leave Chicago on Aug. 30 and Sept. 27, and tickets can be purchased at the very low rate of one fare for the round trip to points in Iowa, Minnesota, North and South Dakota, Nebraska, Wyoming, Colorado, Utah, Idaho and Montana. They will be strictly first-class in every particular, and will be good for return passage at any time within twenty days from date of purchase. Full information concerning rates and arrangements for these excursions can be obtained upon application to any coupon ticket agent, or to W. A. THRALL, G. P. T. A., Chicago & North-Western Railway, Chicago.—*Adv.*

# Sea and River Fishing.

*The* BOOK OF THE GAME LAWS *has all fish and game laws of United States and Canada. Price 50 cents.*

## ANGLING NOTES.

### Pike, Commonly Called Pickerel.

IN New York State the pike (*Esox lucius*) is almost universally called pickerel, which is the proper name for another and smaller fish of the same family, namely, *Esox reticulatus*. In the fish laws of New York pickerel are mentioned twice, once each in two different sections, and in each instance when the name pickerel is used the fish meant is the pike. The pike is referred to once and then the fish meant is the pike-perch, which is in this State more generally called pike than by its proper name of pike-perch or wall-eyed pike. I have written columns of descriptions to separate these fishes, the pike, the pickerel and the pike-perch, one from another, and sometimes the mascalonge comes in as a pike to add to the confusion, but no written description is equal to an accurate portrait of the fish for the purpose of identification. Hon. Jerome Lapham, of Glens Falls, who has a cottage on Phantom Island, Lake George, caught a pike in the lake which weighed 17½lbs., another of 14½ and still another of 12¾lbs., all within a few days of each other the last of July. The larger fish of the three was photographed and the markings of the fish are so plainly shown that FOREST AND STREAM has reproduced it. The lemon colored, bean-shaped spots on the sides of the fish appear more distinctly than in any figure of the fish that has been published that I can recall. Usually, and in very excellent figures of the pike these spots are represented as faint, light-colored markings; the shape of them is not well defined, so that altogether I think this is the best portrait of the pike that has been published, as it certainly is the best photograph. I have a photograph said to be of a pike that weighed 35lbs., and was caught in Lake Le Bouef, Erie county, Pa., by Charles Phelps, but it does not show spotting of any kind on the sides of the fish, and this very fact has caused me to think it might be another of the pike family, but the photograph is too small to determine the matter with certainty. If one will imagine that the lemon-colored spots on the side of Mr. Lapham's pike are removed, and picture in place of them dark lines and streaks, producing a reticulated appearance, it will be very like the pickerel; and if the bean-shaped spots are made round and of a dark brown color on light ground it will answer for the mascalonge. To make this fish into a pike-perch or wall-eyed pike it will be necessary in the first place to put two dorsal fins on it, so I shall not undertake it, for the structure of a fish is not so easily changed as the color.

PIKE OR PICKEREL.

Caught by Hon. Jerome Lapham in Lake George.

### Mr. Stockton's Tame Fishing.

Mr. R. B. Marston says in a recent letter from London: "Mr. Stockton, who is one of our authors, called the other day, and I had a pleasant chat with him about fishing. I told him I quite agreed with his tame fishing ideas as against game fishing. He says he has written to you about it. The tendency is to get too scientific and mechanical and 'dodgy' in our angling."

This is Mr. Frank R. Stockton, author of "Rudder Grange," etc., and his idea is that with our extremely light rods and very fine tackle the modern scientific angler is too long in killing his fish. He makes one of his characters say: "There's only two animals in the world that likes to worry smaller creatures a good while afore they kill 'em; one is the cat, and the other is what they call the game fisherman. That kind of a feller never goes after no fish that don't mind being ketched. He goes fur them kinds that loves their home in the water and bates most to leave it, and he makes it jist as hard fur 'em as he kin. The longer the weak'nin' business can be spun out the more the sport. The idea is to let the fish think there's a chance fur him to git away. That's jist like the cat with her mouse." Mr. Stockton thinks that fish taste better that are quickly landed with the fight still in them, and because he believes in short work with a fish once it is hooked. Let no one think that he is not a finished angler, because he is. The best evidence that I can produce that I agree with his plain fishing idea is that while I have a couple of split-bamboo fly-rods that weigh about 4oz. each, I do not use them once where I use an 8 or 9oz. rod a hundred times. Catching big fish on extremely light tackle is not always proof of sport. I once caught a pike of 23¾lbs. that was the biggest dough-head of a fish that I ever saw. A linen sewing thread would have brought him to gaff so far as any fight that he made was concerned. There is a happy medium between "derricking" a fish with a weaver's beam and playing a fish with a fairy wand, and that is a rod and tackle to match that is fine enough not to scare the fish, and strong enough to kill them quickly once they are hooked.

A. N. CHENEY.

## CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

CHICAGO, Ill., Aug. 20.—It was one of those ancient parties, Col. Heraclitus, I believe, who was the author of the saying, "No man has ever been twice upon the same stream." I am persuaded that Col. Heraclitus was both philosopher and fisherman, and that he made the above remark after having had bad luck on a stream where he had every right to expect the fishing to be good. Verily, all things are fleeting, and nothing is more than once alike.

Thus reasoned my experienced friend, the Chief with Two Stomachs, and myself as we paused last week at the deep hole under the bridge where a few weeks ago we caught the 14 small-mouths. The river had fallen 4ft. and the weeds had risen 4ft. more, and our pool was much contracted. Moreover, there were two anglers on the bridge ahead of us, which was eminently wrong, *prima facie*.

"I'll bet they've read FOREST AND STREAM," said the Chief, "and so got on to our hole." And so it proved later.

"Say, won't you come over here and unfasten my line?" called one of the fishers to us as we passed by in our boat.

"Naw, unfasten nothin'," I replied; whereat the Chief rebuked me, and gently rowed over for the required service. Shortly we learned that the anglers had recognized us, though we did not know them at first. It was Billy Tuohy, from over at Eagle Lake, who had brought over Doug. Bergh, of Chicago, to try for some of our small-mouths under the bridge, as per recent issue of FOREST AND STREAM. Such are the ministries of a big sporting paper.

"Your big bass with the white spot over his eye is in there yet," said Billy. "I hooked him and ought to have landed him if I had been careful. He's a whale." (This shows the veracity of my fish story in regard to this old fellow.) Still, as Col. Heraclitus said, things change, and so far from catching very big bass, our friends had only taken five fish, none over a pound and a half. The school of big bass we had left in there had dispersed or been destroyed. I much suspect the reel or spear of the natives who saw us catch our big string there.

There remained for us, however, the consolation of the fact in natural history that if bass are not in one place they are in another, provided there are any bass. As to this latter we can speak in the light of our discoveries in quite a new water of the different waters near this same town of Mukwonago. Indeed, as we talked to our friends on the bridge, we had in our boat a water pail full of big bass which we had caught on the way to the bridge. We had passed hurriedly over good fishing to get to what we thought was better, only to find the latter poorer than we could have believed.

Mukwonago Creek rises in Beulah Lake, for one leg. Its other leg is dammed and makes Eagle Lake. Joined, filled with cold springs and dammed again, it makes the Mukwonago mill pond. Above this lower dam there are no small-mouth bass, though once in a while you see one in Lake Beulah. Below the dam at the village the stream is shallow enough to wade, 10 to 20yds. wide, and though it runs through a marsh for its two and one-half miles to the Fox River it has a hard, gravel bottom nearly the whole way. No one had ever fished that water, so far as we could learn, because it was very hard to get at. The Chief and I sort of 'lowed we would try it, knowing that we could descend the stream to the Fox River, and thence row a mile or so up to the bridge, where we expected to make a heavy killing in the bass family. We hauled our boat over the dam, struggled under innumerable wire fences, and at length found ourselves drifting down a swift, cold, hard-bottomed stream running through what looked like a sea of marsh and mud. The bass were in that creek, about 7,000 of them, and for about a mile of the swiftest water every one of them was a small-mouth.

"See here," said the Chief, who was rowing, "that bridge may be all right, but there's a good many fish right here. S'pose you put up a rod and try these fellows right here, and not go hunting for those in the bush, you know."

Without thinking that the bass would take a bait in such clear shallow water, I did put up a fly-rod, and began to whip a small frog about the boat, trying to head off the big waves which were running every way just ahead of the boat. By and by and biff! a big fellow went at the frog, and after a hard tussle we got a 2lbs. small-mouth in on the fly-rod—about as much fun as landing a hundred big-mouths on a bait rod. This set us to thinking, and though we passed rapidly on down the creek, and did not stop and fish carefully, I kept on whipping with the little frogs, and we caught six splendid small-mouths in this way and one big-mouth, out of fifteen strikes. They smashed our leaders up awfully, and tore loose in the weeds very often. The bass were feeding, and they had that little creek fairly alive with big boiling splurges where they were catching frogs. Right there was where we missed our chance to catch a big string of bass. The bass had left the dirty, weedy river to run up in that cold creek and catch minnows and frogs. If they had ever been fished very much they would have been too shy to take the bait so close to the boat as they did. I think we made a discovery in this creek here, just as we did in hunting out the channel through and above the big pond, where we caught the largest big-mouths ever taken in that section.

And yet the Chief heeded not Heraclitus. "To-morrow," said he, "we will go down that creek again, and we will break the record." On the morrow I could not

go with him, but he went alone. He came back bathed in a long-forgotten, honest perspiration, and had in his company—one solitary bass!

"Those bass didn't want any frogs to-day," said he: "they just turned up their noses at 'em." 'Cause why, it wasn't the same stream. Heraclitus had a good head, if he was a ancient.

Nevertheless, when Mr. W. H. Comstock, of this city, asked me yesterday where to go for some fly-fishing for bass, I sent him to this same locality unhesitatingly. I do not know of any wading water, anywhere in the country, where there are so many large bass. They ought to rise to the fly, and if they do at all, Mr. Comstock will get some of them, for he never uses anything but the fly for bass, and is very successful.

GREAT FISHING.

I do not know any reason for it, and indeed, there is every reason against it, but it is a fact that fish of all kinds are biting ravenously all over this part of the country. Everybody is having luck. Mr. C. W. Lee, of the Board of Trade, tells me that all the Board of Trade men now dropping in from their summer trips report good fishing. On all hands the stories are the same. The high water of this spring was a blessing to anglers. The Fox Lake country is alive with fish. At Antioch we found big-mouth bass a drug on the market.

Bass are now taking the fly very well on the Fox at Elgin, and the fly-fishing there will be good all the rest of this month and perhaps for a week or so in September.

The Kankakee swarms with bass in its upper reaches. The Mak-saw-ba boys are glorying in the sport. Billy Mussey has been living there, and weekly adds some new and lurid light on records. He brought up 34 bass in one lot, the last time he came, and in three days caught 24, 19, 14. Roll Organ caught 16 last Saturday, L. R. Brown 10, Frank Reynolds 12, Geo. Holden 8, and others of the club in the same ratio. Talk about bass! I never heard of such fishing in these parts. All frog casting. I recommend to these anglers in the narrow Kankakee that they lay aside their bait-rods and try pitching small frogs on fly-rods. It is a shame to use a fly-rod so, but you can take an old and stiffish one. In this way the angler can have some fun with his fish. I should like to hear some of these mighty men in connection with a 4lbs. bass and a fly-rod, and the Kankakee current.

Mr. C. W. Lee starts soon for a couple of weeks at Lake Chautauqua, N. Y., where he anticipates divers struggles with mascallonge, pickerel or maybe rock bass, if he has luck.

Mr. Abe Pool, of this city, is back from a northern lake whose whereabouts he is not anxious to reveal. In one day he caught 82 bass there. On the same day a market-fisher caught 189 bass in the same lake.

Mr. Harry Wadhams is just back from Wausaukee Club, near Wausaukee, Wis. In his stay of some days he caught 582 trout in the adjacent streams. He caught 87 trout in one day. He brought back with him 21 trout, of which not one weighed less than 1¾lbs. They ranged from that up to 2¾lbs. I knew in a minute where these trout were caught, for there is only one place in that region where that is possible. It was in the deep, cold hole at the mouth of Medicine Brook, where it empties into the Peshtigo River, about 10 miles above Ellis Junction. I have reported other heavy trout from the same spot in previous years. Yet old men will tell you gravely that there isn't a trout in the Peshtigo!

DESTRUCTION OF YOUNG BASS.

Dr. Bartlett, of the State Fish Commission, cites an unusual and most unfortunate state of affairs in the hook-and-line murder of young bass along the Mississippi River. The worst of it, there is no remedy. Leave the greed of the average clown alone, and it will know no limit till the end of the fish has come. The letter mentioning this reads as follows, and one can imagine the feelings of the man who wrote it, for Dr. Bartlett is sincere in his love for things that swim.

"QUINCY, Ill., Aug. 17.—Small game fish never so plenty as this season. Everywhere the waters are full of them, but I fear that irreparable damage is being done to the future of good bass fishing. Hundreds of thousands are caught every week of young black bass, measuring hardly 4in. in length. I presume Sunday last and Sunday preceding 100,000 young black bass were taken by hook and line out of Quincy Bay, and every day enormous strings of these little fish are taken. I have just come to my office from the depot, and on my way up I counted thirty-two men and boys on one little point of land jutting out in the bay, not over 40ft. across, and there was a little black bass in the air all the time. Every individual had a big string; as I sit now writing I look out of my office window and count nine boys all catching these little bass as fast as they can bait hooks.

"Think of it; one man boasted of a catch of 800 Sunday, and not one of them fit to eat. Ninety per cent. of all these fish are thrown away, spoiled when they come in, or, if taken home, go to the ash heaps. These people are doing more harm to the bass fishing of the future than the fishermen, a long way, and yet there is no redress. It is a hard sight to see the strings that go by the office—200 to 300 on each.

"We have a goodly number of prosecutions and convictions reported by our wardens—over 1,100 for the season.

"Am out of all my damage suits in good shape—new trials or continuances. I have been quite busy with the work in hand. S. P. BARTLETT."

The Chicago Fly-Casting Club continues its practice meets, the last being that of Aug. 13. Many erstwhile novices are becoming quite profishient, as it were.

E. HOUGH.

### Fishing at Fountain City, Wisconsin.

R. L. C. and myself left Minneapolis Aug. 11 on the Chicago, Burlington & Northern for a week's vacation at Fountain City, Wis., 107 miles from Minneapolis. Fountain City contains, in its normal condition, 972 inhabitants—970 German, 1 Englishman and 1 Irishman, the last two speaking the German language as she is spoken. It will repay any one to make a trip to Fountain City, and it's dollars to cents they will say they have seen no other place like it in the United States.

The fishing on the Mississippi River is very fair, and is improving every day as the water in the river lowers. A large variety of fish can be taken with the minnow for bait—black bass, striped bass, croppie, pickerel, sand-pike, pike, skip-jack, buffalo, sheepshead, gar, sturgeon and catfish. Trout can be taken in the brooks from four to six miles into the country.

The accommodations are first class; at the Scherer Hotel, which is kept by Albert Scherer, board can be obtained at $2 per day, or by the week for $7.

Aside from the fishing, as notes of special interest may be mentioned the springs, or fountains, and the bluffs. The place is rightly named Fountain City; it abounds with clear, cool, sparkling springs, gushing out from the side of the bluff, and almost every residence has its private fountain. The high bluffs overhang the city to the height of between 500 and 600ft. Eagle Bluff, the highest, takes its name from Eagle Valley, in which is located a very nice trout stream.

C. and I made a trip up the bluff and were well repaid by the view we got of the Mississippi River and the neighboring islands.

We have put in the week and are to come back in October, when the trees of the hills and bluffs have taken on their autumn colors and the ducks and jacksnipes are in the land. W. F. D.

## BLUEFISHING IN OLD TIMES.

HAVING read in the FOREST AND STREAM many accounts of fishing trips and of various incidents in connection therewith. And being an old and enthusiastic bluefish fisherman, I wish to add my part to reminiscenes of the past life in New York city. I found myself financially able to own a fishing yacht and thus to follow my favorite sport night and day, for pleasure and profit. Profit consisted in an outlay of $5 for 25 cents worth of fish sold.

My thoughts go back to my apprenticeship of five years. Date 1840. Shop 11th street and 3d avenue, New York city. Terms $20 per year, boss to board me. We used to go fishing and bathing, summer evenings, at Sandy Gibson's, corner 13th street and Avenue B.

This love of sport seems to follow man from youth to old age. Well, I love it yet. But alas! where are the fish? Thirty years back, bluefish were plentiful and were then caught by trolling, or in the absence of wind, by throwing and hauling the squid. As a edible or saleable fish they were scarcely marketable. But the mode of catching for the past thirty years has been by chumming or baiting. In a conversation with that noted smack fisherman, the late Capt. Hiram Bebee, he told me how this mode of baiting bluefish was found out. It was thus: After catching in the smack a fare of sea bass, porgies and other marketable fish, and when the smack's crew were washing the decks, the large bluefish were seen feeding on the scraps of bait. So Captain Bebee would drop a line and baited hook and haul in a few for market. Thus, I am informed, this mode of fishing was introduced.

Let us go on a bluefishing trip. Time, twenty years back. We have a boat, say 40ft., with living accommodations on board and provisions. There are four of us on this trip. We get 500 mossbunkers for bait from pound nets in Gravesend Bay. Then we sail outside of Coney Island Point on the ebb tide as we sail off shore. We wish to anchor inshore off the lightship, or off shore of the wreck of Black Warrior. We grind our bait in a mill, thus making our mossbunkers into sausage, or fine ground fish. We do this grinding as we sail out for the fishing ground.

And now the order is down jib and stow it away, round up in the wind and drop anchor, down mainsail and stow it. And now a guess as to how long before we can draw the fish to us and get them to bite. I say fifteen minutes. As I generally feed the bait overboard with a spoon I could, most times, get the first fish. But to-day we have a novice at this mode of fishing. I see we have a nice tide to carry the bait so I bait my line and give him the best place, and also try to instruct him how to act in fishing. In about ten minutes I see the wake of the fish which have found our feed, and I tell him the fish are around. Then I see him snatch and haul in his line as if his own life depended on it. As I stop him he finds there is no fish on his hook, but he tells me what a bite he had. I tell him not to snatch his line, but if he feels the fish working at his bait to pay out his line and the fish will take the bait in, and when hooked will pull in earnest; then to pull him on board. In a short time he said he felt a fish at his bait. I told him to pay out his line. He did so, and now he has an 8lbs. bluefish. But what an exciting time until he gets him into the boat. And as he admires the fish he asks how it will be known from the other fish. I cut a notch in this wonderful fish's tail so that it can be known. And thus we fish, some days catching five to 200, and then, as we read of fishermen in the wonderful Book catching nothing, so the same with us.

I am writing of twenty years back, when fish were plentiful. The past few years they have been scarce, and there are too many blank days. But they now make it a game fish by using rod and reel. But the fish of the past would have broken fancy tackle.

We formerly caught bluefish by trolling. I often think of and laugh over the tricks and pranks we used to play on each other, especially on a novice at trolling. It used to be great fun, when you had 150ft. of line out, and thought you were pulling in a large bluefish to lift in a couple of bricks or a bottle, or two dead fish on one hook. And how the man knew it was not a fish on his line.

The late C. G. Gunther (ex-Mayor) was a noted one for pranks when out with a party of friends. As he owned a small steamboat he was often out trolling. Once as I lay baiting fish I saw him with friends trolling for bluefish; and as his boat passed my own his friends and himself were shouting, and the water was flying, and what they thought was a large bluefish on their line I saw was a large iron frying-pan. But how that fish did skip and jump; and what a time when his friend lifted it into the boat. But I must stop this rambling, and if worthy of a reminiscence to you, you are welcome to it; and if not, these thoughts have brought to me pleasant memories of the past. JOHN BATEMAN.

## FISHING RODS FROM THE HUB.

BOSTON, Aug. 22.—The latest reports from the fly-fishermen are rather dubious. The weather has been extremely hot and very few trout have been taken in the principal New England trout waters since August came in. Fishing at Rangeley has been very poor. There is some fly-fishing in the smaller bodies of water that are remote in the woods. At Kennebago the sport has been only fair. Mr. Frank S. Dexter, of Boston, left Dixfield, Me., last week for Kennebago. Mrs. Dexter is with him and Miss Addie Sherma as guest. This will be the young lady's first trip to the Maine trouting grounds, though Mr. and Mrs. Dexter have spent some six weeks at Kennebago every season for a number of years.

Mr. J. F. Dwinell, of Dwinell, Hayward & Co., left Boston the other day for a fishing trip to Moosehead. He was accompanied by Mrs. Dwinell and one or two lady friends. Mr. Dwinell is an expert fly-fisherman. He writes his son that he whipped the waters of Moosehead all one day without a single rise. Then he was ready to give up in disgust. The party has since started for a trip to the White Mountains.

It seems that the opening of the narrow-gauge railroad from Phillips to Rangeley, Me., twenty-eight miles through woods and mountains, has opened up some very good trout streams and ponds. It also seems that the fishing has been abused. People who go up and down the road tell me that enormous strings of small trout have been taken in that vicinity of late. The little train even stops to let the sportsmen off, and at night it stops to take them on again. They tell of catches of 500, and even up to 700 trout in a day, or from one train to another. A Boston gentleman tells me of a couple of New York boys who got on the train he was coming out on the other afternoon. The boys got on at Reddington, a lumber town that has sprung up on this road. They had fifty-eight trout that weighed 30lbs. They had never had any previous experience in catching trout, but this time their trout catching was only limited by their bait giving out. They had tried to dig worms with a stick, but did not succeed very well.

As suggested in the account of their departure in the FOREST AND STREAM, the gentlemen of the Edwards party, with Mr. Clarence M. Reed, were not satisfied with fishing for bass in Nova Scotia. Mr. W. P. Edwards is too much of a lover of trout fishing. They fished for trout at Kempville, about twenty miles from Yarmouth, and had excellent sport. Their best catch was about fifty pounds of trout, weighing about three-fourths of a pound each. These were caught in about an hour and a half.

It seems that the inhabitants about Lake Cobbosseecontee and the Winthrop, Me., ponds are at last awakening to the desirability of having their beautiful sheets of water stocked with salmon and trout. It is proposed that if local fish and game societies can be formed, so that the fish may be protected, that the State will furnish the fry. But the worst drawback to be encountered is the fact that black bass are now in the most of these waters, and that they are fast destroying the perch, pickerel and other food fish. A gentleman, well acquainted in that section, tells me that the inhabitants are now claiming that it was a great mistake ever putting bass into these waters. The people care nothing for the bass; not many of them ever using them for food, and as for the sport of taking them, they have little time or care for such pastime. Such is generally the case in Maine. People who have a taste for trout and salmon—a taste for angling for them—do not take kindly to black bass.

At last some pickerel are being taken in the Charles River this summer. It will be remembered that the pickerel fishing was good in that river last year; but those who have given the river a fair trial this year, a number of times, have met with no success. Local fishermen have been at a loss to understand the situation. But now it would seem that the lusty pickerel has concluded to come to the hook. Mr. T. J. Houlahan made a good catch of pickerel near Millis the other day. He took fifty-five fish, the largest weighing 3lbs. A Mr. Ellsworth is reported to have caught a 7-pound black bass in Lake Waldron last Saturday. This is the largest bass on record from that lake. It is perhaps not generally known that Chestnut Hill Reservoir was stocked with black bass several years ago, and that some permits to fish there are being granted. No considerable strings are reported, however. Bass are being taken from Island Pond at West Roxbury and Dedham this summer, the first for several years.

SPECIAL.

### Harvey Goddard's Trout.

THERE is hardly a fisherman in Springfield, Westfield or Hartford who does not know Harvey Goddard, of Granby, and few who are not more or less under obligation to him for fishing privileges in his streams or trout pond. An unusual feature of a recent heavy storm, as related by himself, will prove interesting to perhaps more than the fishermen of the vicinity. At 6 o'clock on a recent evening there came up a heavy thunder storm, and the rain fell in torrents for two hours. Mr. Goddard's stream during this storm rose higher than it had ever been before, overflowing the road and the stone wall, rushed through his fields, digging deep gulleys, and finally plunging down through the ravine with a terrific roar. The water, however, subsided almost as quickly as it rose, and the following morning the stream was only at its usual height for this season of the year. But here comes the sad and painful feature of the narrative to the hearts of all genuine sportsmen: On investigation Mr. Goddard found that thousands and thousands of speckled trout had been washed from the stream, and while most of them were lying dead in the fields, there were many still alive in the various pools of water that were left in the little hollows. With assistance he placed many of the surviving trout back in the brook, but it will take years, says Mr. Goddard, to get the stream in the fine condition that it was in before the storm. He has kept this stream well stocked for years, mainly for the pleasure of his friends, of whom he has many in Hartford, where he has served in the Legislature as representative of his town. No one regrets the work of that great storm more than Mr. Goddard, but there are still trout in his stream, and, compared with the average trout brook, it will prove "mighty good fishin'."—*Correspondence Springfield Republican.*

## Forest and Stream's Fishing Postals.

"DROP US A LINE" ON A POSTAL CARD.

Fishing News, Place to Catch Fish, Fish Caught, Fishing Incidents.

BOSTON, Aug. 20.—*Editor Forest and Stream:* When you announced your special expedition for the investigation of the fishing resources of Salt River I hailed the enterprise and looked forward to a report on a stream which I once came near visiting and investigating on my own account; but, behold! Your Salt River is not my Salt River, and I never before heard of yours and you betray no knowledge of mine. Now who knows but there are other Salt Rivers yet to be heard from and all equally well worthy of attention? Will the enterprise of FOREST AND STREAM not make the investigation complete? My Salt River is in Arizona and its valley is asserted to be the very best fruit-producing region on earth, and this is said by those who know southern California and New Mexico. But what is its volume? Are its waters inhabited by fishes and, if so, of what kinds? Who has explored it from mouth to source? I have a faith that my Salt River is larger and more interesting, and worthy of exploration, if not larger, than the Blue Grass Country stream. There must be readers of FOREST AND STREAM who know all about the Arizona river and who will champion it. If not let the FOREST AND STREAM commissioner explore it at once.

C. H. AMES.

EAST HEBRON, N. H., Aug. 19.—I have been on Newfound Lake every day for one month and have only caught pickerel and perch. Salmon trout, for which this lake is so noted in the spring, seem to be rather shy at this time of year. Mr. Fowler, of Bristol, N. H., caught one, weight 10lbs., the early part of this month, and this is the only one caught since last May. It seems strange they do not take hold at this time of year. This is a beautiful sheet of water surrounded by the Green Mountains, and Mr. J. W. Sanborn, our landlord, keeps a good house, and I can recommend this place to any one. I first saw account of Mr. Sanborn and Newfound Lake in the FOREST AND STREAM. I do not regret the trip. Of course the salmon trout fishing is a great disappointment, but I am satisfied the spring is the time to come. I left New York city in the height of grand bluefishing and intend to return in time to catch these bulldogs of the ocean before they leave. H. C. W.

GOSHEN, Mass., Aug. 19.—Yesterday I brought in three fine pickerel from Damon's Pond, caught with the Enterprise luminous spoon, which were cooked by mine hostess of the Highland House, and seemed to have the merit of being boneless. Perhaps it was in the cooking. Least-wise there were no bones to bother, and the flavor was inimitable and superior to brook trout, the water being clear and pure and the food choice and abundant. There have been 3,000 picnickers and fishermen at Damon's Pond this season. It is a lovely spot.

CHAS. HALLOCK.

LAKE VIEW HOUSE, Vermont, Aug. 20.—The bass fishing just all any one could ask for, for July and August 10 to 50 bass per boat. Better than at any time during the past five years. Dr. McNeil, of New Haven, caught to-day 49 after 4 P. M. One catch of 14 averaged 3½lbs.

H. L. SAMSON.

PERTH AMBOY, N. J., Aug. 22.—The fishing in Raritan Bay near Perth Amboy is poor. Even porgies are scarce, as well as weakfish, and the bluefish have disappeared.

K.

MUNCY, Pa., Aug. 19.—Two large German carp were taken in Muncy Dam a few days ago. The largest weighed 14lbs., the other 10 or 12. M. E. J.

## BUZZARD'S BAY.

ON almost any pleasant afternoon in August one may find this delightful bay, with its myriads of coves and harbors, studded with fishing craft of almost every description. Yet the abundance of fish in these waters is to many lovers of salt-water angling comparatively unknown. Our fellow fishermen from the Middle Atlantic or the Southern States, who happen to be visiting the New England coast during a portion of the summer months, could find no better sport than to try a day's fishing on Buzzard's Bay.

As I have already intimated, many varieties of fish exist here. Perhaps the most exciting sport is the bluefishing. There are, however, other kinds of fish nearly, if not quite, as gamy as the bluefish; namely; the tautog or blackfish and the rock bass, also the little "snapper" (or young bluefish), which is so highly prized on the shores of Long Island, and which has achieved a deserved reputation for its gaminess, has recently made its appearance in large numbers along the shores of Mattapoisett and the neighboring villages on the coast. The most common fish, however, throughout the bay is the scup or porgy, a species doubtless familiar to most readers of FOREST AND STREAM. The flounder and squiteague, too, are rather plentiful in the deeper parts of the bay, while those who are eager for a more uncommon and rather more exciting sort of fishing can try their luck at dogfishing. I myself have lately landed several of these "small sharks," averaging somewhat over 25lbs. apiece approximately.

ANDREW OLIVER, JR.

### A Curious Capture.

THE following fish story comes from Brewerton, N. Y., on Oneida Lake, and is vouched for by reliable parties who witnessed the occurrence. Edward Bell, an oarsman who takes parties after fish, was trolling for large lake pickerel one day this month, and succeeded in hooking a large fish. He had him near the boat when the monster made a lunge and either cut or broke the copper wire line and got away.

Our friend Edward was ready to dive in after the fish, but thought it would avail him nothing. In despair he looked over the side of the boat, and lo and behold what he saw—the pickerel on his back struggling in his death agony. Bell made an effort to secure the fish, but again lost sight of him for fully 10 minutes. The party scanned the water closely and were at length rewarded by seeing the fish come to the surface again, when he was with difficulty gotten into the boat with the aid of a pole and two hooks. The fish choked to death with the spoon hook. When the party returned they weighed him and found he tipped the scales at 7¼lbs. S. B. M.

## The Kennel.

### FIXTURES.

DOG SHOWS.

Sept. 12 to 16.—Fourth Annual Dog Show of the Toronto Industrial Exhibition Association, at Toronto, Canada. C. A. Stone, Sec'y.
Sept. 19 to 22.—Third Annual Dog Show of the Kingston Kennel Club, at Kingston, Canada H. C. Bates, Sec'y.
Sept. 20 to 23.—Western Michigan Kennel Club, at Grand Rapids Mich. H. Dale Adams, Galesburg, Mich., Superintendent.
Sept. 26 to 30.—Rochester Kennel Club, at Rochester, N. Y. Dr. O. S Bamber, Sec'y.
Sept. 27 to 30.—Dog Show at Ottawa, Can. Alfred Geddes, Sec'y.
Oct. 25 to 28.—Omaha Kennel Club, at Omaha, Neb. E. L. Marston, Sec'y.
Nov. 22 to 25.—Brooklyn. H. W. Huntington, Sec'y, 148 South Eighth street.

1893.

Jan. 5.—Gloversville, N. Y. F. B. Zimmer, Sec'y.
Feb. 21 to 22.—Westminster Kennel Club, New York city. Jas. Mortimer, Supt.
June 13 to 17.—World's Fair, Chicago.
Sept. 7 to 10.—Hamilton, Ontario. A. D. Stewart, Sec'y.

FIELD TRIALS.

Aug. 31.—Manitoba Field Trials, at Morris, Man. A. Holloway, Winnipeg, Man., Sec'y.
Sept. 5.—Northwestern Field Trials Club, at Morris, Man. Thos. Johnson, Winnipeg, Man., Sec'y.
Oct. 25.—Third Annual Field Trials of the National Beagle Club, at Nauguet, N. Y. Bench show of the club Oct. 24. H. V. Jamieson, Sec'y.
Nov. 7.—International Field Trials Club, third annual trials, at Charham, Ont. Amateur Stake, Nov. 7. Open Stakes, Nov. 8. W. B. Wells, Sec'y.
Nov. 7.—United States Field Trials, at Elizabethtown, Ky. P. T. Madison, Indianapolis, Ind., Sec'y.
Nov. 8.—New England Field Trials, at Assonet, Mass. E. Knight Sperry, New Haven, Conn., Sec'y.
Nov. 14.—Fourth Annual Trials of the Brunswick Fur Club, at Princeton, Mass. J. H. Baird. Sec'y.
Nov. 15.—American Field Trials, at Columbus, Ind. W. J. Beck, Sec'y.
Nov. 21.—Eastern Field Trial Club Trials, at High Point, N. C. W. A. Coster, Sec'y.
Nov. 28.—Philadelphia Kennel Club Trials, at High Point, N. C. F. G. Taylor, Sec'y.
Dec. 5.—Central Field Trials, at Lexington, N. C. Col. Odell. Sec'y.
Dec. 19.—Irish Setter Field Trials, at Lexington, N. C. Dr. G. G. Davis, Philadelphia, Pa., Sec'y.

1893.

January.—Pacific Coast Field Trials, at Bakersville, Cal. J. M. Kilgarif, Sec'y.
Feb. 8.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y.

REMEMBER, entries close for Toronto Sept. 1.

### POINTS AND FLUSHES.

CHICAGO, Aug. 20.—In a letter dated Aug. 17, Mr. W. T. Hunter, of Wheatland, N. D., writes me that birds are very plentiful at Morris, Man., where the trials of the Northwestern Field Trials Club and Manitoba Field Trials Club will be run. The trials of the latter commence on Aug. 31, those of the former on Sept. 5. Mr. Hunter also mentions that there is a favorable outlook for a successful trial.

The best route from St. Paul, Minn., is by the way of the Great Northern Railway to Gretna, thence by the way of the Canadian Pacific to Morris, which is but a short distance from the boundary of North Dakota, in a section where prairie chickens are said to be in great numbers.

#### The Exposition Dog Show.

The entry blanks for the dog show of the World's Columbian Exposition have full information of all requirements printed on them so that any one who contemplates exhibiting need only send for entry blanks to obtain all needed information. The entry fee, $1.50, is small, too small, in fact, to give reasonable assurance of sufficient money to defray the expenses of benching, feeding and expenses of caretaking. If a dog offered for entry is not exhibited the entry fee will be returned. This is a very unwise provision, inasmuch as the management will incur the expense of arranging for the showing of many dogs which will be entered, but which will not be shown. The management will thus incur a direct expense for such dogs, with no compensation whatever in return. It is only just that an exhibitor should forfeit his entry fee if he does not show his dog. It is possible that, with such a small entry fee required and not forfeited by non-appearance, a large number of dogs will be entered without any intention of being shown, the mere advertising being an inducement when it can be gotten gratuitously.

#### Coursing and Field Trials.

The famous coursing judge, Mr. John Grace, of San Francisco, in a pleasant and interesting letter to this office, mentions, among other things, that coursing holds its popularity undiminished in California, and also that some of the coursing there this season was very fine. Referring to the delightful climate, he says that dogs can be run without injury almost every day in the year, the weather conditions and temperature are so favorable. With all the attractions of the noble sport, he says that the love of fine horses and horse racing is so widespread that it obstructs the growth of coursing. However, a steady, natural growth is undoubtedly more permanent and better for the best interests of the breed than a boom for a season, violent for the time being and ending in failure or neglect.

The constant gain made in coursing interests, from the Atlantic to the Pacific, indicates the intrinsic merits of the sport and its power to interest the people, auguring most favorably for its continued prosperity and permanency.

It is gratifying to know that the growth is not confined to the greyhound interests, but is general in all branches of field sports in which dogs are factors.

There are ten field trials arranged for setters and pointers, and one for beagles to be run in the coming fall and winter this year, nearly all of which are liberally supported.

If these events multiply and the doggy interest grows as steadily as the signs of the times indicate, they will have become so large and important, five years hence, that the doggy fancier of that time will look back upon the present as very crude and hardly out of the stage of infancy. The kennel writers of that period will be individually faultless, if faults there be, it will always be the other fellow who has them. But it is to be hoped that vindictiveness will not then pass current for candor, envy pass for enthusiasm; impertinence for wit; avarice for zeal, and the improvement of the dog a cloak for ill nature.

Major J. M. Taylor made a hasty visit to Chicago yesterday and to-day. He is hard at work putting the finishing touches on his forthcoming work, "Bench Show and Field Trial Records and Standards of Dogs of America." He expects that the first edition will be in print by the middle of next month.

I have received from the West End Kennels, of San Antonio, a catalogue of the dogs of their kennel. Manitoba Frisk heads the list in the setters, and Trinket's Chief, Jr., holds the first place in pointers. B. WATERS.

### PSOVOIS.

THROUGH the kindness of Mr. Wade we are enabled to publish several translations from a late issue of the Russian periodical, *Journal of the Hunt*, and if further proof was needed that the Russians speak of these Borzois as Psovois, the following free translations amply show that the latter is the correct name. The following letter is of interest, and Mr. Kapegeff's visit next year is sure to create a sensation, but we fear that he will be disappointed if he expects to present any wolf coursing. We have thought best not to interfere with the translator's phraseology in any way, as there are many words which, if we altered them, might spoil the meaning the writer wishes to convey.

SALE AND PURCHASE OF DOGS.

"We hear that during the late show in Tambor, Mr. Boldareff bought from S. S. Kapejeff these Psovie-Borzie. From the same breeder were bought, by Baron Shteingel, during show in Kieff, nine dogs. Duchess of Newcastle's Psovoi male dog Golubz was bought in England from Mr. Knorr, being from Mr. Baljtzoff. W. N. Tschebischeff bought from Mr. Ozepoff the male Psovoi Lebedj, son of Sudarok, of Mr. W. P. Chleboff's breed, and Aspid, of Baljtzoff's. On the last auction, being held after the coursing of Kolomjaschki and in the Riding Academy of the Nikolajeff Palace, the dogs did not sell very fast, even when the prices were very low—from 3 to 200 roubles. Even the 3-rouble dog was not worth the money, as the breed was something abnormal—the father an English greyhound, the mother the first best cross breed of a Psovoi with a Crimean dog.

Many of those dogs were bought by Mr. Scheremetjeff, among them not a bad male dog, Bavladaja, for 200 roubles, Mr. Rousseau also bought several dogs, but cheap ones, as one for 7 roubles and another for 6. All these dogs will certainly go to America, which country Mr. Rousseau *inundates with worthless (refuse) hunting dogs.*

LETTER TO THE REDACTION.

*Most Honored Editor:*

Having read just now in your esteemed journal of the pitiful fate of our Psovie, which met them in America on their trials, I cannot pass it in silence, as it hurts my hunter's heart too much. The Americans cannot judge our dogs, as our blooded and in particular wicked dogs do not reach them often, *because those people whom they charge with the purchase of our dogs, will not pay the money which they are worth according to their qualities. Mr. Rousseau and others buying here dogs for 15 roubles and even for 6 roubles, transport whole herds of them, and certainly make a pile of money.* For a good wicked dog, in particular now, when there are very few blooded and sportive dogs left, we ourselves pay up to a thonsand roubles. Not long ago I was offered by one of those Americans 300 roubles for bitches in whelp. Naturally I also could get dogs for such a price, but I don't wish to compromise my breed, particularly in selling, by deceiving people, but a blooded bitch cannot be sold for less than 3,000 roubles apiece. It is to be supposed that not one honest hunter will sell for less. I am going to the fair in Chicago and shall bring with me a full Russian hunt, six leash of Borzie and ten of hounds, and also shall take with me wolves, and shall try to show how our Russian dogs take them. If the Americans don't trust our wolves they may put their own in. Even if it is not according to our rules that the dogs should kill the wolf, still if the Americans like, I shall show it to them. Three dogs easily kill a young wolf; even should he tear himself away several times, he will be left on the spot. Now when in Germany and America there are formed societies of lovers of the Russian Psovoi; many solid hunters by us sacrifice large sums of money for the formation of such societies"

S. S. KAPEJEFF.

### FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Can.—Mr. "Andy" Laidlaw is down to judge spaniels at Kingston.

You or I made a "break" in the dates of meetings in last week's "Flaps." The Fox-Terrier Club meeting is called for Monday and not Tuesday, as therein announced.

The Toronto Humane Society also use those little water troughs, and they can now be seen all over the city. They are given without charge to any person who agrees to place them outside the house or store door and keep them filled with fresh, clean water. They are neat in appearance, being made of iron, standing on short legs and painted. The name of the society appears in raised letters.

Mr. W. A. Haskell, formerly of Kingston, is now in Boston, where he has gone into business.

Several applications for entry at the World's Fair have already been received at the office of the Ontario Commission. Among others are 10 St. Bernards from S. F. Glass, London; 8 spaniels from J. F. Kirk; 4 greyhounds from C. E Ireson; 4 spaniels, P. J. Keating; 4 fox terriers from H. O. Bennett, all of Toronto. The Woodland Kennels, Woodstock, have sent in no less than 18 applications; Mr. Curtis, Simcoe, 8 spaniels. Mr. John Campbell, Guelph, hopes to send a kennel of Newfoundlands. Several smaller entries have also been received. H. B. DONOVAN.

### OTTAWA DOG SHOW.

*Editor Forest and Stream:*

A meeting of the bench show committee was held on the 3d inst. Mr. W. B. Palmer, of Woodstock, Ont., who gave so much satisfaction last year, will again judge the spaniels. The other judges will be announced later on. The Dominion and Canadian Express Companies will carry dogs at regular rates to the show and return them free. The Canadian Pacific and Grand Trunk Railways will carry dogs at regular excess baggage rates and return them free, but exhibitors must be furnished with certificates (which will be mailed to every exhibitor with entry tickets) to be filled up at starting point by the agent. The top row of benches, which were so objectionable last year, have been removed, which leaves only 230, and when that number has been received the entries will be closed. It is therefore to be hoped that intending exhibitors will take the hint and make their entries early, as a number had to be refused last year. The committee are now busy collecting specials, which will be announced later through the papers.

ALFRED GEDDES, Sec'y and Supt.

OTTAWA, Can.

## SHOULD JUDGES BE THEIR OWN CRITICS?

*Editor Forest and Stream:*

Replying to your inquiry, I think it very well for judges to write reports of the classes they judge, provided they give in the report an intelligent description of all the dogs in their classes. If this is done readers can gather some idea of how the different points, good or bad, appear to the judge. I do not think this should be the only report published; judges are bound to make some mistakes, and if the representatives of the sporting press do not criticise, the public would only have the judges' views, which are practically published in the awards. In order to write a full report the judge would have an endless task, and this is probably the reason their reports, as a rule, are so short. If defeated, any one can, by properly addressing the judge, obtain his reasons. If a winner, best let well enough alone.

CHARLES HEATH.

NEWARK, N. J., Aug. 19.

*Editor Forest and Stream:*

Have not much faith in the criticisms of judges in general when making reports on the dead carcasses that are left behind at every show. But many that are half slain have had new life put into them by some charitable work of the critic of some paper, and it has given the owner courage to try again under some judge who can bring out his good points.

Some judges, in bull-terriers for instance, can get no further than the head, and a little cheekiness, that all possess, will outweigh the grandest body, legs and feet and tail.

I have suffered a long time, waiting patiently for a judge that knew what he was doing, before I got recognition, having been slaughtered almost past recall had it not been for the FOREST AND STREAM's enterprise in putting a man to judge the judges. That was the best stroke ever done by FOREST AND STREAM, to my mind.

I would have a report by judge and by jury, and Mr. Lacy should be fearless and be the jury. His reports are always interesting and have every appearance of truth.

CHARLES N. SYMONDS.

*Editor Forest and Stream:*

In answer to the question whether judges should write a report on their own judging, if you are taking a vote on the subject please record me in the affirmative. It seems to me it is a desirable result, but it should by no means take the place of the ordinary and instructive criticisms as usually published in the sporting papers. CLARENCE RATHBONE.

ALBANY, N. Y., Aug. 22.

*Editor Forest and Stream:*

Replying to your question, Should judges write their own criticisms? I should say no; though it would no doubt be interesting to know, from the judge himself, the reason for some of the decisions made.

I think the judge's report would be simply a repetition of the prize list. What we want is a criticism of the judge's decisions by competent men well acquainted with the breeds they criticise. The critic should at least be as competent as the judge. HENRY JARRETT.

CHESTNUT HILL, Pa., Aug. 22.

*Editor Forest and Stream:*

Yes; a judge should write his own report if he is paid double rates for doing it; this writing a report for love or just because you are asked to do so is nonsense, but it is not as bad as judging and then trying to explain why you did thusly. Let the reporters and the public be the critics, not the judges. "UNCLE DICK."

HORNELLSVILLE, N. Y., Aug. 21.

## NORTHWESTERN FIELD TRIALS ALL-AGE ENTRIES.

THE entries for this stake closed Aug. 1, with six pointers and sixteen setters.

POINTERS.

COLON (J. C. Philips), liver and white dog (Ponto—Dainty).

ALBERTA JOE (John Sharples), liver and white dog (Upton—Blythe).

ALBERTA RUBY (John Sharples), liver and white bitch, (Upton—Blythe).

DAVID C. (Jos. Crugona), liver and white dog (Duke of Hessen—Princess M.).

MANITOBA SHOT (Thos. Stone), liver and white dog (Colon—Psyche).

IGHTFIELD BEAUTY (Thos. A. Montgomery), liver and white bitch (Ightfield Dick—Polly P.).

ENGLISH SETTERS.

HALLELUJAH (Elms Kennels), blue belton bitch (Gath's Mark—Esther).

MINNESOTA (Elms Kennels), blue belton bitch (Monk of Furness—Lady Faydette).

ST. PAUL (L. T. Menkey), black and white dog (Monk of Furness—Madge D.).

DOC QUINN (Chas. Travis), black, white and tan dog (Monk of Furness—Merry Girl).

DAN NOBLE (Ad. J. Kloflanda), black, white and tan dog (Gladstone's Boy—Flame).

MANITOBA PATTI (Thos. Johnson), blue belton bitch.

MANITOBA PET (Thos. Johnson), blue belton bitch.

IGHTFIELD RHUELAS (W. J. Beck), blue belton dog (Down—Sconaidh).

HULMAN (W. D. Hardins), orange and white dog (Gath's Mark—Esther).

SPORT (J. H. Fuller), liver and white dog (Don—Dolly).

LUCKY DRUID (H. P. Kennetts), lemon and white dog (Ruber's Druid—Hoosier Belle).

ATLANTA (L. W. Smith), black, white and tan bitch (Jean Val Jean—Shienavan).

CLICK NOBLE (C. M. Griggs), black, white and tan dog (Dan Moore— ———).

RUPERT (Avent & Thayer Kennels), black, white and tan dog (Roderigo—Bo Peep).

BETTIE S. (Avent & Thayer Kennels), black, white and tan bitch (Roderigo—Ollie S.).

IZA (Avent & Thayer Kennels), black, white and tan bitch (Roderigo—Ollie S.).

## IS SCORING DOGS POSSIBLE AND FEASIBLE?

*Editor Forest and Stream:*

I am not sure that any regular contributions to the kennel press are more valuable than those of Mr. B. Waters. The topics treated are timely, the style clear, his judgment sound, and above all, the spirit of his writings is calculated to inspire confidence by leading all to see that he is dealing with facts and arguments and not persons. I do not remember to have noticed any of that fiery rhetoric which is but too common in our press. He does not seem to regard everything as already settled—settled long ago beyond all improvement, but he invites suggestions and is ready to admit that there may be two sides to most questions, even if in his opinion one may be much better than the other. To me, accustomed to be on the constant lookout for changes in scientific thought—indeed in all things—this attitude so common in the doggy world, of all being fixed and no room for modification, seems one of the greatest barriers to progress; for I hold that all subjects should be considered as open to investigation and if so to possible change. The man who advances a new idea should be encouraged, not "sat upon," as is so commonly the case. Any good cause does not need to be bolstered up by rhetoric of any kind, and to knock a man on the head does not clear his mental vision.

I have dwelt upon this subject a little because until we become more hospitable to new ideas I do not see how we are to advance much.

Notwithstanding an occasional exception in this respect, FOREST AND STREAM is progressing, and Mr. Waters's writings will greatly help in this direction. In your last number this writer raises the question of scoring dogs. This is one that people now seem to think may be discussed in a few lines; but I venture to think that a little candid discussion of the subject may do good. I therefore ask Mr. Waters to explain to us how it is that for years poultry have been scored with the greatest rapidity. If one animal can be scored why not another? If dogs cannot be correctly scored, why not? The question of feasibility should be kept separated. If Mr. Waters is not an expert as regards fowls I refer him to the "American Standard of Excellence," published by the American Poultry Association, for all the standards in compact form. I am taking no side on the question at present, but would simply like to hear better reasons against scoring than I have yet known offered, and altogether apart from any past attempts that have been made to score dogs, my suggestion may at least serve the purpose of leading many to think upon an important subject, and it is hoped with open minds.

WESLEY MILLS, M.D.

MONTREAL, Aug. 20.

## THAT BEAGLE CHALLENGE.

*Editor Forest and Stream:*

Circumstances may alter cases, but "happenstances" do not occur in the Hornell-Harmony or in any well regulated kennel. If we breed a 12¼in. dog to a bitch under 11in. we expect three-fourths of the litter to be under 12in. The laws

"What's the matter with us?"

MASTER "WINNIE" TAYLOR AND BREEZE GLADSTONE.

of breeding are as well defined as the law of gravity—like begets like. The worst thing a breeder has to contend with is atavism, but if a breeder knows his stock for three generations and cannot mate to get eighty per cent. of what he wants, then he had better give up breeding. If he goes very slow he might in time learn how to peddle fish.

Who told Mr. Kreuder that a beagle under 12in. was a "happenstance" and what difference does it make as long as they can run for eighteen hours as three of ours under 12in. did last week? Any time they can get out they will run all night and the next day until the dew is off. What good is a beagle if he has not field qualities? They are just like the world beating cockers that would not know a woodcock or a ruffed grouse if they met it in the street.

According to the code the challenged party has choice of weapons and place of meeting; we will meet Mr. Kreuder at Toronto, and show five or ten against his, but for good and sufficient reasons our dogs will not be at Nanuet this year. Speaking of Nanuet I do not think that any judge would place any dogs ahead of Mr. Kreuder's after partaking of Nanuet hospitality, and a record at Toronto is just as good as at Nanuet.

I don't see any "gumption" in buying a pup at a long price and waiting for it to develop into a crack; the gumption would be in buying at a low price, for the breeder knew that he had a good one and put his price on it, and the breeder gets the glory, not the buyer.

HORNELL-HARMONY KENNELS, per "Uncle Dick."

HORNELLSVILLE, N. Y., Aug. 21.

## FOX-TERRIER IMPORTATION.

THE Queen City Kennels, Elmira, N. Y., have secured from the well-known fox-terrier kennels of Mr. Robert R. Raby, Blackrock, Ireland, the prize-winning bitch, "Blackrock Belle." She is by "Vesuvian," the most successful sire of the period, and the only dog living who has sired two winners of the fifty guineas challenge cup, out of "Richmond Rescue," winner of over thirty prizes at leading shows, including the twenty-five guinea challenge cup presented by the Fox-Terrier Club for the best fox-terrier in the show, as well as the club's silver medal for the best animal of the opposite sex to the winner of the challenge cup. She has given a good account of herself as a brood bitch, having produced several winners, among them "Raby Pilgrim," owned by the well-known fancier and judge, Mr. George Raper, and "Blackrock Dick."

Belle was served by the well-known Champion Dominie, already sire of "Dona," "Dominica," "Dion," "Desperate," "Dice Box," and many other winners. She left Blackrock, July 27, via Liverpool, and arrived in Elmira, August 11, in first-class condition, and whelped four pups August 13, which are doing nicely.

# DOG CHAT.

### Mr. Mortimer in England.

Mr. Mortimer called on us on Monday and he is looking very fit after his trip abroad. Quite a long talk ensued, naturally, upon his experiences in "dogly" England. He says he had a royal time and every one was kind. He thinks they are behind us a good deal in the way they manage their shows; in fact, as he says, the shows are run off so quickly there is hardly time for things to settle into shipshape. There is little sentiment in the English shows as a rule. The dogs are taken in the ring and the judges put their awards down in their books, and that is the end of it—no ribbons, no cards to flutter tantalizingly in the face of the defeated ones. How different here, what a disappointment to every one when the ribbons are not forthcoming. The awarding of them constitutes half the charm of showing to most people—any way one looks at it. Exhibitors in England have to rush off to the award board at one end of the show building to know how their dogs stand. Mr. Mortimer says he saw a couple of cockers that can beat anything we have here, but the general run of this breed is inferior. He also spoke very highly of a field spaniel that was shown. Glenbeigh, the pointer he brought over for Mr. Huber, has shown so much field ability that Angus Cameron, the Hempstead Kennels' trainer, almost grew enthusiastic over him, and we all know it takes a good deal to move our Salopian friend. Sandford Druid is said to be a great dog, and no wonder Geo. Jarvis felt anxious. Provided with the requisite papers and passing the customs, Mr. Mortimer had his dogs on the wagon and on the way home half an hour after landing on Sunday. He says that it is no wonder dogs come over here in bad shape, as the captains will not allow exercising on the decks, off the chain, and one knows how this affects some dogs and doubtless the seeds of disease are laid by their very cleanliness. To obviate this Mr. Mortimer had to get around very early before the captain got up in order to let his dogs run loose. This reminds us that all these circumstances should be taken into consideration when condemning a shipper of dogs if after a six or eight days' journey they should arrive in bad shape. Mr. Mortimer has not moved to Hempstead yet, but will do so next month. The collies he brought over are very good, but we will have more to say about them in a future issue. His dachshund Tack he left with Mr. Raper and will be shown from time to time in England. As may be supposed, our friend has not a very exalted idea of the general run of show reports in English papers. The time the reporters have to do them in precludes all chance of anything but the "skimmiest" work, and how could it be otherwise with twenty shows to report in a week. As a guide to the American buyer they are practically useless. We say this with no disrespect to the journals in question, for to have the right men do the work as it should be done is a physical impossibility.

### Seminole Kennels.

Dr. L. C. Sauveur, proprietor of these kennels, called upon us the other day on his way to Spring Lake, where he is rusticating for a time. He was accompanied by champion Roslyn Wilkes, who looked in good shape for this time of year. The Seminole dogs will be right in the fight this fall, and chief factotum Connors will have his hands full. The Doctor tells us that he has some beautiful collies coming on, and one he bought from Mr. Jarrett is a "cracker;" she is a sister to Chrisolyte, that was shown during the spring. She has a peculiar color, body black, head sable, and a white frill. She must look very handsome. Laura B. is in whelp to champion Tim, and this should mean something good. The Doctor talks enthusiastically of a red setter called Claremont Heather, by Claremont Patsey out of Nino, and this will be seen out at the shows. Metchley Surprise should throw something good by Roslyn Wilkes, as she is in whelp to him. Then there is another good red dog, Sir Elcho, by Elcho, Jr., out of Deele, both of which were by Elcho out of Noreen. One peculiar thing the Doctor told us of. He has made a dead set against cod liver oil, for it has caused the death of two or three good dogs. When giving the dog the oil there is always more or less resistance and the dog is apt to get the oil into the windpipe, and from there into the lungs, where the oil causes congestion of those organs. We suggested cod liver oil cakes, which always go to the right spot, and are really very beneficial to a bad doer. We may have to report an important sale in collie circles; at present we are told to keep quiet.

### Kingston Show.

Mr. W. Tallman will judge most of the classes at Kingston show. The secretary tells us that the prospects of a good show are very bright. The premium list is about the same as last year with the addition of several enticing kennel prizes and money specials. Kingston is one of the prettiest towns in Canada and exhibitors will find profit and pleasure in meeting the genial superintendent, C. H. Corbett and his fellow-members.

Mr. H. C. Bates, the secretary of the Kingston show, writes: "Everything points to a most successful show at Kingston, Ont., this year, the large number of inquiries for premium lists from prominent breeders show our efforts during the past two years to have not been forgotten. Mr. Ben Lewis stated last year that he never saw a finer building for a dog show than our big skating rink, being so airy and well ventilated, and the large grass field of 50 acres surrounding the rink used as exercising ground was a grand thing for the dogs. Collie breeders will be pleased to know that a $10 cash special will be given for the largest and best exhibit of their favorites; $20 will be given for the largest and second largest number of entries; $5 for the best kennel of four Dandie Dinmonts; $5 for best kennel of 4 setters, and $5 for best kennel of 4 dachshunds. Specials are also given for cockers, pointers, fox terriers, etc., etc., in fact, all breeds are remembered. Our entries close Sept. 12, Kingston, Ont." Mr. Andrew Laidlaw is down for spaniels.

### News from Thomasville, N. C.

Mr. J. B. Stoddard, whom all field men know well, tells us that the Mock House at Thomasville, N. C., which was burned last March, has been rebuilt on a much improved plan. The main building is 104 by 36 feet, with an L 54x20 feet. The house contains forty-three rooms. There are sleeping rooms, single and en suite on both first and second floors, and the whole is cooled by 569 feet of porches and verandas. The furniture is new and handsome and was made by the High Point Furniture Company. This house has always been headquarters for the shooting fraternity and they will undoubtedly appreciate Mrs. McIntyre's efforts to provide for them a comfortable stopping place.

### Mr. Laidlaw Selling Out.

Mr. Andrew Laidlaw, of Woodstock, Ont., proprietor of the Woodstock Spaniel Kennels, has disposed of his business interests in Woodstock, and on Sept. 1 removes to Galt, Ont., where he has purchased a newspaper business. He writes that as his time will be fully occupied he has decided to dispose of his entire kennel of cockers, including the well known Red Roland and numerous other very good ones. His advertisement appears in our business columns. We fancy, all the same, that however big Mr. Laidlaw's business may grow, it will never prevent his having a good cocker or two around.

### Toronto Dog Show.

Mr. Stone writes: At the coming Toronto show the following additional specials are offered: $10 cash for best kennel of four Dandie Dinmonts, and a friend of the breed offers $25 for best kennel of four, and $25 each for best dog and bitch. O. P. Kinnie offers $10 for best pug dog or bitch sired by Eberhart's Cashier. For the benefit of intending exhibitors from the United States, I beg to state that I have received from the Customs Department, Canada, the following circular: "Dogs for exhibition purposes will be allowed entry in bond, the building in which the exhibition is held to be considered as a bonded warehouse for the purpose." The dogs may be entered under bonds and if returned to the United States at the close of the exhibition, the bonds to be cancelled. The Industrial Exhibition Association furnish bonds to the extent of $25,000 to cover all exhibits from the United States, consequently exhibitors exhibiting in Canada have a great advantage over Canadians who exhibit in the United States, as in the majority of cases they have to put up at the line the hard cash for the duty to have it returned to them upon their return from the show.

### Western Michigan Dog Show.

The Western Michigan Kennel Club's dog show at Grand Rapids, Mich., Sept. 20 to 23, will be well patronized from all over the country, according to letters received from intending exhibitors. The show will be held in connection with the Grand Rapids fair in a new building erected specially for the purpose, and as no additional admittance is charged to kennel building it will probably have as large attendance as some of our largest shows, and this alone has proved a great inducement to exhibitors to show their stock. A good premium list has been provided with a fine list of specials, including those of the National Greyhound Club, National Beagle Club, Collie Club of America, and those of Mr. A. H. Heppner, secretary of the Great Dane Club. A special feature will be the care of dogs not accompanied by owners. All express companies will have offices on grounds and passenger trains arrive and depart from fair grounds depot. Roger D. Williams, Frank Wheeler and John Davidson are the judges. H. Dale Adams is the superintendent.

### Death of Champion British Monarch

Probably there has been no bulldog with a more world-wide reputation than Mr. Woodiwiss's champion British Monarch. The dog was found on the morning of Aug. 5 dead in his kennel with his head resting on his paws in a most natural position. Heart disease was the cause of his taking off. *Stock-Keeper* this week gives a very interesting account of the dog, but space forbids our more than giving it a cursory notice this week. British Monarch was by Monarch out of Venice, and would have been eight years old next October. Mr. Mortimer saw the dog when he won his last first prize at Cirencester show and he remarked then to Mr. Woodiwiss that the dog did not look long for this world and should not have been shown, as he could scarcely stand up, and was in luck to beat His Lordship.

### Club Reports.

That we struck the keynote in our paragraph published a short time since about club secretaries and their duties is proved by the following from the Boston *Herald*: "The FOREST AND STREAM has the following in its last issue, and as it exactly voices the sentiments of numberless dog fanciers in this city, it is here reproduced. Anything more shortsighted and absurd than the methods of some of the Massachusetts clubs in respect to the semi-secrecy of their meetings could not well be imagined. The more publicity such meetings get, the better for the clubs holding them."

### Amateur Photographs.

The editor of this department, having represented to his associates the injustice of excluding the dog from the charmed precincts of the Amateur Photography Competition, has of course carried his point. Photographs in which dogs figure are to be eligible; and to show what the competition will gain from this we print to-day a specimen of the work of Mr. F. G. Taylor. There is another picture, by Mr. Brelsford, all ready, and to follow before long. Read the conditions of the competition in the announcement which has been crowded over into the advertising pages.

### Death of Champion Kash.

We regret to record the death of another good pug. In the death of champion Kash last week Mr. A. E. Pitts sustains a great loss and the pug fancy loses one of its best exemplars. Champion Kash was a son of that good pug Bradford Ruby and out of Lady Cloudy, and bred by Mr. W. D. Peck. He has seldom, if ever, met defeat in the ring, and as a pet dog, Mr. Pitts tells us, he was a general favorite. The cause of death was inflammation of the bowels, caused probably by the extreme heart.

### J. Otis Fellows.

We do not think there is any more thorough fancier or sportsman living than the man who is known among his friends as "Uncle Dick." A letter from him always brings a smile on the cloudiest day. Here is a bit of one: "Don't I buy and read the paper, and don't I kick if any one needs kicking? Yes, I am in it, and by gosh! I won the Hornellsville Gun Club's gold badge last week, so you see I am not dead yet." Mr. Fellows' one rifle arm must be a handy weapon.

### Trotting Dog Doc.

There are not very many dogs who can be considered a source of revenue. But the Irish setter Doc fairly "trots" the money into his master's pocket. Up to the present time this wonderful dog is said to have earned for his master $17,000. His skeleton, properly articulated, should speak for itself and be an interesting object lesson to our "lay anatomists" and settle the question as to whether a dog's propelling power is fore or aft, etc., etc.

### Mr. Titus Changes Quarters.

Mr. W. W. Titus, the well known field trial man, is going to locate in Mississippi, taking the entire kennel of dogs formerly owned by the Coal Grove Kennel Co., except champion Bohemian Girl. He will locate probably at Montpelier, Miss., and go to training for the public when he gets the kennels, etc., arranged, which he will do by the time the season opens, Oct. 15.

### Bohemian Girl Changes Hands.

Mr. O'Connell seems bent on severing his connection with celebrated field dogs, for he has now sold champion Bohemian Girl to Mr. J. Shelley Hudson, Covington, Ky., so this grand bitch goes back again to her old home.

---

Gertie—Papa, will our new mamma go mad after awhile? Father—What a question! Why do you ask such a thing? Gertie—Well, I heard her tell the cook yesterday that she got badly bitten when she married you.—*Kate Field's Washington.*

---

Several interesting litters have arrived at the kennels of Mr. N. Wallace, the well-known field trial judge. His Countess W. whelped three dogs to Rod's Whim last month, but the litters that please most are one by Paul Bo, the noted field trial winner, out of Bell Noble, and another by Antonio out of Pearl Noble. There is a saying about "keeping quiet and sawing wood." Mr. Wallace carries out this precept quite a good deal.

---

Mr. A. D. Stewart tells us that he has given notice of motion officially to the secretary of the C. K. C., that at the annual meeting of that body in Toronto next month he will move for the reinstatement of F. H. F. Mercer, of Ottawa, and the removal of the penalty of disqualification now resting on him.

---

Mr. F. L. Cheney lost a letter from a gentleman in Providence in answer to his advertisement of a pointer in FOREST AND STREAM, and he has forgotten the man's name; he would like him to write again.

---

Stout Party—"I like the dog and feel rather inclined to have him, if he's anything like my figure." "Well, an' if he isn't, sir, you've only got to feed 'im a bit, an' that'll come all right."—*Funny Folks.*

---

Advices from Canada are to the effect that the competition in the fox-terrier classes at Toronto will be very keen, and Mr. Wheeler will have his work cut out to please every one. Mr. A. D. Stewart has put all his dogs in the hands of young Spracklin to condition for the shows. Suffolk Coronet, the sire of the FOREST AND STREAM office dog, is doing good work for the breed in Canada, his services being in constant demand.

---

The fox-terriers consigned to Mr. Hull, mention of which we made recently, were, it seems, the purchases Mr. Mortimer made for Mr. Winthrop Rutherford. Refuge is in whelp to Charlton Verdict, the latter by Venio out of Sentence, litter sister to Stipendiary, sire of D'Orsay, etc. Eggesford Safety and Eggesford Sapphire are by Starden's King out of Vatican. Safety was served by Vice Regal, and Sapphire by champion Venio before coming over. They were purchased as brood bitches and their excellent breeding should strengthen even the Rutherford kennels. Mr. Winthrop Rutherford has not been well lately, and will leave for Europe this week for a change of air.

---

Those who only know Mr. F. Blackwood Fay through the Boston shows will be surprised to hear that he is an expert polo player. A Boston paper recently published a capital picture of him on his smart looking pony Buckwheat. Mr. Fay was one of the Myopia Club team that played in the final games for the Westchester cups.

---

Mr. Frank Dole has purchased all Mr. Comstock's black and tan terriers and a young "Jap" bitch. On the water, coming from England, he has the bull terriers Sir Ruloph, Woodcote Bill, Scamp and Lily. All will be at Toronto.

---

Mr. Tracy will not judge at the Northwestern trials.

---

Looking through our business columns this week we find among the new advertisements Andrew Laidlaw has a fine lot of prize winning cockers for sale; Lenawee Kennels, cocker bitches and pups; D. W. C. Parker, pointer bitch and two dogs; W. P. Palmer, black and red cockers; Box 26, pointer bitch; Peter Paulus, St. Bernards; Tenn. River Kennels, Chesapeake Bay dogs; Merry Mount Kennels, great Dane dog; M. W. Reid, poodle pups; 854 Seventh avenue, well bred collie dog; S. Anderson, mastiff. Wants—G. O. Smith, high class broken pointer dog; G. K., smooth St. Bernard pup; G. S. Thomas will prepare and handle dogs for fall shows.

---

The revised premium lists and rules for the World's Fair dog show are now in the printer's hands and will be issued very shortly. Entry blanks can now be had of Mr. Vredenburgh.

## ROCHESTER AND HAMILTON DATES.

*Editor Forest and Stream:*

In your last issue you publish a letter from Dr. O. S. Bamber, secretary of the Rochester Kennel Club, in which that gentleman very coolly states that the two letters written by me to him on June 3 were not received by him. Dr. Bamber further insinuates, negatively, that one of the letters referred to was written deliberately "to fill a weak spot in Hamilton's case."

Whether Dr. Bamber received my letters or not I cannot say, but I do say most emphatically that both letters were written to him, and that in the presence of witnesses, who will be forthcoming if desired.

Anything more thoroughly mean and contemptible than the insinuation made by Dr. Bamber I cannot conceive, and his letter is a fitting wind up to the correspondence which has passed between the two clubs.

As far as my committee is concerned, it has only sought to place the situation fairly before the public, and having done so, it has no desire to continue the correspondence, especially after this last emanation from Dr. Bamber's pen.

That gentleman now has the field to himself and can say just what he pleases, for we shall pay no further attention to him.

A. D. STEWART,
Hon. Sec'y Hamilton Kennel Club.

HAMILTON, Ont., Aug. 16.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

### NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*Corktown Clipper and Corktown Clinker.* By Corktown Kennels, Ottawa, Ont., for two black cocker spaniel dogs, whelped June 29, 1892, by Tip Obo (Bob Obo—Cleo) out of Dot Smirle (Bob Obo—Tough).

*Archie.* By B. H. Adams, New York city, for black, white and tan English setter dog, whelped March 8, 1892, by Count Paris (Count Noble—Dido II.) out of Nellie Cambridge (Racket—Daisy Cambridge).

*Gypsie Queen.* By J. K. Boyd, Hempstead, N. Y., for black, white and tan English setter bitch, whelped March 8, 1892, by Count Paris (Count Noble—Dido II.) out of Nellie Cambridge (Racket—Daisy Cambridge).

### BRED.

☞ **Prepared Blanks sent free on application.**

*Queen Olive—Bonsor.* Jas. Bowden's (New York city) pug bitch Queen Olive to A. E. Pitts's Bonsor, Aug. 12.

*Lillian—Bonsor.* Geo. Gillivan's (West Jefferson, O.) pug bitch Lillian (champion Kash—Zudie), to A. E. Pitts's Bonsor, Aug. 8.

*Blemton Brilliant—Blemton Reefer.* J. B. Martin's (San Francisco, Cal.) fox-terrier bitch Blemton Brilliant (The Moonstone—Media) to his Blemton Reefer (champion Venio—champion Rachel), Aug. 13.

*Cleo—Blemton Shiner.* A. F. Baumgarten's (Oakland, Cal.) fox-terrier bitch Cleo (Le Lojos—Gyp) to J. B. Martin's Blemton Shiner (Blemton Rubicon—Blemton Brilliant), Aug. 15.

*Dorothy—Rustic Swell.* C. P. Lawshe's (Trenton, N. J.) bull bitch Dorothy (Caliban—Hillside Girl) to A. J. Hatch's Rustic Swell (Kittering Jubilee King—Rustic Belle), Aug. 10.

*Corktown Bebe—Tip Obo.* Corktown Kennels' (Ottawa, Ont.) cocker spaniel bitch Corktown Bebe (Bounce—Œnone) to their Tip Obo (Bob Obo—Cleo), Aug. 8.

*Lady Melville—White Wonder.* H. M. Howes's (Somerville, Mass.) bull-terrier bitch Lady Melville (champion Trentham Dutch—Old Lil) to H. A. Harris's White Wonder (Gully the Great—Kit), June 13.

### WHELPS.

☞ **Prepared Blanks sent free on application.**

*Darky.* E. Mayer's (Columbus, O.) pug bitch Darky, July 1, six dogs, by A. E. Pitts's Bonsor.

*Kash Girl.* W. W. Stukey's (Mt. Sterling, O.) pug bitch Kash Girl, July 29, six (four dogs), by A. E. Pitts's Bonsor.

*Nellie.* C. F. Wilson's (Elyria, O.) pug bitch Nellie, July 13, three (one dog), by A. E. Pitts's Bonsor.

*Pansy Blossom.* B. A. Smith's (North Attleboro, Mass.) collie bitch Pansy Blossom (Maney Trefoil—Spoiled Miss), June 9, four (three dogs), by J. A. Long's Archie L. (Roderick of Ruthven—Airedale Duchess).

*Maud Noble.* N. Wallace's (Farmington, Conn.) English setter bitch Maud Noble (Rowdy Rod—Pearl Noble), July 17, seven (six dogs), by Blue Ridge Kennels' Antonio (Roderigo—Bo-Peep).

*Bell Noble.* N. Wallace's (Farmington, Conn.) English setter bitch Bell Noble (Rowdy Rod—Pearl Noble), July 28, five (one dog), by R. Merrill's Paul Bo (Paul Gladstone—Bohemian Girl).

*Countess W.* N. Wallace's (Farmington, Conn.) English setter bitch Countess W. (Count Noble—Jennie III.), July 30, three dogs, by E. O. Damon's Rod's Whim (Roderigo—Fanny Gladstone).

*Queen of Kent.* F. D. Freeman's (Central Falls, R. I.) English setter bitch Queen of Kent (imported Royal Kent—imported Lady Kendall), Aug. 7, nine (four dogs), by Gordondale Kennels' Soudan (champion Druid—champion Ruby).

*Lady Melville.* H. M. Howes's (Somerville, Mass.) bull-terrier bitch Lady Melville, Aug. 16, eight (five dogs), by White Wonder.

### SALES.

☞ **Prepared Blanks sent free on application.**

*Mrs. Money.* Silver fawn pug bitch, whelped May 7, 1891, by champion Kash out of Flirt C., by A. E. Pitts, Columbus, O., to W. A. Donaldson, same place.

*Duke of Al De Ber.* Sable, with white points, collie dog, whelped June 9, 1892, by Archie L. out of Pansy Blossom, by B. A. Smith, North Attleboro, Mass., to Chas. Hopkins, same place.

*Tricolor.* Black, sable and white collie dog, whelped June 9, 1892, by Archie L. out of Pansy Blossom, by B. A. Smith, North Attleboro, Mass., to A. D. Smith, Baltimore, Md.

*Royal Lee.* White, black and tan beagle dog, whelped November, 1891, by Lee II. out of Mayflower, by F. B. Zimmer, Gloversville, N. Y., to L. Merritt, Norwalk, Conn.

*Jack Bannerman.* White and tan beagle dog, whelped Sept. 20, 1888, by champion Bannerman out of Kate, by F. B. Zimmer, Gloversville, N. Y., to H. Card, Elora, Can.

*Handicap.* White, black and tan beagle dog, whelped 1891, by Fairy's Lee out of Zimmer's Blue Bell, by F. B. Zimmer, Gloversville, N. Y., to F. Williamson, Holley, N. Y.

*Bill.* White, black, tan and blue ticked beagle bitch, whelped May 13, 1892, by Elora Dash out of Gipsie, by F. B. Zimmer, Gloversville, N. Y., to S. W. Hulett, same place.

*Debonair Roy.* Black, white and tan beagle dog, whelped June 14, 1892, by Jubilee out of Nellie Bannerman, by F. B. Zimmer, Gloversville, N. Y., to John McFarland, Vallonia, Pa.

*Reckless.* Black, white and tan beagle bitch, whelped April 28, 1892, by Drummer out of Elora Beauty, by F. B. Zimmer, Gloversville, N. Y., to John McFarland, Vallonia, Pa.

*Rip Rap, Ruth and Rachel.* White, black and tan beagles, one dog and two bitches, whelped June 14, 1892, by Julia out of Nellie Bannerman, by F. B. Zimmer, Gloversville, N. Y., to E. L. Stine, Philadelphia, Pa.

*Hope.* White and brindle St. Bernard bitch, whelped Jan. 1, 1892, by Crystal out of Faith, by F. B. Zimmer, Gloversville, N. Y., to M. Conley, same place.

*Ivy.* White, black and tan beagle bitch, whelped April 28, 1892, by Jack Bannerman out of Nellie Bly, by F. B. Zimmer, Gloversville, N. Y., to C. E. Morris, North Wilton, Conn.

*Rollo.* Black, white and tan beagle dog, whelped June 14, 1892, by Jubilee out of Nellie Bannerman, by F. B. Zimmer, Gloversville, N. Y., to C. E. Morris, North Wilton, Conn.

*Blackcap.* Black, white and tan beagle dog, whelped 1891, by Fairy's Lee out of Zimmer's Blue Bell, by F. B. Zimmer, Gloversville, N. Y., to B. A. Carter, Benson, Vt.

*Hazel Deal.* Black, white and tan English setter dog, whelped Nov. 26, 1891, by Duke Boy out of Sue Ellen, by J. K. Boyd, Hempstead, N. Y., to R. B. Hamel, Bellport, N. Y.

*Hazel Deal.* Black, white and tan English setter dog, whelped Nov. 26, 1891, by Duke Boy out of Sue Ellen, by W. F. Foss, Maineville, O., to J. K. Boyd, Hempstead, N. Y.

*Hazel Sam.* Black, white and tan English setter dog, whelped Nov. 26, 1891, by Duke Boy out of Sue Ellen, by W. F. Foss, Maineville, O., to J. K. Boyd, Hempstead, N. Y.

*Count Paris—Nellie Cambridge whelps.* Black, white and tan English setter dog and bitch, whelped March 8, 1892, by W. F. Foss, Maineville, O., to J. K. Boyd, Hempstead, N. Y.

*Count Paris—Nellie Cambridge whelp.* Black, white and tan English setter dog, whelped March 8, 1892, by J. K. Boyd, Hempstead, N. Y., to B. H. Adams, same place.

*Chatham Bob.* White bull-terrier dog, whelped April 29, 1892, by Roscoe out of Loumont Kit, by H. M. Howes, Somerville, Mass., to J. McCormack, Toronto, Can.

*Lady Chatham.* White bull-terrier bitch, whelped April 29, 1892, by Roscoe out of Loumont Kit, by H. M. Howes, Somerville, Mass., to C. M. Kohn, Montgomery, Ala.

*Duke of Ellerslie.* White bull-terrier dog, whelped May 2, 1892, by White Wonder out of Rose, by H. M. Howes, Somerville, Mass., to C. M. Kohn, Montgomery, Ala.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.*

J. L. K.—The strain and dogs you mention are of the best Irish setters, and you can make no mistake in purchasing at that price.

W. T. S., Philadelphia, Pa.—Kindly give an extended pedigree of Bess, the dam of Duke, 574, also of Marster's Bang and Thompson's Belle (Irish setters). Ans. Bess was said to be from an imported brace, names unknown. The others are not registered.

B. D. T.—My foxhound dog has got a bunch on his lower jaw about as large as a hen's egg. I noticed it last night for the first time, it has not grown any since then. Can you tell me the cause of it, and what I shall do for it? Ans. Do not know exactly what you mean by "bunch." If it is a soft swelling, open it and allow contents to escape; syringe out daily with Listerine and water; do not let wound close for a few days. If it is hard, poultice for a few days and when soft, open.

H. P., Lake George.—1. Will you kindly inform me what is the best food for hard working bird dog of about six years of age? 2. Proper treatment for a heavy accumulation of yellow matter around eyelids of dog in the morning? 3. Remedy for loosening bowels and conditioning? Ans. 1. Plenty of meat, stale bread and gravy, crackers occasionally and little oatmeal. 2. Apply following lotion to eyes three or four times a day:

| | |
|---|---|
| Boracic acid | ℥ ii |
| Sulphate of zinc | grs. xx |
| Water | ℥ viii |

Mix. 3. Castor oil or a compound cathartic pill; for conditioning, any of the advertised tonics.

J. W. A., Taylor, Pa.—I have a setter pup five months old, whose mouth is filled with warts. Can you tell me the cause and recommend a course of treatment? Ans. Due to some defect in the nutrition of the skin or to some debilitating influence. Try the following mixture first:

| | |
|---|---|
| Liq. ferri perchlor. | ♏ i |
| Liq. arsenicalis | ♏ xxxvi |
| Aq. ad | ℥ iii Mix. |

Give one teaspoonful three times a day. If the mixture is not effectual then touch each of the warts with very strong acetic acic. Take care that the acid does not go on the skin. Only do a few warts a day.

R. J. W., Ashland, Pa.—I have a young setter dog that is very much troubled with what I first supposed was mange. In some instances small hard lumps appear all over the body, resembling mange. Lately he has had numerous pustules filled with yellow matter, also a light discharge from the eyes. I have applied an ointment of sulphur, salicylic and carbolic acids with petroleum, and an internal remedy of cream of tartar, saltpetre and sulphur. Ans. Treat for worms. Try the following mixture:

| | |
|---|---|
| Mag sulph. | ℥ i |
| Ferri sulph. | ℈ i |
| Acid sulph dil. | ♏ i |
| Aq ad | ℥ viii |

Give one tablespoonful twice a day.

Wash the dog in a solution of creolin (one ounce to gallon of water) every other day.

### Appreciating Good Advice.

*Editor Forest and Stream:*

My pointer whom you prescribed for a fortnight ago, is improving rapidly. Gaining flesh, good appetite, etc., but the twitching in the leg and breast is just as bad. I am afraid he will never stand a day's hunt.

Many thanks for your advice. J. P. W. (Boston *Daily Globe*).

# THE A. C. A. MEET OF 1892.

### Willsborough Point, Lake Champlain.

A SECOND visit to Willsborough Point has confirmed the opinion formed last year by most canoeists as to both the good and bad features of the place. The former have been developed by the light of experience, making this camp in many ways superior to that of 1891, while the latter as well have kept pace with this development, with most disagreeable results.

The weather last year was all that could be desired, with comparatively little rain, but at the same time there was a threat of evil in a small black cloud which hung persistently over the hills to the westward, occasionally driving over the camp and sprinkling a few drops. Though nothing came of it, the cloud was there night and day, and it was evident at the time that the skies were full of moisture, which might descend on the camp at a moment's notice, regardless of a bright sun and clear blue sky in other quarters.

This year unfortunately the latent possibilities of this small cloud have been brought out in a most marked and unpleasant manner, and for the first ten days of the meet the camp has been a swamp and the atmosphere a deluge.

Com. Winne has been at the camp many times this spring, and was ready by Aug. 1, Mr. Huntington, of the camp site committee, being with him, while Mr. Gibson, of the regatta committee, had been at the hotel for several weeks with his naphtha launch. The result of system and timely preparation during the winter and spring was apparent as soon as the camp opened on Aug. 4, all arrangements for transportation, camp mess, tent floors, etc., being complete from the start.

When the advance guard, including a number of ladies for Squaw Point, reached the camp on Wednesday and Thursday, the weather was showery, and rain fell at intervals on Friday and Saturday. Sunday was fine, but on Monday began a deluge that lasted with hardly a break for seven whole days. A dark curtain of cloud hung over the lake and both shores, blackest to the west, over the Adirondack hills, and from it came rain in a steady, soaking downpour. The low spots of the camp, always wet, were soon little lakes, and after a couple of days even the hilltops were covered with spots on which the water lay ankle deep. Every tent site was a puddle, every path a brook or a mire, and the general moisture penetrated even the clothing and blankets in the tents. Outdoor life was impossible, and all sought shelter under canvas. Camp-fires would not burn, and on two days the weather was quite cool.

The only thing which was not dampened and which kept the camp alive during this trying time was the enthusiasm of Com. Winne, who worked unceasingly to counteract the evil spell of the rain nymphs of the Adirondacks. He was about the camp from early morning until long after "taps" had sounded at night, attending to a thousand details of business, and yet finding time to be everywhere with a pleasant word, a joke about the weather, trying with good success to put a good face on a very serious matter.

As the rain continued the price of rubber boots rose with each half inch of rainfall, large supplies being sent for from Burlington. The chief amusement was digging and ditching, until the whole camp resembled a distorted map of Holland's miniature canals everywhere. The journey over heavy sodden fields to the mess pavilion was a hard one, especially for the ladies, and many spent the time from breakfast to dinner and then to supper and even later in the dry and roomy pavilion. Stories were told, games played, songs sung, and at times the floor cleared for dancing.

The customary work of the racing men during the first week, the practice spins under paddle and the scrub races over the triangle, were not possible, and there was no chance to stretch or try sails.

This meet has offered several proofs that the average canoeist or A. C. A. man is not the chronic growler and kicker that some have pictured him, paying a dollar a year and expecting everything in the way of luxury and convenience; and this was nowhere better seen than during the week of rain. In spite of the general discomfort and discouraging surroundings, with grave doubts whether they would not be obliged to return home without a race or a camp-fire, and with all vacation time wasted, the men, and especially the ladies, maintained a constant good nature, not a growl nor a grumble was heard save some uncomplimentary remarks of a general nature directed at the weather.

Before the patience and forbearance of the camp was tested beyond endurance, a happy change occurred, after a rainy Sunday the sun made his appearance for the first time in a week on Monday morning, and from that time on to the date of writing the weather has been absolutely perfect, clear and bright all day, starlight at night, with a clear blue sky, gentle and moderate breezes, and a dry atmosphere with little dew, making it possible to sit and lie on the grass during the various entertainments at night.

The present camp is identical with that of last year, and has been frequently described and illustrated in the FOREST AND STREAM, the location of the various points being as given in the accompanying plan.

The arrangement of headquarters is by far the best yet seen at a meet; the officers' tents are pitched around a semi-circular board walk, in the center of the circle being a pole with the large A. C. A. burgee. On one wing is the American flag, on the other the national ensign of Canada, the three large flags showing out well. At one side are the two high poles for the code signals. In front of each tent is the small pole on which is displayed the official flag of the owner, the commodore, secretary or other officer.

In the center of the crescent is the double tent of Commodore Winne, the inner tent at the rear being for his private use; the large one in front being filled with the prizes. The tent is very handsomely decorated; the floor and a couple of divans are covered with bright rugs; the roof is lined with a large British Jack, the walls are hung with about forty handsome silk flags, and on a table are the A. C. A. trophies, Peconsic cup, Jabberwock trophy and other prizes. One that has attracted much attention is a beautiful little canoe cannon, presented by the Winchester Arms Co. On the left are the tents of Secretary-Treasurer Wackerhagen, the outer one being his office, also the A. C. A. post office. On the left wing of the crescent is the hospital, presided over by Fleet Surgeon Nellis, of Albany, with the little Red Cross flag above it. On the end of the other wing is the tent of Signal Officer Parmele, end between it and the Commodore's are the tents of the camp site committee. The headquarters face on a little grove, from which runs out a very good little dock, at which the camp launch lands.

Being just outside the main camp, headquarters is what it should be—the general center and rendezvous of the whole camp. Through the day the ladies of Squaw Point and many guests are seated under the shade of the wide awnings, and at night the camp-fire is lighted on the beach, nearly in the center of the semi-circle.

The official bulletin board is here, and through it and the signal flags information is quickly spread through the camp.

The main camp is much more compact than last year, beginning just in the rear of headquarters and extending well around the point on the west of Indian Bay. The main hillside is kept clear, and in consequence the tents are closer in the main camp. Last season's tent floors and skids are being used again, quite an item of saving. The level of the lake is from one to two feet higher than last year, the result being that the stony and bad part part of the beach is under water, leaving a wide path of pebble and shingle along the water's edge. The men have observed the requests of the camp site committee very carefully, and all tents are pitched well back from a line marked out by a row of stakes, each decorated with a red rag, leaving a wide walk along the entire camp front.

The main part of Squaw Point is unchanged from last year, but a large camping party, the Bulwagga C. C., of Port Henry, further up the lake, has filled the extreme point occupied before by the Toronto men. A number of large tents are pitched here, all being nicely furnished, and one boasting an upright piano. Two steep flights of stairs have been built down the cliffs, leading to little coves where a large fleet of canoes and boats are hauled up. The Bulwagga C. C. possesses a number of very enthusiastic novices who are likely to become known in future races.

The mess pavilion is the same, the fare being similar to last year.

For once the Association has been blessed with transportation arrangements which leave no ground for complaint. Through the personal efforts of Com. Winne, the Delaware & Hudson Canal Co. has established a new station called Willsborough Point, just opposite the camp, at which all trains, to and from Albany and Montreal, stop. A horse and stone drag are at hand to transport baggage, and a walk of a couple of hundred yards down the hillside brings one to a little landing in a most picturesque nook of the steep rocky shore. Here the launch Ruth, Capt. Piepenbrinck, is ready, and in fifteen minutes the passengers and baggage are on the headquarters dock. From the camp to the train is a journey of less than half a mile, and for once the old experience of six hours on the springpiece is but a memory in place of a sad reality. There are several other ways of reaching the camp, but this is the most popular, and in spite of one or two delays in very bad weather, there has been no cause of complaint over getting to or from camp.

PAUL BUTLER'S CANOE WASP, TROPHY WINNER, 1892.

The work of the regatta committee has been done no less thoroughly than that of the camp site committee; Mr. Gibson was early on the ground with his naphtha launch, and the buoys were laid out with the greatest possible accuracy. Just off the north point is No. 3, the finish of the paddling races. No. 2, the half mile paddling starting buoy, is off the west point, and up Willsborough Bay is the starting buoy of the mile paddling course, No. 1. Half a mile to the north of No. 3 lies No. 4, the south angle of the sailing course. No. 5 is in a line with No. 3 and 4, half a mile distant, while No. 6, the west buoy, is half a mile from No. 4 and 5. The distances have been very carefully laid off and verified, and they are as nearly accurate as is practicable. The arrangements for announcing and starting, and for all details of the races were unusually complete, and all have been carried out without a hitch.

The first three days in camp passed very quietly, the rain keeping all under canvas. On Saturday night a dance took place in the pavilion. Sunday Aug. 7, was very pleasant, the one clear day of the early part of the meet. In the morning service was held in the pavilion, Dr. Savage of Newburgh officiating, and in the afternoon Mr. Francis held a service in the Bulwagga Camp. The week was a dull one, with little to enliven it until Saturday night, when a hop was given at the Willsborough. On Sunday the rain had decreased, and some stray gleams of sunlight gave a promise of better weather.

The starters in the various races were as follows:

A. C. A. MEET, 1892—ENTRIES FOR RACES.

| *Canoe.* | *Owner.* | *Club.* |
|---|---|---|
| Wasp | Paul Butler | Vesper. |
| Bee | D. S. Goddard | Vesper. |
| V | Howard Gray | Vesper. |
| Jog | W. H. Cottingham | Stanley Is. B. C. |
| Mab | C. E. Archbald | Pointe Claire B. C. |
| Iolante | J. D. Patterson | Pointe Claire B. C. |
| Toltec | T. E. H. Barrington | New York. |
| Paddle | | |
| Hornet | Wm. Whitlock | New York. |
| Bubble | S. Schieffelin | New York. |
| Io | F. H. Foster | |
| Tornado | F. C. Moore | Knickerbocker. |
| Glenwood | T. X. Oxholm | Yonkers. |
| Evangeline | Thos. Hale, Jr. | Yonkers. |
| Foggy Dew | H. L. Quick | Yonkers. |
| Pollywog | W. C. Witherbee | Bulwagga. |
| Pagan | W. T. Foote, Jr. | Bulwagga. |
| Bulwag | C. A. Neidé | Bulwagga. |
| Kiowilla | C. E. Cragge | Bulwagga. |
| Bedouin | W. N. Goddard | Bulwagga. |
| L'Hirondelle | E. C. Knappe | Springfield. |
| Marguerite | | |
| —— | W. E. Parsons | Springfield. |
| Eel | J. W. Sparrow | Corinthian. |
| Rana | S. J. Benson | Troy. |
| White Cloud | Enoch Aston | Troy. |
| Gertie | J. R. Robertson | Puritan. |
| Kitty Clyde | C. B. Ashenden | Puritan. |
| Wannolancet | F. J. Burrage | Newton B. C. |
| Sunbeam | R. D'A. Scott | Ottawa. |
| Banshee | A. M. Adamson | Ottawa. |
| Zoe | E. L. Jones | Ottawa. |
| Idlemere | G. P. Douglas | Ianthe. |

The two remarkable things about this list are the very small total of starters, and the still smaller proportion of first-class racing canoes, while of the latter all are old boats. Wasp, Bee, Toltec, Hornet, L'Hirondelle and Tornado have all raced before at the meets, Glenwood is known through the New York cup races last June, a new Ruggles racer. Mab is a new canoe, a handsome racer designed and built by Gilbert, of Gananoque, of good model and well built, with a smooth lap. She is, however, but 28in. wide, and so unable to carry her sails, two huge standing batswings such as are used on the St. Lawrence River skiffs. The masts are hollow but they are 3½in. in diameter and the longest is 16ft. In addition she is fitted with the old fore and aft deck tiller, so that her crew has nothing to help him in off the seat. In spite of her model and finish she was outclassed by the older American boat of 30in. beam. The only other racer was a very handsome paddling canoe built for O. E. Knappe by W. F. Stevens, a Spanish cedar racing shell, of the lightest construction, decked fore and aft with oiled linen. In model she is similar to a rowing gig, very light bilge, but in use she is amply stiff. Mr. Knappe uses a seat about 5in. above the keel, both feet resting in shellboat stretchers.

V is a canoe built in 1888 by Paul Butler, a peculiar model, with the S section of a modern compromise centerboard yacht such as Mayflower or Puritan. She has never been raced to any extent, and has never been to a meet. There were a number of Rushton canoes and some new open canoes, but none of special note.

Four of the regatta committee were present, Messrs. Gibson, Oliver, Barney and Quick, Mr. Ford Jones not being in camp. These, with Mr. George P. Douglas as clerk of the course, were on Mr. Gibson's launch Sirius. In some races the start was made at the leeward buoy, so as to make the first leg to windward, this necessitating the addition of one half-mile leg to the announced course, the finish in nearly all cases being at Buoy 4. Two men in a rowboat made the starting and finishing line, and managed the signals very well.

With a light south wind on Monday morning, the record sailing, Event 3 was called at 9:30, the starting gun being fired at 9:55, the start being off Buoy 5. There were 14 starters, Mab, Io, Hornet, Toltec, Bubble, V, L'Hirondelle, Tornado, Evangeline, Bulwag, Kiowilla, Joy, Banshee and Eel. L'Hirondelle and Eel made a good start, V soon came to the front and led the fleet, with Eel second, but on the second round Mab gained down wind and passed V. The wind fell very light, and after a drift the race was called, the two-hour limit having expired.

At noon there was a flat calm, but by 1 o'clock a strong north wind was kicking up a heavy sea in the bay, and after dinner the unlimited race was called, Event No. 6, starting at 2:42, with 11 starters—Wasp, Bee, V., Mab, Toltec, Glenwood, Tornado, Bulwag, Pagan, Hornet and Bubble. Io capsized before the start. Wasp and V carried big sails, but reefed before the start. With a windward start from Buoy 6, Tornado was first over, but V., Wasp and Glenwood were soon in the lead. Wasp took a knockdown and the seat slid to leeward, Mr. Butler falling backward into the drink, but he regained the canoe and held on his course. At the end of the first round the order was Glenwood, Tornado, V, Bee, Bubble, Wasp, etc. On the next round Hornet capsized, but righted; Glenwood had her weather and took a long lead, being nearly 3m. ahead of Bee at the end of second round. Bee, Wasp, V and Tornado were close together. On the first leg of the third round the lashings of Wasp's mainsail gave way along the yard, the waxed thread of each knot slipping. One by one they went, until the sailwas disabled, when Mr. Butler lowered it and ran in under the mizen. Glenwood held her lead and won easily, her time being 57m. 45s. for the six miles, a very high speed. Each of the four rounds, 1½ miles each, was sailed by the leaders in an average time of 15m.

In the evening a camp-fire was held at headquarters, and a meeting of the Atlantic Division was held at the Trenton camp, the following division officers being elected: Vice-Com., J. R. Lake, New York; Rear Com., H. L. Quick, Yonkers; Purser, F. L. Dunnell, Brooklyn; Executive Committee, M. V. Brokaw, W. E. Dodge and W. E. Lawrence.

The rest of the evening was spent (as are all nights in racing week in camp) in protracted discussions of the sailing work of the day, canoes and their handlers.

Tuesday was as fair and bright as Monday, and a number of new arrivals reached camp, the register showing nearly 200 names. The first race was the resailing of the record race, started from Buoy 6 at 9:38, the wind being light south, with smooth water. The first leg was a beat, the second free and the third a reach. With a good start V led over the course, Tornado being a poor second. The full times are given in the table further on.

The novice race followed, starting in a lighter wind at 11:50, the starters being Rana, Pollywog, Pagan, Bedouin, Zoe and Joy. The start was particularly poor, all waiting until long after the gun. Pagan was first over, holding his lead for the two rounds and winning easily.

At noon there was no wind, the lake being calm and smooth, and the principal paddling races were posted, the trophy being called at 2:00. Last year the interest and excitement ran high over the paddling trophy, a fine field of starters and some good canoes were present, and some sharp paddling was promised for this year, especially in the event of the removal of the weight limit of 40lbs. This change was made last November, and there has been much talk over paddling during the winter, but the result was very disappointing.

Only two of the leading paddlers, Messrs. Knappe and Parsons, were present, while total starters numbered but five. The only Canadian, Mr. Archbald, is a sailing rather than a paddling man, and was neither boated nor trained for a very sharp race. The paddling men, McKendrick, Muntz, Johnson, Carnegie and Tilley, were all absent. The starters were five—Knappe, Archbald, Barrington, Parsons and Scott. Mr. Knappe used his new 30lbs. racer before mentioned, Parsons used a canoe of a new material, a paper called Linenoid, made by Crane & Co., the paper manufacturers. Barrington paddled a light open Ruggles canoe, Archbald an open Gilbert canoe, and Scott an ordinary light Canadian canoe. All used double blades, some standing and some kneeling, Knappe alone being seated with legs extended and feet braced. He took the lead at the start and increased it for the whole mile without effort, winning in 7m. 36s., with Scott 42s. later, then Archbald, Barrington and Parsons. There was much disappointment on the part of the Eastern men because none of the recognized cracks were present to meet Knappe. There was no question such as was raised last year over the accuracy of the course, which in this case was the full mile, and he was never pushed from start to finish, so that his time shows very fast paddling.

The first race of the afternoon was the record paddling, won by Mr. Knappe from Messrs. Moore, Sparrow, Hall, Gray and Foster. The open canoe race with single blades was won by Mr. Archbald, with Scott, McKinley, Robertson and Titus in order. The first three men were disqualified, their canoes being under the limit, 55lbs., and the prizes go to Messrs. Robertson and Titus.

There were but three crews in the tandem paddling, Knappe and Parsons defeating Robertson and Ashenden and Burrage and Drake. The club fours brought out five crews, Springfield winning after a good race, with New York second.

A meeting of the Central Division was held in the evening, the following officers being elected, Vice-Com., T. S. Stryker, Rome, N. Y.; Rear-Com., W. B. Witherbee, Port Henry, N. Y.; Purser, C. G. Behman, Amsterdam, N. Y.; Executive Committee, C. V. Winne and W. R. Huntington.

On Tuesday evening the camp and a number of visitors from the hotel were entertained by a novel performance, of course under the management of Mr. Seavey. A small stage was built in the grove on the hill, a curtain being fitted between two trees. A series of 17 tableaux from "As You Like It" was given here, the parts being taken by ladies and gentlemen from the camp. The costumes and the little necessary scenery were sent from New York, a chorus sang some of the music from "The Foresters," and the orchestra was

made up of guitars, mandolins and banjos. The audience found seats on the grass, on rugs or camp stools. The tableaux were most elaborate and artistic, and the whole performance was a remarkable one considering the conditions under which it was given.

After the return of the men to headquarters, at 10:30 a couple of bouts with gloves took place, one very amusing one between two men of 130lbs. and 206lbs., the smaller man being the victor.

Wednesday morning was similar to the preceding ones, the same moderate south wind just rippling the surface of the water. The sailing trophy race was the first called, being started at 9:44 with the smallest field of starters yet seen in the race since it was established in 1886. The men who were eligible through having finished in the unlimited sailing race were Oxholm, Goddard, Moore, Gray, Schieffelin, Barrington and Whitlock; to whom the committee added Butler and Archbald, both disabled in the unlimited.

The course was nine miles, six rounds of the triangle, starting and finishing at buoy 6. The first leg was to windward, the second so nearly free that several canoes, Bee in particular, sailed it winged out, and the third a reach. The wind was moderate and very steady, and there was no sea. The fleet made a good start on starboard tack, Toltec and Wasp in the lead, but V was over on port tack from the other end of the line just in time to meet them and foul Toltec, throwing the fleet into confusion. Tornado fouled the starting buoy, and Bubble was 5m. late in crossing. Wasp took the lead, with Glenwood second, Bee third and Mab fourth when they came to the finish buoy. Wasp held Glenwood down wind, while Mab passed Bee. Just after passing the second mark, Mab's deckseat broke and she capsized. Mr Archbald righting her and sailing home, having lost some time and being badly disabled. Toltec was filling with water from a leak forward, and by the end of the round her stemhead was hardly out of water. There was little change in the second round save that Tornado capsized, continuing the race however, and Hornet sprung her mizen mast and withdrew.

At the end of the third round Wasp and Glenwood were in nearly the same positions as at the start, but in getting in sheets for the beat Mr. Butler lost some valuable seconds, and Glenwood ran up dangerously close. Being out on the end of a 5ft. deck seat, Mr. Butler was unable to handle the sheets quickly, the canoe lying in the wind for quite a time. This brought the two leaders very close, and the race became still more exciting. There was very little difference in the speed, and the result seemed likely to be decided by some small mishap.

At the beginning of the last leg of this round, Mr. Oxholm lost his sheet and nearly slipped off his seat, but saved himself; losing, however, a few precious seconds to Wasp. On the next turn, beginning the fifth round, the Wasp was again in trouble, losing a little to Glenwood, but on the last leg of the round she ran away from the latter, and also made the last turn very neatly, with no loss of time, the difference between her and Glenwood being but 21s. There was some close racing and fine handling on the last round, but with little change of position, and Wasp crossed the line with a lead of 14s. in a 9-mile race. After the finish the two canoes came side by side, the men shaking hands and then exchanging boats and sailing into the camp. Mr. Butler is the only man who has sailed every race for the trophy since 1886, and his victory has given pleasure to all, as he has been very unfortunate in several previous races, as last year, when his canoe was injured in launching for the start. The winners of the trophy have been: 1886-7, R. W. Stisser, in Vesper and Notus; 1888, M. V. Brokaw in Eclipse; 1889-90-91, Ford Jones in Canuck, and 1892, Paul Butler in Wasp. The positions on the various rounds were:

| | First. | Second. | Third. | Fourth. | Fifth. | Sixth |
|---|---|---|---|---|---|---|
| Wasp | 1 | 1 | 1 | 1 | 1 | 1 |
| Glenwood | 2 | 2 | 2 | 2 | 2 | 2 |
| Bee | 3 | 3 | 3 | 3 | 3 | 3 |
| V | 5 | 5 | 4 | 4 | 4 | 4 |
| Toltec | 6 | 7 | 5 | 5 | 5 | Withdrew |
| Tornado | 4 | 4 | Capsized and withdrew. | | | |
| Hornet | 7 | 6 | Disabled. | | | |
| Bubble | 8 | Withdrew. | | | | |
| Mab | Capsized and withdrew. | | | | | |

Mr. Goddard sailed a good race, but never was near the leaders. The three Vesper canoes all sailed the race without mishap. Butler and Oxholm each carried about 150sq.ft., the former having his well known rig, while Oxholm used Pecowsic sails.

The first race on Wednesday afternoon was the sailing and paddling event No. 1, the race for cruising canoes being continued with it. There were eight starters, L'Hirondelle, Io, Tornado, Evangeline, V, Eel, Foggy Dew and White Cloud.

The race was started from Buoy 4 at 2:43, the first leg under paddle, L'Hirondelle leading with Foggy Dew second and Evangeline third. On the sailing leg Foggy Dew ran ahead, while V took second place, but on the second paddling leg L'Hirondelle regained the lead and held it to the end, increasing it steadily. V lost on each paddling leg and gained on the sailing, finishing second, with Foggy Dew, Tornado, Eel, Evangeline, White Cloud and Io in order. L'Hirondelle and V win the sailing and paddling prizes and Foggy Dew the cruising prize.

The club race was called next, with six starters, the Vesper representatives being Wasp, Bee and V, and the Yonkers being Glenwood, Evangeline and Alpha. At the start Evangeline broke a mast, throwing her out. Bee carried a large mainsail in the mizzen tube and another forward, so that she was unmanageable. She collided with V and also struck three buoys, thus being disqualified. Glenwood finished first, Wasp second, V third and Alpha fourth, giving each club five points. A resail was ordered, but as the usual individual prize for first was not offered the Yonkers men decided not to start.

On Wednesday evening the general meeting of the Association was held for the election of officers, Col. Cotton, of Kingston, being elected commodore, and Mr. C. E. I. Porteous secretary-treasurer.

All the camp was invited to a camp-fire on the point, as the guests of the Bulwagga C. C., and nearly two hundred persons assembled around the blazing logs. The entertainment, which lasted from 8 P. M. until after 11, was one of the best ever given at a meet, with very good vocal and instrumental music, recitations and dances. The whole grove was illuminated, and the view from the lake was very beautiful.

Thursday another perfect day, with a breeze in the morning for the Pecowsic Cup, which was called at 9:30, being started from buoy 6, making four and a half miles. There were but six starters: Glenwood, Toltec, Mab, V., Alpha and Hornet; Bee breaking a mast before the start. Glenwood led all the way, scoring an easy victory, Toltec being second and Mab third. Mr. Oxholm won the cup in 1891, and by this second win he becomes the permanent holder. The cup was given in 1889, being won by Dr. Gage in that year, by Mr. Butler in 1890, and by Mr. Oxholm since then.

The resail of the club race was only possible through the entry of another trio from the New York C. C., Messrs. Whitlock, Barrington and Moore. The Vesper trio were the winners.

Thursday was visitor's day, and in the afternoon there were two or three hundred strangers present. The crowd was remarkably quiet and unobtrusive, quite different from the hordes of picnickers who have sometimes invaded the meets. The afternoon was given up to the upset and similar races, the first being the paddling upset, won very cleverly by Mr. L. B. Palmer, who was the quickest to right his canoe. The hurry scurry race had nine starters, Mr. Barrington leading in the run and being first in his canoe, winning very handsomely. The sailing upset and maneuvering had five starters, Wasp, Bee, V, Glenwood and Mab. Mr. Archbald handled Mab very cleverly, being the first to throw his paddle over at the signal and to regain it. After the capsize Bee took the lead in the run to the buoy, V lost her mainmast, Mr. Gray standing on the centerboard in the effort to right her quickly. Mab was first at the turn, holding her lead on the beat home and winning easily. Wasp and Glenwood finished almost at the same time.

The sports closed with an exhibition of canoe gymnastics by Messrs. Douglas, Barrington, Goddard and Butler. Some of the feats were very clever, each of the men capsized his canoe through a complete circle, standing on the keel and then righting her and sailing on. Mr. Douglas set four sails, passing along the deck and around each mast. Mr. Butler walked all over the deck and around both masts, also standing on his head on the deck seat. Mr. Barrington kept his canoe under way while he stood on the extreme stem and held the mainmast in his hands. He finally climbed the mizenmast. All of the work was good, but the prize was awarded to Mr. Barrington, his performance being the most graceful and most easily executed.

Late in the afternoon the annual meeting of the Eastern Division was held, the officers elected being: Vice-Com., Geo. L. Parmele, Hartford, Conn.; Rear Com., F. A. Sears, Worcester, Mass.; Purser, F. B. Lewis, Hartford; Executive Committee, Paul Butler, W. U. Lawson and Raymond Appolionio.

Although but two of the three weeks had expired, the old practice of breaking camp after the races is not extinct, and many prepared to leave, quite a number being recalled to join their regiments in consequence of the railroad strike. Thursday night was the culmination of the meet, and it was celebrated in a fitting manner, all hands taking part, while the whole camp was thrown open to visitors until a late hour, a volunteer patrol force keeping them within the prescribed limits and guarding the tents. The steamer Vermont brought a large party from Burlington, lying off Indian Bay, where a fine view could be had.

During the day a large structure of joists and boards had been erected under Mr. Seavey's direction on the hill near the old headquarters. This wall, about 70ft. long and 12ft. high, was covered with painted canvas representing a fort, a high tower rising from the center and one from each wing. At dark a hundred large torches were lighted and planted in the beach around the whole long arc of Indian Bay, from the west point around beyond the headquarters dock, at intervals of 15ft. Chinese lanterns were hung in all parts of the camp, a huge campfire was started in front of headquarters, and a large fleet of canoes, decorated with lanterns, was launched on the bay, where steam launches and other boats were awaiting them. The fleet moved around in procession, winding like a huge serpent about the bay. Fireworks were set off on the water, and others from the shore. After a time a bugle sounded the attack, and a reply came from the fort, followed by a volley of fireworks from the water, returned by bombs and rockets from the fort, now brilliantly illuminated by green and red fires. For half an hour the firing continued, the successful attack ending in a grand explosion, the shattered towers of the fort falling and leaving all in total darkness

During the morning a bass drum and snare drum arrived in camp to augment the three cornets composing the band. At noon the line formed, all fell in, led by a drum major waving an old horn, and all marched to dinner and up past the hotel. When the attack on the fort concluded, at night, the drum beat called the camp together, each man seized a torch from the beach, and a wild march began, from headquarters, up to the west end of the main camp, back and over the hill through the Bulwagga camp—"Three cheers for the Bulwaggas!"—on through the ladies' camp—"Three cheers for the ladies!"—on to Mr. Seavey's tent—"Three cheers for Mr. Seavey, and three more!"—then on over the fields and the rough road to the hotel, the long line of 100 bright torches marching zigzag in a serpentine path, from one side of the road to the other, a most fantastic procession. In front of the hotel a halt was called—"Three cheers for Mr. Otis!"—"Three cheers for the A. C. A.!"—"Three cheers for the ladies!" and the march was resumed back to headquarters, where the entire party broke up quietly, leaving the camp in peace after one of the noisiest, jolliest frolics that has ever enlivened a meet. Apart from the general fun, the scenic display, afloat and on shore, was most striking.

Friday saw a few arrivals and many departures, but the pavilion was still well filled at meal times. The weather was warm, but with a strong south breeze; and toward noon some ominous clouds gathered over the hills, with distant thunder and a few drops of rain at times. The race for the Jabberwock trophy was called in the morning, limited to members of the Central Division, not less than five starters. As the requisite number were not ready, the race did not take place. Early in the morning a cruising party of three canoe yawls, with Messrs. Dennison, Ward, Johnson, Connell and Hatch, reached camp after a cruise down the lake and Richelieu River as far as Sorel, having left Plattsburgh on Aug. 4. They were towed into camp by the steam yacht St. Julian, of Ottawa, with Mr. J G. Edwards on board. Among the late arrivals at the camp were Vice-Com. Cartwright and Mr. M. V. Brokaw.

Friday was the hot day of the meet, but toward evening a cool northerly breeze came up the lake. At 8 P. M. a camp-fire was lighted in front of headquarters, and after a short speech by Com. Winne, the prizes were distributed as follows, the names of donors being in parenthesis:

LIST OF PRIZE WINNERS AND DONORS.

Bunting Flags.—Sailing (Paul Butler), Paddling (E. C. Knappe), Record (E C. Knappe).

1. Combined Race.—1st, E. C. Knappe (Puritan C. C.), 2d, Howard Gray (Miss Stanford).

2. Record Paddling.—1st, E. C. Knappe (Com. C. V. Winne), 2d, F. C. Moore (Miss Francis S. Archbald).

3. Record Sailing.—1st, Howard Gray (Miss Beatrice Winser), 2d, F. C. Moore. 1st Record. E. C. Knappe (Miss Gertrude V. Fredericks). 2d Record, F. C. Moore (Com. C. V. Winne), 3d Record, Howard Gray (Miss Mary Warren Fuller), 4th Record, J. W. Sparrow (Mrs. W. P. Stephens), 5th Record, Thos. Hale, Jr. (Miss Beatrice Dartnell).

4. Trophy Paddling.—1st, E. C. Knappe (Flag, Asssociation Trophy), 2d, R. Scott (Mrs. Bessie W. Leonard).

5. Open Paddling.—1st, J. R. Robertson (canoe cushion, Mrs. F. B. Yard, flag, Miss Elizabeth Upham), 2d, W. C. Titus (Miss Frances C. Archbald).

6. Unlimited Sailing.—1st, T. S. Oxholm (canoe cannon, Winchester Arms Co.; flag, Com. C. V. Winne), 2d, D. S. Goddard (Mrs. Edward Leigh).

7. Trophy Sailing.—1st, Paul Butler (Association Trophy), 2d, T. S. Oxholm (flag).

8. Novice Sailing.—1st, W. T. Foote, Jr. (Miss S. E. Vair), 2d, W. C. Witherbee (Lt. Col. W. H. Cotton).

9. Pecowsic Cup.—1st, T. S. Oxholm (Pecowsic Cup), 2d, T. E. H. Barrington (Miss Elizabeth Norton).

10. Sailing Club Race.—Individual prize, D. S. Goddard; 1st, Vesper (Misses Sherwood).

11. Cruising Race.—1st, H. L. Quick (mirror, Mrs. W. C. Lawrence, flag), 2d, Thos. Hale, Jr. (flag).

13. Tandem Paddling.—1st, Knappe and Parsons (Com. C. V. Winne), 2d, Ashenden and Robertson (M. F. D.).

14. Club Four Paddling.—1st, Springfield (Mrs. John D. Parker), 2d, New York (Mrs. H. J. Winser).

15. Sailing Upset.—1st, C. E. Archbald (Miss Draper), 2d, Paul Butler (Mrs. J. H. T. Burr).

16. Paddling Upset.—1st, L. B. Palmer (Miss Dartnell), 2d, T. Hale, Jr. (Mrs. Edward Leigh).

17. Hurry Scurry.—1st, T. E. H. Barrington (Mrs. F. G. Mather), 2d, T. Hale, Jr.

18. Gymnastics.—1st, T. E. H. Barrington (Mrs. C. B. Vaux).

19. Jabberwock Trophy.—W. C. Wetherbee.

The prize flags were very handsome, and bore evidence to no small amount of taste and skill on the part of their donors. As the successful racers came up for their prizes they were greeted with cheers from the large group of ladies and canoeists assembled in front of the officers' tents. Mr. Butler's victory is the cause of general congratulation, as he has been most persistent in the face of a number of mishaps, such as that of last year, when his canoe was stove in while launching for the trophy race. Mr. Knappe carried off a large number of prizes, the result of special skill in paddling and of good all around work in all the races. Mr. Oxholm, too, was very successful, counting among his many prizes the valuable Pecowsic Cup, his permanent property by virtue of two wins.

After the presentation there followed music and some recitations, the ladies retiring to Square Point at about 11 o'clock. The wind had been rising through the evening, and by midnight it was piping half a gale from the north, squarely into the bay. All hands turned out, first to set up tent pegs and stow the tent flies, then to carry all canoes from the skids to the beach, and finally to look out for wrecks on the shore.

The steam yacht St. Julian was anchored off headquarters dock, with her fires out. She began to drag and fires were quickly lighted and fed with kerosene and light wood, but before steam was up she had dragged aboard the little cutter Madge, the latter's bowsprit fouling her at each jump and smashing seventeen of the cabin windows. The St. Julian finally steamed around the Point to shelter, but the cutter dragged ashore, going quite high on the beach. All hands were at work from midnight until 3 A. M., everyone being wet, as rain came with the wind, and nearly all were more or less in the water in saving the yachts.

During the excitement several accidents occurred. Mr. Benson, of Troy, slipped on the wet rocks, and in falling cut his wrist very badly on some broken glass. The wound was sewed up by Dr. Nellis, fleet surgeon, and Mr. Benson left for home next morning. One man made a misstep and fell over a bank about 10ft. high into the water, a companion who tried to help him sharing the same fate and falling on him. Skids and landings were washed ashore, and if the storm had occurred a few days earlier there would have been serious inconvenience. As it was, many were ready to leave, and the skids were no longer needed.

Saturday was cloudy and very cool, though the rain stopped early. During the morning those who were not busy packing up gathered on the beach to watch or to assist in the work of wrecking, and with the aid of the Ruth and many willing hands both yachts were finally floated with no serious damage. All through the day the tents fell, and canoes and trunks were carted to the wharf, the scow Gloriana being loaded high with canoes. In packing up Mr. Knappe met with a serious accident, cutting his foot badly on a broken bottle.

After dinner the weather improved, and with a light northerly wind the race for the Jabberwock trophy was started at 3:45, with five starters, Bulwag, Bedouin, Pollywog, Bonnie and Mr. Francis's canoe, the course being 1½ miles, by consent. Pollywog won the trophy, which Mr. Wetherbee will hold for the year.

On Saturday evening a dance took place in the pavilion, with the guitar and banjo orchestra and a fiddle steered by Mr. Spaulding, a local celebrity. The pavilion was well filled and the evening passed very pleasantly.

---

The general programme of the races was as follows:

REGATTA PROGRAMME.

REGULAR EVENTS.

No. 1. Paddling and sailing combined, half miles alternately, total three miles. Time limit, 1½ hours.

No. 2. Paddling, half-mile, straightaway.

No. 3. Sailing, four and one-half miles, same rig and ballast as in race No. 1. Time limit, two hours.

These three races to constitute the record races.

No. 4. Trophy paddling, one mile, straightaway. Exempt from one-man-one-canoe rule.

No. 5. Paddling, open canoes, not under 55lbs. weight, single blade paddles, one-half mile straightaway.

No. 6. Unlimited sailing race. No limit to rig or ballast, six miles. Time limit 2½ hours. Starters in the trophy race to be selected from this race. See Rule 5.

No. 7. Trophy sailing. No limit to rig or ballast, nine miles. Time limit 3½ hours. Starters to be selected as by Rule 5.

No. 8. Novice sailing race. No limit to rig or ballast, distance three miles. Time limit 1½ hours. Open only to men who have not sailed a canoe prior to Sept. 1, 1891.

No. 9. Sailing, the Pecowsic Cup. Four and one half miles, no limit to rig or ballast. Time limit 2 hours. Winner of trophy barred.

No. 10. Sailing club race, distance four and one half miles. Time limit 2 hours. First three members of any one club to count. No club can be represented unless it enters at least three men; all men entered must have become members of the club they represent before the first day of the A. C. A. meet.

No. 11. Cruising race. Open to "general purpose" or "cruising" canoes, sailing and paddling combined, one-half miles alternately. Distance three miles. Time limit 1½ hours.

OTHER EVENTS.

No. 12. Paddling war canoe race. Details will be posted.

No. 13. Paddling tandem, half mile straightaway.

No. 14. Paddling club fours, half mile straightaway.

No. 15. Sailing upset and maneuvering, no special appliances, no limit to ballast; at signal throw over astern and recover paddle; second signal, canoe to be heeled over until top of foremast touches the water; canoes to be righted and cross finish line under sail. Time limit ½ hour.

No. 16. Paddling upset, usual conditions, no special appliances.

No. 17. Hurry scurry, run, swim and paddle short distances.

No. 18. Gymnastics

No. 19. Long distance cruising race, two or three 'days' racing, about six hours each day, and camping at night, each man with his own outfit. Details of this event to be decided at a meeting to be held at camp Saturday evening, Aug. 6.

Event No. 1, paddling and sailing combined, distance 3 miles. Start 2:43:

| | 1st round. | Finish. | Elapsed. |
|---|---|---|---|
| L'Hirondelle | 3 00 20 | 3 27 00 | 44 00 |
| V | 3 02 55 | 3 29 05 | 46 05 |
| Foggy Dew | 3 00 55 | 3 29 05 | 46 05 |
| Tornado | 3 03 00 | 3 29 45 | 46 45 |
| Eel | 3 04 40 | 3 31 45 | 48 45 |
| Evangeline | 3 01 50 | 3 34 30 | 51 30 |
| White Cloud | 3 02 45 | 3 35 40 | 52 40 |
| Io | 3 05 30 | Withdrew. | |

Event No. 2, record paddling, distance ½ mile. Times not taken:

| | |
|---|---|
| L'Hirondelle | 1 |
| Tornado | 2 |
| Eel | 3 |
| Evangeline | 4 |
| V | 5 |
| Io | 6 |

Event No. 3, sailing record, distance 5 miles. Start 9:33:

| | 1st round. | 2d round. | Finish. | Elapsed. |
|---|---|---|---|---|
| V | 10 01 10 | 10 18 45 | 10 34 16 | 56 16 |
| Tornado | 10 03 25 | 10 22 40 | 10 41 25 | 1 03 25 |
| Eel | 10 04 00 | 10 24 00 | 10 43 06 | 1 05 06 |
| L'Hirondelle | 10 05 55 | 10 26 10 | 10 45 45 | 1 07 45 |
| Io | 10 08 53 | 10 31 23 | 10 52 00 | 1 14 00 |
| Evangeline | 10 31 30 | 10 36 44 | 11 01 15 | 1 23 05 |
| Pollywog | 10 24 35 | 10 49 40 | 11 16 25 | 1 38 25 |

Event No. 4, paddling trophy, distance 1 mile. Start 12:09:35:

| | Elapsed. |
|---|---|
| Marguerite, E. C. Knappe | 7 36 |
| Sunbeam, R. D. Scott | 8 18 |
| —— C. E. Archbald | 8 36 |
| Paddle, T. E. H. Barrington | 8 39 |
| —— Parsons | 8 46 |

Event No. 5, paddling, open canoes, distance ½ mile:

| | |
|---|---|
| —— C. E. Archbald | Disqualified—over weight limit. |
| Sunbeam, R. D Scott | Disqualified—over weight limit. |
| Iolanthe, J. D. Patterson | Disqualified—over weight limit. |
| —— D. S. McKinley | Disqualified—over weight limit. |
| Gertie, J. R. Robertson | Winner. |
| —— W. C. Titus | Second. |

Event No. 6, sailing, unlimited, distance 6 miles. Start 2:47:00:

| | 1st round. | 2d round. | 3d round | Finish. | Elapsed. |
|---|---|---|---|---|---|
| Glenwood | 3 02 00 | 3 16 00 | 3 30 17 | 3 44 45 | 57 45 |
| Bee | 3 04 03 | 3 18 39 | 3 33 25 | 3 46 55 | 59 55 |
| Tornado | 3 03 44 | 3 19 47 | 3 35 51 | 3 50 59 | 1 03 49 |
| V | 3 03 45 | 3 19 35 | 3 36 25 | 3 52 37 | 1 05 37 |
| Bubble | 3 04 07 | 3 21 40 | 3 37 54 | 3 54 44 | 1 07 44 |
| Toltec | 3 06 50 | 3 23 30 | 3 39 35 | 3 56 47 | 1 09 47 |
| Hornet | 3 05 07 | 3 22 44 | 3 41 30 | 3 59 12 | 1 12 12 |
| Wasp | 3 04 14 | 3 19 07 | Dist.; withdrew. | | |
| Mab | 3 06 16 | Dist.; withdrew. | | | |
| Pagan | 3 08 37 | Withdrew. | | | |
| Bulwag | 3 11 47 | Withdrew. | | | |

Event No. 7, sailing trophy, distance 9 miles. Start 9:44:

| | 1st Round. | 2d Round. | 3d Round. | 4th Round. | 5th Round. | 6th Round. | 7th Round. |
|---|---|---|---|---|---|---|---|
| Wasp | 9 59 34 | 10 14 11 | 10 29 06 | 10 44 01 | 10 59 27 | 11 14 37 | 1 30 37 |

## Mattapoisett Regatta.

AUG. 13.—The annual regatta took place here to-day. There were six classes, one for sloops and five for catboats. The race was sailed under the Beverly Y. C. rules. The course for the sloops, first and second class cats was 16 miles, third class 15 miles, fourth class 6 miles and fifth class 4 miles. The interest centered in the third class, for the Tycoon, a Mattapoisett boat, beat the Sippican, a Marion boat, by 10 seconds. There was a good whole sail breeze from the southwest, and some of the boats carried a reef. The following is the summary:

SLOOPS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Fin, H. Stockton | 17.01 | 2 54 31 | 2 17 42 |

## Sippican Y. C.

MARION—BUZZARD'S BAY.

THE second championship race was sailed Aug. 17 in a fresh W.S.W. wind. Flight, Venture, Tycoon and Edith had already won legs. In the first class Hector started first and held the lead on the first leg to windward, but Flight outran her, passed her on the second leg and finished well ahead.

Venture was unable to race and Gymnote was the only starter in the second class. She soon came to grief again, this time breaking her centerboard.

In the third class Sippican led off, followed by Algol (a new boat just built by Holmes), Buzzard, Eina and Tycoon. Tycoon sailed remarkably well to windward and was second boat at Bow Bells. From that time she had the race well in hand, although Sippican gained a little running. Buzzard beat Algol until they got into a seaway and then Algol gained on the whole fleet. Tycoon protested Sippican for fouling a buoy and Sippican and Algol protested Tycoon for not being sailed by a member of the club. Both of these protests, however, proved to be groundless and were not allowed.

In the fourth class Edith started first, followed by Eel, Squall and Cat. Cat had some difficulty in hoisting her sail and consequently was handicapped 2?s. She gained 3m. on the first leg, passing Squall and Eel. Squall mistook the mark and overstood it, losing thereby about 5m., but she gained a little on the run home. Cat sprang her rudder-head and could not be steered off the wind, and lost the race after she had apparently won it.

In the special class Cheemaun distinguished herself by not only distancing Wide Awake but keeping up with the fourth class. In the sea she was in her own element, while her rival seemed to be stopped by it.

Courses—First class, from judges' yacht, leaving Nye's Ledge and S. E. Ledge buoys on port and return, 15 miles. Third and fourth classes, from judges' yacht, leaving Bow Bells and S. E. Ledge buoys on port and return, 8 miles. Special class, from judges' yacht, rounding Bow Bells Buoy an port and return, 6½ miles:

FIRST CLASS CATS.

| | Length. | Elapsed. | Corrected. |

| Eel, W. E. C. Eustis | 16.03 | 1 47 56 | 1 28 16 |

Winners: Class 1, Hector; Class 3, Tycoon; Class 4, Edith. Judges; Messrs. Carey, Yardley and Whiting.

# Rifle Range and Gallery.

## Excelsior Rifle Club Shoot.

THE Excelsior Rifle Club of Jersey City, held its second annual prize shoot at Ambruster's Greenville Schuetzen Park last Friday and Saturday, Aug. 19 and 20. A large number of New York and New Jersey marksmen attended, with the result that the prizes offered for competition were equally distributed among the representatives of both States. Fred Ross of the Zettler Club came to the front on the last day, making a 73, tying the high man, Henry Holges. The results on the different targets are below.

German Ring Target.—Open to all comers. Tickets (3 shots) $1. Tickets unlimited. Two best tickets to count for first five prizes, one ticket to count for the remainder. Only one prize and one premium can be obtained by any one shooter. Ties divided, distance 200yds. First prize, $40, and second prize $30, divided between Henry Holges, Zettler Rifle Club, with scores of 23 24 25—72 and 23 25 24—72 total 144 and 24 25 24—73, and 22 24 25—71 total 144 respectively. Third prize, $25, William Hayes, Newark Shooting Society, 23 23 25—71 and 24 23 24—71 total 142. Fourth prize, $20, Louis Flach, Zettler and Miller rifle clubs, 25 23 23—71 and 23 24 23—70, total 141. Fifth prize, $15, Ernest Fischer, Miller Rifle Club, 25 25 22—72 and 25 24 19—68, total 140. Sixth prize, $12, A. Bergerow, Newark Shooting Society, 23 24 23—71. Seventh prize, $10; eighth prize, $9, and ninth prize, $7, were divided by Wm. Weber, Excelsior Rifle Club, 23 23 22—68; Michael Dorrler, Zettler R. C., 24 23 22—69 and Joseph Speecher, Excelsior R. C., 24 21 24—69. Tenth prize, $6, L. P. Hansen, Excelsior R. C., tied Barney Walther, Zettler R. C., for this and the eleventh prize, $5, with scores of 23 22 23—68 and 23 22 25—68 respectively. Twelfth prize, $4, J. G. Hard 23 20 22—65. Thirteenth, fourteenth and fifteenth prizes, consisting of $3, $2 and $1 were divided by David Miller 23 21 20—64, Geo. Weigman 20 22 22—64, C. Hutch, Harlem R. C. 20 21 23—64, and L. Vogel, Miller R. C., 22 20 22—64. The premiums for the best five tickets were secured by the following gentlemen: First, $5, F. C. Ross, 73 71 70 70 70—354. Second, $5, Harry Holges, 72 72 70 70 69—353. Third, $2, Wm. Hayes, 71 71 70 70 70—352. A premium of $1 was also offered for the first and last flag every day. The winners were: First day, morning, Wm. Weber; evening, F. C. Ross. Second day, morning, Wm. Hayes; evening, James Hughes.

Bullseye Target.—Open to all comers. Tickets (10 shots) $1, re-entries unlimited. Target with black of 12in., with 8in. center. The best shot of every shooter to count by measurement. A peculiar feature in the shooting at this target took place at about three minutes to five, a few minutes before firing was discontinued William Hayes, the Newark crack, scored the best flag at the last moment, beating the next man. Fred Ross, by a hair. A summary follows: First prize, $20, William Hayes, 17; second prize, $15, Fred C. Ross, 20½; third prize, $12, L. P. Hansen, 34; fourth prize, $10, Henry Holges, 37; fifth prize, $8, Wm. Weber, 41; sixth prize, $6, D. Horn, 41½; seventh and eighth prizes, $5 and $4, were divided by Ernest Fischer and J. Hughes with 43 each: ninth prize $3, J. Chavant; tenth prize, $2, George D. Wiegman, 46½.

The premiums for the most bullseyes were secured by Fred C. Ross, $5, with 35 flags to his credit; William Hayes second prize, $3, with 17, and third, $2, to L. P. Hansen with 16. In all there were 221 flags made on the bullseye target.

Target of Honor.—Open to members of the club only, three shots, for prizes contributed by members and friends:

| | | | |
|---|---|---|---|
| 1st prize, L P Hansen | 21 | 22 | 22—65 |
| 2d prize, Thomas Hughes | 23 | 22 | 20—65 |
| 3d prize, J Speicher | 20 | 19 | 25—64 |
| 4th prize, W J Channing | 21 | 22 | 20—63 |
| 5th prize, Wm Weber | 20 | 20 | 20—60 |
| 6th prize Colin Boag | 20 | 15 | 15—50 |
| 7th prize, James Hughes | 15 | 12 | 20—47 |
| 8th prize, Oscar C Boyce | 16 | 14 | 11—41 |
| 9th prize, Wm J Hennessy | 12 | 14 | 11—37 |
| 10th prize, C L Pinney | 12 | 10 | 11—33 |
| 11th prize, Wm J Hallowell | 10 | 11 | 10—31 |

The hours of shooting were from 9 A. M. to 12 M., then 1 P. M. to 7 P. M., with the exception of the bullseye target, on which shooting was stopped on the last day at 5 o'clock. The shooting committee consisted of L. P. Hansen, First Shooting Master; Wm. Weber, Second Shooting Master; Wm. H. Robidoux, John Speicher, William H. Hallowell and W. J. Channing. The Excelsiors are no doubt pleased with the financial outcome of their shoot.

NOTES.

Messrs. Horn and Hutch created some merriment by their efforts to strike a bottle with several stones. Their excuse was that they had forgotten how to shoot at a target and were getting square with the bottle.

Fred Ross, William Hayes and several others enlivened those present with a rendition of the celebrated "Obadiah" chorus. The only needed article missing to make it a bigger success was said by Barney Walther to be a certain well-known Alexander. The latter, it is said, can drive what little music there is in any popular song right out of the question.

The measuring of the bullseyes scored was done by Henry Oehl, of the Zettler Rifle Club.

George Schlicht had charge of the markers and warners, and consequently this part of the affair ran smoothly.

Messrs. John Bender and Laute, of the Our Own Club, Newark, also attended.

## Revolver Shooting in England.

AT the South London Rifle Club's competition of Aug. 11, there were two competitions for revolvers, one at a stationary target, the other at a target appearing and disappearing at intervals of three seconds at a distance of 20yds. (similar to the Bisley competitions). Mr. Walter Winans won first prize in both with a score of 41 out of a possible 42 in each; the one at the disappearing target being the "best on record" at the 2in. Bisley target. Only one score being allowed for the revolver championship in each day, Mr. Winans chose his 41 made at the stationary target (which was a slightly better, counting 41) to represent him for the championship. He has now passed Major Mackerrell, the scores for the revolver championship of the club now standing:

| | | | |
|---|---|---|---|
| Walter Winans | 41 40—81 | T W Heath | 39 35—72 |
| Major Mackerrell | 41 37—78 | C F Lowe | 36 36—72 |
| H Andrews | 39 38—77 | Mortimer | 34 34—68 |

## Chicago Championship.

CHICAGO, Ill., Aug. 17.—H. S. Burley accepts C. A. Haukle's challenge to shoot 150 shots on the same conditions as the championship of Chicago was shot for, 25yds., strictly off-hand, with open sights, for $50 a side, match to take place at the Garden City shooting gallery, Saturday evening, Aug. 27. H. S. BURLEY,
Champion of Chicago.

## North Ends Defeat Lancasters.

EPHRATA, Pa., Monday, Aug. 22.—Some time ago the members of the Lancaster Schuetzen-Verein and the North End Rifle Club arranged for two contests for the championship of Lancaster county, the first contest to be held on the range of the former near Lancaster City, on the banks of the Conestoga Creek; the second on the range of the latter on the Cocalico Creek, in Ephrata, the headquarters of the North End team. The first match was held several weeks ago, eight shooters on each side, and was won by the Lancaster team. The distance was 200yds., rest shooting, standard American target being used. The Lancaster boys scored 596 points, the North End boys but 570 points. The day was favorable for good shooting and the event was greatly enjoyed by all participants.

The second contest came off last Friday morning on the range at Ephrata, the conditions the same as on the previous occasion except that there were ten shooters to a side. The visitors came to Ephrata in the morning and the entire day was spent on the range. After all trial shots had been had, which occupied an hour or two, the contest was entered, both sides determined to do their best shooting. At the end of the contest the visitors had made 697 points, and the home team 781 points, leading 84 points. The following are the scores made:

| Lancaster Schuetzen Verein. | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| J H Wentzel | 8 | 8 | 10 | 10 | 7 | 9 | 8 | 10 | 8 | 8 | —85 |
| T Anderson | 10 | 8 | 9 | 5 | 5 | 6 | 9 | 7 | 9 | 7 | —75 |
| J Wolfer | 10 | 6 | 7 | 8 | 8 | 6 | 8 | 7 | 9 | 8 | —77 |
| B Bihl | 7 | 9 | 8 | 8 | 6 | 9 | 8 | 6 | 8 | 8 | —75 |
| D W Wentzel | 8 | 9 | 10 | 9 | 9 | 10 | 9 | 8 | 7 | 5 | —84 |

| D B Lefever | 9 | 9 | 7 | 7 | 9 | 8 | 7 | 7 | 6 | 8 | —77 |
| Kegel | 4 | 8 | 4 | 7 | 8 | 0 | 9 | 10 | 7 | 8 | —65—781 |

During the shooting a fine lunch was spread upon the grounds of the club and afterwards the visitors were taken to Winter's hotel, in Ephrata, where they were entertained at an elegant supper. As things stand now the clubs are even, each having won one match. To decide the best two in three another match will be shot shortly. Both clubs will make a desperate effort to win, and will pick out their best men to go to the front. When the third match will take place is not known as yet. It is probable, however, that it will be held at Mt. Gretna, in the latter part of September. D. B. L., Sec'y.

## New Jersey Rifle Shooting.

[*Specially Reported for Forest and Stream.*]

A hundred-shot match has been arranged between Secretary Charles E. Bird and Captain Henry L. Hansen, of the Hudson Rifle Club, to take place August 27, at headquarters on Giles Avenue, Marion. The conditions are to the effect that the match be finished in an hour and thirty minutes. Mr. Bird thinks he can do it inside the hour mark, as he is counted upon as the most rapid shooter by the club. Speaking of the Hudson Club's members, reminds me that Monday is an off day with John Rebhan, the former captain. He is one of Jersey City's many tonsorial artists.

Miller Rifle Club, Hoboken, N. J., Wednesday, August 17. Tonight's scores are appended below. The conditions were:

Ten shots off hand; twenty-five ring target; possible, 250:

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| D Miller | 25 | 25 | 25 | 25 | 24 | 24 | 24 | 23 | 23 | 23 | —241 |
| E Fischer | 25 | 25 | 25 | 24 | 24 | 24 | 24 | 24 | 23 | 22 | —240 |
| F Brandt | 25 | 25 | 25 | 24 | 24 | 24 | 23 | 22 | 21 | 21 | —236 |
| J H Kruse | 25 | 25 | 24 | 24 | 24 | 24 | 23 | 23 | 22 | 20 | —234 |
| F Kloepping | 25 | 25 | 25 | 24 | 24 | 23 | 23 | 22 | 22 | 22 | —234 |
| A Meyns | 25 | 25 | 24 | 24 | 24 | 24 | 23 | 23 | 21 | 20 | —234 |
| H D Hencken | 25 | 24 | 24 | 24 | 23 | 23 | 23 | 22 | 21 | 21 | —230 |
| W Rogers | 25 | 25 | 24 | 24 | 23 | 23 | 22 | 21 | 20 | 20 | —227 |
| R Zoch | 25 | 24 | 23 | 23 | 23 | 23 | 21 | 21 | 20 | 20 | —223 |

| F Dunsteadt | 25 | 25 | 21 | 21 | 20 | 20 | 19 | 19 | 19 | 18 | —205 |

The sixth anniversary shoot of the Our Own Club of Newark, N. J., at Shooting Park, Labor Day, Sept. 5, promises to be a fine affair. The bullseye target which is open to all comers, offers prizes of a silver ice pitcher as first prize, $5, $4, $3, $2 and $1, also nine silver medals. The shooting commences at 9 A. M. and closes at 7 P. M. The committie of arrangements consists of Gus. Goerk Chairman, G. D. Wiegman, John Coppersmith, Jacob Hunziker, Jr., Henry D. Uhl and John F. Bander.

All communications for J. H. Kruse will kindly be addressed to No. 105 Adams street, Hoboken. JAY H. KAY.

## The Big Shoot at Sea Girt.

GEN. SPENCER is beginning to feel sanguine that the second annual fall meeting of the New Jersey State Rifle Association, to be held at Sea Girt, Sept. 5 to 10 inclusive, will be an immense success. The First, Second, Sixth and Seventh Regiments, N. G. N. J., will positively enter teams of six men each for the New Jersey team and Columbia trophy matches, and the Second and Fourth Regiments may also put teams in. These teams, along with two from the District of Columbia Militia, Sixth Pennsylvania, Twenty-third New York and a team from men will also contest in the match for six-men teams for the Interstate Regimental Team trophy. The Interstate and Hilton trophy matches will call out strong teams from New York, New Jersey, Maine, and the District of Columbia and Pennsylvania and Massachusetts may also enter teams, although it is not certain that they will.

The District of Columbia team will reach the Sea Girt Range on Sept. 4 and will camp there until after the meeting is ended. The Jersey teams will go to the camp on the same date. They will be quartered in comfortable wall tents, provided with floors, cots, blankets, camp stools, tables, etc., these being furnished gratis by New Jersey. Meals will be procured by the teams at Greason's restaurant on the grounds. Plenty of tents will be pitched on the field near the rifle range, and civilians and guardsmen alike, who go there to shoot, will be provided with quarters.

## World's Fair Schuetzenfest.

CHICAGO, Aug. 22.—There is a grand gathering expected by the Chicago Schuetzen-Verein at the Columbia Schuetzenfest in connection with the World's Fair. The programme is a simple one but some big prizes will go to the lucky winners. The list of matches stands as follows:

Point Target—4in. center in 12in. black, distance 200yds; entrance fee $25, entitling the shooter to 200 shots. All shooters shooting the 200 shots will receive a gold medal valued at $15; 173 prizes, ranging from $100 to $3.

King Target—German ring-target, 25¾in. rings; entrance fee $5, 10 shots each. First prize $150 and king medal valued at $50; 200 prizes, ranging from $150 to $3.

Stich Target—9in. center in 12in. black; entrance fee $5. A premium of $5 will be given to each shooter making three center shots; 162 prizes, ranging from $250 to $1.

Public or Ring-target—German ring-target, 25¾in. rings; entrance fee $3 for first ticket, re-entries $2, three shots per ticket; 116 prizes, ranging from $150 to $1.

Man Target—Entrance fee $3 for first ticket, re-entry $2; five shots per ticket; 116 prizes, ranging from $150 to $1.

Creedmoor Target—8in. bullseye target divided into six rings. The entrance fee, number of shots and prizes are the same as on the man target.

## Garden City Rifle Team.

THE Garden City Rifle Team met for their weekly contest Tuesday evening, at Burley & Erickson's shooting gallery, 146 South Halstead street, Chicago. Conditions were: 25yds, 25 shots each, open sights, free off-hand position, Massachusetts paper target. Possible 500 points:

| | | | | | |
|---|---|---|---|---|---|
| H S Burley | 279 | W J Gibbs | 260 | F Erickson | 252 |
| C A Hankle | 268 | J C Martin | 259 | Ed Pierce | 250 |
| A McBean | 263 | G O Misga | 256 | | |
| Al Sorensen | 262 | John Polites | 255 | | |

The score of Mr. Burley is the largest ever made in the team sweepstakes, Mr. Burley scoring 118 out of a possible 120, the largest score ever made in the gallery. B. S. H.

### Port Chester Riflemen.

PORT CHESTER, N. Y., Aug. 20.—The following scores were made by members of Port Chester Rifle Club on Saturday, Aug. 20, 200yds. off-hand, standard American target:

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| F A Bachman | 9 | 6 | 6 | 7 | 4 | 6 | 7 | 7 | 5 | 3 | 60 |
| | 6 | 3 | 5 | 4 | 7 | 6 | 9 | 10 | 5 | 8 | 63—123 |
| J Smith | 4 | 8 | 2 | 3 | 7 | 8 | 5 | 4 | 7 | 7 | 55 |
| | 6 | 9 | 7 | 6 | 7 | 6 | 6 | 8 | 4 | 7 | 66—121 |
| R Rudd | 9 | 4 | 3 | 3 | 6 | 8 | 6 | 8 | 3 | 5 | 55 |
| | 5 | 6 | 5 | 6 | 9 | 6 | 3 | 9 | 7 | 5 | 61—116 |
| R McNeil, Jr | 2 | 8 | 6 | 9 | 6 | 6 | 8 | 4 | 7 | 3 | 60 |
| | 4 | 3 | 3 | 5 | 2 | 5 | 6 | 9 | 7 | 7 | 51—111 |
| H Boeger | 9 | 4 | 5 | 4 | 4 | 3 | 4 | 7 | 2 | 4 | 47 |
| | 7 | 6 | 6 | 8 | 6 | 2 | 6 | 7 | 6 | 4 | 58—105 |

R. MCNEIL, JR., Sec'y.

### Massachusetts Rifle Association.

BOSTON, Aug. 20.—The Massachusetts Rifle Association held its regular weekly shoot at its range to-day. Some very good scores were made by Messrs. Willard, Bell and Merville in the different matches. Following are the scores, distance 200yds., standard American target, all being re-entry matches:

All-Comers' Off-Hand Match.—H. L. Lee 80, A. Law 74, P. H. Kemble 73, D. Bayley 71, A. Remington 70.

All-Comers' Rest Match.—H. L. Willard 112, John French 109, D. Winchester 108, O. Moore 108, A. Ballard 103, W. P. Thompson 103.

All-Comers' Military Match, Creedmoor Target.—C. H. Brigham 44, A. F. Cary 41, G. C. Marshall 40, O. Moore 39.

Eagle Badge Pistol Match, 50yds.—L. Bell 92, A. G. Stevens 91, M. T. Day 91, O. Moore 91.

All-Comers' Pistol Match, 50yds.—L. R. Avery 76.

### At Lion Park.

AT the annual reunion of the A. O. U. W. at Lion Park, New York city, Aug. 17, Charles E. Bird, of the Hudson Rifle Club, Marion, N. J., succeeded in securing the second prize, and Gus Zimmerman the first. The scores were: G. Zimmerman 17 17 18—52, and 18 17 18—53, total 105; C. E. Bird 16 17 17—50, and 16 18 18—52, total 102. The distance was 75yds. Mr. Bird did his shooting with a .22cal. Ballard, while Mr. Zimmerman used a .32-40 Ballard.

### Two Harvest Excursions.

THE great West and Northwest offer special attractions this season to tourists and home-seekers. For the purpose of enabling the public to visit the immense region included, the Chicago Great Western Railway (operating the Chicago, St. Paul and Kansas City Railway, will run two harvest excursions, selling tickets to all principal points in the territory included, on Tuesdays, Aug. 30 and Sept. 27, 1892, at the low rate of one fare for the round trip. An additional excursion will be run Oct. 25 to points South and Southwest. Tickets sold only on above dates, good to return in twenty days. For detailed information call on your nearest agent, or address F. H. LORD, General Passenger and Ticket Agent, C. G. W. Ry., Chicago, Ill.—*Adv.*

THE FAVORITE LINE.—The Shenandoah Valley route to the South, comprised of the Norfolk & Western and East Tennessee, Virginia & Georgia Railways, is the sportsman's favorite line. "The Washington & Chattanooga Limited," which is a solid vestibuled fast flying train, consisting of Pullman, drawing room, sleeping cars, day coaches and Pullman dining cars, leave Washington 11:15 P. M. every day in the year, arriving Chattanooga 6:45 next afternoon, making close connection for all Southern points. Mr. B. W. WRENN, General Passenger and Ticket Agent, E. T., V & G. R'y, Knoxville Tenn., will furnish free any information desired.—*Adv.*

## Trap Shooting.

All ties divided unless otherwise reported.

May, 1893 (last week).—Knoxville Gun Club tournament, three days targets, last day live birds; $1,000 added to purses.

### DRIVERS AND TWISTERS.

The following has been received from H. A. Penrose: "The work on the grounds of the New London Gun Club where the fifth annual tournament of the Standard Keystone Target & Trap Company is to be held Aug. 30, 31, and Sept. 1 and 2, is now about completed. The tents of the I. M. & D. A. are pitched with other tents and canvas covering score where shooters stand so that those attending can be in the shade continually if they wish to. As our grounds are on the banks of the harbor and within gun shot of the water, it is almost sure to be cool and pleasant. We have stated in our programme that the management reserves the right to modify programme to suit the shoofers present and every visiting sportsman may be assured that he will get all the shooting he wants and to his own liking. We give this shoot annually in order to bring the boys together and to determine who are the champions of the season, for which we have arranged team races, individual races, etc., each day. Event No. 5 on the 4th day, is to determine who is the champion target shot of America, for which we give a handsome diamond ring. I purchased the ring while in New York last week, and it is by far the best one that we have ever given. It weighs a karat and a half, is handsomely set and will certainly be worth battling hard for. We have also arranged to have stages run from the hotel to the grounds and have arranged with hotel people for a reasonable rate for all attending the tournament. So come one and all, and to those that enjoy shooting we can guarantee a royal good time. Shells for prominent trap shots from different points have already, at this early date, arrived, and all those who are going to attend and want to ship their shells may ship them to me and I will see that they are taken to the grounds and cared for. There will also be plenty of loaded shells on the grounds, and in fact, everything pertaining to a tournament. The citizens are taking a good deal of interest in this shoot, so taking it all in all it should be the shoot of the season."

* * *

Programmes have been received for the fifteenth annual tournament of the St. Paul (Minn.) Gun Club to be held at the State Fair grounds, Sept. 6 to 8 inclusive. The programme comprises five 10-target events, five at 10 singles and 3 pairs: four at 15 singles, three at 20 singles. The entries are from $1.50 to $2.50. The main event of the week will be a special contest at 26 singles and 12 pairs of targets, $5 entry, targets extra, for the Chamber of Commerce diamond badge and nine valuable prizes of merchandise. The winner of the badge this year will receive the entrance money in the 1893 contest. Very valuable merchandise prizes are offered in each event, in addition to the money divisions. All except the special badge contest are open to the world. There will also be 23 prizes for the high averages in all the events during the three days, first prize being $40 in cash, second $35, third $30, fourth $25, fifth $20 and so on down to a bronze figure for the 23d average.

* * *

ATLANTIC CITY, N. J., Aug. 22.—The Pier Gun Club, of this city, will hold their first tournament Sept. 5 and 6, and what was at first thought would be only a small shoot promises to be quite a tournament, as we have had letters and assurances from quite a number of shooters from different parts of the country that they will be there, and as we have a variety programme and a novel place to shoot, it will be something new for the boys. The pier, off the end of which the birds will be thrown, extends 1,400ft. out into the Atlantic Ocean, and just behind the score is a large pavilion for spectators. Atlantic in September is at her best; the mud hens are ripe and the fishing in its prime; the nights cool and the air through the day bracing and healthy. Just what a person wants after the long hot spell this summer—a few days of fresh salt air.—THURMAN & GARVIN, Managers.

* * *

Labor Day, Sept. 5, will be a great day for trap shooters all over the country, and almost every club will do more or less shooting on its own grounds. Besides there will be any number of tournaments at various places. Those on our list at this time are the Central Gun Club at Elizabeth, N. J.; Frankfort (N. Y.) Game and Fish Protective Association; Muncie (Ind.) Gun Club tournament; open shoot at John Erb's "Old Stone House" grounds, Newark, N. J.; opening of the Pier Gun Club tournament at Atlantic City, N. J.; Beaver Falls (Pa.) Sportsmen's Association, and the final contest of California State Sportsmen's Association at Shell Mound, Oakland, Cal.

* * *

SHEBOYGAN FALLS, Wis., Aug. 17.—The Sheboygan Falls Gun Club has just been organized here with a membership of 16. The officers are: Pres., A. C. Bassuener; Vice-Pres., Wm. Langner; Sec'y and Treas., M. Clark. Directors, Geo. Wilson, Wm. Blust and J. Kehl; Capt., Chr. Kerskamp. Traps and a supply of bluerock targets have been ordered, and the first shoot will take place next Sunday. The club will meet the last Monday in each month.—W. C. THOMAS.

* * *

The Londonville (N. Y.) Gun Club announces a kingbird target tournament to take place on Sept. 6. This club has very convenient grounds, reached by the Troy and Albany electric cars. The targets will be thrown from improved Keystone traps. The events will comprise five at 10 targets each, $1 entry; four at 15 targets each, $1.50 entry, and one at 20 targets, $2 entry. Shooting will begin at 9 A.M. and there will be no postponement on account of the weather.

* * *

The next shoot of the New Jersey Trap-Shooters' League will be held on the grounds of the East Orange Gun Club at Harrison, on Sept. 14. The grounds of this club are located within three minutes' walk of the terminus of Newark & Harrison Horse Railroad Company, and are provided with a pretty club house and plenty of room for any number of traps desired. A fringe of trees extends across the field in rear of the club house, providing an elegant shade after 11 o'clock.

* * *

Teams of five men each from Orange and South Orange will shoot a match on the Maplewood Gun Club's grounds on Saturday. The conditions are 50 bluerock targets per man, 5 traps, Keystone rules, the losing team to pay for the targets. The contest will begin at 2 P. M., and these are the teams: Orange—J. Warren Smith, Quintin McGall, John Siggins, Henry Quad, O. L. Yeomans. South Orange—A. Sickley, A. Perry, W. Swift, W. N. Drake, F. Tillou.

* * *

A. G. Courtney received a warm reception from his friends in and about New York city. "Court" has the happy faculty of being welcomed wherever he goes. He says the new Lefever ejector is "the gun," and that it is going to revolutionize the market. From the Metropolis "Court's" route leads through Philadelphia, Baltimore, Washington, Reading, Harrisburg, Pittsburgh, and thence to Detroit and the West.

* * *

The St. Paul Gun Club has arranged to give its annual tournament at the State fair grounds at Hamline, Minn., on Sept. 6, 7 and 8. Bluerock targets and Paul North's electric pulls will be used. The programme will include fourteen regular events, and the contest for the Chamber of Commerce diamond badge for the individual championship of the State, now held by Sheriff Block, of St. Peter.

* * *

The Colt Hammerless Gun Club, of Hartford, Conn., has elected the following officers: A. C. Collins, president; John Alger, vice-president; Millard F. Cook, secretary; J. C. Capen, assistant secretary; W. R. Hopkins, treasurer; executive committee, A. C. Collins, John Alger, M. F. Cook, J. C. Capen and John Melrose. E. Decker, instructor.

* * *

The final match of the series between the Cambria and Western Maryland Gun clubs took place on Aug. 18, at Cumberland, Md., the teams comprising ten men each and each man shooting at 25 targets. The result was in favor of the West Marylands, who broke 118 to their opponent's 122.

* * *

The traps will be in position on Monday on the New London grounds so that the "early birds" will have a chance to shoot in impromptu sweeps to "catch on" to the lay of the land. It is likely that a number will go up on Sunday night and will spend Monday in sailing about the beautiful harbor and in shooting for practice.

* * *

T. W. Morfey and G. Doremus shot a match at 10 live pigeons each for $30 a side at Williard Park, Tom's River, N. J., on Aug. 17, Morfey killing 8 to his opponent's 6. On the same day a match at 25 glass balls each, for $20 a side, took place between James Donnelly and Milton Garside. Donnelly broke 13 to Garside's 7.

* * *

The following bags were made by Utica sportsmen on the opening day of the season. John Cummings and Charles Mizner got 10 woodcock; George Knowlton one partridge and one woodcock; Thomas Parson, three woodcock and one partridge; Hardie Richardson and J. P. Davis, five partridge and one jacksnipe.

* * *

The Oxford Rod and Gun Club has got leave from the Supreme Court to change its name to the Long Island Country Club. The club is composed of Brooklyn gentlemen and owns 900 acres of land at Eastport, where it has erected a large club house for its members. Mr. Henry G. Preston is president.

* * *

A New York daily on Aug. 13 gave a very graphic account of a match "at 100 bluerocks," between J. L. Brewer and Dr. Carver, said to be in progress at Atlantic City, when said paper went to press on the above date. On that date Dr. Carver was in the West.

* * *

The Pierrepont Gun Club, of Utica, has been incorporated with the Secretary of State for hunting and fishing purposes. The directors for the first year are Henry T. Crouse, Isaac N. Maynard, Frederick S. Kellogg, Hugh White and Wm. Pierrepont White, all of Utica.

* * *

Mystic, Ia., has a new gun club with twenty-five members. The organization was formed on Aug. 8, the officers being as follows: President, Wm. Orr; Secretary, Peter Barker; Treasurer, Wm. Ellis. The club will shoot on the 20th of each month.

* * *

A few short weeks more and all the Browns, Jones, Grays, Blacks, etc., will begin to come out with their periodical challenges to shoot for the championship of Squedunk and other large countries, to say nothing of the United States.

* * *

The Union Hill Gun Club held its semi-monthly shoot at Guttenberg on Aug. 17. Each man shot at 25 birds. J. Waller won first prize by killing 23. The other scores were: H. Untereiner 19, P. Sullivan 3, Theo. Butterbaum 18 and J. Collins 23.

* * *

The Dayton (Ohio) Gun Club entertained about 300 of their friends to a picnic on Aug. 15. A fish-fry was prepared in the evening and George Kiett acted chief cook and bottle washer. After a meal was made on fish the genial cook was presented with a diamond.

* * *

The Conesus Lake (N. Y.) Fish and Game Protective Association has elected officers as follows: Horace McGuire, Pres.; L. L. Williams, 1st Vice-Pres.; Robert Matthews, 2d Vice-Pres.; C. C. Woodworth, 3d Vice-Pres.; D. C. Bascom, Sec'y-Treas.

* * *

It should have been "Jos." instead of "Jas. Thurman, Jr." in last week's FOREST AND STREAM. And the real handsome chap whose picture appeared beside that of George Ritter is Harry Matz, president of the Reading Shooting Association.

* * *

"S. S." powder is gaining a decided foothold, and is doing good work. When E. R. Sperry, a Connecticut shooter, used this powder for the first time he broke 99 out of 100 keystones. This is his best-on-record score.

* * *

The officers of the St. Paul (Minn.) Gun Club are: John Pfister, President; Dr. Wm. Richeson, Vice-President; B. F. Schurmeier, Secretary; R. S. Kennedy, Treasurer; Henry Blakely, J. P. Burkhard and Paul Hauser, Jr., Board of Directors.

* * *

The Von Lengerke & Detmold representatives, Ferd. Van Dyke and Gus Grieff, made a great showing at last Saturday's shoot of the Maplewood Gun Club. Each of them shot at 110 bluerocks and each broke 102, an average of 92.72 per cent. for the pair.

* * *

The Passaic City Gun Club has purchased a tract of eight acres of land situated between Speer's Vineyard on Van Houten Lane and the D. L. & W. R. R., at Passaic, N. J. A fine club house will be erected.

* * *

At the monthly shoot of the Lake City Gun Club, at Madison, Wis., August 16, at 18 singles and 3 pairs of Peoria blackbirds, C. A. Mayer broke 22, Louis Fauerback 21 and Wm. Dunn 16.

* * *

The Long Pond Fishing and Game Association has been incorporated at Utica, N. Y. The trustees are Joseph Ardesson, Andrew Zehr, Thos. Glenn, P. H. Striffe and Michael Nortz.

* * *

We regret being unable to produce pictures of the officers of the Missouri State Amateur Sportsmen's Association owing to the fact that it was impracticable to reproduce the tin-type pictures.

* * *

The regular monthly shoot of the Kansas City Gun Club took place on Aug. 16, the medal being won by Rooney on a score of 22 breaks.

* * *

At the shoot of the Quincy (Ill.) Gun Club on August 17, Frank McDavitt broke 17 out of 20 Peoria blackbirds and won the club's medal.

* * *

In another column will be found an attractive ad. of the "S. S." company, showing each week the picture or some noted expert exponent of that explosive.

* * *

Jos. Wolstencroft has received a letter from H. M. Worden, of the Harrisburg Shooting Association, denouncing in strong terms the actions of Budd Kinzer, detailed in last week's story of the Reading shoot.

* * *

The Norwich line boat which leaves Pier 40 (old number), North River, at 5:30 next Monday afternoon will take a jolly crowd of New Jersey and New York shooters to New London, Conn.

* * *

Charley Tuttle and his fellow hustlers, of the Auburn Gun Club, will give visitors a warm reception during the coming Interstate shoot at Auburn.

* * *

It is expected that a score of 100 straight will have to be made to win the diamond ring at the Keystone shoot. And the ring is well worth 100 per cent.

* * *

Lieut.-Col. R. Heber Breintnall won the Maplewood (N. J.) Gun Club's monthly cup contest on Saturday last by breaking 48 out of 50 targets.

* * *

The Eagle Eye Gun Club, of Centre Belmont, Me., shoots every Saturday afternoon on the premises of Chas. Lamb, near Tilden Pond.

* * *

The Courtland County Gun Club anticipates a big time on Aug. 31 when it will hold an all-day tournament at kingbird targets.

* * *

"Doc" Wolstencroft, alias "Captain McFarland," was in great form at the Springfield tournament, killing 58 live birds straight.

* * *

The Rockville (Md.) boys expect to have a lively time at their shoot this week. Billy Wagner will be prime hustler.

* * *

The Findley (Ohio) Gun Club held its weekly shoot on August 16, Evans winning the main event with a score of 43 out of 50 targets.

* * *

"Happy Jack" Milliott and Pilkington, the shooting oarsman, are matched for a 100-bird race, to take place early in September.

* * *

Prizes aggregating $500 will be awarded at the shoot of the Michigan Trap-Shooter's League, at East Saginaw, on Sept. 6, 7 and 8.

* * *

W. H. Wolstencroft, E. D. Miller and Rolla Heikes will be members of the Western team at the Keystone tournament.

* * *

John Cullen defeated Stewart Linton in a 15-bird match at Easton last week by a score of 12 to 11.

* * *

The Onondaga County Sportsmen's Club will have a two-days' tournament this fall at Syracuse.

* * *

Al Spangler has had a force of men engraving on parts of Smith ejectors for a year and can not catch up to the orders.

* * *

The Central Gun Club, of Elizabeth, N. J., will have a bird shoot at Deugler's Grove, on Labor day.

* * *

H. A. Penrose says the Keystone tournament will reach high-water mark so far as entries are concerned.

* * *

The Peekskill Gun Club will have some first-class birds on the final day of its tournament.

* * *

The Cortland County (N. Y.) Gun Club will have a big time at its Kingbird-target tournament, on August 31.

* * *

The annual open shoot and picnic of the Parkway Gun Club will be held at Dexter Park, Long Island, on Monday.

* * *

The West End Gun Club will hold a tournament on Sept. 4 and 5 at Davenport, Ia.

* * *

The Griffin Gun Club, of Atlanta, Ga., holds its regular shoots at Camp Northern.

* * *

The Walkerville and Keystone Gun Clubs, of Detroit, Mich., have consolidated.

* * *

It will be a battle royal between the New Jersey and Connecticut teams at New London next week.

The next shoot of the Connecticut Shooting League will be held at Windsor Locks.

* * *

The "Smokeless" shell of the U. M. C. Co. is making friends wherever it is tried.

* * *

The Wauregan Gun Club has elegant new grounds at Pelhamville, Staten Island.

* * *

What a gathering of the clans there will be next week at New London.

* * *

Saratoga has not yet announced the date for its tournament.

* * *

E. R. Kniskern says the Wilkesbarre gun is having a "boom."

* * *

All the Interstate tents will be at New London.

* * *

St. James, Minn., has a gun club.

C. H. Townsend.

### Garfield Gun Club.

Chicago, Ill., Aug. 16.—*Editor Forest and Stream:* As you will see the Garfield Gun Club won a victory on Aug. 13, over their neighbors the Douglas Gun Club, by a moderate score on both sides, but still with a good fair margin. It is a curious thing that some men who usually are strong shooters at a club shoot go all to pieces, so to speak, when an event like this is on hand. This can be readily seen by comparing the scores in the two shoots. Next week we shoot a match with the Northwestern Gun Club. In fact, from now till the end of our season our time will be pretty well occupied in various matches. This is right, it wakes up the boys, and if defeat meets us we will try still harder. By a challenge received we will have need of all our skill to maintain our lead. Scores below:

Garfield Gun Club Team.

| | |
|---|---|
| S Palmer | 01100111111111011111—16 |

Richards won A class medal, Young B class and Drake C class.

H. C. Brown.

### New Utrecht Gun Club.

The usual weekly shoot of the New Utrecht Gun Club was held on Saturday, August 20, at Woodlawn Park, S. I. The competition at targets was for the gold and silver medals in that class. D. Deacon, who has won the golden trophy several times in succession, had to succumb to R. R. Street, a novice at target shooting. M. Van Brunt won the silver trophy. The score:

| | |
|---|---|
| M. Van Brunt | 11101010101101011111—14 |
| D. Deacon | 01110101010101101111—13 |
| A. A. Hegeman | 10110111100100101011—12 |

| D. Reese | 10101—3 | |
| D. Callender | 10221—4 | |

### The Ottawa Tournament.

Ottawa, Aug. 20—The Rideau rifle range had an attendance of trap-shooters to-day at the tournament given under the auspices of the St. Hubert and Rideau Gun clubs. The shooting at times was away up and the St. Huberts first team with 94 in a possible 100 did a noteworthy feat. Much regret was felt that the Aylmer Gun Club were unable to send a team to compete for the beautiful silver cups given for this match by Mr. R. J. Shaw, president of the St. Hubert Gun Club; but it is understood that a challenge will shortly be sent by the Aylmers to the St. Huberts for the Montreal challenge cup, at present held by the St. Huberts. Should this be the case an interesting contest may be looked forward to.

Sweepstake No. 1, 15 birds: W. P. Batterton 12, J. Locke 11, J. P. Nutting 10, W. J. Johnstone 11, A. Stewart 7, A. W. Throop 12, P. Trudeau 12, R. G. Dalton 14, C. L. Panet 5, W. E. Calvert 6, W. R. McEwan 10, E. A. Grant 3, W. McMahon 8, W. J. Henry 6, J. Stewart 12, J. N. Desiauriers 8.

Match No. 2, guaranteed to $40, five prizes of $8 each, class shooting, 20 birds each: Dr. McPhee 12, Throop 17, Johnston 18, Lack 19, A. Stewart 10, Dalton 18, Deslauriers 17, Calvert 12, Batterton 16, Nutting 13, Martin 16, Trudeau 16, McMahon 12, Panet 12, White 18, Stewart 19, McEwan 15, Grant 9.

Match No. 3, sweepstake at 15 birds: Lock 14, Johnstone 14, Dalton 13, Throop 15, Deslauriers 13, Trudeau 13, McEwan 13, Dr. Martin 12, J. Stewart 13, Batterton 12, Nutting 12, White 9, A. Stewart 10.

Match No. 4, team match:

| St. Hubert No. 1. | St. Hubert No. 2. | Rideau Gun Club. |
|---|---|---|
| R G Dalton....20 | Dr Martin.....17 | W R McEwan..12 |
| A W Throop...19 | J P Nutting... 14 | W E Calvert...10 |
| A Johnstone...19 | P Trudeau.....18 | W P Batterton,16 |
| J Lock.....19 | S White.....14 | E A Grant.....10 |
| J Stewart.....19—96 | T Deslauriers,.17—80 | W J Henry.....10—58 |

Match No. 5, guaranteed of $40, 5 prizes of $8 each, class shooting, 20 birds: Johnston 16, Lock 20, Throop 19, Deslauriers 19, Dalton 20, Dr. McPhee 12, Calvert 12, Nutting 15, Batterton 17, Trudeau 16, McMahon 15, Panet 11, Grant 8.

### Fond du Lac Gun Club.

Fond du Lac, Wis., Aug. 20.—Inclosed find score of our shoot Aug. 13, 25 bluerocks: S. Burris Amory 18, Fred Hurlbut 14, Will Reinig 5, L. F. McLain 10, Will Hamilton 15, M. S. Treleven 15.

Score of regular shoot Aug. 20, 25 single bluerocks: M. S. Treleven 15, W. I. Hamilton 9, A. R. Keating 12, F. Hurlbut 10, A. Hamilton (visitor) 4, F. S. McLain 10, Lant Lewis 19, M. S. Treleven 5 pairs, 6; A. R. Keating 6 pair, 7; Lant Lewis 6 pair, 6, with Winchester repeater.

A. R. K.

### Coney Island Shooters.

Some good races were shot off on Monday morning at Coney Island between some of the members of the Atlantic Rod and Gun Club. The first under modified Hurlingham rules between R. Dwyer and C. E. Morris against J. B. Collins and T. Langcake was won by the former with the score of 42 to 39. The second under modified Long Island rules, bird to be on the wing, both barrels, caused a considerable amount of fun between the shooters and referee. All the birds scored as missed were lost on account of gun being above the elbow. The last match resulted in a tie, and as the birds gave out it was declared a draw, each man paying for his birds. The score:

First team match, $200 a side, 25 birds:

| | |
|---|---|
| R Dwyer | 1121122120102111101102o—18 |
| C E Morris | 1112211212110111221121121—24—42 |
| J B Collins | 1121102221120200121221012—20 |
| I Langcake | 11o1c001122212111020121l—19—39 |

Second match, $100 a side, both barrels bird on wing:

| | | | |
|---|---|---|---|
| R Dwyer | 00021 0111—6 | 10011 0111— 7 | |
| T Langcake | 1101110111—8—14 | 1110111101— 9—16 | |
| C E Morris | 2002101111—7 | 1111111111—10 | |
| J B Collins | 1101120211—8—15 | 1110111100— 6—16 | |

### Wauregan Gun Club.

On Thursday, Aug. 18, several members of the Wauregan Gun Club had a private match shoot at their new grounds at Pelhamville, Westchester county, N. Y. A match was shot off on Saturday, Aug. 6, between W. H. Brickner and partner against F. Kerker and partner, which resulted in a tie of 43 on each side. The return match was arranged to come off at the last meeting but only Brickner and Kerker were present, so the two shot off a race for the birds. Some other good races took place and the scores were:

First match, 27yds., $25 a side:

| | |
|---|---|
| W H Buckner | 2213010221212210122101222—21 |
| F Kerker | 0210120122212012002102002—16 |

Second match, 10 birds:

| | | | |
|---|---|---|---|
| J Elliott | 1202212210—8 | P McGee | 2110220220—8 |

Third match:

| | | | |
|---|---|---|---|
| J Elliott | 0021022021—5 | P McGee | 1210022102—7 |

Sweepstake, miss and out, $1 entry, won by Godfrey.

Bluerock sweepstake, 25 targets: J. Elliott 19, G. Greenville 19, J. Godfrey 12, P. McGee 2.

### Riverside Gun Club.

Red Bank, N. J., Aug. 19.—The regular monthly shoot of the Riverside Gun Club took place to-day on the Beach street grounds. This was the first meeting of the season, and the attendance was large. The first event was a club handicap at seven live birds, in which there were twelve entries. First money was divided between John and Edward Cooper and John B. Bergen,

WALTER D. FILER,

Secretary Reading Shooting Association.

who scored 6 each. Henry C. White and Frank Heyer scored second money with 5, and James Cooper, Jr., was third with 4.

A sweepstakes match at nine bluerocks had ten entries, Edward Cooper winning first money with 9, John Cooper and Oscar Hesse broke 8 each and divided second money. Edward Cooper won the final event at five pairs of bluerocks, scoring 8. John Cooper and Hesse got 7 each.

The club is getting ready for its tournament on Oct. 5, 6 and 7. The grounds are to be inclosed and other important improvements to be made. A number of the leading clubs in the State will be invited to take part. The targets will be live and clay birds.

### Wilmington vs. Grubb's Corner.

The following scores were made in a match between teams of 10 men each from the Wilmington Rod and Gun Club and the Grubb's Corner Rod and Gun Club, both of Delaware, on Aug. 13:

| Wilmington R. and G. C. | | Grubb's Corner R. and G. C. | |
|---|---|---|---|
| Bilderback | 12 | W Pierce | 19 |
| Clark | 13 | A Harvey | 15 |
| M H D | 14 | W Brown | 16 |
| Harris | 15 | L Vance | 16 |
| Stout | 17 | W Booth | 12 |
| Hartlove | 20 | W Pierce | 13 |
| Byrne | 13 | B Vance | 13 |
| Cooper | 13 | I Bird | 19 |
| Hamilton | 13 | N Grubb | 11 |
| Wagoner | 19—148 | I Pierce | 9—144 |

The match took place on the grounds of the winning team. This is the second time the Wilmingtons have defeated the Grubb's Corner team. A series of sweepstakes at 10 targets each resulted as follows:

No. 1: Bilderback 6, Booth 3, Hamilten 9, Pyle 6, Grubb 3, Hartlove 8, Underwood 8, Cooper 9, Clark 4, Harris 6, Pierce 3, Lancaster 8.

No. 2: Bilderback 6, Hamilton 9, Wamsly 5, Harris 7, Cooper 8, Pyle 5, Lancaster 5, Grubb 1, Hartlove 8.

No. 3: Hamilton 7, Wamsley 5, Harris 9, Cooper 8, Lancaster 8, Pyle 6, Grubb 5.

### Oneida County Sportsmen's Association.

Utica, N. Y., Aug. 19.—The weekly shoot of the Oneida County Sportsmen's Association was rather slimly attended despite the favorable weather conditions. The scores were as follows:

No. 1, badge contest:

| | |
|---|---|
| Smyth | 11111101111101111111111—23 |
| Elliott | 11111111111111111100011—22 |
| Knowlton | 01111000111101111010111—19 |
| Harris | 00111111111111101011111—21 |

No. 2, club shoot:

| | |
|---|---|
| Knowlton | 11101111111111111111111—24 |
| Smyth | 11111111111111111111110—24 |
| Elliott | 11111111111111111111111—25 |
| Kollies | 11111111111111111011111—24 |
| Gilmore | 10000001011011100111110—13 |
| Harris | 11101111011111111110101—21 |
| Kilbourne | 01111111101111101111111—22 |
| Weed | 10010000101000100010100— 8 |
| Lane | 01100011001011100101010—13 |

### South Branch vs. Centreville.

A match between teams of eight men each representing the South Branch Gun Club, of Somerville, N. J., and the Centreville Gun Club took place at Centreville on Aug. 13, the scores being:

| South Branch. | | Centreville. | |
|---|---|---|---|
| L T Schenck | 10 | H Cortelyou | 17 |
| J H Ross | 19 | D Dilts | 12 |
| J Dewis | 16 | F Hall | 11 |
| P S Tingley | 15 | F Servis | 19 |
| G V Apgar | 19 | O Huff | 19 |
| F Lewis | 20 | D Hall | 14 |
| R Hoagland | 10 | Davison | 17 |
| M Hurling | 15—124 | D Snyder | 4—112 |

### Shooting in the Blue Grass State.

Covington, Ky., Aug. 15.—An interesting shoot at live pigeons took place at Teiple's Shooting Garden, Covington, Ky., yesterday, among the contestants being C. A. Young, of Springfield, O.; Verges, of Lowell, O.; Richard McGraw, an old-timer from Mason; Benj. Davis and Samuel Condell. The grounds are finely adapted for live-bird shooting, the boundary being 40yds. front, 32yds. left and 32yds. right, with a dead line 32yds. from the center trap. Otherwise the shooting was governed by Hurlingham rules. The result:

Event No. 1, 5 birds, entrance $3:

| | | | |
|---|---|---|---|
| J Schreck | 11202—4 | Lee | 22122—5 |
| C A Young | 01011—3 | Snider | 12011—4 |
| C E Verges | 02222—4 | Ben Davis | 20121—4 |
| Tug | 12111—5 | Wood | 21022—4 |
| Murphy | 12102—4 | | |

No. 2, entrance $3:

| | | | |
|---|---|---|---|
| J Schreck | 11010—3 | C A Young | 12101—4 |
| H Robinson | 12111—5 | Tug | 12222—5 |

### Hamilton Gun Club.

Hamilton, Aug. 5.—To-day for the fourth time the members of the Hamilton Gun Club competed for the handsome silver medal donated by the Hamilton Powder Co. This is a handicap competition, with the number of birds allotted to each marked opposite their names. The winner has one bird taken off and all the others a bird added for the following competition. As no score can count higher than 20 it will readily be seen that it will be next to impossible for one individual to win many times in succession.

To-day was J. W. Bowman's second win, D. Smith and Wilson having won once each. The competition for this medal is to continue until May 1, 1893.

The club medals were also shot for, Bowman winning easily in first class and Parker in second class.

Much regret was expressed at the absence of our esteemed vice-president, Captain Spencer, whose portly form and pleasant face add much to the enjoyment of our monthly competitions.

Hamilton Powder Co.'s medal, handicap, unknown angles:

A. C. Collins, President.

### Minneapolis Gun Club.

Minneapolis, Minn., Aug. 20.—The Minneapolis Gun Club will open its regular winter season on Sept. 8. The diamond badge contest will be at 100 singles. The secretary announces the following members eligible to shoot in the several classes, their average for the past season being also shown:

Senior Class—John Marshall .875 per cent., E. W. Ensign .875, L. Harrison .865, H. C. Lawrence .860, J. C. Joyslin .860, H. A. Richter .800.

Junior Class—W. L. Ellis .785 per cent., James Ford .775, W. L. Wolford .770, John Nicholson 760, F. A. Richter .760.

Amateur Class—F. C. Lawrence .760 per cent., W. H. Jacoby .755, Ed Terrill .645, Geo. Gooseman .635, F. B. Whitcomb .630.

All ties in these matches will be shot at 30 singles and 10 pairs.

Diamond Badge—Senior Class—John Marshall .935 per cent., H. C. Lawrence .935, J. C. Joyslin .936, D. Harrison .925, E. W. Ensign .895, F. C. Lawrence .886.

Junior Class—H. A. Richter .875 per cent., Jas. Ford .845, W. L. Wolford .815, John Nicholson .815.

Amateur Class—F. A. Richter .810 per cent., F. B. Whitcomb .800, W. L. Ellis .795, Ed Terrill .660.

Ties in this match will be shot at 50 singles. Juniors are allowed a handicap of 8 birds in the 100 and amateurs 16.

### Erie Gun Club.

On account of the scarcity of birds during the month of May, the regular monthly shoot of the Erie Gun Club was indefinitely postponed. The regular monthly shoot for August was held at Woodlawn Park, Gravesend, L. I., on Wednesday Aug. 17, and it was then decided to shoot off the postponed May contest for the club's gold medal and three extra prizes, at seven birds each. C. Plate and H. Dohrman tied with seven straight, the former winning on the shoot off. The ties for the second prize to be decided by the scores in the regular August shoot which followed. A good race took place between J. Schmadeke and M. Elsasser for the medal and first prize, Schmadeke won on the seventh round. J. Plate took the second money and D. Lynch the third in both shoots. A sweepstake shoot followed with eight entries, and a long race took place between J. Plate and C. Mohrman, the former winning on the fourteenth round of the tie. The scores:

| | May Shoot. | August. | | May Shoot. | August. |
|---|---|---|---|---|---|
| C Plate | 2111112—7 | 0110211—5 | J State | 1111120—6 | 0220111—5 |
| F Greff | 1101121—6 | 1102021—5 | Schmadeke | 1211202—6 | 2201211—6 |
| H Dohrman | 1111112—7 | 0112210—5 | C Mohrman | 1122120—6 | 1221201—6 |
| D Lynch | 1011000—3 | 0000011—2 | M Elsasser | 0211112—6 | 1211101—6 |

Sweepstake, 5 birds, $1 entrance, 3 moneys:

| | | | |
|---|---|---|---|
| C Plate | 01101—3 | M Elsasser | 11021—4 |
| J Schmadeke | 12110—4 | C Mohrman | 02222—4 |
| J Plate | 11220—4 | H Dohrman | 01010—2 |
| D Lynch | 10000—1 | F Greff | 10123—4 |

## The Central Iowa Tournament.

AMES, Iowa, Aug. 18.—The Central Iowa Shooting tournament opened at the Driving Park at this place on Tuesday and closed last night, the attendance being rather light owing to the warm weather and busy season. The shoot was under the management of G. C. Christianson and John Georgeson. Bluerock targets and traps were used and both gave good satisfaction. The shooting was from five traps under the rapid-firing system, which in my judgment takes away every particle of pleasure from target shooting. I for one will welcome the day when some shooting club gets backbone enough to hold a tournament under the old system of shooting from three or five traps under the National or American Association rules.

Among the shooters in attendance were Hon. J. G. Smith and Henry Durant, of Algona; E. D. and H. J. Trotter, of Kingsley; G. E. Hughes, of Fonda; Bergen and Kosterman, of Ida Grove; Butler, of Boone; Leonard, of Nevada; Allerton, of Sandford; Whiting and Budd, of Des Moines; J. M. Taylor, of Knoxville and G. W. Rexroat, of Virginia. The office work was done by F. C. Whiting, who was always ready to take in or pay out cash.

*The First Day's Scores.*

Target events, 10 targets, $1, and 5 targets, $1.50; 20 targets, $2; 25 targets, $2:50:

## Dando Wins the Grand National.

THE grand national handicap of the Hollywood Gun Club was shot at Hollywood Park, near Long Branch, N. J., on Aug. 19, the conditions being 50 live pigeons per man, $100 entry, 70 per cent. to first, 20 per cent. to second, and 10 per cent. to third, modified Hurlingham rules to govern, rises from 27 to 31yds., 21yds. boundary. ties to be shot off at 10 birds each. There were eleven entries. The birds were a mixed lot, some being extra good, some few poor, but the majority above the standard for the season. The weather was beautiful, with a southeast breeze tempering the heat. The grand stand was filled with a fashionable audience. The match was a close one throughout, the result being a victory for Thomas Dando, who grassed 48 of his birds. E. G. Murphy shot a game race, killing straight after the eleventh round. John S. Hoey was referee. The birds were procured by L. M. Gilbert. The shoot began at 11:35 A. M., and closed at 5:15 P. M. Dando saved his last bird and will have it mounted.

Below are the scores of the match in full:

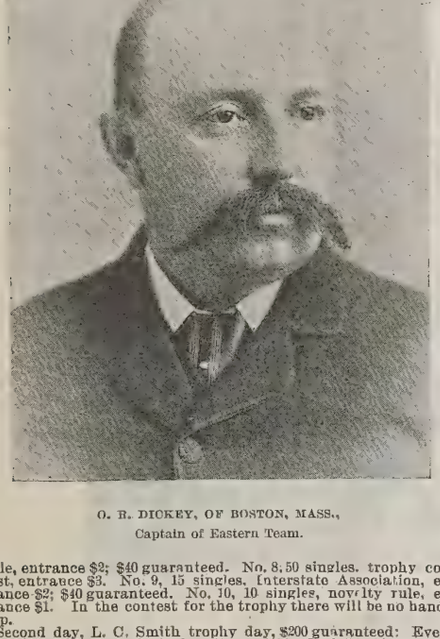
## The Utah Championship.

OGDEN, Utah, Aug. 1.—The second match for the championship badge of Utah between James M. Anderson, formerly of Kansas City, who won the badge July 4, and A. J. Dermody, of Ogden, took place in Salt Lake City July 29, and was won by the latter. Conditions: 40 single bluerocks and 10 pair, 5 unknown traps. Score:

| | | | | | | | | |

## "New London Will Catch Them All"

SAYS H. A. Penrose, and if his word is not made good it will not be the fault of himself nor the Standard Keystone Target and Trap Company, whose fifth annual tournament will be held at the above place on Tuesday to Friday, inclusive, of next week. A very handsome souvenir programme has been scattered broadcast throughout the country, this showing well-executed pictures of several well-known trap experts, as well as of the Standard-Keystone, L. C. Smith and Peters Cartridge companies' trophies. Mr. Penrose has secured reduced rates on all railroad and steamboat lines, and has also secured a reduction in hotel rates during the tournament. The shooters' headquarters are announced as the Crocker House. Stages will be run from the hotel to the grounds. Lunch will be served on the ground, under canvas, at noon each day.



The tournament will take place on the grounds of the New London Gun Club, which are situated on the banks of the New London Harbor (about one mile from the hotel), affording an almost unequalled open foreground for shooting. The tents will be arranged, after the manner of the Inter-State Manufacturers' and Dealers' tournaments, on the wooded slope of the hill to the rear of the grounds, while the score will be covered with an immense awning that will prevent the rays of the sun from interfering with the work of the shooters.

In previous years the Keystone tournaments have attracted immense lists of entries and the prospects are that the coming affair will exceed all previous efforts. The program has been carefully prepared and presents events under a diversity of rules. An innovation will be in those events shot under the "Novelty" rules which call for sixteen traps, the system being thus described: Six traps will be placed in the field sixty yards from the score, five yards apart, and will throw right and left inquarterers and straight incomers, while the other ten traps will throw the targets in the usual manner. Unknown traps, unknown angles, different distances, open to all, no handicap. As this rule is entirely novel, as its name implies, the amateur will have an equal chance with the expert.

When shooting the Interstate Association Handicap events the shooters will be classified under those rules and the management will make particular efforts to classify every shooter according to his abilities. Ten traps will be used in a straight line. In shooting the Trophy, Diamond Ring and Team Races the Amateur Rules will govern. There will be no handicap and all will shoot on an equal footing.

The full program is as follows:

First day, Standard-Keystone trophy day, $200 guaranteed: Event No. 1, 10 singles, novelty rule, entrance $1. No. 2, 15 single, Interstate Association, entrance $2; $40 guaranteed. No. 3, 10 singles, novelty rule, entrance $1.50; $20 guaranteed. No. 4 15 singles, Interstate Association, entrance $1.50. No. 5, 20 singles, novelty rule, entrance $2.50; $50 guaranteed. No. 6, 10 singles, Interstate Association, entrance $1. No. 7, 15 singles, novelty

O. R. DICKEY, OF BOSTON, MASS.,
Captain of Eastern Team.

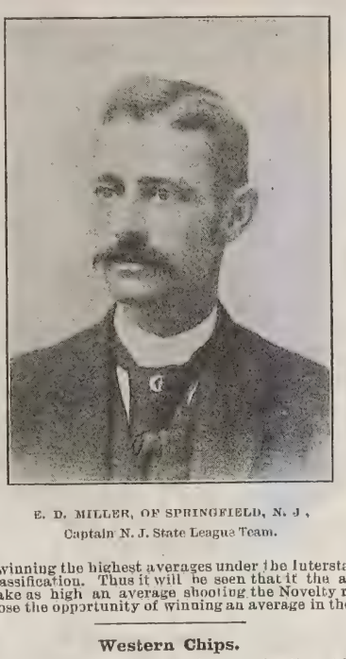
rule, entrance $2; $40 guaranteed. No. 8, 50 singles, trophy contest, entrance $3. No. 9, 15 singles, Interstate Association, entrance $2; $40 guaranteed. No. 10, 10 singles, novelty rule, entrance $1. In the contest for the trophy there will be no handicap.

Second day, L. C. Smith trophy day, $200 guaranteed: Event No. 1, 10 singles, novelty rule, entrance $1; No. 2, 5 pairs, open to all, $2, $40 guaranteed; No. 3, 20 singles, novelty rule, $2.50, $50 guar.; No. 4, 15 singles, Interstate Association, $1.50; No. 5, 20 singles, novelty rule, $2.50, $50 guar.; No. 6, 10 singles, Interstate Ass'n, $1; No. 7, 50 singles, trophy contest, $3; No. 8, 15 singles, novelty rule, $1.50, $30 guar.; No. 9, 10 singles, Interstate Ass'n, $1.50, $30 guar.; No. 10, 10 singles, novelty rule, $1. There will be no handicap in events No. 2 and 7.

Third day, Peters Cartridge Company's day, $200 guaranteed: No. 1, 10 singles, novelty rule, $1; No. 2, 15 singles, Interstate Ass'n, $2, $40 guar.; No. 3, 20 singles, novelty rule, $2.50, $50 guar.; No. 4, 15 singles, Interstate Ass'n, $1.50; No. 5, 20 singles, novelty rule, $2, $40 guar.; No. 6, 10 singles, Interstate Ass'n, $1; No. 7, 50 singles, trophy contest, $3; No. 8, 15 singles, novelty rule, $2, $40 guar.; No. 9, 10 singles, Interstate Ass'n, $1, $30 guar.; No. 10, 10 singles, novelty rule, $1.

Fourth day, championship day, $75 guaranteed: No. 1, 10 singles, novelty rule, $1; No. 2, 15 singles, Interstate Ass'n handicap, $2, $35 guar.; No. 3, 20 singles, novelty rule, $2 50, $40 guar.; No. 4, 25 singles per man, first match New Jersey State League vs. Connecticut State League, open to one team from any State association or league, $50 per team; No. 5, 100 singles, individual championship of the United States, $5; No. 6 100 singles, team race between East and West for championship of America, $60 per team; No. 7. 10 singles, novelty rule, $1. No handicap in events No. 4, 5 and 6

Event No. 4 on the fourth day is open to one team of 10 men from any State association or league. In case more than two teams enter the purse will be divided to suit the captains of the several teams. Enoch D. Miller, of Springfield, N. J., will captain the New Jersey State League team and C. E. Longden, of New Haven, Conn., will captain the Connecticut State League team. Entries will be received up to 12 M. of the day of the match.



Event No 6, on the same day, is between teams of six men each, representing the Eastern and Western sections of the country. The purse will go to the winning team. M. F. Lindsley, of Hoboken, N. J., will captain the Western team, and can select any six men living west of New England. O. R. Dickey, of Boston, Mass., will captain the Eastern team, and can select any six men living east of New York. Each captain will have at least ten men on the grounds to select from.

Event No. 5 on the fourth day is to determine the individual champion target shot of America, the prize to be a diamond rug costing $200, which becomes the property of the winner.

All trophies won by individuals at this tournament are to be held by them for one year, and bond given for their safe return at expiration of said term. If winners prefer, donors will hold trophy and no bond will be required.

In the trophy contests, winners of trophies get the trophy only this year; and the money is divided, to winners of trophies in 1891, 40 per cent.; second, 30 per cent.; third, 20 per cent.; fourth, 10 per cent. Next year the winners of this year's trophies get 40 per cent. of the entrance money.

All purses in the regular events will be divided 30 per cent., 25 per cent., 20 per cent., 15 per cent. and 10 per cent. All ties will be divided unless majority in purse decide to shoot off. All surplus money divided as follows: 55 per cent. added to purses; 10 per cent. to first and 5 per cent. to second for best average in expert class to those shooting in all guaranteed purses on any one day; 10 per cent. to first and 5 per cent. to second for best average in semi-professional class, and 10 per cent. to first and 5 per cent. to second for best average in amateur class to those shooting in all guaranteed purses on any one day. All averages paid each night. The surplus money in the Novelty rule events will be added to the surplus money in the handicapped events, and will be paid to the

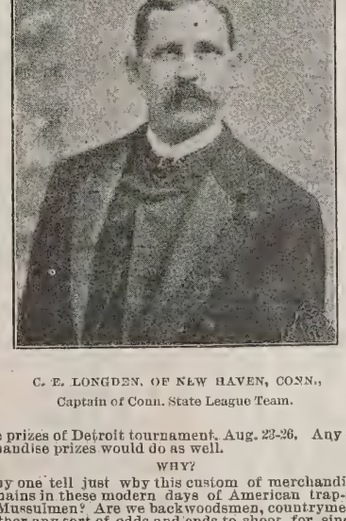
E. D. MILLER, OF SPRINGFIELD, N. J.,
Captain N. J. State League Team.

shooters winning the highest averages under the Interstate Association classification. Thus it will be seen that if the amateurs do not make as high an average shooting the Novelty rule they will not lose the opportunity of winning an average in their class.

## Western Chips.

CHICAGO Ill., Aug. 19.—There has been no shooting at Watson's Park of late, chiefly for the reason that there hasn't been any Watson's Park. As announced last June, Mr. Watson has been compelled by encroaching real estate improvements to give up the lease on the old Burnside ground, and for the second time in three years has had to get out of the way for south-bound Chicago. He has secured grounds just beyond the old ones, equally good and almost as accessible; since they are reached by the same railroad station, Burnside. In a short time Mr. Watson will have things in running order again and will be furnishing the old J. Watson brand of harsh, sudden pigeons. In the meantime a large slice is taken out of Chicago trap shooting.

COL. MEADE-WINSTON.



Col. Jack Meade-Winston, of St. Louis, which is the same that beat Geo. Kleinman here once and probably thinks he could do it again, though probably he might not, has, it appears, forsaken the tobacco trade and gone into the hand-loaded shell business a St. Louis. He aptly claims for trade mark the "Winner Brand," and will load three grades, the winner best, the winner medium and winner worst.

MERCHANDISE PRIZES.

There are certain customs which by reason of their hoary old age have attained a respect and reverence which do not belong to them by any existent virtue of their own. I am told that there is a certain holy stone in Mecca which all good Mohammedans kis when they travel thither in pilgrimage. Continual kissing has worn the stone thin. I am told also that devout Catholics have in similar way nearly kissed the great toe off the statue of St. Peter at Rome. Evidently these people have thus kissed this natural stone and this artificial toe in stone because they have seen thousands kissing before them. Now, I should not like to be irreverent, or to step upon anyone's toe, artificial or otherwise, but really, those are just the sort of places I should not want to kiss at all. The antecedent thousands would be no argument.

I can not see why the antecedent thousands should be *per re* an argument anywhere. I can not see why a custom should continue simply because it is a custom. This is no day for Mecca stones. No temple threshold to-day is sacred but the door stone of the temple of progress. Customs to-day need reasons under them, not history behind them.

These things occur to me as I look over the list of special mer-

C. E. LONGDEN, OF NEW HAVEN, CONN.,
Captain of Conn. State League Team.

chandise prizes of Detroit tournament, Aug. 23-26. Any other list of merchandise prizes would do as well.

WHY?

Can any one tell just why this custom of merchandise prizes still remains in these modern days of American trap-shooting? Are we Mussulmen? Are we backwoodsmen, countrymen, knocking together any sort of odds and ends to shoot for, since cash is not at hand? Admitted that we are, why, then, should we not shoot for our own stuff? What right have we to go to uninterested home merchants and beg for contributions? Is it not asking quite too much of local tradesmen of all sorts, to draw upon them for contributions for which they cannot in natural course expect any return by way of trade? My expectant tradesman, importuned by the tournament manager, gives from his stock (I quote) "one stiff hat," "one pocket knife," "one umbrella," "one picture," "one ornamental beer mug," "one parlor lamp," etc., etc. I have seen loaves of bread, bottles of liniment, etc., in such lists. My tradesman is not a shooter, perhaps, but only that much enduring man, a local merchant. Does the winner of the ornamental beer mug or the parlor lamp go to the donor of his prize and buy other ornamental beer mugs and parlor lamps? Not in the least. He does not even know the donor's name. He speaks of the gift in tones of the utmost carelessness and contempt. It is a gift pure and simple, without reason in commerce or in common sense, yet I never knew a shooter who had consideration enough to thank the donor for such "plunder"—as it is usually called.

The management would not beg stuff for his own personal use. Why should he beg it for a use which is intended for his own direct personal gain? Because it is a custom? I can see no reason for such a custom. It might have done for the past, when shooters needed pampering. We ought to be more dignified and manly than that now. We are men grown in shooting now, and we ought to have the independence and dignity to shoot like gentlemen and like men. It is time for the trap-shooter to shake free from the old pampering policy, to get out of coddling arms, and stand square down on his own legs. He is old enough now to walk. He is old enough to see that the most honorable future for his sport is one in which it shall not be mere gambling and dividing up of unfairly obtained and still despised "plunder;" but where it shall be a manly and honorable contest of skill among competitors made as nearly equal as possible by a just system of handicap. Sport, not a gambling scramble, that is what trap-shooting should be.

"But," says some timid friend, "such talk will offend the shooters."

Not in the least. Such talk will offend no shooter of intelligence who will stop for one instant to give the matter thought. The custom has nothing to do with it. If we must go back in customs, much better would we hold to the customs of the old Olympic games, where men contended with all the energy of their lives, not for stiff hats and ornamental beer mugs, but for a simple crown of laurel. The American custom is wrong. The Greek custom was right and is right. Give us medals, trophies, prizes, souvenirs—honors, in short—but keep us away from tawriness, mercenarness, from the vulgar principle of mere personal gain. These latter will ruin trap-shooting if allowed to run an unthinking course.

The Illinois State Sportsmen's Association took the first step in the right direction this year, when it declined to do any soliciting for special merchandise prizes, offering only such as came in voluntarily. It may be that in this is sounded the first note of the coming cry, "The merchandise list must go."

NOT ONE GUN LESS.

Not one less gun would be fired if every management would hoist this motto on its banners. Indeed, that state of affairs would be a relief to all concerned. No shoot will suffer which abandons this old and senseless custom. No shooter will suffer who casts his vote against it. To vote thus is to vote for a modern and a higher sportsmanship. It is to take a step up, to a more dignified and manly plane of sport. I fear of offending no one. I know that that plane is where trap-shooters belong, and where

M. F. LINDSLEY, OF HOBOKEN, N. J.,
Captain of Western Team.

they want to go. They do not belong in babydom to-day. They do not belong in a mercenary machine system. They belong in a system of active, fair and honorable competition in sport among men and gentlemen. That is the plane for them. That is where they belong, and where they all want to go. The trap-shooter of to-day is a man of thought, intelligence and progress. He is advancing with all the world of sport.

The merchandise list must go.

E. HOUGH.

## Michigan Trap Scores.

SAGINAW, Mich., Aug. 16.—The West Side Gun Club tried a new style of expert trap at their shoot Sunday for the first time. They are operated by an electric pull and the appliances were put in perfect operation by John Herman, of the electric light works, the traps operating in fine style. The operation of the new traps puzzled the marksmen of the club not a little and more lost birds were scored than at any previous shoot. The medal for the A class was won by Edward Carpenter for the second consecutive time. The scores are as follows, each being out of a possible 25:

A class—Carpenter 22, Brechtelsbauer 20, Keller 20, Bowden 21, Bastian 18, Kindler 14, Ward 16, C. Zschoerner 20, Adams 14, Cone 14, Hatcherson 17.

B class—J. Herman 20, H. G. Zschoerner 17, Wirth 11, C. Delonjay 14, C. Schoeneberg 14, Held 11, H. G. Krogmann 7, Michelson 12.

C class—A. Delonjay 21, Wm. Brown 9, L. Herrig 8.

GRAND RAPIDS, Aug. 17.—As the game season is near at hand, the Valley City Gun Club will probably discontinue its trap shoots hereafter and confine its attention to the more exhilarating sport of shooting animate birds. The farewell shoot took place yesterday afternoon at the club's grounds near the Country Club and a contest for a supper was indulged in. Gauthier, the winner of the State individual championship, and W. S. Coleman were chosen captains. The score by teams is as follows:

Captain Gautbier 19, Summers 17, Davidson 16, Hansen 8, Kelsey 4, Freaut 13, Knowlson 15, Pugh 10, Planes 9, Stainton 1; total 112.

Captain Coleman 13, Wharton 18, Gould 16, Walton 12, White 17, Rood 15, Temple 6, Nelson 12, Scribner 4, Love 11; total 124.

The losing team escorted the winners to Sweatland's, where a sumptuous supper was served and a general good time enjoyed.

## Money Defeats Hoey.

CAPTAIN A. W. MONEY, the well-known expert, and Fred. Hoey of Long Branch shot a match at Hollywood on Aug. 15, the conditions being 100 live birds each, 30yds. boundary, 21yds. rise, for $100 a side. The shoot began soon after 11 A. M., there being breeze enough from the west to temper the sun's rays and keep the shooters comfortable. Lou Thompson looked after Captain Money while Daniel Johnson did the honors for Mr. Hoey. The birds were a good lot. Up to the eightieth round the race was a close one, but from that point to the finish Money had things his own way as the appended scores will show:

## Missouri State Shoot.

LEXINGTON, Mo., Aug. 13.—The Missouri State Amateur Association held its second annual tournament at Lexington, Mo., Aug. 10, 11 and 12, which proved to be the most pleasant and successful shoot ever held in the State. The tournament was under the management of the Lexington Gun Club, and much of the success of this association is due to the Lexington Club. Long since the old Missouri State Association was taken in hand by all the professional shooters of the United States, and is run and managed so entirely for this class of shooters that the membership of this association has dwindled from 35 clubs to 9 clubs, there being no chance for the younger shooters to do anything but put their money into the professionals' pockets, and they have become tired of this. The old association now stands with an enrollment of 5 clubs from Kansas City, one from St. Joseph, one from Lexington, one from St. Louis and one from Jefferson City. The Lexington Club last year feeling it was time something be done for the amusement of the amateur shooters of the State, issued a call for a meeting of the amateurs throughout the State to be held in Lexington in the month of August for the purpose of forming an association exclusively for the amateur shooters. The call was responded to by 23 clubs with indorsements of clubs from all over the State in the movement. And at the second annual meeting just held about 10 additional clubs were enrolled. Constitution and by-laws were adopted protecting the amateur shooters by barring all professionals and A class shooters.

This association under the protection for the amateur shooters, as provided for in its constitution and by-laws, is bound to grow more popular each year; the attendance during this tournament was over 100, and the Lexington Club had spared no expense to make it the grandest affair ever held in the State, together with placing on their programme $300 in added purses. The weather was fine, the grounds the best in the State. There were two sets of live bird traps constantly in use, the live bird traps were operated with the W. T. Best non-electric pull, and one set of bluerocks with the Paul North electric pull. The Best and North pulls were the crowning success of the tournament, consuming 5,500 live birds and 20,000 bluerocks. Paris, Missouri, was decided upon as the place of next meeting, and judging from all present appearances the next tournament of this association will be even more successful than this has been.

C. L. Blanton, President; J. W. Barre, Vice-President; G. W. Haden, Secretary and Treasurer; R. E. Seer, Montgomery City; E. Chanslor, Lexington; J. W. Wright, Warsaw, were chosen officers and board of managers for the ensuing year. This closed the second tournament of the Missouri State Amateur Association, which, with its popularity, is bound to become the association of the State of Missouri.

Following are the scores of the principal events of the tournament:

TARGET EVENTS.

No. 1, 10 bluerocks, $1 entrance: See 8, Love 9, Spencer 4, Brasher 7, McQueen 6, Francatte 8, Dallmeyer 8, Doehler 8, Rhodes 3, Lucas 10, Hall 6, Meyer 5, Barre 7, Wright 6, Morgan 6, Lindsey 4, Vaughan 7, Pendegrass 6, Weaver 8, Rawlings 9, Ski Ski 9, Coppock 6, Seward 7, Hayson 9, Blanton 6, Redman 6, Nickell 9, McNally 9, Buttles 5, Haydon 9.

No. 2, 10 bluerocks, $1 entrance: Seward 4, Coppock 7, Redman 6, Love 8, Trigg 8, French 5, Hales 8, Francotte 9, Shacklett 8, Davis 7, Wright 5, Hayson 10, Lucas 6, Marshall 7, Dallmeyer 4, Doehler 5, Meyer 2, Haydon 7, Pendergrass 10, Vivion 4, Ski Ski 8, Meyer 8, See 9, Wilmot 6, Green 5, Hughes 7, Nickell 6, Rawlings 8, Weaver 9, Hall 7.

No. 3, 15 bluerocks, $1.50 entrance: Redman 7, Haydon 12, Kish 7, Marshall 14, Trigg 8, See 11, Doehler 13, Barre 8, Davis 10, Wilmot 9, Rawlings 7, Chanslor 11, Pendegrass 13, Rush 11, Marrs 14, French 8, Wright 10, Green 11, Hayson 11, Weaver 13, Trigg 5, Hill 12, Coppock 12, Bennett 13, Dallmeyer 11, Blanton 8, Shacklett 12, Wright 11, Hales 11, Ski Ski 14.

No. 4, 10 bluerocks, $1 entrance: Ski Ski 10, Hayson 5, Drepps 1, McNally 5, Dallmeyer 9, Doehler 7, Hill 8, Buttles 7, Goullute 3, Green 6, Payne 7, Buchanan 5, Davis 7, See 6, Blanton 5, Hales 7, Barre 9, Haydon 6, Mize 8, Marshall 9, Pendegrass 10, Rush 8, Brasher 10, Redman 7, Coppock 7, Happy 7, Francotte 8, Hall 7, Chanslor 8, Wilmot 6, French 5, Rawlings 10, Haggerty 9, Wright 8, Weaver 8, Lucas 9, Shacklett 7, Rhodes 8, Hughes 8, Marrs 9, Bennett 8, Sturges 7.

No. 16, 10 bluerocks, $2 entrance: Pendegrass 8, Weaver 10, Marrs 9, Haggerty 10, Wright 8, Hayson 8, Hales 5, Francotte 8, Bennett 9, Wilmot 10, Ski Ski 10, Coppock 9, Sturges 6, Rawlings 6, Davis 5.

No. 17, 10 bluerocks, $1 entrance: Bennett 7, Francotte 10, Wright 6, Pendegrass 9, Weaver 9, Hales 8, Haggerty 10, Lucas 7, Blackwell 7, Brown 7, Redman 6, Hughes 8, Ski Ski 9, Rush 5, Harnes 9, McKee 6, Hayden 6, Davis 8, Rawlings 1, Barre 7, Dinsmore 6, Hughes 5, Hayson 6, Green 9, Wilmot 9. See 9, Dallmeyer 7.

No. 10—Any number of teams of two. 10 blue rocks. Entrance, $4 per team.

First Prize—Badges, donated by Central Missouri Association, to be shot for annually; the winner this year to receive 50 per cent. of the entrance money next year; 50 per cent. of entrance

TREASURER A. GEYER.

LIVE BIRD EVENTS.

No. 1, 10 live birds:

| | | | |
|---|---|---|---|
| Florida | 8 | Hamlet | 7 |
| Sturges | 8 | Campbell | 10 |
| Pendegrast | 8 | Hale | 10 |
| Brasher | 9 | Ski Ski | 8 |
| Hicklin | 6 | Mize | 10 |
| Spencer | 5 | McNally | 9 |
| Francotte | 10 | Buttles | 9 |
| Dallmeyer | 9 | Barre | 8 |
| Dripps | 4 | Hill | 7 |
| Doehler | 7 | Longnecker | 7 |
| Lucas | 9 | Rhodes | 9 |
| Wilmot | 9 | Clark | 8 |
| Morgan | 6 | McQueen | 8 |
| Wright | 6 | Rist | 8 |
| Love | 10 | Hayson | 8 |
| See | 10 | Seaward | 10 |
| Lindsey | 9 | Chanslor | 10 |
| Buchanan | 10 | Coppock | 7 |

| | |
|---|---|
| Weaver | 9 |
| Green | 9 |
| Bennett | 9 |
| Nickels | 8 |
| Hughes | 8 |
| Meyers | 6 |
| Hammer | 9 |
| Rodman | 7 |
| Happy | 9 |
| Trigg | 7 |
| Thompson | 9 |
| Davis | 6 |
| Marrs | 8 |
| Hassell | 7 |
| Nelson | 7 |
| James | 7 |
| Martin | 7 |
| Vaughan | 9 |

First money $70, second $55, third $35, fourth $20.

No. 2, 5 live birds:

| | | | |
|---|---|---|---|
| Florida | 5 | Lucas | 5 |
| Rhodes | 5 | Francotte | 5 |
| Clark | 4 | Lindsey | 5 |
| McQueen | 4 | Meyer | 5 |
| Rawlings | 5 | Blanton | 5 |
| Dallmeyer | 5 | Wright | 5 |

| | |
|---|---|
| Longnecker | 3 |
| Hassell | 5 |
| Sturges | 5 |
| Kiser | 4 |
| Seward | 5 |
| See | 3 |

highest average in shoots 1, 3, 5 and 6, was won by F. M. F. Fourote of Osceola.

The $25 given by the Lexington Gun Club to the shooter making lowest average in shoots 1, 3, 5 and 6, was won by E. C. Redman of St. Louis.

## Wawaset vs. Nonesuch.

The Wawaset Gun Club, of Wilmington, Del., and the Nonesuch, of Newport, shot a match with teams of twelve men each, at twenty-five targets per man, on August 13, the result being as appended:

| Wawaset. | | Nonesuch. | |
|---|---|---|---|
| C. Buckmaster | 25 | Smith | 12 |
| E. Miller | 22 | Wright | 11 |
| W. Buckmaster | 21 | Groome | 19 |
| A. Williamson | 18 | Williamson | 16 |
| T. Wright | 19 | Webb | 13 |
| R. Miller | 24 | Young | 18 |
| J. Fitzgerald | 19 | Allen | 21 |
| J. White | 15 | Myers | 13 |
| E. Camp | 16 | J. R. Lynam | 14 |
| G. Huber | 19 | Slaw | 16 |
| D. Buckmaster | 17 | H. Lynam | 11 |
| C. Springer | 23-238 | Lancaster | 13-187 |

SACRAMENTO, Cal., Aug. 15.—The Spoonbill Gun Club had a shoot at the Curtis ranch, which resulted as follows:

| | | | |
|---|---|---|---|
| Thomas | 23 | Soule | 19 |
| L Morrison | 21 | Bryant | 18 |
| Flohr | 21 | VanAlstine | 17 |
| Capt Bohn | 20 | Maddux | 14 |
| Naeghel | 19 | Chapman | 14 |

| | |
|---|---|
| Morrell | 14 |
| Todd | 13 |
| Stiegler | 13 |
| Mold | 12 |

# Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

J. H., New York.—Yes, you will find such game in the Adirondacks.

E. R. J., Albany.—Rail season in New York State will open Sept. 1. On Long Island it opened July 1. The birds are not protected at any season in Onondaga, Wayne, Oneida, Cayuga, Wyoming, Genesee, Niagara, Monroe, Erie, Chautauqua, Cattaraugus and Orleans counties. Full text of law in *Book of the Game Laws.*

General Passenger Agent,
ALBANY, N. Y.

**SOME anglers labor under the false impression that large dealers and manufacturers charge more for their goods than the keepers of small shops. A glance at our new Illustrated Catalogue and Price List for 1892, which we will mail on receipt of 6 cents to cover postage, will show how much they are mistaken.**

**ABBEY & IMBRIE,**
**Manufacturers of All Grades of Fishing Tackle,**
**18 Vesey Street, New York.**

**Notice to Fishermen! Cut Prices for 1892!**

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

*"On their own merits modest men are dumb."—Colman.*

We are not a bit modest; have no hesitation in telling about our many good points (we have no bad ones).

No one seems willing to tell about us, and we really feel that you ought to know the facts. See this space from time to time.

If at any time you seriously think of expending some of your surplus for Firearms, Ammunition, Tents, Seines, or Sporting Goods of any description, see us or write us.

*Montgomery Ward & Co.*

111 to 116 Michigan Avenue, Chicago

**C. H. STERRY,**
**Of Tolland, Conn.,**

writes: "I have given SS powder a thorough trial, and to say that I am pleased with it would be expressing myself very mild. The merits of the powder are: Quickness, no smoke, little recoil, even pattern and great penetration. I have tried all kinds of Nitro powders and think SS is the best. I made the following score the first time I used SS powder at a shoot of the Tolland Gun Club on July 4, 1892, at artificial birds:

1111111110 1111111111 1111111111
1111111111 1111111111 1111111111
1111111111 1111111111 1111111111
1111111111—99."

Send orders to

**Agent SS Powder Co., Limited,**
**147 PEARL STREET,**
**BOSTON, MASS.**

Watch this space from week to week for the faces of prominent sportsmen who are using SS powder.

**MEPHISTO**

331-333 BOWERY, BET. 2d & 3d STREETS.

NEW YORK, July, 1892.

Our "ONDINA" all Havana tobacco **NEW YORK made** cigar, our world-renowned **"MEPHISTO"** and all other finer grades of cigars made by us are superior in many ways to those made in the tropics. In addition to all the tobacco markets of the earth to which we have access, New York City always commands the best of every material as well as labor. **OUR** New York factory is a perfectly ventilated, clean abode. No sort of uncleanliness is permitted, and our cigars, therefore, are not liable to contain matters other than tobacco, and smokers may confidently and safely use our cigars, not needing a mouth-piece or a cigar holder to prevent unpleasant consequences. **To protect consumers from imposition, every "MEPHISTO" cigar is banded.**

# LIVING ANIMALS.

MAGPIES and PRAIRIE DOGS

A SPECIALTY.

We sell Buffalo, Badgers, Bears, Antelope, Deer, Elk and all other living animals, Birds, Reptiles etc., mounted and unmounted Heads, Skins, Skeletons and Horns. Fossil Fish and other fossils, Crystals, Agates and Curios of all kinds. Mineral Specimens and cabinets. Indian Relics of all kinds. Genuine Indian made moccasins, all sizes. We both buy and sell. If you desire to buy or sell write us. Hunting and fishing parties supplied with guides and complete outfits. Bank reference given and required.

**W. H. ROOT, Laramie, Wyoming,**

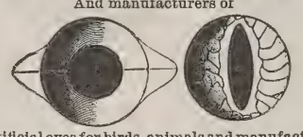
Importer, Exporter and Dealer in Living Wild Animals, etc.

**WM. W. HART & CO., TAXIDERMISTS.**

**11 & 13 Jacob St., NEW YORK.**

NEAR BROOKLYN BRIDGE.

Animals, Birds and Fish Mounted true to nature, and guaranteed against moth.



FINEST EXHIBITION IN NEW YORK.

Send for Price List.

**J. KANNOFSKY,**

**Practical Glass Blowers**

And manufacturers of

Artificial eyes for birds, animals and manufacturing purposes a specialty. Send for prices. Please mention FOREST AND STREAM.

369 Canal street, New York.

## In the Stud.

**REFUGE II.**

Winner of over forty prizes, including the *medal for the best stud dog*, Agricultural Hall, London, 1891.

Fee, $40.00.

**Champion Kingston Regent.**

Fee, $35.00.

**Prince Clifford.**

Fee, $15.00.

SEVERAL LITTERS SIRED BY THESE DOGS FOR SALE CHEAP.

**NEW YORK ST. BERNARD KENNELS,**

138TH ST. AND THE HUDSON RIVER.

**MELROSE KENNELS ST. BERNARDS.**

Stud dogs, puppies and brood bitches.

**Lord Melrose at Stud.**

Fee $50. Largest dog in the world.

E. H. MOORE, Melrose, Mass.

STUD POINTERS.

**Ch. Pommery Sec.**

(Ch. Graphic—Lady Vinnie.)

**Champ. Ossining.**

(Ch. Robert le Diable—Countess Nellie D.)

For stud fee, list of winnings, etc., address WM. H. HYLAND, North Tarrytown, N.Y.

**In the Stud. Fee $25.**

**WHYTE B.,**

By Roderigo—Florence Gladstone.

Divided 3d, Southern Field Trials.

Broken dogs and puppies of strictly pure Llewellin breeding always for sale. The blood of my kennel is the bluest of the blue.

HERBERT S. BEVAN, Lamar, Miss.

BULL-TERRIER AT STUD:

**CHAMPION CARNEY,**

(A.K.C.S.B. 24,986).

To a limited number of approved bitches.

TUBBY HOOK KENNELS, Inwood, New York City.

**At Stud.**

The blue belton setter **BOW BONDHU** (17,852), winner of several first prizes, by Gus Bondhu ex Bo Peep, she the dam of the noted field dogs Antonio and Chance. Is a fine field dog and an A 1 retriever. Will be allowed all the bitches he can get. Fee $15. Address for cut and stud card, V. L. BOSSA, New Canaan, Conn.

**THE FOX-TERRIER.**

**History and Description with Reminiscences.**

By RAWDON B. LEE, Kennel Editor London *Field*.

NEW AND ENLARGED EDITION.

15 Portraits and Illustrations; 130 pages.

PRICE, $1.50.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

## In the Stud.

**Seminole Kennels,**

CHESTNUT HILL, PHILADELPHIA, PA.,

OFFER THE SERVICES OF THE FOLLOWING

**STUD DOGS:**

**Rough-Coated Collies.**

CHAMPION **The Squire,** (E. 15,757). Fee $50.

CHAMPION **ROSLYN WILKES,** (A. 20,883). Fee $50.

CHAMPION **Sir Kelpie,** (A. 14,735). Fee $15.

CHAMPION **ROSLYN DANDY,** (A. 17,577). Fee $35.

**ENGLISH PUGS.**

**WINK,**

(22,027). H. C., New York, 1892. Fee $10.

**IRISH SETTERS.**

**Champ TIM,** 1st and special. N.Y., '92. Fee $25.

**JERRY JARVIS,** (A. 15,347) litter brother to Duke-Elcho. Fee $15.

Extended pedigrees of any of the above on application. Bitches entrusted to us receive the best of care. Fine specimens of the above breeds for sale at reasonable prices, including several good stud dogs and brood bitches in whelp.

Young Stock Always on Hand.

**FOX-TERRIERS IN STUD.**

| | |
|---|---|

### *ILLUSTRATIONS OF WILD LIFE.*

WE have in preparation a series of illustrations of American wild animals, to be published as supplements of the FOREST AND STREAM.

The drawings are by Mr. Ernest E. Thompson, whose previous work in this line is well known; and we are confident that the merits of his successful delineation will be recognized. The subjects already drawn are of the Felidæ, and they will be published as follows. See that your newsdealer has the numbers:

Sept. 8. THE PANTHER.
Oct. 6. THE OCELOT.
Nov. 3. THE CANADA LYNX.
Dec. 1. THE BAY LYNX.

In connection with the illustration of the panther will be given some notes of observation of that creature by Mr. George H. Wyman, and Mr. O. O. Smith's story of how he won his cougar skin trophy in Oregon last year.

### *NIGHT SOUNDS.*

USUALLY when the labors of the day are ended the men sleep soundly. A long day's toil, marching or hunting, the work of making camp and cooking supper, prepare the traveler for the dreamless enjoyment of his bed.

It may now and then happen, however, that some man of the party for a long time lies awake, and such a one hears sounds that are hushed except during the watches of the night. Even the commoner sounds of the wilderness—those that are audible at all times—take on a different character to ears that listen to them after the quiet of slumber has stolen over the camp. The wood of the still burning fire snaps and crackles now more viciously than it did during the evening, and the fall into its soft bed of ashes of a burned-off stick, which would have been unnoticed in the daytime, is now distinctly heard. The whisper of the gentle breeze among the pines and the intermittent brawling of the little brook speak to the listener in tones whose purport he feels that he understands, though, perhaps, he could not translate their speech into the commonplace language of everyday life. To all of us there come now and again thoughts and emotions that we cannot voice.

Soon after darkness has settled down over the earth, the coyote begins to utter his complaint, and from the top of some near hill sound introductory barks, followed by a series of shrill yelps, growls and shrieks, swelling at length into a chorus, as if all the little wolves of the neighborhood had gathered here to announce their woes and make their appeal to those whose camp-fire burns so brightly near at hand. Yet we know that all this noise issues from the throat of one little wolf, so small that a man could easily carry him in one hand. The noise continues for an hour or two—longer if the moon is bright—and then ceases, to be renewed just before daylight in the morning. Though the little animal which makes this noise is a most harmless beast, from his cries you might judge him to be a demon, and more than once we have seen men new to the country nervously grasp their rifles, and anxiously inquire "What's that?" when they first heard the coyote's voice.

It is in the middle of the night that we hear the stranger voices of nature, some of which we may not comprehend. The cracking of sticks in the timber, close to the camp, tells of the passage of some heavy animal, perhaps a bear, since no footfall is heard, though the sounds are near. Besides, it is only now and then that a stick snaps, and the changing directions from which the noise comes show that the creature is not merely passing by the camp, but is prowling about it on all sides. At length these sounds come more and more faintly as their author moves away, and there is silence, broken only by curious faint noises hardly to be detected or described, but which the ear as one listens recognizes as the dropping of a pine cone on the soft forest floor, the snapping into place of a twig which has been bent back and is now freed, or the passage of some tiny animal through the grass. All at once one is startled by a sound like that of a horse galloping; but it is only a little field mouse that is running over the canvas of the tent, which, drum-like, magnifies the patter of the tiny feet, and makes them seem like thunder. Often the tent may be invaded by a dozen of these little intruders, which race over the sleepers, forage among the food, and have a genuine revel amid their novel surroundings.

As the night wears on, an odd snuffling, almost like the grunting of a young pig, is heard approaching, and for a time a skunk works about the camp, causing—if the tent door has been left open—some anxiety lest curiosity should lead him to enter and investigate. In the Southern country, the bite of this animal is greatly feared, but we recall no cases in the North where skunks have attacked sleepers.

The minutes and the hours pass. The skunk has moved away and again there is silence, interrupted now and then by the petulant squall of the lynx or the faint bark of the distant fox. If the month is September, and the moon is bright, one may hear all night long, if in an elk country, the musical bugling of the challenging bulls, and perhaps a band, coming down from the mountain side to the water, will call and whistle and splash and play all night, making sleep impossible in the camp. Sometimes will be heard the clash of horns when two enraged bulls meet in the headlong charge, and push and push until the weaker little by little yields and gives ground, and either comes to his haunches or nimbly springs aside to draw off and get his breath for another charge, or perhaps to fly ingloriously before the threatening antlers of his victorious rival. But in these latter days such sounds are seldom heard.

As day approaches the great owl sounds his resonant call from the tall tree where he rests, and is answered by some distant comrade, and a little later the serenade of the coyote begins again. The whistling wing-beats of migrating wild ducks thrill the air with their faint music, and other sounds of traveling birds are heard. The horses, whose footfalls and croppings of the grass ceased early in the night, awake. You can hear those which have been lying down get up, and all begin to move about and feed. The wind rises; the sighing of the pines becomes at first a murmur, then a groan, and at last a roar, drowning every other noise except the shrill scream which comes from two branches rubbing together, or the crash of some falling tree. This tumult will last till morning. There will be heard no more voices peculiar to the night. Let us turn over and go to sleep.

---

One of these days we shall have a legal treatise on the "Fishing Alibi." Some years ago an absent bank cashier was charged with having absconded; but he turned up again and explained that he had been belated on a fishing excursion. A defendant in a murder case on trial for his life was asked to explain certain blood stains on his clothes; he showed that the stains were not of blood, but of a mosquito preventive, which he had used on a fishing trip. In the Borden murder case at Fall River, the woman accused of murdering her father and stepmother alleges that at the time the murder was done in the house she was in the barn looking for some lead to make sinkers to go fishing with. It is not often that a fishing trip or the preparation for a proposed fishing trip is fraught with such momentous consequences.

---

AN international fly and bait casting tournament will be held at Edinburgh on Sept. 20. The competition will be in trout and salmon fly-casting. What has become of our own National Rod and Reel Association with its angling tournaments?

### *SNAP SHOTS.*

THE syndicate letters sent out over the signature of Albert Edward Tyrrell are among the phenomena of modern journalism. We observe one of his efforts in a recent New Orleans *Times-Democrat*, headed "Mecca of Hunters;" and it is as extraordinary a mixture of lies and thievery and silliness as an exchange reader may come across in a fortnight. "When you have named Cameron, Deer River, Tuxedo Park and Ellenburgh," says Mr. Tyrrell, "you have called off all the really available hunting grounds in New York State." A deer stalking, he tells us, is now being arranged by some of the famous New York hunters, who make annual pilgrimages to Florida. An enthusiastic quail hunter, whom his friends call the "philosopher," lets Mr. Tyrrell into the mysteries of shooting. Many a novice, the philosopher tells him, does not know when he has hit a bird, but a good quail hunter ought to know "before the bird has fallen two feet" whether or not to shoot at it again. "Henry Welles, the gentlemanly secretary of the Spalding Club," evidently "sized up" Mr. Tyrrell for an idiot, and stuffed him with a story of having bagged four pheasants (by which he means quail), "each of which weighed three and three-quarter pounds apiece." The syndicater also claims to have interviewed one "Edward Lacy, of the FOREST AND STREAM," who was bound for Maine hunting, and told him, "In fact, I'm going into Washington county after deer. I understand that some one has seen a jet black animal of that genus up there, and that's the creature I am going after." Mr. Lacy also appears to have filled him up with a pleasing bit of fiction about a fox-hunting club formed by "rich New Yorkers," to gather in all the best foxhounds of the country. All this, and there is more of it, is illustrated with drawings stolen from the FOREST AND STREAM, without a word of credit; one of them being labeled "A Moose Hunter's Camp." The marvel is not that the Albert Edward Tyrells of the syndicate bureaus will write such screeds as this, but that any managing editor in his senses will print them.

---

Politics unfortunately often have an evil influence in the appointment of game and fish wardens; but on the other hand it is equally unfortunate that an official's record and attitude with respect to the enforcement of fish and game laws are not more often taken into consideration as political factors. It is only occasionally that we hear of the members of the fish and game protective societies going into a local election to support a constable or sheriff or district attorney who has done good service in this respect, or to oppose one who has made for himself a bad record as to fish and game. In Massachusetts, Sheriff Crosby, of Pittsfield, was asked the other day to appoint as a deputy, for special service in enforcing the fish law, a member of the Rod and Gun Club. The sheriff not only refused to do this but told the seventy petitioners that he didn't think much of the law anyway, didn't see why a man couldn't buy or eat a trout of any size at his own table at any time of year—an official opinion about a law he is sworn to enforce, which recalls the advice of Mr. Robert B. Roosevelt, when as a fish commissioner of this State he instructed the game protector not to enforce the reed bird law because that statute did not find favor in the Commissioner's eyes. There is some satisfaction in learning that the Pittsfield Rod and Gun Club members propose to make Sheriff Crosby's dereliction an issue of his campaign, and it will be a yet greater satisfaction when election time comes to record their success. A fish commissioner who instructs his subordinates not to enforce a certain game law which he disapproves, a sheriff who sneers at a trout law, and a district attorney who assumes to have private opinions respecting the woodcock in close season law, may have views on a dozen other subjects, and as public officials will bear watching.

---

A German fish breeder has brought suit against the Duchy of Oldenburg to recover for damages for the loss of his fish, which he claims was due to neglect on the part of public officials who permitted drainage from mills to pollute the breeding waters. Yet in this country the public is year after year defrauded of a possible food-fish supply in rivers and streams by the thousand and one pollutions from mills and factories; and in its simplicity the public never dreams of collecting damages nor of putting an end to the costly abuse.

# The Sportsman Tourist.

## THE CONTEST.

The day is well chosen; this rock-riven stream
  Is the angler's ideal resort.
The waters rain-tinted, nor muddy, nor clear,
Not twenty such days in the calendar year
  Are designed for the lover of sport
Who draws near the brink—true to nature as ever,
And matches his own with the flies on the river.

For he who would master the art must discern
  The shade of each delicate thing;
From the creatures that glide o'er the waters' clear face,
Interwearing themselves in their frolicsome chase,
  To the dragon fly's gossamer wing.
How the shades of the silk and the wild fowl's feather
Are suited to changes of season and weather.

A cloud has passed over the sunlight, and he
  Who'd remained for an hour so still—
Having stretched his gut line to its utmost tense
And examined each knot to relieve the suspense—
  Now wields the lithe weapon with skill.
Each angler we meet has original notions;
Come let us approach and observe all his motions.

His flies are cast forth with a sinuous sound
  That resembles the flight of a dove,
While each in succession drops into its place,
To lure and to baffle the star-speckled race,
  'Til again the line whistles above
And falls unperceived in the white foaming eddy.
A flash—'tis a rise, now you have him, hold steady.

And now the rod bends to its shadow below,
  And the pulse of the angler beats quick,
While his fingers are artfully trying to deal
With a subtle silk line rolling out from a reel
  That responds with a musical click.
Look out for the rapids and "bear on him" lightly;
When he runs give him rein, when he slackens hold tightly.

Behold, now the struggle is reaching its height,
  And the brisk trout, to vary the scene,
Leaps upward and quivers one moment in sight,
Then pierces the pool with the shafts of his light,
  'Til the angler, though watchful and keen,
Finds out that his utmost precaution is taxed;
The fish has run shoreward—the line is relaxed.

Step back a few paces—rely on the reel;
  That fatally musical click
From the clock of a life; and it runs rather low,
As the king of the water course soon must know,
  For his movements no longer are quick;
Keep his head above water and bear him down streamwise,
As a landing, yon shadowy inlet would seem wise.

Our hero has yielded—his efforts were vain
  Against science, that dealer in death;
Full twenty-five minutes—the struggle was brave;
He floats like a sunbeam aslant on the wave,
  All conquered and gasping for breath.
The landing net now does the last stroke of duty
And we are "all eyes" for the star-speckled beauty.

The steelyards bring hither—five pounds to an ounce:
  Such a prize rarely falls to our lot;
And to-night when you meet with the mates of your club,
You can give the old anglers an eloquent snub
  When they greet you with "What have you caught?"
That infallible question—they're certain to ask it,
  For answer—just raise up the lid of the basket.

H. F. O'Beirne.

El Moro, N. M.

## VACATION TIME.

The vacation time is here, and go where we will we meet tellers, bookkeepers and clerks from all branches of business—on wheels, in canoes, in the mountains with rod and reel, with dog and gun; on the seashore; all enjoying their outing—and what a blessing it is. The getting ready and packing up for weeks before, the thinking of every little thing to take—all these are a pleasure in themselves. Oftentimes the outing itself is a disappointment. We don't find the birds. Fish do not bite. Water too rough. And other things that interfere, but the large majority have very enjoyable times and come home refreshed and ready for the duties that their positions require. We find work has accumulated in our absence, but we are equal to the task, and as the weeks roll on into months, some day or evening, while poring over a ledger difference, there comes the thought how that old partridge did tumble, and then in less time than it takes to tell it here we see all the nooks and corners in the woods, and after that staunch point of Mollie, how the old grouse did get up from the other side of that log and like a rocket fly right over toward Doc. And what a shot. "Steady now, old girl, there he lies. Fetch." We sit down and look him over, and as it is lunch time and here is a cool spring we enjoy the spread, and after a smoke then on to that woodcock cover.

But where is the ledger difference? Oh, that is all right. We'll find that now very soon, and we do. We have had the help of Doc and Mollie and that glorious October day—all have given us a helping hand.

With me vacation never ends. It comes to me in days of trial and perplexities in business, in the evening hours at home with my family or with friends. How pleasantly we talk over our outing days of each year, and read over the diary, where we saw our first deer—and so on.

Vacation to me is not how many birds shot or how many fish caught. These may count for something, but the true and lasting value of every vacation comes from the lifting of mind and body out of the daily ruts of toil and care. The individual who carries his business into his vacation might as well stay home. To such an one the strike of a mosquito will do as well as the strike of a trout, and the pop of a ginger-ale bottle as well as the report of a wood powder shell. Fling care to the wind when vacation begins, and every wind will waft back comfort and restful influence.

One word on half days off and the man at the head of the office in which I am employed. He isn't a shoot fisher—don't know a woodchuck from a woodcock or a sandpiper from a pickerel. He isn't interested in field sports, but he is interested in the help under him, and there is no occasion to use the old dodge (which they say so many clerks have used), presenting a telegram to the employer that your aunt's grandfather of the mother's side is dead and you wish to go to the funeral. Nothing of the kind. We walk up and say we would like to go away for the afternoon. It is always, "Go, and I hope you will have a pleasant time, and if the boys have too much to do call on me and I will do your work."

My brother bookkeepers, clerks and any and all of you who may read this, my wish is that you all had such an employer, but I know you have not. I know that there are those who only think of you for the good you are to them, and if they give their consent for your going for a half day, do it so reluctantly that it takes from the afternoon all the anticipated pleasure, and you are wishing that you had remained at your post, and not asked for the favor.

I expect to take my vacation about Oct. 15, when the grouse are all full-grown and the woodcock from the north are with us, and I may tell you about it. H.

## CAMPS OF THE KINGFISHERS.—XI.

### CARP LAKE, MICHIGAN.

#### The Carp Lake Camp.

At breakfast next morning while sorting the bones of one of Charley's trout, old Sam said, with a face as solemn as an owl's, "Jeemes Mackerel, that 18ft.—beg pardon, 18in. mud turtle o' yourn must be getting oneasy at your absence by this time; better go down this mornin' an' hive 'im. Take the glass minner trap along with ye an' put two er three shiners in it an' he'll go in after 'em, same as the big-bellied perch did, an' then you've got 'im. See?" And then they all laughed, even the keeper of the fryin' pans had a broad grin on his face as he peered over the boat box at the end of the table, and Kelpie rubbed it in still deeper with, "Hickory, I'll go along if you like, and take a landing net, and if you succeed in getting the 'what d'ye call it?' out from under the bank I think we'll manage to land him." It needed no hint with a sarcastic twist in it from old Sam to start the expedition, and in half an hour Kelpie and I were on the way across the lake to Alexander's Point, in the ironclad, where we stopped and caught a lot of shiners, for we intended to do some bass fishing on the way down which would only give the boss of the pool a little longer lease of life.

We stopped and caught three or four medium sized bass near the first log yard, and kept on down to the point at Horton's Bay where we always expected a strike from a maskinonge, for hadn't we been told by not less than a score of people since making camp, that one had been caught on a troller right there a few weeks before that was six feet and an inch long, and another of five feet—eye measure—lost by the clothes line breaking after a prolonged and desperate fight of two soul-harrowing hours?

None of the twenty or more who had told us about this monstrous fish—the six-footer plus an inch—would put themselves in a corner by saying they had seen it, but one at last said that George Fox, living near the head of the lake, had actually helped weigh it (he had forgotten the number of pounds), but knowing George, we never asked him about it, as we didn't care to have a good fish story spoiled by hearing George's version, for we knew he would tell the truth.

I have no doubt it was the same fish we heard about in 1884—weight 37lbs.—that had only kept pace with the natural growth of country fish stories till now the fish had stretched to 6ft. 1in. in length, and if the ratio of increase holds out, and the natives along the lake don't forget the combination, that fish (story) will be about 6ft. 13in. at the end of July, 1895. At all events, the story had its effect, and none of us ever neared the point without a streak of expectancy running through our frames, hence Kelpie and I forgot the big trout for the time and dropped the anchor stone in 10 or 12ft. of water near a patch of big bush weeds to have a try for the five-footer that had got away with the troller and some yards of the clothes line to which it was attached.

However, we were not loaded for maskinonge, having no trollers or clothes lines along; nothing but bass tackle and minnows for bait, but if we should by any mischance strike one, we could do no worse than lose him in the bush weeds, with mayhap a few fathoms of line. Besides, we would not have fished with a hand line, for we hold the angler in small respect that uses one to "windlass" in a fish: that is not angling.

We fished diligently for half an hour or more, making long casts up, and down, and out into the lake, reeling in after each cast by which a bass was brought to grief now and then by Kelpie's rod, but neither the five-footer nor any other footer of his tribe seemed to be around, and the streak of expectancy gradually gave place to a feeling of mild disappointment, a state of mind that had possessed us more or less ever since we struck Green Lake, till we had come to look on it as one of the natural results of too much anticipation.

We said nothing (audibly) but fished.

Kelpie, fishing outside from the stern of the boat was having some sport with the bass, while I, fishing further inshore, had my patience about worn out with goggle-eyes—the pests of Carp Lake—which were returned to the water with what must have seemed to them unseemly haste and a lack of gentleness that doubtless gave them a crick in their backs for the rest of the day.

I got little comfort out of my share of the fishing except when Kelpie let me handle a bass on his new Bristol steel rod. I had been anxious for some days to try the temper and "feel" of it in actual service—goggle-eyes barred—and when he struck a fish that gave promise of some weight I asked the favor of trying the rod, which was cheerfully granted, and for a few minutes that little steel tube was in shapes that must have brought Kelpie's heart in his mouth, for at times the tip was pointing the same way as the butt. I was well pleased with its performance, and were it not for a feeling of "top-heaviness" they seem to possess—I have handled two or three others since—I believe that for a bass rod and rod for all work they are not surpassed.

(Old Sam, and Charley, and Harry and Gooder have d themselves each with a steel rod, but the Colonel and I are sticking to our old friends that have been true to us for years.)

When the bass was at last led over the landing net and swung over into the boat I handed the rod back to Kelpie, who looked carefully over it from butt to tip to see if it were all there, I fancied, for I had given it a straining, purposely to try its backbone, that few rods would have stood.

"Three pounds and a half, strong," Kelpie made it out when he had hung the bass on his pocket scale and squinted at it for a good half minute—it seems that fish are always two, three or four pounds, strong, as the case may be, but never two, three or four pounds scant, unless it may be the "other feller's" fish is on the scale—and then he complacently consigned him to the stringer with the others. The fish was a big-bellied, big-mouthed bass, but he had made a good fight for a big-mouth, and we made no complaint about his girth amidships.

A quarter of an hour after, when the anchor was stowed, we pulled around to the old log yard in Horton's Bay, and after securing the boat were soon at the bridge crossing McConnell's Creek, talking in subdued tones about the prospect of hiving the big trout, and treading softly the while lest we jar the ground near the stream and remind him of something. Kelpie said he would slip around up the stream a few yards and fish while I was getting ready to "lay the big fellow out," but would be within call if I should happen to need the landing net, which he took along; from which I inferred that he, like the others, did not take much stock in my 18-inch trout. He made his way around the upturned roots of a big tree that lay prostrate across the stream a few yards above the pool, and was at once out of sight in the tangle. I got a lively 2-inch shiner from the bucket, hooked it carefully through the lips and slipped stealthily around to the head of the pool, having it in mind not to jar the overhanging bank as I passed around the bushes, where, without showing anything but the upper half of the rod over the water, I dropped the minnow in below the little sandbar, when the current soon sucked it under the bank.

It was barely out of sight when I felt a slight twitch of the line which, being interpreted, meant "trouble has set in." I pulled 2 or 3ft. of line from the reel and let it run freely through the guides as it went under the bank, and then I waited till I thought that whatever was tampering with the shiner—trout, dogfish or "mud turkle"—had plenty of time to swallow it and settle down to digest with a mind free of care, unless the line tickling his throat would arouse a suspicion that the harmless looking minnow was loaded.

I felt a "nudge-nudge" on the line, and not to hurry the proceedin's, bit off a fresh "chaw t'backer" and waited some more, for I was determined to take no chances on hooking him somewhere in a tender part of the jaw and have the hook tear out and destroy my peace of mind for another week.

I waited till I got a trifle nervous and then stepped cautiously out from the screen of the bushes where I could see the whole pool, taking up the line at the same time till the rod tip was down near the water.

When the suspense had reached the unbearable notch I gave the rod a quick, strong side pull—a "Watterson wipe," as they call it in Kentucky—to keep the line clear of the overhanging bank, and at the same time I felt a violent yank that sent a thrill up the old rod, and the fun was started.

I drew him straight out from under the bank without giving him time to dodge around a hidden root or find out what was "agitatin' his bowels;" he didn't even have time to leave a notice saying when he'd be in his office again, and the next moment a magnificently colored trout was out in the open water making the spray fly, turning over and over, and squirming and twisting at a rate that threatened to turn him inside out.

I kept a short line on him that prevented him from getting under either bank, and several times in less time than it takes to write it, the rod tip was doubled nearly to the point of breaking; but the trusty old stick had pulled through worse difficulties than that, and I still had faith in it.

I shouted to Kelpie, "Bring the landing net, quick; I've got him!" and then waited seemingly an hour before I heard a commotion in the brush above and his answering "All right; I'll be there in a moment." But Kelpie's eyesight was poor and the tangle bad, and the trouble was increasing in the pool.

I noticed that the hook was out of sight down his throat and I decided to try and land him without waiting for Kelpie and the net.

Raising the point of the rod and letting the line run off the reel under a pressure to keep it taut till I got enough off to get the spring of the whole rod, I dragged him, despite his twisting and flopping, out on the little sandbar, and stepping down from the bank, the rod upheld in one hand and the line still taut, I grasped him and threw him out on the bank with a "Whoop-ee!" that must have made Kelpie's hair stand on end.

I stood looking at him as he turned flipflaps on the grass, a good deal disappointed, for he did not look near as large as I thought the big trout ought to look; in fact, I couldn't make up my mind that it was the same trout that had disturbed my nightly rest for near a week in devising schemes for his capture.

The old warrior was still in the pool, hid under the bank, laughing at me—that was a settled point in my mind—and this greedy imposter had snapped up the shiner before the big fellow got a chance at it.

Kelpie emerged from the bushes around the upturned root with, "Well, Hickory, I see you've got him, and he's a fine one, too. I came as quickly as I could for the tangle, but I see I'm too late to be of any service with the net. I'm sorry I wasn't here to see the fun," and then he deliberately pulled a rule from some hidden pocket, and after unfolding it with the same deliberation placed it alongside the trout as it lay on the grass.

After squinting at it deliberately for half a minute or more a smile twitched the corners of his mouth, he said, with the most harrowing deliberation, "Hickory, somebody must have been along here in the last day or two and sawed off about 5in. of your 18in. trout, for I find he is only 13in., strong," and then as the smile broadened he folded the rule and returned it to the mysterious pocket with the same calm deliberation that had marked his movements and speech while measuring the trout.

We stood looking silently at one another for the frac-

tion of a minute and then laughed, for we were doubtless thinking of the same thing. The possibilities for fun for the boys in camp at the expense of "Old Hickory" and his foot and a half trout were great, and I had a notion to toss the gasping beauty—for he was a beauty even though only 13in. "strong"—back into the pool.

But I thought better of it, and biting off the line near his mouth, leaving the hook still in his bowels, he was soon on a stringer and "coming to" in the cold water near where the minnow-bucket was sunk.

Then a mild difference of opinion arose as to whether that one was the big trout of the pool or not, Kelpie trying to convince me that it was, while I held out and still believe that the big fellow that I had been fishing so persistently for was at that very moment "layin' low" under the bank and tickling himself against a root over the thought of having outgeneraled me again by holding back, while his less wary mate swallowed the loaded shiner and found himself ingloriously yanked out, for there had not been a semblance of "artistic angling" from a fly-fisher's standpoint during the whole performance, but I got the trout—not the big one, however, as I still maintain, Kelpie and the boys to the contrary notwithstanding.

Kelpie took his way down the stream to fish toward the lake, while I hooked on another shiner to try the pool just once more with a forlorn hope that the big trout might be fool enough to bite, to the utter confusion of Kelpie and his notion that I had taken the last one in the pool. Besides my "Scotch was up"—obstinacy, if it fits the case better—and my pride as a trout fisher was a trifle ruffled and I hated to give up the fight.

But the wary warrior of McConnell's Creek was too smart for me, and after trying patiently for half an hour or more without as much as an indication, I put the 13 inches of disappointment in the minnow bucket, and burdened with a good-sized load of "depression of spirit," went back to the boat laboring under the conviction that it was another case of "bunkoed ag'in, b'gosh."

Somehow I lost interest in that pool—the reception I got at camp may have had something to do with it—and never went back to it again.

The difference of opinion as to whether I got the big one or not still exists, and I reckon I'll not hear the last of that 18in. trout till the Kingfishers break camp for the last time, which I trust is many years yet in the future.

I found Kelpie at the boat ahead of me, and as I caught sight of him a few yards upshore he was just shying a club at a thieving mink that he had caught in the very act of trying to steal our bass hanging at the side of the boat. He was a "sassy cuss" and went "snoopin' along" near the water seemingly in no hurry to get out of range of Kelpie's missiles, but at last he dodged one that struck the ground uncomfortably close to him and disappeared in the bush, and Kelpie came back to say as he drew near: "That mink's got more cheek than two book agents and a tree peddler. I found him tampering with our fish on the stringer and he wouldn't leave till I was on the point of tapping him on the head with the tip of my rod. Then I tried what virtue there was in clubs and chunks of wood, instead of the 'tufts of grass' of our boyhood spelling books, with the result that you have just seen.

"The nerve of some minks is past comprehension; the audacious rascal"—this last in a tone that doubtless would have paralyzed the hungry mink had he been within ear shot—and then with characteristic deliberation he fished out his tobacco pouch and pipe from some recess in his clothes, filled the pipe with careful accuracy, returned the pouch to its proper receptacle, scratched a match, took several long, deliberate whiffs to fire the tobacco, and after blowing out the flame of the match and tossing it with a satisfactory flourish into the water, sat deliberately down on a log to comfort himself with a smoke, remarking between two whiffs, "That rascally mink;" while I got the boat in readiness to start back to camp.

He had taken no trout from the stream worth mention, but he never growls over poor luck, neither does he become unduly hilarious over a big catch; he sails always on an even keel, so to speak, and never envies a comrade the taking of the biggest fish. Rare old Kelpie—the world were better were there more in it like you.

We stopped at the point and caught a few minnows in the grass and fished awhile, expecting, of course, to get a strike from a maskinonje, but, of course, we didn't, but we did get another bass to put on the stringer and then went on our way up the lake to Alexander's Point, where we stopped to "feel fur a bass or two" and have another look at the glass minnow trap that had been hanging on a pole for several days at the edge of the sand bar where we always found the grass and rushes alive with minnows and an occasional school of young perch. We thought to find mayhap that another pot-bellied perch had strayed in, if nothing else, but there was nothing in it but pieces of broken cracker and water and we once more voted it a transparent fraud; however, it was a great contrivance for keeping our "expectancy" up to the proper pitch, and we let it hang.

KINGFISHER.

### Care of Animals in Captivity.

"A Handbook on the Management of Animals in Captivity in Lower Bengal," by Ram Bramha Sányál, Superintendent of the Zoölogical Garden, Calcutta, is favorably reviewed in *Nature*, Aug. 4, 1892. The author is a native of British India who has a taste for natural history and has been for some years in charge of the collections supported by the Government of Bengal, but controlled by a committee of the subscribers. The plan of the handbook was drawn up by a sub-committee.

The volume contains a complete classified list of the mammals and birds—241 of the former and 402 of the latter—which have been kept alive in the Garden. The author kept a journal of observations on the treatment of the animals in health and in sickness, their longevity, and their habits in confinement.

"In a case of a fight between a lioness and a tiger, which were by some accident allowed to pass into the same compartment, the tiger was completely victorious and killed the lioness." "The longest period during which a tiger has lived in the Calcutta Gardens is fourteen years." An account is given of a young rhinoceros which was born in captivity. The American ant-eater and the African ant-bear endure life in confinement very well.

The handbook will prove of much value to superintendents of zoölogical gardens in other parts of the world.

## Natural History.

### A CARIBOU WITHOUT FEAR.

MONTREAL, Aug. 6.—A very remarkable adventure befel my two daughters on Saturday afternoon last while on their way to the Mastigouche Lakes, where they usually spend several weeks every summer. About a quarter of a mile beyond the last settlement (Mastigouche), where the woods road to our camp begins, there is an abandoned clearing of some few acres in extent, now overgrown with ferns, raspberry bushes and small shrubs.

The buckboard with my two daughters and driver (David Prevost, who is so well known to all the visitors at the lakes) had just entered this clearing when David suddenly stopped his horse and pointing with his whip said, "Oh, look at the caribou," And there some 200yds. or less directly in front of them, was a fine caribou quietly feeding and apparently unconscious of their presence. After looking at him for some moments David said he would drive on slowly and see how near he could get. After covering about half the distance the caribou looked up at them, and evidently thinking there was nothing very alarming in their presence, quietly returned to its feeding.

David then drove slowly along to see how close he could approach without frightening it away, and when within some 40 or 50yds. it walked into the woods, but almost immediately returned and stood gazing at them. As the team still drew nearer, it again turned into the woods, but this time came out again close to the wagon, and walked deliberately toward them. David put out his hand and called and the animal reached out his head to smell of his fingers. It then passed on to the horse, walking alongside of it, then crossed in front under the horse's neck and back along the other side, so close to the buckboard that my daughter could have put her hand on it, then around the back of the wagon and up again on the other side near the horse.

David thinking that as the animal seemed so tame he would try and catch it, handed the reins to my daughter, quietly got down and approached the caribou, holding out his hand and calling to it, when it put out his nose and smelled of him. He rubbed its nose, scratched its head, which it put down and rubbed against him, and finally got up close alongside of it, and threw his arms over his neck and grasped the long hair underneath. Then the caribou jumped and struck at David with its feet, but fortunately did not strike him. David meanwhile grasped it under the throat with his other hand and held on, and in the struggle both fell to the ground, David on top. The girls of course were very much excited and kept calling to David not to hurt the poor creature, but to let it go; and as it lay there panting after Prevost got up they were sure he had broken its leg or hurt it some other way so seriously that it could not get up. However, after punching it with his foot once or twice the caribou got up, shook itself and moved slowly away; and as David got into the wagon and drove off the last the girls saw it was quietly feeding again as if nothing had happened.

From the description given of the animal I should judge it to be a female about 18 months old and full grown.

The place where this happened is near the Mastigouche Club lakes, in the Laurentian range of mountains, about ninety miles northeast of Montreal, and is a locality probably well known to a number of your readers.

### THE SNAKE'S SKIN-SHEDDING.

AS DR. GIBBS says, snakes always attract attention, at any rate, mine always do. I have owned several, of different kinds, at different periods of my existence, but each specimen for only a very brief season, but like the majority of your contributors, I never saw a snake spit, or eject venomous saliva or other material, and the consensus of opinion seems to be largely against any such habit. When a person states positively that he has seen a snake eject froth, spittle or venom, that ends it as far as that specimen goes, or as far as the spittle went, though we are as much in the dark as ever as to whether it was froth, spittle or venom, whether the snake just "b'iled over" with rage and frothed at the mouth because he couldn't help it, or whether he had "malice prepense and murder aforethought" in mind, neither do we know that any other snake would do it if he had a chance. There is so much individuality about snakes, as there is about other animals (never mind now, whether a snake is an animal or not) that it isn't safe to generalize. Some animals (men included) when angered right smart will "tear passion to tatters" and froth at the mouth like "all possessed," but they are not always the ones you want to watch the closest, generally it's the non-spitting kind that bite. So with snakes, maybe. Seems to me if a snake ejects venom, being as how it comes from his fangs on each side his jaw, he has got to have his air-gun trained down pretty fine to hit anything, though maybe he is choke-bored. If the current shoots out the center of his mouth it wouldn't hit the venom on the side, unless the snake has muscles specially formed to convey the venom to the center, and you don't suppose that is the case, do you? And if the current went every which way, he couldn't shoot anything with it. I am impelled to the belief that any case of snake spitting was purely accidental and shouldn't count.

But what I set out to say was about the skin shedding of snakes. Dr. Gibbs wrote a very interesting account of the process as performed by a massasauga. That snake had much "method in its madness." We infer from the doctor's article that snakes in casting the skin begin at the head and work backward, inverting the skin as they crawl out. This is not always so, I believe. Once, while hunting in the South, I found a snake skin, not long cast, lying stretched nearly perfectly straight, by the side of a brush heap. The tip of the tail was firmly glued to a twig and the skin was right side out. That case needs no demonstration.

I was reading the doctor's article to my little daughter, who is quite observant and who has found a number of cast-off skins, when she remarked, "Why, papa, I don't believe all snakes crawl out of their skins in that way, leaving them wrong side out." "Why not?" said I. "Because," she answered, "I have seen a good many, and the skin over the eye was convex side out, which wouldn't be the case if the skin was wrong side out." Which I thought quite natural and a very rational conclusion.

### A Habit of the Robin.

AT my home in New York a robin had built her nest on a projection over a window which was well shielded by a rose bush. From the story above I could plainly observe her every action through a small hole in a cardboard which I had tacked to the window sill, and which projected sufficiently to shield my head from the bird's view. Generally, after she had fed her young, she would stand upon the edge of the nest as if in meditation. As soon as one of the birdlings began to stir, as with a trembling motion, her attention was at once directed toward it. With this motion of the birdling its rump became elevated and it voided excrement, being a globule the size, say, of a small marble. Instantly the old bird took it before it could drop into the nest, and invariably swallowed it. If the naturalist has never observed this I have taught him something.

N. D. ELTING.

### Migrating Martens.

BUCKSPORT, Me., Aug. 26.—Migratory martens are coming into Bucksport daily from the eastward. On the evening of Aug. 25 a bird house on the premises of Mr. J. F. Moses was filled with these birds, and the writer counted forty which could not crowd in and were clinging to the outside during a rainfall. Mr. Moses has another bird house over his carriage shed, but the martens never enter it, and nobody can tell why they prefer the other. The resident martens left Bucksport on Aug. 15. Mr. Moses has in previous seasons observed hundreds of the birds resting over night on the masts and yards of vessels lying in the harbor.

### VELOCITIES OF SHOT.

OAKLAND, N. J., Aug. 26.—*Editor Forest and Stream:* I notice in your issue of Aug. 11, that in answer to "Cleremont, South Dakota," you give the results of Prof. Mayer's trials, as to the velocities of shot. I do not know what instruments he used to obtain these results, but either his instruments must have been inaccurate, the calculations wrongly worked out, or a misprint have taken place. His results show that with 3¼drs. Curtis & Harvey's, 1⅛ shot, the following velocities were obtained:

| Size of shot. | Vel. 40yds. | Vel. 50yds. |
|---|---|---|
| BB | 795 | 667 |
| No. 3 | 754 | 696 |
| No. 6 | 739 | 630 |
| No. 8 | 749 | 607 |

No. 3 shot is shown to give higher velocity than BB at 50yds. Also, No. 8 is shown to give higher velocity than No. 6 at 40yds.

I believe both of these results to be an absolute impossibility, and I cannot understand the velocities being so low, although several things may account for that. Since 1880 great improvements have taken place in shells, shot and wadding. Curtis & Harvey's powder may also have been improved, but I rather think it is the same now as it was then.

Prof. Mayer's trials may also have been shot in bad weather; velocities are high in dry, still, clear weather, but in a damp, rainy day they are very much lower, as the following results show, the difference in velocities on the two different dates being entirely due to the atmosphere.

The shot used is No. 7 Leroy's chilled trap, 276 pellets to the ounce.

| Aug. 22.—Dry, clear day: | | |
|---|---|---|
| Powder. | Size of shot. | Vel. 40yds. |
| E. C., 42grs. | No. 7, 1⅛oz. | 883ft. per second. |
| C. & H., 3drs. | No. 7, 1⅛oz. | 883ft. per second. |
| April 4.—Damp, wet day. | | |
| Powder. | Size of shot. | Vel. 40yds. |
| E. C., 42grs. | No. 7, 1⅛oz. | 826ft. per second. |
| C. & H., 3drs. | No. 7, 1⅛oz. | 812ft. per second. |

The damp causing a decrease of about 60ft. a second; these averages were taken from a series of twenty shots each.

The velocities were obtained by Boulengé electric chronograph, which gives the results absolutely accurate.

N. E. MONEY.

### THE HUNTING RIFLE.

*Editor Forest and Stream:*

I read with great interest Mr. Meyrick's article in your issue of August 18. I find that we agree that large caliber rifles should be used for deer and all other large game; but there is still one question to be discussed; in fact more than one. Now for example, I go into the woods expecting to see deer, and knowing that I shall see all manner of small game. Now the question which at once presents itself is, "what rifle shall I take?" I need a rifle with which I can kill small game (especially large birds) without breaking them all to pieces; and as most of these are shot (my experience at least) at a considerable distance, a shotgun is of no use. The rifle then must be of small caliber. In the second place the rifle must be powerful enough to kill a deer, and kill it quickly too. I don't want to shoot any more deer with a .22 (your types make me say a .32). I have tried a great many rifles of almost all makes and calibers, and now have a .32 40 Merwin & Hulbert. The rifling is the best that I have yet seen for that caliber and cartridge, and with a solid bullet and 40grs. of C. & H.'s No. 6 powder it gives a flat trajectory and is very powerful. With a split bullet it will tear any ordinary-sized cat or hawk all to pieces. I cut a crow completely in two with one of these bullets: in fact it smashes far more than the solid .45 bullet has ever done to my knowledge. For deer its penetration must be sufficient, as I shot a ball completely through a dead steer at about forty yards, making a very ugly-looking hole. I think that this is a good all-around gun and am certain that a deer shot in any vital part, or near it, will die as quickly as though shot by a .45 solid bullet.

L. D. von IFFLAND.

## CHICAGO AND THE WEST.

*[From a Staff Correspondent.]*

CHICAGO, Ill., Aug. 25.—Altogether the most important shooting event now on the tapis is the opening of the duck season at Horicon Club marsh, Wisconsin, Sept. 1. This event has grown greatly in importance, the more so because of the heavy bags usually made on that now famous marsh. The forty who will go up to the Diana club house will, under lead of Manager Percy Stone, include Col. C. E. Felton, Messrs. F. C. Donald, C. L. Hunter, Walter F. Clark, L. M. Hamline, L. J. Stone, W. S. McCrea, P. D. Armour, Jr., C. B. Dicks, W. P. Mussey, W. C. Buchanan, F. H. Lord, Geo. C. Lamos, W. L. Shepard, Henry Smith and J. A. Hanley, all of Chicago; Messrs. H. B. Hibben and brother, of Indianapolis; Mr. H. D. Smith, of Appleton, Wis.; Messrs. Richard Merrill, L. J. Petit, Wm. Sanderson, Frank Falk, Louis Auer and B. Leidersdorf, all of Milwaukee; quite a party certainly. These should bag somewhere between 300 and 800 ducks the first day; the lowest bag of any spring day before last fall never having been lower than sixteen birds, with top bag seventy or over sometimes. Just what the shooting will be this time is hard to say, but one thing is certain, it will be much pleasanter than it was last September, for there is plenty of water all over the marsh, so that the boats can get about. Last fall the marsh was a sea of mud, and punting over it was an experience never to be forgotten. I only wish I could accept the kind invitation to come up next week and have a horrible revenge for last fall's experience on the flats of the West Bay. Not so many ducks are reported this fall as last, but the grass is very high, and it is likely that there are plenty of ducks on hand, and more are appearing daily from somewhere or other, possibly young birds coming out of the grass.

Great numbers of snipe have appeared on Horicon Marsh, and when the grass is dry enough to burn and the low ground has been burned over, the shooting at this bird will be very fine.

No one seems to know what has brought the snipe down so early this fall. There is some report of low water in the British Provinces, but without confirmation.

### THE NORTHWEST.

Dakota and Minnesota are this year experiencing a complete revival in game matters on account of the general rise of the local waters. For some years these two States have been dried out, and this affected even the chicken shooting very seriously. This year the dried-out lakes and sloughs are full of water, and the result is most surprising in the improvement of the game supply. There will be better duck shooting in the Northwest this year than for several seasons past, and the chicken shooting will be much better than it was last year.

Yesterday that widely-traveled market-shooter, Billy Griggs, came up to my office, on his way from Central America to Dakota, and in search of a good, comfortable place to shoot a few thousand ducks this fall. Billy tells me he had word from northern Minnesota a week ago that the Indians were gathering the wild rice nearly three weeks earlier than they usually begin. He thought that pointed to an early fall and an early flight. The snipe may see more attractions in the well-soaked soil of this parallel than in the country further north.

Mr. Mart M. Whitcomb, president of the Minneapolis Gun Club, and an enthusiastic fowl shooter, was in town this week, and has completed arrangements by which Mr. R. B. Organ, of this city, who had so nearly a fatal experience last season in his night in an open boat on a Minnesota lake, will in October join the old party, including Mr. Whitcomb and Col. Jacoby, and will again try conclusions with the ducks in the blizzardy clime of northern Minnesota.

There are very few Western men, I presume, who go East for either shooting or fishing, but it is surprising how many Eastern men there are who are interested in the shooting and fishing country of the West. Just now I average from two to five letters a day from gentlemen of the East who want to know about chicken and duck country. From two received this morning, one from New York city, and the other from Amsterdam, N. Y., I take the following:

"Two friends and myself contemplate taking a trip during September out West, and I write to ask if you can inform me where we can obtain good prairie chicken and duck shooting, and what part of September is the best time to go? It is immaterial whether we go to Minnesota, Wisconsin or any northwestern State, but we desire, if possible, to obtain good shooting. Do you think the shooting would be better in North Dakota than in your vicinity? Can you give me the names and addresses of parties in your section who could give me information in reference to the shooting?"

Of course reply was made to this to the best of my ability, much on the lines of such comment as appeared on this topic in FOREST AND STREAM of Aug. 18 and 25. Illinois is not the place for chicken shooting this fall. Last fall, I believe, Illinois was really better than Dakota or Minnesota, though very few believed that then or will now. This season it is different, for any one coming from so far east as New York for a shoot it would be much better to follow the usual Chicago trend and go on out to the further Northwest. A party could take the Great Northern road, north from St. Paul, and go on up into extreme northern Minnesota, and relying on local advices of the railroad men, etc., could hardly go wrong for a good, pleasant trip, if they had any experience in hustling at all. The Manitoba field trials, which will be run next week, will be held at Morris, Man., not far across the Minnesota State line, and they certainly expect plenty of chickens in that section. It is obviously impossible to give exact local advice, for we don't get much idea of the supply of birds until the season opens, and only a general idea of the excellence of a locality can be had until after parties have reported actual experience there. It is safe to go to North Dakota or Northwestern Minnesota for grouse this year, but it is assuredly not safe to take any outside advice blindly. Get the general direction, get out on the ground, and then inquire and move around, 25 or 50 miles at a jump, till you get your spot. Judicious treatment of local residents has much to do with success in locating good country.

### LATE SHOOTING.

For those who want to kill a whole lot of soft young birds out of the grass or stubble, now is the time to go, for the coveys are not so much shot down and the birds are much easier to kill. I cannot see in what respect this early chicken shooting can be called sport. A trip in late September or early October would offer far more pleasureable shooting at chickens, with a much better chance at ducks. For chicken shooting as a sport, with some features of skill and chance in it, I would rather, personally, wait till October, and then go to the sandhill country of northwestern Nebraska. Then one gets grouse shooting in a form fit to be called a sportsmanlike performance. No fluttering of wings of a weak bird trying to get out of the grass. Each bird booms up strong, clean and swift, and you have to hurry, not wait till it gets far enough to shoot. It is a mistake to think that chicken shooting is not good, and that the birds will not lie to the dog after they have packed up. If they are worked properly on a warm day, they will not only lie to the dogs, but will offer the prettiest sort of sport. I can well quote our market-hunting friend, Billy Griggs, on this, and I like to do so, as showing that a market-shooter is not always fond of shooting young grouse.

"I like to hunt chickens in October," said he. "You go along a strip of the light sod corn in the morning, and you put out a great big bunch of birds, maybe 500 of them, big as turkeys and as wild as deer, you think. You watch 'em go, far as you can see them, maybe two miles, your driver standing up on the wagon seat and watching them with a pair of field glasses till they go down in some grass or slough. Then you drive right for them, and put them up again, and shoot at them often as you like. They won't go so far this time, maybe half a mile, and you work over after them. By and by your dog strikes one, and you kick it out and kill it, and then another one goes out, or two or three. That's all you want. Don't be in a hurry then, but just unhitch your team, get out your lunch and wait a while. The sun gets warmer and the birds will not leave. You have got them located all right, and after awhile you go to work on them. You will find they lie well enough for the dog, but they are wilder and stronger than the August birds, and better shooting every way. You want No. 6 shot for this shooting. Very often you can walk around the edge of a bit of sod corn and get maybe a dozen of these great big booming flyers. I would rather kill a dozen that way than to kill fifty little ones in August or early September."

The second letter above mentioned has to do with my now famous game pocket, and from it I quote:

"I write to you for the location of your game pocket. I do not want the location for myself, but for my grandfather, Mr. Elias Mathias, of this city, and Mr. Joseph McMurray, of New York city, both thourough sportsmen, who hunt for sport and never for profit. They would like to hunt chicken for ten days and hire dogs at the pocket. If you should conclude to give me the location please let me know if they can hire dogs at the pocket."

This inquirer was also given the address of the "pocket," which, fortunately, is big enough for all. As to the dog question, one must refer again to the issues of Aug. 18 and 25. I beg to be understood not as advertising a spot where all the earthly wants of a shooter can be supplied on demand, but only a place where there are some birds, therefore a place a good ways from the conveniences of civilization. Never having been there myself, as I must repeat, I cannot say whether or not any broken dogs can be hired. One or two might be found, but it would be far safer to take dogs along. This I say for the benefit of other readers who contemplate a trip of this sort. The Northwest chicken country is not yet much given over to the guides who furnish everything, including dogs. Go out in there and get acquainted with some man who has a herd of Jersey cattle, and a good-looking family, and some well-broken dogs, and treat him so well that he'll invite you to come out next year and shoot with him. That's the way Roll Organ does, and others of our successful sportsmen who go out to Minnesota and the Dakotas. Under this system you don't need a dog.

### IGNORANCE OF THE LAW.

A young gentleman of this city has long been planning a trip to Nebraska after chickens. He and his party went last week, and he faithfully promised to send friends a lot of chickens before this time. At this writing he has sent a pair of jack rabbit ears, invariably the first trophy of an Easterner in the West. As the Nebraska law does not open the season until Sept. 1, and as it prohibits the shipping of such game out of the State, it is probably just as well that he didn't send any chickens. Now, if this gentleman had only read the *Book of the Game Laws* before starting on his trip, he need not have wasted two weeks of time, nor have gone to Nebraska to learn the Nebraska law. One thing I do counsel, and that is that every one about to go shooting should get this same book and refer to it. Without such reference to the different laws, the best of shooters may unintentionally violate a law. I am sorry for our friend waiting out in Nebraska for the season to open.

For any one desiring chicken shooting near Chicago, I would advise a trial at Annawan, Henry county, Ill., via Rock Island railway. There is good nesting ground there still, and from earlier prospects there should be a little shooting there now at least.

Some chickens are to be found, or last week were to be found, near La Grange, in Du Page county, just west of Chicago on the C. B. & Q. road, though it is doubtful whether there will be any left Sept. 15, as the early shooters are after them. Mr. T. C. Morris, lately of Baltimore but now of Chicago, lives at Hinsdale, near by the fields, and he has long had a covey located in the fond hope that he would be able to get a shot at a prairie chicken, something he never had in his life. Mr. Morris got wind of a party of three who next Sunday, Aug. 28, will make a sneak on his covey of birds. He entered complaint of this in the proper place, and President Organ of the State Assodiation will have an officer meet Mr. Morris to-morrow night. They will arrange a little Sunday surprise party for these three ardent souls if they can, and I truly hope that by the time this appears the way of the transgressor may have been made hard. All three of these men know the law is not off till Sept. 15.

A well-connected young sportsman of this city was innocently telling his friends yesterday of killing sixteen woodcock out of seventeen that he found in a little willow patch near Lake Koshkonong, Wisconsin, last week. He was absolutely ignorant of the fact that the Wisconsin season for woodcock does not open till Sept. 1. I did not know this myself till I looked it up to-day in the *Book of the Game Laws*.

R. A. Turtle is just back from a few days on the Kankakee Marsh above Water Valley. He and a friend killed fifteen dozen yellowlegs, but only saw three jacksnipe in the country where they hunted. Mr. Turtle says that dozens of young wood ducks are being killed along the river at that point, and that one party whose identity would occasion great surprise, had been netting, and one day caught 144 fish. It would seem that the Kankakee Association could do a little desirable work just about there just about now.

The game law of Ontario opens the season on ducks Sept. 1. I understand that another paper states this as Sept. 15. The same law limits any shooter to 300 ducks in a season. This clause, one would think, would sit lightly on our urbane friend and earnest young sportsman, Col. Harry Dale, of Rice Lake Club, Ontario. Col. Dale, however, resents this imputation, and offers to bet $1,000 to $250 that he kills 500 ducks this fall. At a reasonable fine per each of the extra 200, I am afraid he wouldn't get the best of it, even on that basis, though I don't believe he thought of that.

"That's nothing," said Mr. R. S. Cox, also of Rice Lake, and Col. Dale's faithful friend and companion. "After a while I'll tell you the name of another man over at Rice Lake who always fishes all through the close season, and promptly winds up his line when the season opens. He says he wouldn't give a cent to fish when everybody else can." From all I can learn Rice Lake must be a weird country. E. HOUGH.

175 MONROE STREET, Chicago.

## ABOUT KILLING ELK.

THE UNION LEAGUE CLUB, NEW YORK CITY, July 25.—*Editor Forest and Stream:* Happening to glance over an article in FOREST AND STREAM, current date, I came upon an account of an elk stalk, in which the two gentlemen killed fourteen head out of a small bunch, of which thirteen were cows. Now every one who ever had anything to do with wapiti knows that after the difficulties of the stalk are overcome and fire is opened, the herd will huddle and lose their heads so that most of them can be killed. There is no particular skill required in the process, for their confusion admits of much shooting, and the veriest "duffer," if he fires often enough, must make some hits. So much for the achievement. The disgrace lies in the fact that two men were unsportsmanlike enough to kill fourteen of these fine creatures, and thirteen of these cows, for a camp of about eight people. Killing the bull for his trophy was well enough, especially as the cows would be gone to find a new mate during the rutting season, and perhaps one cow might have been shot for meat. The death of the other twelve with their possibilities of eight or ten calves next season was an atrocity. Alas! however, it is only one of the atrocities which have made of a country, which one remembers twenty-five years ago as well stocked with beautiful creatures, now a dismal waste without life.

I note that these considerate "sportsmen" let the yearling calves go free, possibly out of a fellow feeling for the bears and wolves who probably made meat of these unprotected innocents in a very short time.

I really wish that it could be made a penal offense in this country to kill any game bird or animal with any other weapon than a long bow or single-barreled smooth flint-lock. This would give the game a chance and in case of an able-bodied bear would indicate "sand" in the hunter. M.

*Editor Forest and Stream:*

I feel that, in common with other sportsmen, I owe you a debt of gratitude for publishing, in your impression of Aug. 25, the account of the hunt in the Rocky Mountains signed by "Shongo."

Many men—even many newspaper editors—would have suppressed the article on the ground that such a tale of butchery had no place in a journal published for sportsmen's reading. I am glad that you took the broader view and published the paper, thus bringing up for discussion a subject which can not be too thoroughly canvassed. Many wrongs are committed through ignorance or thoughtlessness, which if publicly condemned will not be repeated, and many young men, who have read the article by "Shongo," and will see the comments which it must call forth, are likely to ponder both, and to mark out for themselves a course of action against the time when they shall find themselves within easy range of a band of elk or blacktail.

I presume that I am old fashioned, and having hunted in the West in early days, when all game was very plenty, I learned never to kill more meat than I could use. I have always been a "pot-hunter," so far as big game is concerned, for I always killed meat to eat and for no other purpose. I always preferred to kill a deer rather than an elk, and an elk rather than a buffalo, and if the season was right I never killed does or cows.

The butchery of thirteen cow elk in these days seems to me little less than a crime, and so far as can be learned from the account given by "Shongo" was entirely without justification. I do not wish to condemn that writer, for I know too little of the circumstances to do so. It may be that he is a young boy who lost his head in the excitement of seeing game, and led on by his older companion, kept shooting as long as there was anything standing; or he may be one of our English cousins, who are somewhat notorious for their love of bloodshed. The Reas, George and Tom, I used to know well enough years ago. They are old and good hunters, men who value the game for what it will put in their pockets and with no idea above the dollars and cents of a hunting trip. They have been hide hunters, and I was told years ago that they made a practice of dynamiting trout at Henry's Fork of Snake River, and I know that they used to haul away the fish by the wagonload to the towns nearest their place. These men would shoot down the last buffalo or the last elk in America with no feeling beyond one of triumph that they had the last one and there were none left for other people to kill.

In these days every man who reads knows that big game is very scarce, and it should be the ambition of the hunter to kill as little as he can get along with rather than as much as possible. The hunter's camp must have meat, but a single deer or a single elk represents enough of this to last a long time. A great quantity of meat carried about for a long time spoils or becomes sour.

Females should never be killed unless meat is really

needed. Most men hunt in the late summer, or during the autumn, when the males of all the larger game animals are fat and in good condition, while the females, which are only just weaning their young, are usually thin in flesh and poor eating. Each female spared means one or two head of game added to the next season's supply. The importance of preserving the females is coming to be more and more generally recognized, and to-day the laws of several of the States prohibit the killing of female deer at any season of the year.

I might write much more on this subject, but I will close by asking "Shongo" whether he expects us to understand that he and Rea, after killing thirteen cows and the bull, really spared the four calves?

WHITE WOLF.

NEW YORK, Aug. 26.—*Editor Forest and Stream:* "Shongo" is a butcher; he should be ashamed to tell the disgraceful story of butchering 14 elk cows. I am surprised that you print such reports. C. P.

## MASSACHUSETTS SHOOTERS.

THE gunners are getting ready. The open season on partridge and woodcock begins on Sept. 1 in New Hampshire and in Maine, and several Boston gunners propose to make early excursions into these States. Reports say that grouse are very plenty in southern New Hampshire, though the backwoods remain to be heard from. From Maine I have not yet heard any reports that have made me very enthusiastic in regard to game birds. Mr. C. Z. Basset, of Geo. B. Appleton & Co., is as fond of gunning as he is of trout fishing. With his friends, Dr. Langmaid and Mr. Thairlwall, he will go to their shooting ranch in New Hampshire as soon as the season opens. They have a spot up there that they do not like to talk much about; and no one can blame them. There is a farmhouse that they make their headquarters, and they have a number of well-trained dogs. They will be at the ranch off and on till the fall shooting is done.

Mr. G. N. Smally, the trout-fishing friend of Mr. Basset, with his brother, is already at their shooting ranch up in Canada. They are on the borders of a lake and report the fishing excellent. They will be absent till the autumn has flown or till they are tired of shooting.

About the best bags of shore birds for the seaeon by Boston gunners were made about Aug. 28, just after the great storm. Mr. Claude H. Tarbox, with A. E. Aldrich & Co., at the Chamber of Commerce, is keeping house, with his wife, in a cottage on Plum Island, just off from Newburyport. On Saturday he invited Mr. R. H Jenkins, chief of the grain inspection, and Mr. Allen P. Aldrich, of the firm, down home with himself for a bird shoot. The next morning before breakfast Mr. Tarbox, who, by the way, is one of the best gunners in this section, had brought down thirteen birds by himself, and several of them were black-breasted plover, birds that delight the gunners. After breakfast the shoot begun in earnest. The sport was truly rare. Mr. Jenkins made a bag of thirty-four birds to take home. They were summer yellowlegs, plover, ring-necks and peep. Some golden plover were seen, but none were obtained. Mr. Aldrich also had rare luck, taking some large birds.

There are also several reports of other good bags, and at other points. A party of Boston sportsmen were down to Pittick's Island on Saturday and they obtained eleven big birds and some twenty peep. They saw numerous plover flying in the morning, both golden and black-breasted, but they would not respond to either decoys or whistles. On the whole, several of the gunners claim that the flight of birds was not what might have been expected after an easterly storm of such violence and long duration.

Mr. N. G. Manson, Jr., will start for Camp Leatherstocking, on Richardson Lake, Me., on Saturday. He will be accompanied this time by his friend Mr. Ned Bynner, Mrs. Bynner and her sister. Later they expect a brother of Mr. Bynner with his wife, from Chicago. Mr. R Henry Fuller, a relative of Mr. Manson, will also be one of the party, the same as last year. Mr. Fuller has been spending the entire summer at Pine Point, Scarboro, Me. He is a retired New York hotel man, and finds nothing equal for his leisure to the woods and waters of Maine. Later in the month of September Mr. Manson expects the company of his brother in camp. Camp Leatherstocking was built last year, and Mr. Manson is sparing no pains to make it an attractive spot for his friends. He will enjoy a well-earned vacation during the month of September, "under his own vine and fig tree." Like Nathaniel of old, his namesake, he may climb one of the fig trees to see what is passing beneath. SPECIAL.

## NEW YORK WOODCOCK AND GROUSE.

ALBANY, N. Y., Aug. 6.—*Editor Forest and Stream:* A fair number of Albany gunners took advantage of the opening day of the woodcock and grouse season last Monday, and hunted favorite covers adjacent to the city. No bags of any account were secured, however. The want of success was chiefly due to the dense underbrush, which rendered it almost impossible to do any work except on the outskirts of the covers; but hunting before the lawful time was also somewhat accountable for it. We found evidence of this in the broken up broods and in the wild and scattered condition of the broods.

Sportsmen complain of a scarcity of woodcock and grouse, but in this I think they are mistaken. From my observation, covering a good portion of the State, birds were never, of late, more abundant than this summer.

That the section of the present code, permitting the killing of game birds at a time when it is impracticable, and undesirable, is unwise, must be admitted. Were the sentiment of sportsmen generally expressed in the enactment of a law, the season would not, I think, open earlier than formerly if before Oct. 1. There is no reason why a State law that is of benefit to but one county should be borne by the remaining counties. And sportsmen should look to their boards of supervisors for legislation more in harmony with their interests. NATURA.

### Nebraska Prairie Chickens.

A NEBRASKA correspondent offers to give information as to good prairie chicken grounds in that State to any inquirer who may address him through this office. He writes that there will be plenty of quail, prairie chickens, grouse and ducks in northwestern Nebraska this fall.

### How I Hunt the "Grays."

WHITEHALL, New York.—From Sept. 10 to 20 is the best time to shoot gray squirrels in this locality, and in my judgment there is no better ground in the State than here.

Last "squirrel year" I bagged thirty-seven in four hours (two hours in the morning and two at night).

Some years they are more plenty than others. Twice in my life I have seen "squirrel year," the last about nine years ago, when it was no trick to bag twenty-five in a day.

My way of hunting them is to "look for shuck" in the hickory groves, then, just at night, or early in the morning, sit down and wait for a bark, or for a gray to show up. When I see one if out of shot I run toward him until near enough to kill, then I stand perfectly still, and as he jumps from treetop to treetop I drop him with No. 4s. I have killed as many as eight out of one hickory tree. It will soon be time to hunt them, and I anticipate some great sport, for I am told by many farmers that they are quite plenty this season. C. B. PIKE.

### Lard with Shot.

SOME months back a correspondent of FOREST AND STREAM gave his observations of the effectiveness of lard as a concentrator of shot. I concluded to test the matter, having, however, doubts about duplicating his extraordinary target.

The result of my test was that two charges, one with and the other without lard, gave exactly the same results—92 No. 6 pellets each in the same target. I once read of a man who killed a very poor, scraggy bear and applied his oil to his own head, and the man's hair all came out, but he solved the mystery by concluding that the bear was shedding his coat and that it was "hair sheddin' ile" that he had used. Maybe the lard I used was the shot sheddin' kind. Sportsmen with sufficient curiosity may try the difference between the Suffolk and a razorback. I don't know the condition of the porker from which my lard was taken. N. D. ELTING.

### Vermont Woodcock and Grouse.

HIGHGATE, Vt., Aug. 24.—We are having fine woodcock shooting here now. The writer has never in former years found as many birds in our covers as are now here, though the wet season has made it laborious work to hunt them, as the ground is very soft, and there is a most luxuriant growth of vines that makes our bottoms veritable tangle swamps. Ruffed grouse are also unusually plentiful; the open season for them does not begin until the first of next month, so they now are a perfect nuisance, for half the points that my dogs get are on grouse. Yesterday my blue belton, Bruce M., gave me more than a score of staunch points on these birds, which means big sport when the season opens. STANSTEAD.

### Two Harvest Excursions.

THE great West and Northwest offer special attractions this season to tourists and home-seekers. For the purpose of enabling the public to visit the immense region included, the Chicago Great Western Railway (operating the Chicago, St. Paul and Kansas City Railway), will run two harvest excursions, selling tickets to all principal points in the territory included, on Tuesdays, Aug. 30 and Sept. 27, 1892, at the low rate of one fare for the round trip. An additional excursion will be run Oct. 25 to points South and Southwest. Tickets sold only on above dates, good to return in twenty days. For detailed information call on your nearest agent, or address F. H. LORD, General Passenger and Ticket Agent, C. G. W. Ry., Chicago, Ill.—*Adv.*

## Camp-Fire Flickerings.

"That reminds me."

DANVIS, Haugus fourteen Day.—*M'sieu Fores Strim:* Ah'll ant read it biccause Ah'll ant gat tam for read, but Ah'll hear ma frien' M'sieu Mum'sin read on you papier 'baout rattlin snake spit off hees pizins for keel somebodee w'en he'll go hugly.

Wal, sah, Ah'll ant b'lieved it, an' Ah'll tol' you what for.

We'll ant got some wil' rattlin snake here, but Ah'll see some tame one, w'en hol' Joe Maurice brought it roun' for show on hees woggin' from York State where he'll caught it.

Hol' Joe he'll come any place where dere be some folkses, he'll beegin holler, "Any one man want see nine rattlin snake, for twanty-fav cen', jomp on de woggin."

Den w'en you'll gat on for look, hol' Joe he'll stroke it wid a steek an' mek it tur'ble hugly, so he'll rattlin lak ev'ryting an' bit lak lightlin.

But Ah'll ant see it spit, no sah, for all he look lak he gat juice plenty for spit 'f he'll mine to.

Naow Ah'll goin' tol' you what Ah'll mek off ma mine of it.

De rattlin snake ant spit fore he'll bit, but after sometam.

W'en he'll bit off piece of man he lak tase of it, he'll ant spit. If he'll ant lak tase of it or be be too hol' an' tough, den he spit heem off, jus' sem anybodee.

Ant dat sensibly for rattlin snake? Hein?

ANTOINE BISSETTE.

That reminds me of the way they catch rabbits in the Upper Peninsula of Michigan. The hunter goes out just at dusk, and builds a large fire at the edge of a cedar swamp, then retire. The rabbits seeing the light are attracted in large numbers. Finding the fire warm and agreeable they sit around until the fire burns out. The snow being warmed and melted, freezes rapidly, and very soon the rabbits find themselves frozen fast. In the morning the hunter comes armed with a club and knocks them on the head. B. B.

MANISTEE, Mich.

*Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 15 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents Wild Fowl Shooting; see advertisement.*

## Sea and River Fishing.

### TROUT AND BEATEN PATHS.

MANISTEE, Mich., Aug. 15.—*Editor Forest and Stream:* On Monday, Aug. 1, I went to Snerman, a small town on the Toledo & Ann Arbor R. R., 60 miles north of here, on business; but I always combine pleasure with it when opportunity offers. That evening Mr. Frink, who keeps the Exchange Hotel, told me of some wonderful catches of trout. He had caught over 700 in three weeks. A man who keeps the book store said he kept count of his catch until he got 520; had caught quite a number since that he did not count. Other natives of the town also reported large catches until they had me so excited that I was ready to start at once and fish all night. As I could not persuade any one to go with me I decided to wait until morning. The book store man furnished me a box of nice worms. Said he had tried artificial fly with poor success, and everybody used worms. I got the location of a stream 1½ miles from town; there were three other streams from 2 to 5 miles out, all good trout creeks.

I made arrangements to have a lunch put up that evening so as to get an early start, as I had to leave on the 10:49 train next morning. I retired early and slept well considering my excited state of mind in consequence of the big fish stories. I put up my window curtain so as to catch the first streak of dawn, and awoke promptly at a quarter past four; was soon dressed and eating my lunch just as the chore boy commenced to rattle around the kitchen stove, and by the time the sun was half an hour high I had found my way to the creek, which looked very trouty, indeed. It was fifteen to twenty feet wide, full of fallen tree tops and old logs, deep holes, and every little way a cascade three or four feet deep. It ran through a deep ravine, and hemlock, maple, elm and cedar shaded it beautifully. A well worn path on either side told its own story—fished to death. I soon cut a yellow birch pole, and using line and hook that I always carry with me, I baited with a wriggling worm and dropped into a fishy-looking pool where the water dashed over an old log. The bait was no sooner out of sight than it was caught and I landed a 9in. trout. Then I began to think how I could carry them all home and speculated how I would surprise my friends, several of them each with a fine mess of trout. I rebaited my hook and tried again and for five minutes did not get another bite.

It was a lovely morning, just cool enough so the mosquitoes were not troublesome. The sun was glinting through the trees; birds were singing; the stream was rapid and I felt repaid for getting up early, if I did not catch a bushel of trout, and that is just about what happened. I fished until half-past nine and only caught five measuring from 7 to 8in.

When I got back to the hotel I was told the fish bite better toward evening; but my enthusiasm of the night before had cooled off somewhat, and I took the train for Manistee. Got to Copemish ten minutes behind time and had the satisfaction of seeing the train on the Manistee & Northeastern road just going around the curve, and there I had to wait from 11:30 to 4:20. At the hotel I was told of a trout creek one mile down the railroad. After dinner I found the barber, who had angle worms to sell, and for a good cigar furnished me all I wanted. I started for the trout once more and found the creek; but it was rather a tame looking affair, small and shallow, with no current or rapids, but a well beaten trail and plenty of fresh-cut poles showed that there had been plenty of fishermen there before me. I fished up and down for two hours in all the likely looking places I could find, but never got a nibble; saw three trout run out from under a log that I stepped on, so I think likely there might have been some in the creek; but it was not the right time of day for them to bite. The sun was so hot and mosquitoes so numerous that I returned to the hotel without adding anything to my morning catch.

I met Mr. Hatch at Copemish, who had some fine trout in a basket for a friend. He has a private trout creek on his farm, three miles from Copemish, and has been engaged in raising trout for the past five years. Said he had now 350 full-grown trout, some measuring 21in. and weighing 3½lbs. Said he had as much right to raise and sell trout any time of year as sheep or cattle; they were his private property and the law had nothing to do with him. He was deputy game warden. Had never seen a copy of FOREST AND STREAM, and I have forwarded him several copies, especially those containing articles on sale of cultivated trout during the close season. He gave me a pressing invitation to visit him, and said he would show me some fine trout and one of the finest natural trout streams in the State of Michigan. Said he could contract all the trout he could raise for 40 cents per pound delivered at the station. I expect to visit his farm in the near future and may have something to write you in regard to it. B. BRISTOL.

### A REMARKABLE STATEMENT IN THE CENSUS RETURNS.

*Editor Forest and Stream:*

Have you noticed in the report of Mr. Porter, Superintendent of Census, the following statements, which would indicate that in the State of New York for once there had been too much legislation in the way of protecting fish:

"The marked decline in the fisheries of Lake Ontario has been chiefly due to legislation. Laws have been enacted with the avowed purpose of prohibiting commercial fishing, and the effect of their rigid enforcement is shown in the decadence of this once important industry."

"From 1886 to 1889 the Legislature of the State of New York passed many laws, the avowed purpose of which was to stop all commercial fishing in certain counties bordering upon Lake Ontario excepting that fishing done with hook and line held in the hand or attached to a fishing rod. As is shown elsewhere in this bulletin, the decline in the fisheries of this lake has been marked, and is no doubt largely attributable to the legislation referred to."

"Lake Ontario is the only one of the Great Lakes that shows a uniform falling off in the points under consideration. These results are due undoubtedly to the restrictive acts passed by the New York Legislature to prevent commercial fishing in Lake Ontario, and the figures are conclusive evidence that this purpose has been largely accomplished. The decrease in the number of persons employed in 1889 as compared with 1880 was 32.20 per cent.; in capital invested, 11.72 per cent., and in the value of the catch, 46.51 per cent., or very nearly one-half." WESTERN NEW YORK.

## ANGLING NOTES.

### Caught on a Fly.

THE artificial fly is intended only for hooking and catching fish, but fishermen have caught very strange strings other than fish when casting the fly, and a list of the things, of the air that have been hooked with fly-rod and fly at some time or another would prove interesting. Birds, bats and chickens would in all probability occupy the most prominent places in the list of animals that have fallen victims to the allurements of counterfeit insects, but other animals have been captured or hooked when they had no desire to accept the fly as a lure which promised to satisfy the appetite. One of the most notable cases was told by the late Dr. T. S. Up De Graff, of his friend Mr. S. S. Hamlin, who gave his name to the Hamlin fly. Mr. Hamlin was fishing a Pennsylvania trout stream when a deer appeared on the bank within reach of his cast, and as the deer made a startled plunge into the stream to cross, the angler cast over his back and the tail fly fastened in his rump. The butt of the rod was advanced, but it was useless to hold such big game, and the deer disappeared in the woods taking flies, leader and most of the line that was on the reel, for the angler tried hard until the smash came, after all the line was run off. I have a photograph of Dr. Up De Graff in the act of fishing the "Slope-Wall Pool" on the Lycoming and after the doctor gave it, to me some one wrote on it with pencil "Deer Pool," but it is not where the deer was hooked.

A few years ago I caught an owl with a fly-rod, but not with a fly, for a slip noose in the end of the line did the business for his owlship. The most recent instance of catching other than fish with a fly I find in *Land and Water*. A gentleman was fishing the Ilen, in Cork, Ireland, for salmon, and hooked and played an 8-pound fish, and as he was about to gaff it a fox-terrier jumped from the bank and made a dash for the salmon and succeeded in getting a dropper fly fast in the paw. "Then came the tug of war. The salmon, frightened by the sudden appearance of the dog, rushed out with renewed energy into the pool carrying the little fellow well under water. Sometimes both would come to the surface, the dog wanting to reach land and the fish to escape. This continued amid the greatest excitement for twenty minutes, when the salmon was successfully landed and the fly was taken out of the terrier's paw."

Of water animals the late Col. Frank Pinckney has told of hooking a big bullfrog, and another angler hooked a muskrat, both being caught foul while fly-fishing in the evening. I presume this list may easily be added to, for I think Mr. R. B. Marston, of the *Fishing Gazette*, once hooked a cow on the back cast.

I was once fishing a stream that in places was so thick with brush that it was impossible to get a fly on the water, and I was using flies, while a friend who was with me used bait. He declined to fish one alder-covered hole, and I borrowed a worm of him and took off my leader and flies and baited a snelled hook, and caught the largest trout of the year from the stream. Expecting to at once replace the leader I did not wish to coil it, so went out of the brush and placed the leader and its three flies, all new, on a flat rock. In ten minutes the leader and flies were gone. There was no wind and the earth was bare about the rock, but I never saw the leader again. If I could know what animal was deceived by the flies I might add it to the list.

### Rank Heresy.

A few years ago I thought it my duty as an angling writer to criticise adversely one of the letters in the *Journal of Commerce* that are signed with an old English W. I did so with the greatest regret, the more so because for twenty-five years I have had a warm admiration for this brilliant, captivating, angling author, but his position made his advice the more pernicious. Then his letter was headed, "Stop Killing Large Trout—Absurd Game Laws—Useless Fish Commissions." Briefly, he advocated the abolition of the 6in. trout law, the capture of fingerling trout, and a law which should forbid the capture of trout over a half pound or a pound in weight. Fish commissioners were held to be useless, and a possible repeal of all fish and game laws predicted. Of that letter I wrote that in my opinion "It is weak in argument, wrong in assumption of facts, and utterly lacking in that for which it was commended—common sense. I say it with regret, but the author appears to have given no heed to the results, derived from years of practical fishculture, and little thought to the habits of the fish themselves, otherwise he would have chosen comparisons in breeding with surrounding conditions more alike than those of farm cattle and wild fishes. * * * Except for the old English W at the foot of the letter, one would think it was written by a pot-fisherman or 'trout hog' of the most pronounced type, a man who delights to catch fingerlings for market or to boast of his catch in numbers. If all the male trout could have rings in their noses and be led with leading sticks, and the female trout be haltered in boxstalls, and the fry be herded in pastures by watchful men, then Dr. Prime's plan might work; but until trout are taught to eat hay and oats, and stay on a farm without jumping the fences, I fear we will have to continue to breed fish in water, strengthen our excellent Fish Commission, protect the young, healthy breeding fish, kill the old cannibals, and send the netter, fingerling hunter and trout hog to jail for non-compliance with just and reasonable laws. * * * I can charge the letter only to lamentable ignorance, but coming from such a source it might work injury if it was passed by unnoticed, as it would be if written by another pen. I have attempted to write mildly upon this subject in face of the fact that a grievous wrong is done to our Fish Commission by one whom I feel would uphold them if he understood better the admirable work they have accomplished and are accomplishing, but such changes as are advocated in the letter would surely be the means of destroying entirely our trout fishing for years to come." Dr. Prime has recently written another letter dealing chiefly with black bass and the manner of fishing for them, which is interesting and instructive, but he thinks that an error has been made in stocking the lakes and ponds of New England with this game fish, because it has displaced the pike (the so-called pickerel) and the yellow perch. I fully agree with him that many small lakes and ponds have been planted with black bass that should not have known the fish in their waters, but I think no one will agree with his manner of getting rid of them. I quote only the final paragraph, which contains the remedy, and this requires no comment from me: "The beginning of the remedy should be to repeal all laws protecting the black bass in the early season. They are as good a food fish when they begin to form their nests on the shallows in the spring as in July, and if with spear, and net, and trap and hook their increase can be kept down, there may be a chance for the perch and pickerel, and the farmers' families may again have fish food once in a while." I wonder if the omission of dynamite was intentional, and also wonder what the farmers' families think of the remedy? A. N. CHENEY.

## TROUTING IN THE NORTHWEST.

ON Friday evening, July 22, at 4 o'clock I finished sawing the last log I had in the mill, went up and turned off the water, went to the house, hung my hat on a pair of antlers, which I use as a substitute for a hat rack, picked up the FOREST AND STREAM, and had just finished reading "Kingfisher's" article No. 2, when there was a rap at the door, and I said, "Come in." In stepped Andrew, my Indian helper, and said: "Lew, nica, nica tillicums tickey clatawa. Sockley ocoke illihe iskum mowich. Wake siaw. Polackley Sunday kilipi." Which meant that he and his friends wanted to go up on the big mountain and kill some deer and he would be back Sunday evening. I told him "All right."

After he left I read for a short time, but could not help sympathizing with "Kingfisher" and his companions and wish he was here. We would go to a stream where the trout are not all caught out yet. I concluded I would go over to Kettle River and see if I could catch a few trout.

Next morning I heard the clock strike 3. I jumped out of bed, donned my clothes, started a fire in the stove, and milked my cow while the stove was heating up. After eating a hearty breakfast, consisting of oatmeal mush, poached eggs, a slice of bacon, hot biscuits, fresh butter and honey, I picked up a rope and started for my horse, which I found in a short time. On getting back to the house it did not take me long to get ready.

At 5 o'clock I mounted my horse and was off for Kettle River, B. C., distant twenty-three miles, over a tolerably high divide, but splendid trail. To a person who is not accustomed to mountains this route would be considered quite picturesque; here were rolling prairies, deep cañons, high mountains in the north, a high mountain covered with thickets that are almost impassable for man or beast on the south, while the snow-capped peaks stretched far away to the west. But this beautiful scenery has long since lost its charm for me. When I reached the summit I rode out to a little lake which covers four or five acres of ground and is the breeding place of a few mallards and coots or mud hens. The old mallard had quite a brood; I could not count them, as they made a break for the tules as soon as she discovered me; but the mud hens were not so shy, there were nine young ones.

I kept on, and Frank (my dog) kept flushing bevy after bevy of grouse, some over half grown, while occasionally a brood would not be as large as larks. He made some very nice points, but I would not shoot any, as we were too far from camp and I was fishing, not hunting, just then.

I reached Kettle River at 12; here I met an Indian acquaintance who wanted to know where I was going. I told him I was after fish. He exclaimed, "Tenas; kikooly hyiu," down the river a little there were lots of them, and he measured up on his arm to the elbow that they were that long. I went down about one-half mile to a shallow ford, but the river was quite deep. I was told by the Indian that I could not cross, but I was going to try, for the fishing is always best on the other side.

I rode in and the water came up within six inches of my horse's withers. Here the stream was about fifty yards wide and ran quite swift. I got across O. K. and went down a short distance where I found a good place to camp. I soon had my traps off, picketed my horse, jointed my rod, attached the reel and line, and put on a couple of small hooks baited with grasshoppers.

I went down a short distance to a small point that had an eddy below it, where I threw out my line and it had floated down but a short distance when, ripity swish splash, and a reddish silver streak flashed through the water. It looked as if a trout was trying to play whale, and my grasshopper a yawl loaded with sailors; it was so sudden it made me jump, and I think a stethoscope would have shown that my pulse was on the increase at a rapid rate. In an instant my pole received a big jerk. I gave it a quick twitch which hooked a fish, and from the way he jumped and thrashed I thought I had one as large as the Indian had indicated.

The reel began to sing as the trout made for the other side of the river, he, too, thinking the other side was the best. After he had gone seventy-five or eighty feet I began to haul him up; I saw two leap clear out of the water, and as they were near together, I thought they were both hooked. I played them until they would fight no more, when I landed them. They were beauties; one was fourteen inches long while the other was a foot. I killed them, then took them off the hook, put them on a string and laid them in the water.

I put on a couple more grasshoppers, threw out my line, and in an instant felt a jerk at the pole, which I responded to by a smaller jerk. This was a very lively one, but he soon ran down and I landed him. He was about the size of the smaller one of the first pair. I dressed these, went to camp, built a fire and got my dinner.

I brought along a spider to cook in, as it is much thicker than a frying-pan. I can cook anything better, and do not scorch it. I put in four tablespoonfuls of lard, one of butter, rolled my trout in flour, and when my grease was smoking hot I put my trout in, covered up the spider with a tin plate and let them cook until they were a delicate brown: then I turned them over and cooked them until they were done. After they were done I poured the grease off into a can and my dinner was ready—such a dinner, too, fit for a workingman: fried trout, bread, butter and gooseberry preserves, and for beverage a cup of hot water.

After dinner and a short rest, but no smoke, I went to fishing, and in two hours I caught 27, the smallest 10in., longest 15in. I fixed up my pack, saddled up my horse, recrossed the river, went back up about four miles, and camped for the night. After picketing my horse I got supper, then made down my bed, went to bed and in a very few minutes was sound asleep.

Next morning I was up long before old Sol, got my breakfast and pulled out for home. I had gone but a short distance when Frank put up a fine bevy of ruffed grouse, they were not large enough to kill, when one could do better and I was not hungry. In a short time he came to a staunch point. As I had left the creek and brush I thought it must be blue grouse. I got down and walked up to him, when up got six or seven nice grouse, they were a little more than half grown. I shot twice, got one I marked down, when a couple settled, and when they got up one at a time I got both. I drew the three, tied them on to the saddle, and started on.

Frank was very anxious to have his hunt; he was up a slope to my right when he ran out an old cock grouse. When it flushed he chased it down past me. I hollered at him and he came in. I scolded him. He looked up as much as if to say: "My father is a greyhound, my mother a Gordon setter; now, if I point half the time you ought to be satisfied. Last winter when you broke the leg of that big black-tail doe and you told me to catch it, I bayed it in the brush until you came up and shot it in the head; then you patted me on the head and said, 'Good doggy,' now, because I chase a grouse you scold me. I will just get in the trail behind George and won't hunt any more." Well, if that is what he thought he did not carry it out, for in less than 100yds, he was hunting as busy as ever, and he made some points as nice as I ever saw.

The cover was good; the day not hot. I kept getting off and killing until my last cartridge was shot. I started with fifteen loaded shells and I had killed ten birds. Not a first-class showing. Well, I will have to do better than that if I cut much of a figure in the World's Fair tournament at Chicago.

I reached home just as the clock struck eleven. I had had two days' splendid sport, and the only thing that could have made it better would have been to have had Kingfisher or any other good sportsman along to share the sport with me. LEW WILMOT.

LOOMIS, Wash.

## WHEN YOU HAVE ON A MUSKALONGE.

AUGUSTA, Ga.—*Editor Forest and Stream:* I inclose you a letter writen by Rev. Dr. Lansing Burrows, of Augusta, and published in the *Chronicle*, of this city, yesterday. The Doctor has been on a vacation to Michigan, and for description of the sensation of fishing it excels anything I have read. Thinking you would like to republish same I inclose copy.—JOHN M. WEIGLE.

There are four of us in this pilgrimage into the wilderness. Mr. F. N. Lewis, a Main street merchant of Louisville and his son, a student of fair Harvard, Col. Weir, of Owensboro, a typical Kentuckian, and the Georgia pilgrim. With wonderful preparations for fish slaughter we have penetrated to the furthest extreme, headquartering at the "Elliot." This is no Arlington. The glimmer of a few white tents bespeaks the presence of a party of campers, and this is as near the chair-warming feature as woods hostelry can boast of. The points further back have claimed the greater part of the fishers and we have the primeval wilderness almost to ourselves. The breath of the balsam woods fans the tanned cheek, the same air that Bayard Taylor has described "as grateful to the lungs as Falernian to the palate." The clear, cold waters rush and swirl in tortuous channels ranging from boulder-lined shore swallows to fifteen fathoms. Merrily they dash their green waves striped with golden sunrays upward to catch the blue of the cloudless ether. This is the home and haunt of the bass and pickerel and trout and the majestic and gamy muscalonge. On first landing our introduction was a seventeen pound pickerel! What do you think of that, ye Edisto fishermen?

McGulpin is the guide. Brown of face and with a cheery smile, he looks like a battercake with a dab of honey on it. From Elliot's he leads us through the spruce forest a half mile, over a velvety turf formed of the fallen spruce leaves, as soft as a Persian carpet, and we come out on the most lonesome expanse of water I ever saw. It is between great islands, but the entrances on either side are narrow and winding. The shores of rock are lined with the everlasting green of the balsam—and the trees, the bright green water and the encircling sky are all that eye can behold.

The trolls are out. The silent oarsman bends to his work. The quiet is depressing. Not a sound disturbs the eternal silence. Even the oars dip without more than a ripple. Only two lines follow in the wake of the boat. The Colonel and the Student have gone away to themselves, too far off to note their luck. The moments lengthen out—and then the line lengthens, too. What is this? Have I caught a hidden rock? Queer rock to lash tail like that! In it comes, tugging and raging, and with open mouth threatening a modern edition of Jonah, to lie panting and wrestling in the boat—a 10lbs. pickerel.

> Better a moment of Les Cheneaux
> Than a hundred and twenty Edistos!

This is enough to make a man poetic. Solomon never would have written in dyspeptic vein had he been able to land 10lbs. pickerels. The fishing is not very good in Palestine, I think. With a line pulling out almost as fast as one is pulling in, and the waters white with contagious rage of a finny gladiator, there could be no recollection of the depressing heart-burn and provoking cough of indigestion. To be fishing where there never are mosquitoes or malaria, or even black flies and other insects contributes to the sources of universal charity and generosity. Even the hay fever patient snuffs only the battle with the trout.

But to catch a muscalonge—a palpitating, throbbing, gamy aggregation of five and twenty pounds of aqueous life—you Brier Creek men must wait for that before you come to tell what luck you have had. Oh you swamp fishermen, gently throw out your line and watch that no leaf or lily pad or stalk of bulrush entangles its intrusive green upon your glittering spoon. Did you feel a gentle tug? Draw up: you have caught a weed. Take it off and carefully let your 100ft. of line out again. Be patient, for you may do this a dozen times. But the air has stirred the waters with ripplings. The fugitive clouds have swept the golden glitter from these creeks—be wary now. Permit the line to lie along the fore finger, pressing the tips. Lounge not, sit steadily, drawn up like a tiger ready to spring, alert and lithe in an instant. That glittering,

revolving spoon, spinning on its swivel will be seen presently. Look out! is your arm out of joint? Gather yourself. Never mind McGulpin's chuckle, for he will look out for oars; you look out for yourself. You have hitched a lightning express train, and it is billed through. Haul in, keep taut, oh, for your life don't slack the line. Blood on your finger? all right, that will cool your fever a little, it is only the line that has cut through into the flesh. Come in steady, jerk not, still come in. You can't. You must. Take a good breath. Never mind McGulpin, he is pulling toward shore. There he goes, that hillock of foam means one fearful strike for life. It must be tiger against tiger now. Let him tangle your line and he is safe. Ah, that rush means business, never mind the boat, go overboard, but hold that line tight. Pull, pull, pull—oh, pull, for a yard of slack will raise the laugh on you. Good, McGulpin, the bow is among the bulrushes and the shore is near. The lashing monster feels the tickling of the bulrushes and he knows that means speedy death. Now for one last, mad, despairing effort. Straight up into the air he shoots himself, his lithe sides sparkling with drops that glisten like diamonds, a volcano of hot rage; let him have his way, let out the line just so much; how much? enough to keep him from snapping it in twain, and not enough for him to loosen that hook; this is his one grand chance for life. He flings himself like a circus acrobat, nose pointed away from boat and shore. Now, if you know anything, let him go, but only until with gentle pressure you can turn him as a tug will tow a great ship around. Is he off? No, that white turbulent circle means that he is still hooked and your skill is bringing him toward you again. Will he try another leap? He would if he knew how out of breath you are, standing there quivering like a frightened girl, panting and with eye aflame with delirious intoxication. Draw in steady, the boat is in the shallows. What's that brushing your legs? Never mind, it is McGulpin crawling aft with his gaff-hook. Are you going to lose your quarry? You see him plainly now, six feet away. Will he shoot that monstrous power against the boat and tear himself away to freedom? You may have the muscalonge ague and lose everything if you are not cool and steady. Lean out, throw that right arm as far as possible from the boat. Suppose you do fall out. Stand up to your armpits but don't lose your taut hold. There he is, his tiger eyes, bloodshot and defiant, glaring at you. Now for McGulpin—you have done all that man can do. Steadily the guide reaches out the gaff—a plunge, a mighty lashing—a peaceful flash—out you go—up the bank—falling limp and breathless on the sweet, soft boughs of spruce, while McGulpin hauls in hand over hand your 40lbs. muscalonge.

## CHICAGO AND THE WEST.

*[By a Staff Correspondent.]*

FROM Sept. 1 on till Nov. 1 the fishing for bass, pike and mascallonge will be good and will improve for thirty to sixty days. This fact is usually lost sight of in the advent of the game season. From now on we will hear less and less of fishing, and more of shooting, from those who leave the city for a sporting trip. Bass fishing is better now than it has been at all, but the ducks and chickens will drown the bass, so to speak, after next week.

Mr. F. H. Andrus, of A. G. Spalding & Bros., in company with Mr. J. D. Knight, start to-morrow to join the Oliver camping party, now on the Little Two-Heart River, Lake Superior, South shore. There are already in camp Messrs. John Oliver and his law partner Mr. Showalter, with Messrs. Snow, Holden and Marshall, all of this city. These have been in the woods for some time, and must doubtless have had magnificent fishing on those little-fished and abounding waters. Mr. Andrus and Mr. Knight will arrive too late for trout fishing, as the season closes Sept. 1, but will have some bass fishing near by. Word comes down that the party now in camp killed a fine black bear lately.

State Fish Warden F. L. Buck, of Elgin, had a serious affray in attempting the arrest of four men who were doing illegal seining in Honey Lake, Lake county, July 23. The men resisted arrest, and one of them stabbed Buck in the back. Buck used the fellow, a big Bohemian, very roughly, indeed, after he was struck himself, and would probably have killed him—as he ought to have done—had he not grown weak from loss of blood. Buck landed all of his prisoners, and they were duly fined, but the warden was then forced to take to his bed, and is now only just able to be about. It is a very foolish thing for illegal netters to resist arrest, and resistance of this sort would have justified the promptest and straightest sort of shooting the warden knew how to do. Buck did not shoot, but beat the fellow insensible with his revolver. The Bohemian is badly disfigured for life, and he is no longer in the ring.

---

She wore glasses, carried a handbag, and wanted to buy her husband a birthday present.

"You sell fishing poles?" she asked of the gentleman at the tackle counter.

"We have a few rods in stock for that purpose, madam," said he.

"What do they cost?" asked she.

"More than we sell them for, madam," said he. "This is a——"

"You needn't get gay with me, man. All I want to know is what them poles cost. I want to buy one for my husband for a birthday present. Is this here the bargain counter?"

"Madam," said the salesman, with his hand upon his heart, "every rod on this counter is a bargain. We sell only the finest goods, made especially for the birthday trade. Our birthday presents in fishing tackle are warranted to restore peace and harmony to families long torn by discord."

"Say, I'd like to know what difference——"

"Oh, not at all, madam——"

"How do you know there's any discord in my fambly?"

"I did not mean in the least——"

"Oh! you didn't? Well, I don't care what you mean. I won't have no talk like that from you, a perfect stranger. I come in here to buy a pole——"

"Yes, madam, a rod——"

"A pole for my husband, an' you go to talking of discord in my fambly."

"You misunderstand me, madam, I assure you. I beg a thousand pardons, but I meant another family altogether,"

"Oh, did you? You didn't mean me an' Henry? Well, now, I tell you: there hez been a little trouble in our fambly. Me an' Henry has been havin' an argyment ever sence last winter."

"Ah?"

"Yes. He's great to go fishin'."

"Yes."

"I told him it cost too much, an' me needin' a new dress."

"Exactly."

"Yes. An' he said I had dresses enough."

"Humph."

"Yes. That riled me."

"Of course."

"Yes. An' I cried."

"So?"

"Yes, an' threatened to leave him."

"Well!"

"Yes, an' — say, I didn't half cook."

"Indeed!"

"Yes. Well, that fetched Henry."

"He got the dress?"

"Yes. Got it on. Pretty good dress, ain't it?"

"Certainly is."

"Fits pretty smooth?"

"Indeed it does."

"Becoming, eh?"

"Well, I should say it was. You look simply charming in it."

"Go 'way! Do I?"

"Yes indeed. A good figure, you know, always—"

"That's what I always said. Henry, he's got carelesser about how I look or what I wear, but I says a woman has to have clothes, if she expects to be anybody at all."

"Why, certainly."

"Well, Henry he got the dress all right, an' so, to show him there's no feelin's on my part, I thought I'd get him a fishin' pole, for I know there's nothin' on earth he likes so well as to be foolin' around with a fishin' pole, even if I didn't let him go fishin' very often."

"Exactly."

"Now, what's the price of this here little pole, with red an' yellow stripes around it? It's rather pretty, but I think navy blue 'd be a better color for summer wear."

"We can sell you this rod for $25, madam."

"What! Twenty-five dollars for that little thing? You must be crazy. Say, you don't know your business. I'm goin' right to the head of this house and see if I'm going to be insulted this way."

"The boss will charge you $40, madam; the further upstairs you go the more it costs."

"You don't say? Well, I'll have to get another sort of pole. Have you got any for a dollar?"

"Yes, madam, we sell an excellent rod for a dollar, with hook, line and sinker thrown in."

"That's more like. I guess I'll have to take it, though I did like that pole with the red and yellow passamenterie trimmin's on it. Say, have you got any o' these little wheels they wind up the line on?"

"Reels?"

"Yes, maybe. What do they cost?"

"A good one can be bought for $10 to $50."

"What! Gee, but you folks are robbers. Got any for fifty cents?

"Yes, madam, an excellent reel for thirty-seven cents."

"That's too much money. I guess I won't buy none of them wheels. I used to go fishin' myself, not so very long ago, when I was a girl, an' I know we never had no wheels to wind up fish with.

"No?"

"No indeed. Well, how much do I owe you?"

"One dollar, madam. Is there nothing else to-day?"

"Oh, yes, Henry must have a yachting cap. I come near forgetting that. How much is these blue ones on this counter?"

"Two seventy-five, madam. They are the latest."

"All right, I'll take one of them. Six an' five-eighths, please. I'll get it small so't I can wear it myself sometimes."

"Is that all, madam?"

"Yes, that's all. How much? Three seventy-five? All right. Good bye. I think this is a real nice place to buy things."

E. HOUGH.

175 MONROE STREET, Chicago.

## THE FISHERMEN OF BOSTON.

BOSTON, Aug. 30.—It is singular how bad luck always goes in strings. I do not mean that a plenty of twine in one's pocket when one goes a-fishing means bad luck, or that there is bad luck in a good string of fish. Bad luck goes quite the contrary, in both cases. Perhaps my meaning is more exactly expressed by the familiar saying that "It never rains but what it pours." Mr. David H. Blanchard has got back from his second trip to his salmon river, the St. Marguerite. He left Boston Aug. 9 on receiving word from his men that there were a good many salmon in the river. He reached Quebec all right, but there his string of bad luck began. The steamer started down the river, but she encountered such rough weather that she had to put back; something that very rarely happens. This delayed Mr. Blanchard two or three days, and all the time the salmon were running. Finally he got started again, with his baggage and his fishing tackle all checked for Tadousac. He got ahead of his tackle. It went wrong, and he saw nothing of it for ten or twelve days. All this time the salmon were running but he had no tackle. After the rods did come he got four salmon—one up to 27lbs. Mr. Blanchard carefully cleaned and smoked his salmon. They were for friends in Boston and elsewhere. He used fine salt in the process. When he got to Boston the other day he opened the smoked salmon that were intended to be the finest his friends ever saw. They were all spoiled. This completed the string of bad luck and tied a knot in the end. He thinks the fine salt did it.

Mr. John Fottler, Jr., is in Boston again after his summer's outing at the celebrated salmon river, the St. John, at Gaspe, owned by himself and Mr. I. W. Adams. He went into camp early in the season, with Mrs. Fottler and his little daughter, twelve years of age. They have actually "kept house" in camp for some thirteen weeks. Mr. Fottler says that he has found the true way to enjoy a fishing season. He has taken some fifteen salmon this season, the average weight of which was about 17½lbs. The largest weighed 26lbs., and there were several that tipped the scales at 25lbs. and above. But then one would come in that would only weigh 10lbs. or so, and this would knock the average down badly. But their best sport was with brook trout, after all. Mr. Fottler and Mr. Adams own a beautiful trout lake also. It is up the mountain something like a thousand feet above the river, and yet is reached quite easily from the salmon camps. At the lake Mr. Fottler has built a cabin or two, so that fishing trips can be made there covering several days. The fly-fishing in the lake is something delightful, as Mr. Fottler explains it. Even the little Miss Fottler could take the very lively trout with the fly, though only just beginning to learn to cast. But like the real sportsman that he is, Mr. Fottler allowed no trout to be killed that could not be made useful for food. Small ones were invariably returned to the lake.

Mr. Fottler must have had simply a glorious time, and there are few men that deserve it more than he, for the noble work he is on record for having put in for fish and game protection in Massachusetts. While not flagging in his interest in the cause in his own State, Mr. Fottler is forced to acknowledge that after all "we must go further into the wilderness for fishing and hunting than is at all satisfactory." He will visit the salmon camps later in the season, or go into that section for caribou, and he has every reason to believe that his chances for success are very good. It seems that Senator Aldrich and Mr. Reed, of Boston, did not get as far as Gaspe, as mentioned in the FOREST AND STREAM, though they started, and Mr. Fottler was ready to receive them. The Hon. Senator received telegrams that called him back before the St. John was reached. He hopes to accompany Mr. Fottler after caribou this fall, however.

SPECIAL.

## A KANKAKEE BASS POCKET.

HUNTINGTON, Ind., Aug. 25.—Last Sunday we visited some friends at a railroad contractors camp, on the Kankakee River, just above Mud Lake, and were told some very encouraging stories of the good fishing, not four or five miles up or down the river, but right there at the camp. We took a look at the water, and found the channel 30yds. wide, with a depth of 8 to 12ft., the current sluggish, and the moss encroaching on the channel from both sides, till there was only 20 to 40ft. of clear water in the center. Had we been looking for an ideal place for 4lb. bass and 15lb. pickerel, we would have looked no further.

The following evening we drove to a creek five miles away and caught several hundred minnows, and an elegant lot they were. From 2 to 6in. long and of all varieties that live in creeks. The minnows were supplemented by two dozen half-grown frogs.

Next morning the rising sun found us in the boats, entirely happy, except that we feared our tackle was not strong enough. It had not entered our heads that possibly they would not bite. No indeed. No bass in his right mind would refuse such tempting minnows as those, and no pickerel ever passed by such frogs as we had. It was not in expectation but in full confidence that our minnows were dropped right at the edge of the moss; but the confidence soon changed to disappointment, for nobody got even a nibble. At last, after an hour of this, Mr. R. said, "I've got one." At this, the rest of the party took in their tackle to give Mr. R. a clear field, and lots of advice.

He was told to "play him easy." "Don't let the line slack." "Keep him out of the moss," and a general assortment of advice was showered upon him. For the first five minutes the fish had it all his own way. The line did not seem to control him a particle, but fortunately he did not go straight away till he reached the end of the line and then break it, but chose to swim in circles. After a while he weakened and was drawn nearly to the top of the water, but he didn't stay there. He went straight to the bottom, and was see-sawed between the bottom and top of the water a good many times before he was drawn near enough to see what he was, and when we did get a view, there were vigorous exclamations that would not look well in print, for the fish was nothing but a worthless old dogfish, but it was the only fish that was hooked in eight hours' faithful work. They would not bite and we couldn't make them. Sadly we put away our tackle, threw the minnows overboard and were unanimously of the opinion that we had been basely lied to by everybody that told us fish could be caught in that part of the Kankakee.

O. H. HAMPTON.

## CRAIG'S POND.

BUCKSPORT, Me., Aug. 25.—The fishing in Craig's Pond has been better than ever before. Brook trout and landlocked salmon are found in considerable numbers. Parties have gone from Bucksport, Castine and other towns, and most of them have been unusually successful. The pond contains minnows and smelts in great quantities, and these are the natural food of trout and salmon.

At first it was sufficiently easy to catch all the minnows needed with a dip net along shore, but gradually the little fellows would rush off out of reach upon the approach of the netter. Earth worms and cut fish were relied upon for hand line fishing, and the best grounds were located near the middle of the lake in about 40ft. of water.

The same difficulty was met in the capture of landlocked salmon during August, as described by a correspondent in Bridgton; the fish refused to take bait because they were in the deepest water in company with their favorite food, the smelt.

The improvement in the fishing in Craig's Pond has steadily improved since the results of stocking from the Craig's Brook station were first noticed. The average afternoon catch of landlocked salmon has been 8 or 10 to the line, and the fish weighed from 2 to 4lbs.

Last spring for the first time these salmon were caught in Toddy Pond, at Mason's Mills; but Craig's has been the favorite water. Mr. Creamer, of Bucksport, had taken 35 salmon up to the end of July, and continued to make fair catches in August. Mr. Winters and Mr. Emerson were also among the successful anglers.

Many of the lakes in the vicinity of Bucksport contain black bass, white perch and pickerel, and furnish excellent fishing.

T. H. B.

*The* BOOK OF THE GAME LAWS *has all fish and game laws of the United States and Canada. Price 50 cents.*

## Forest and Stream's Fishing Postals.

"DROP US A LINE" ON A POSTAL CARD.

Fishing News, Place to Catch Fish, Fish Caught, Fishing Incidents.

CAMP JIBBENAINOSAY, Lake Waquekobing (Clear Water), Aug. 17.—Algoma, Ontario. Total catch of the Kingfisher Club, 816 bass and 77 trout, pickerel, etc., while at this camp. Will try and give you a few items soon. Camp breaks up to-morrow. KELPIE.

RUSHMORE, Aug. 26.—Lake Champlain not quite up to the average this year, owing in part to high water. I think the vast hordes of yellow perch are helping to clean out the black bass. Have been through part of the Adirondacks this week. Had three kinds of trout—bullhead trout, perch trout and trout. DEXTER.

PHILADELPHIA, Aug. 24.—The fishing at Anglesea is fine, large catches of sea bass, with a few weakfish, porgies and eels are caught daily from the decks of the steamer which takes you to the banks. Bait and lines are furnished on board. S. P. M. T.

### CHAIRBACK MOUNTAIN TROUT.

IT is not generally known, I think, that West Chairback, the highest trout pond in Maine, is also one of the best stocked. West Chairback is 2,120ft. above the sea level and is situated on the side of Chairback Mountain, whose height is 2,270ft. above the sea.

It is not of the height of the pond or the quantity of the trout I wish to speak, but of a peculiarity regarding the latter I never noticed elsewhere, although it may be common. When you strike them right—and it's rare that you don't—you catch square-tails averaging about a pound almost as fast as you can land them, and our party was enjoying this very agreeable pleasure. After we had brought in a dozen, I happened to glance down at them as they lay in the boat. We hadn't taken the time to cover them up and the sun was shining upon them. Instead of being a uniform color, some reflected back green, some a royal purple, some crimson and some yellow. Of course they didn't show these colors out of the sun, but they were distinct enough as they lay glistening in the bottom of the boat.

After that I noticed them when brought over the side of the craft we were fishing from with the dip net. First there would be a yellow one, then a green, a purple or red. What I desire to know is if West Chairback trout deserve any special distinction on account of this peculiarity I have mentioned. FRED K. OWEN.

AUBURN, Me.

[The same variation in colors of brook trout has been observed in many other localities; but besides this there are geographical races of trout which differ permanently in color from the usual standard and yet have no other character of importance which would entitle them to a distinct name. Maine lakes contain a red-spotted trout which is different from the brook trout and has a name of its own—the silver trout of Flood's Pond is an example.]

### GREEN LAKE, MAINE.

AT this date the fishing for brook trout and landlocked salmon is comparatively poor, as these fish are found only in deep water, where they have smelt in abundance. White perch, on the contrary, are just beginning to take the hook freely. A fisherman caught eighty one day last week.

As we steamed up to the head of the lake at noon, Mr. Girard and Mr. Webster, of Bangor, who were fishing from a boat, told the writer that one of them had just lost a fine large salmon by the breaking of a leader.

Mr. Daniel E. Wight, foreman of the Green Lake fish hatchery, states that fully 200 landlocks have been caught in the lake during the season, chiefly with worms, in June and July. Mr. Gould, of Bangor, took 25 and Mr. Samuel Carr, of the same place, has caught more than that number, besides some very nice brook trout. Mr. J. W. Davis and other employees of the hatchery secured about 25. At the mouth of Mann's Brook fully 75 were captured from the bridges in shallow water.

What brings the landlocked salmon into shallow water and the mouths of streams early in the season, say in May and June? Smelt. These toothsome little fish form the favorite food of the salmon. They run up into the mouths of streams to spawn and are followed thither by the landlocks, as well as the big brook trout.

It must be a wonderful sight, this struggling host of smelts that fills the stream, crowding upward only in the night, and coating every rock, twig, and blade of grass with the little golden adhesive eggs. Mr. Wight has scooped up a half bushel of the fish at a single scoop of a net.

These eggs evidently hatch in a short time, for on July 1 the fry were from ½ to ⅝in. long, just right to feed young salmon and trout in the hatching troughs. The wild trout of course help themselves to the same delicate food in the brooks.

In October another instinct will impel the landlocked salmon from its feeding haunts in deep water and cause it to re-enter the streams falling into Green Lake. The female will ascend first, and she will select a place in shallow water where stones are plentiful, from which to build a nest. She will work at night and rest in hiding during the day under some sheltering bank or submerged stump in the deepest water she can find. Two nights will generally suffice for the hard work she must accomplish. The nest will be a rock pile about 3ft. long, 2ft. wide, and 7 or 8in. high, and it is surprising to see it composed largely of stones as big as a man's fist.

Mr. Wight has seen the female making her nest, and says she loosens the stones with her snout and pushes them into position with her tail. The male makes his appearance after the work is completed. No female will use a nest abandoned by another female, but each must have a new nest of her own.

It seems evident that this salmon spawns biennially. A number of females were tagged and liberated after spawning two years ago. None of the tagged fish were taken last year, but six have been caught this year.

The nest does not protect more than about one fourth of the eggs, the rest are carried away by the current and eaten by chubs and suckers, which are always to be seen on the spawning grounds of the salmon, and are always found to be gorged with eggs when their stomachs are opened. T. H. B.

GREEN LAKE, Me., Aug. 27.

### WOODS HOLL AND THEREABOUTS.

WOODS HOLL, Mass., Aug. 23.—Bluefish made their appearance in the "hole" about two weeks ago, and are here now in small numbers, but they do not take the hook freely, and bait has been scarce and high. Eelskin, which was the favorite for trolling last year, is not effective now. Menhaden have been selling for 5 or 6 cents each until yesterday a party secured a fine lot for bait at 3 cents each. This party steamed out into Vineyard Sound, about half way to Tarpaulin Cove, and in a couple of hours took about forty fish, one-half of which were beautiful sea bass, the largest weighing 5lbs. The rest of the catch was chiefly scup, with a few grunting sea robins and several small sharks. It goes without saying that the bass and scup slacked off as soon as the sharks appeared.

Bass have only recently "struck in," and our catch attracted considerable praise at the wharf. The "robins" are despised by most persons, but without reason, for their flesh is really very good eating. Professional fishermen have such a prejudice against them that they do not consider them fish at all. The bass were very plump and full of food, and when they came on the breakfast table they were found to be white-meated, flaky and firm, while the flavor was excellent.

We were fishing on hard bottom, in water about 75 to 90ft. deep. The tide runs strong and heavy sinkers were required during its strength.

The fresh-water black bass which were introduced into ponds in the vicinity of Falmouth many years ago thrived and multiplied under judicious protective laws. Now that the leases have expired and fishing is open to the public, the fishing has declined somewhat, but is still fairly good. Bass weighing 6lbs. have recently been taken.

The Grampus returned on Sunday from a trip to the tilefish grounds and brought in another fine specimen weighing 13lbs. The rich lemon yellow spots were well preserved, but Prof. Libbey said it showed none of the characteristic rose tinge in life. The upper parts were steel blue, and with the overlying lemon blotches the colors were very pleasing to the eye.

The shores are almost barren of fish. I do not recall a season in which young scup, tautog and menhaden have been so scarce.

Birds are few and far between; the kingfisher and a small tern are the only species in sight. The surrounding country is parched and thirsting for rain. T. H. B.

### CULTIVATED TROUT AGAIN.

*Editor Forest and Stream:*

When a Governor assumes superior knowledge to the combined wisdom of the Legislature he invites criticism.

It cannot be said of this trout bill that it was passed hastily and without due consideration. On the contrary it received more than usual attention and was fought fiercely and persistently by the sporting fraternity. But after all the objections, both real and imaginary, it was the decision of the Legislature that the fishculturist should have the freedom to sell the products of his industry in a more extended season. But not so the Governor; as a sportsman and in sympathy with the present restrictive, arbitrary and despotic trout law, he vetoed the bill. Although a sportsman, the Governor does not seem to realize the wonderful achievements and grand possibilities of fishculture.

With repeated demonstrations beyond question of the value of artificial propagation of trout for increasing this desirable fish, he expresses fears that if the people are allowed to engage in this business, without restrictions, the streams will become depopulated. This is strange logic. If the business is made profitable it will incite capital to enter it, and our streams will be taken and utilized to their full capacity. With increased production will come competition and with competition only can the price be reduced.

The Governor speaks of the expenditure of large sums of money and expensive offices of the State, in trying to preserve and increase the trout. The State has undertaken the artificial propagation of trout, and with great care and expense hatches and rears about one-half million of trout annually, to a certain size, but not having waters where a trout can live, they drop both scientific and business methods and turn them into private streams to the tender mercies of their enemies. When we consider the variety of birds, animals and reptiles that enjoy a meal of trout, and know they can catch them, we can form some idea of the number the State will be obliged to hatch to make them plentiful and cheap. The fishculturist employs scientific and business methods, but unlike the State, uses them continuously. He would as soon turn his young fry into the street as into a stream with their enemies and expect profit. He is obliged to class his fish according to size, as it is a fact that big fish eat little ones.

A yearling trout has no scruples in devouring twenty-five of his kindred young fry for breakfast, while a dozen would not furnish a frog with a luncheon. It is in the utilization of the great fecundity of fish and carefully guarding life from the germ to the marketable product that fishculture has achieved its wonderful results. In the natural state, but a small per cent. of the eggs can hatch, as they are eagerly devoured by other fish, while the trout, cannibal like, will destroy the eggs of his neighbor. By the artificial method of propagation in a well-regulated hatchery more than ninety per cent. of the eggs are expected to hatch. Those familiar with Warrens Wells brook before Mr. Gilbert employed scientific and business methods in the production of trout can readily compare the difference between nature and art. Now, more than one hundred pounds of trout are produced where one grew before. As the business has developed into an industry, it does not ask for special legislation, it only asks for the same freedom in water farming that is accorded to land farming, but it does ask to be divorced from game laws.

Artificially reared fish being domesticated, should not come under game laws. With game is associated pleasure, but pleasure and business cannot harmonize. It is this point that needs adjusting. The Legislature has favored business, while the Governor has favored pleasure, and in his veto calls it special legislation if this business is allowed to develop naturally and the people allowed to buy the fish when they want them. We think the Governor has more than made a mistake; he has blundered. The population is too dense and the small boy too numerous to respect game laws. The savage still lingers and is ever on the alert to measure his strength with all animate nature around loose.

If the æsthetic gentlemen of the Massachusetts Fish and Game Association must have game for pleasure, they must retire to distant fields where the shriek of the locomotive is not heard, where the music of the babbling brook is not hushed by the mill dam; where nature in its primitive beauty greets them; where the small boy is not; there they can find game that is worthy of the name, and there around their camp fires can spin their yarns of what once was in Massachusetts. W. S. HADAWAY.

PLYMOUTH, Aug. 5.

[This communication is interesting chiefly because by its characterization of the Association members as "the æsthetic gentlemen," it illustrates the misconception many people have as to the character of those who care about preserving the wild fish and game.]

Dec. 19.—Irish Setter Field Trials, at Lexington, N. C. Dr. G. G. Davis, Philadelphia, Pa., Sec'y.

### SOME GOOD GREYHOUNDS.

WHEN the s.s. Tauric arrived a couple of weeks since she brought over a lot of horses and four greyhounds consigned to W. E. Warren, Fox Lake, Wis. Not being able to gain any particulars from the steamship people about the dogs, we wrote Mr. Warren inquiring the pedigrees, etc., of the dogs. The principal owner of the greyhounds is Mr. E. H. Mulcaster, of Brandon, Wis., an Englishman who has had considerable experience in breeding and training greyhounds in the old country. These fine dogs were selected and purchased by his father, Geo. Mulcaster, whose name is familiar to greyhound men. The four dogs are Glen Kirk, Miller's Rab, Gilda and Roy. Glen Kirk is a red dog, weighing 65lbs., and is by Misterton out of Glengowan. His performances are as follows: Ran up to Lord Sinkat in February Stakes (32) at Haydock Park, February, 1887; won five courses Gosforth gold cup, March, 1887, beaten by the winner, Huic Holloa; won three courses Gosforth gold cup, 1888, beaten by the winner, Burnaby; divided September Stakes (21) at Haydock Park, 1888; won Londesborough Stakes (12) at Market Weighton, 1888; divided Gosforth gold cup, 1889, and has always ran a good course whenever slipped. Miller's Rab is by Waterford out of Nancy McPherson. Weighs 62lbs. and is a black dog. He divided the Haydock Champion Puppy Stakes, value £650, 137 runners, and won Buccleugh cup, etc. He is the sire of Gymnast, Porridge, Gladiator, Jungfrau, etc. Roy is a fawn, by Glentruim out of Glade and is also well bred. Gilda, fawn, was whelped in 1889 and is a full sister (later litter) to Gladia, who won the Caledonian (16) and Lytham cup (18) and also sister to Gladiola, who won the Croxteth Stakes (35) at Altcar and three courses in the Waterloo cup. She is by Mentor out of Gladys, by Misterton—Annie Macpherson. It will therefore be surmised that these dogs are both good performers and of royal breeding. Mr. Warren is also interested in their ownership and tells us three or four will be fitted for the Kansas meeting. There are few greyhounds in that locality, and unless our breeders see fit to take the risk we are afraid these dogs will be lost to the general run of greyhound breeders. However, it shows that the greyhound fancy is spreading, and as long as such good ones are imported we shall always see some good coursing.

### PACIFIC FOX-TERRIER CLUB.

MR. J. B. MARTIN writes us that the Pacific Fox-Terrier Club held a meeting Aug. 22, at 21 Kearny street, San Francisco, J. E. Watson presiding, J. B. Martin, secretary. G. W. Debenham, Dr. Thomas Bowbill and Robert Liddle, of San Francisco; R. B. Bain, of Fruitvale; A. F. Baumgartner, of Oakland; G. D. Schearer, of San Rafael and H. H. Carlton, of Alameda, were present. H. W. Fores was elected a member. He recently arrived from Toronto, Canada, and is the owner of Pickle II., by Suffolk Coronet ex Flora Tatters; bitch Kismuth, by New Forest ex Ebor Nettle, and an unnamed bitch puppy, Pickle II. ex a Brockenhurst Rally bitch.

The matter of awarding prizes to Californian bred dogs only was fully discussed, but this did not meet with the approval of the members, who desired that competition be open to all dogs owned by members of the club, but a prize will be offered for the best California bred pup at each of the shows of the Southern California and Pacific Kennel Clubs. It was determined that all the specials to be given by this club consist of cups and silver plate.

The following was adopted: Whereas, The Pacific and California Kennel Clubs, having each claimed the dates May 3 to 6, 1893, for the holding of a bench show in this city; Resolved, That the Pacific Fox-Terrier Club extends its support to the Pacific Kennel Club, and requests the American Kennel Club to award the above dates to said club.

Treasurer Debenham reported $70 on hand. The meeting then adjourned until Monday, Sept. 26.

J. B. MARTIN, Sec'y.

## POINTS AND FLUSHES.

CHICAGO, Aug. 27.—There is no more common fault in training than that of over-training. Nearly everybody thinks that a setter or pointer cannot be trained too much; that the most perfect obedience and dcference should be established and maintained, and that the dog should look frequently to his handler for orders, when searching for birds. This is the belief of nearly every shooter or amateur trainer who has not attended field trials or had the advantage of coaching, in practical training and handling, by professionals, and it is the opinion of some who have had both. Many a good dog has had his individuality entirely destroyed, or his best capabilities impaired, by a course of training wherein the trainer taught on the theory that he furnished all the brains and the dog simply did the work. Even in the practice of professional trainers it is not an infrequent occurrence to see dogs show hesitation in certain parts of their work and look to their handler for orders or assistance, often in matters so simple that they should have instantly decided for themselves without any reference to the handler. This is a much more serious fault than is commonly supposed, since the dogs work but a few moments at a time on any plan or responsibility of their own before looking up for orders, which they obey promptly as soon as received, entirely abandoning all previous plans. He may not precisely understand what the order or signal means, but he works diligently in obedience to the order as he understands it, whether it is useful or entirely useless. As this erratic matter happens every few minutes, the day's work, in its entirety, is but a succession of disconnected efforts, every one different from its predecessor in direction and idea; consequently the results must be unsatisfactory. A dog of this kind may be industrious and willing, but having no self-reliance and no plans, his work is commonplace.

Many dogs of mild and pleasant dispositions are easily over-trained. They are naturally deferential and anxious to please their masters, therefore soon look to them habitually for orders at every turn. Very few dogs are of such an independent and confident disposition that they cannot be over-trained. However, constant meddling and ordering, in season and out of season, will mar the work of any dog, be he ever so self-reliant by nature.

In positive contrast is the dog which plans his work on his own responsibility, ranging from place to place in an intelligent manner, one act following another in useful sequence. Such a dog is rarely in doubt about what is correct to do next. With all his diligence and earnestness in hunting, the self-reliant dog works to the gun with the greatest nicety and good intention, if his training has the proper finish.

It should not be inferred that a self-reliant dog is self-willed or disobedient. On the contrary, he should be thoroughly obedient. The distinction is that one is constantly looking to his handler for orders as to where to work or what to do, the other works freely without any prompting.

### Handling.

As the season for dog training is now begun and the shooting season has opened in the larger part of the vast region comprising the chicken country, a few hints as to manner of handling a dog to develop his best abilities without overtraining him, may be of value to many readers. The manner of doing so is very simple, so simple, indeed, as to be deemed hardly worth observing by the sportsmen at large. The fault of overtraining comes chiefly when the trainer becomes a boss of his dog.

The whole matter of correction is comprised in permitting the dog to do his work and solve his problems in his own manner without bossing. Of course, training to systematically work to the gun should be enforced, but as to the manner of searching, the dog should be thrown largely on his own resources. If he shows a disposition to unnecessarily look to his handler for orders or prompting, the latter should ignore him entirely. When the dog finds that the handler goes on his way without concerning himself about him, he will soon work on his own plans and cease to expect assistance at every turn. The thoroughly trained, high-class dog is one which will work correctly and diligently without orders or prompting. Too often a dog is bossed when he is doing right.

A fault very common with amateurs, and one from which professionals are not always freed, is too many orders habitually given in too loud a tone of voice, sometimes at the highest pitch of the voice. Besides being harsh and inelegant, it is harmful, and withall it is needless.

If Mr. Angus Cameron, who handled the team of English dogs in the trials of 1890 in this country is a fair representative of English trainers, they far excel the American trainers, considering them as a class, in handling dogs quietly and establishing perfect obedience. I do not mean to imply that American trainers can not handle quietly or enforce perfect obedience. The fact that they have not done so is the point presented.

Undoubtedly the old heat system had much to do in developing a large class of disobedient dogs, as each heat was a separate race, one dog beating the other regardless of what good or bad work either may have done in previous heats. A disobedient dog had a great advantage over an obedient one, providing that he did the bulk of his own work well. The dog himself and the loud orders necessarily used in handling him constantly interfered with the obedient dog.

The signs of the times indicate that a more finished style of training is desired and demanded, in addition to developing the dog's best natural capabilities, and trainers will act wisely in recognizing those signs.

### The Memory of Dogs.

The powers of memory are much more acute in dogs than is commonly known, and those who do recognize it do not give it the importance to which it is justly entitled. Many instances could be mentioned, showing that some have remarkable ones. However, everybody has observed this faculty and other phenomena of mind in the dog.

I desire to mention the importance of it in a field trial competition, in respect to which it is very rarely considered. So far as I know it is not recognized by field trial judges in general, although it is often a very important factor, and has been sometimes decisive in its results in determining winners. It is in this connection that it is more particularly important from a competitive standpoint.

So keen is the memory of some dogs that they will remember the exact location of each bevy found in a heat. From experience in field work, they know that if a bevy is not found in a certain place where it has been found and where it haunts, it will be found somewhere in the near vicinity of it. A few rapid casts skilfully taken, generally result in finding it. Dogs of this class often have a great advantage in a field trial. One having such keen power of memory and certainty in applying it, has a great advantage in running subsequent heats over the same grounds. He skims from the haunt of one bevy to the haunt of another, seldom failing to find them. His competitor is hopelessly handicapped by his absence of knowledge of the locality, if he has not hunted the same grounds. It is particularly harmful in the final heats where the best dogs come together. I have seen many dogs handicapped in this manner. It is a fault in management which occurs a number of times at every large trial, the opportunity to profit by knowledge of the grounds being repeatedly afforded by following the same route over the same grounds every time that they are used. Not only does a dog learn a certain route after hunting it out once, but in a case where such dog has previously competed in the same trials in previous years, he has a good knowledge of the grounds before he starts in the competition. It may be asked how such complications and inequalities of conditions can be avoided. Simply by not running a dog or dogs a second time over precisely the same route, and by running the final heats on grounds entirely new to the competitors. There is not much real hunting in working a dog over a route with which he is perfectly familiar. He goes from bevy to bevy as a matter of absolute knowledge, the real searching being insignificant.

---

The Chicago *Tribune* in an account of a landslide at St. Paul, has the following mention of a pathetic incident which deserves wide publication so it may be added to the innumerable good acts already credited to "man's best friend." It says: "In one of the houses demolished two little boys were buried, one of them, a child named Swengert, ten years of age, being killed, the other badly injured and may die. A dog belonging to one of the boys scratched away where they were buried until he uncovered the earth and thereby saved one."

---

Messrs. A. Merriman and W. B. Gates made a pleasant call at this office. Mr. Gates is on his way to his home at Memphis, after a pleasant sojourn at Eastern watering places. Both were looking in the best of health.

---

Mr. Harry L. Goodman will probably not be able to finish up his business interests by Sept. 1, in this city, but he expects to have his affairs settled and be in charge of the kennels near Nashville before Sept. 12.

---

### Scoring at Bench Shows.

I was just closing up "Points and Flushes" for this week when FOREST AND STREAM, Aug. 25, came to hand and afforded me the pleasure of reading Dr. Wesley Mills's courteous letter on the subject of judging by scoring to a scale of points. I have not the time at present to deal with the subject at length, as I start shortly for Manitoba to attend, in the interest of FOREST AND STREAM, the field trials held there.

Touching the matter briefly, I think that chicken fanciers, among whom scoring by points had its staunchest believers and advocates, have become divided in their beliefs as to its soundness, the chicken fancy being arrayed for and against it. If my memory serves me correctly, the great poultry show of New York was judged by comparing fowls, the old style of judging by scoring being thereat abandoned. I think that the circumstances in this respect were the same this year at that show. In short, the theory and practice of poultry judging is in a state of evolution. All progress means destruction of something preceding, and I think that Dr. Mills will find on investigation that scoring to a scale of points is already partially demolished and piled up with the debris of the past. I believe it will not be long before it is abandoned.

Reading between the lines of Dr. Mills's pleasant and instructive letter, I infer that he is a believer in judging by a score card. If so, it would interest the readers of FOREST AND STREAM, as I know it will me, if he will give his views at length. B. WATERS.

---

## FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Can.—My Ottawa correspondent tells me the electric cars are playing havoc with the dogs in that city. Going home recently he saw two "laid out," one a fine black and tan foxhound, a recent purchase of Mr. G. W. E. Austin, V.S., the other a nondescript spaniel.

---

Mr. J. W. Wurtele, Ottawa, owner of the greyhound Justinian, has added Jetsam, first in open class and diploma for best bitch at Ottawa last year. Mr. Geddes will handle the pair at the Canadian shows.

---

Mr. Hugh Falconer, Shelburne, has been making further additions to his kennel. One is the pug dog Peek-a-Boo, from Mrs. J. V. Newton. He is by Wink out of Little Kate, and back of these are Lord Clover, champion Treasure, etc. He also has had from Mr. J. L. Winchell a mastiff puppy by Beaufort's Colonel. I have seen Mr. Winchell's letter and he writes highly of him and says he is "one of the most promising young mastiffs in America."

---

The annual meeting of the Canadian Kennel Club will be held in Richmond Hall, Richmond street, Toronto, on Tuesday, Sept. 13. An executive meeting will be held one hour earlier at same place.

---

Mr. A. D. Stewart showed me part of a letter the other day from Dr. H. S. Griffin, of Hamilton, who is now in England. Dr. Griffin has purchased the crack bull-terrier champion Principio, the winner of many cups, medals and other prizes, and who has beaten Streatham Monarch. But meagre particulars are at hand other than that he is by Bendigo out of Kit. A bitch is also coming over, Kathleen Mavourneen, by Gully the Great out of Rose.

---

Mr. John Saunders, Hornston, has imported a sable and white collie bitch who claims Gladdie as her paternal parent. She is due to whelp Sept. 1, to one of the best dogs in Scotland.

---

Mr. T. Swan Smith, Montreal, has imported from Mr. Alex. Smith, Auchcairiel, Scotland, the collie bitch Auchcairiel Lassie, a black, tan and white, about one year old. She has a double cross of Christopher, being by Auchcairiel Topper (Christopher—Pittengaden Flirt) out of Auchcairiel Duchess (Christopher—Sweet Lassie).

---

A small dog show will be held at Barrie, Ont., in connection with the Agricultural Fair, Sept. 26, 27 and 28.

---

The following notices of motion have been forwarded the C. K. C. secretary for action at the annual meeting. By Mr. H. Gorman: "That a breeder's certificate be attached to every application sent in for registry in the C. K. C. S. B." By Mr. A. D. Stewart: "That the penalty of disqualification imposed by this club upon Mr. F. H. F. Mercer, of Ottawa, be and is hereby removed, and that said Mr. F. H. F. Mercer be and is hereby eligible for re-election in the Canadian Kennel Club upon payment of usual fees." 2. "That Section 7, of Rule 15 be amended by striking out all the words after the word 'class' in the sixth line of the said section." The adoption of this would do away with the necessity of a dog winning at least one challenge first, in a show of 500 entries or over to become eligible for the title of champion. 3. That Rule 18 be struck out and the following be substituted: "No dog eligible for special prizes can be withdrawn from competition in the regular class, a class in which it has been entered" This compels every dog benched to come before the judge.

The following addition to Rule 26 I entirely agree with, and if adopted it will do away with this circus style of advertising, which if carried to excess, as it frequently is, becomes nauseating: "Exhibitors at bench shows held under C. K. C. rules may nail, hang up or fasten to the back of the bench, cage or section in which their dogs are exhibited, a printed card containing the name of the dog, the name and address of his owner, and a list of the prizes which the dog may have previously won. No other particulars of any kind shall be allowed to be printed on the said card, nor shall any card, notice or printed or written particulars of any other sort, other than the card above alluded to, be nailed, hung up or fastened to the cage or bench occupied by the dog. But nothing contained in this rule shall prevent the nailing up by the secretary or superintendent of the show any prize cards awarded to the dog during the progress of the show at which the dog is being exhibited."

By Mr. J. G. Mitchener: "That no two dogs of the same breed shall be registered in the C. K. C. S. B. under the same name unless with a registered affix or prefix." The word "registered" may well be left out of this otherwise excellent rule. It will hardly do to compel a man who may have perhaps but one or two dogs to enter to claim and pay for a registered prefix or affix.

Mr. A. Murdoch gives notice of motion: 1. "That the office of treasurer be abolished and that the duties appertaining to that office shall be performed by the secretary under the title of 'secretary-treasurer,' such secretary-treasurer to give a bond for $1,000 to the Canadian Kennel Club annually as security." 2. "That a patron be elected." 3. "To amend clause 4 of Rule 15." The notice of motion does not give the proposed amendment to the rule, but we surmise it is to strike out the word "Britain." The rule now reads: "The novice class * * * shall not have won a prize at any recognized show in Canada, United States or Britain."

C. A. Stone will move that Sec. 6 of Rule 15 read, "The open class shall be for dogs of any age which have not already qualified for the challenge class and for which no challenge class has been provided." That Sec. 2, Rule 26 be struck out. The rule now reads, "No addition or alteration shall be made to any prize list issued by any bench show committee after it is once printed and distributed, special prizes excepted."

Mr. Donovan has an eye to the funds, and gives the following notice of motion to Rule 5 of the constitution: "After the word membership on first line insert the words 'accompanied by the necessary fees.'" This rule refers to the application for membership.

---

Mr. C. H. Corbett, Kingston, will take all setters and pointers at Ottawa, and Dr. Wesley Mills the remaining classes other than spaniels. Mr. P. S. Keyes has undertaken to compile the catalogue, and entries sent in after Sept. 17 will most positively be declined. H. B. DONOVAN.

---

## THE USE AND THE ABUSE OF ARSENIC.

*Editor Forest and Stream:*

Before the abuse of any drug can be rationally understood its use must be known. Every one is aware that arsenic will produce, in sufficient doses, acute fatal poisoning. It is not, however, generally recognized that chronic or slow poisoning also occurs. I remember a physician being hanged, in my boyhood, for poisoning his wife with arsenic, the process extending over months, if not years. I am convinced that some dogs are slowly poisoned with this drug, owing to constant drugging with it to keep them in show condition, though this is probably more common in Britain than in America, shows being so numerous across the water.

Arsenic is an alterative, *i. e.*, it produces profound changes in the nutritive processes of the body. The object of the administration in disease is, of course, to alter processes that are abnormal. The drug should never be given to a healthy animal, even if a little out of sorts.

What are the circumstances that call for the administration of arsenic? I do not propose to exhaust the subject but to mention a few of the conditions that clearly call for its use. It is never to be used in acute conditions of any disease of the dog. It is well known to those of experience that nothing disorders a dog's skin so quickly as a derangement of the digestive organs. But keep these right and skin disease, excepting, of course, those forms due to animal and vegetable parasites, will be rare. Now as arsenic has a strong tendency to disorder the digestion under the most favorable conditions, it is manifestly unwise to give it for the acute stages of skin disease. As a rule, all forms of eczema, except the dry and usually chronic kind, are made worse by arsenic.

There is, however, one kind of skin disease that is often benefited, viz., the dry or scaly, either patchy or diffuse form of eczema or skin inflammation. Occasionally a dog does not do well; his coat keeps constantly falling out; attempts are made to rectify his condition by attention to his digestion; he is perhaps given tonics to no purpose, as well as that attention which a judicious person is accustomed to bestow on an animal he values. In such cases a few small doses of arsenic often work a great change for the better.

Indeed, when other means fail in bettering the health of an animal that does not pull up after distemper, after rearing puppies, after excessive field work, etc., arsenic may be used with great advantage. Before it is resorted to, however, other remedies should be given a trial, such as cod liver oil and various tonics. Judicious regular grooming and massage will often do more for a dog than any medicine. The method of administration of arsenic is important. The liquid form freshly prepared is to be preferred to pills. Fowler's solution is excellent, perhaps the best. But the drug should always be given at first in minute doses, in plenty of water, and just after food; absolutely never on an empty stomach. By a small dose I mean one to four drops for a dog of the size of a setter. Large doses at first never do good, and may do much harm.

The effect should be carefully watched. As soon as the eyes get red, the tongue whitish, the appetite poor, or there is any evidence of digestive disturbance, it should be stopped. In any case it is well to make the administration intermittent. If the dog does not show improvement in two weeks, after two or three intermissions in the administration, it is better to desist for some time at least. In the case of chorea it may take months of treatment to accomplish much good.

I would like to utter a very strong warning against the use of arsenic for "conditioning" dogs as ordinarily understood. It is absolutely impossible to predict what the results may be; but they are almost sure to be bad and possibly ruinous to the physical or mental condition of the animal. I have seen very bad effects follow a two weeks' use of the drug in moderate doses given to a healthy dog to improve coat and general condition. The dog, weeks or months later, may become very fat or wretchedly thin, dull, etc. In my opinion it is unwise for any one to prescribe arsenic for a dog except he be an expert conversant with the action of drugs, the laws of life (physiology), the principles of disease (pathology), and with an experience greater than falls to any one breeder or handler. As a last resort an owner of a dog who cannot possibly consult an expert may use the drug cautiously under the conditions stated above. I think all owners of dogs who put them in charge of handlers or trainers should stipulate that they be given no arsenic in any form except under the advice of a thoroughly qualified expert. The FOREST AND STREAM has in the past uttered timely warnings against drugging dogs for shows, and for the second time I wish to emphasize in the strongest way the danger of this treatment, which is the rankest sort of an abuse of a powerful remedy. WESLEY MILLS, M. D.

MONTREAL, Canada.

## SHOULD JUDGES BE THEIR OWN CRITICS?

*Editor Forest and Stream:*

I think there is a great deal of humbug about this fuss for judges making reports over their own names. Everybody knows some of our very best judges cannot clearly express their ideas of their own judging; they know they are right, and I know it too, but they haven't the faculty of putting it in words. All the use there is in judges reporting their classes is that sometimes we get mighty good reading, and more times the judge shows us what kind of an ignoramus he is. If the judge is a good critic in the way of writing a good criticism, we want his own criticism, if he is not, we don't want to be bothered with any more rot; that is the size of it as I look at it.

But I can tell you what we do not want; we don't want a lot of men, that don't know a dog from the doxology, that can no more judge dogs than they can jump over the moon, who don't know any more about dog men, dog shows, doggy ways, or doggy rights and wrongs than a dog does of preaching, breaking out like lava from Vesuvius and laying down the law as though Solomon could not hold a candle to them. This kind of pest has become very numerous lately. There is nothing whatever about dogs, from the color of a St. Bernard to the twist of a pug's tail, that these fellows haven't learned more about in two years than you or I have learned in all our years with dogs, and they suppose it is fun for us to swallow it. They don't hurt any of the old hands, we all know how much value to put on upstarts, but they swell round with such airs of universal doggy knowledge that modest fellows, new at the fancy, think these imposters really "know it all" and have to unlearn a lot before they know where they are.

I have bred more dogs than some of these prattlers ever saw. I am sure I would not undertake to say that I could always breed them of any particular temper, yet novices are getting such rot put down their throats all the time. I know scores of men that are able writers that never think of sitting down to write an article to any paper, yet these same men could write more common sense in five minutes than some we are afflicted with could write in a life time. G. BELL.

TORONTO, Canada, Aug. 27.

*Editor Forest and Stream:*

As to whether or not I think a judge should write a criticism of his own awards, I most emphatically say "yes"—provided that a competent critic reports in the same paper his opinions of the decisions, and both are placed side by side, but not otherwise. This will then let us know at once how much the judge knows, and if it is wise to show under him again. Thanks to whoever it was who taught us, we all now are able to tell the faults and strong points of our dogs, and if we discover the judge criticises ours wrongly, we then know what to expect of his other decisions. Such egregious errors have been made in the ring and are constantly being made, that I consider it absolutely necessary for the good of all breeds, that experts should go over the judge's work and point out the defects, else the judge, who alone makes the report, will overlook his errors (if they have been pointed out to him), and so will be led to believe bad ones are phenomena. It is not human nature to expose and parade one's errors, and I know not many judges who, discovering them, would boldly come out in their reports and acknowledge them. They will try to cover them up and mislead the public. But if the expert critic is after errors, he'll find plenty, and so correct what would become a grievous wrong if repeated. Where the judge writes his own reports, he becomes both judge and jury, which is not my idea, except he be one whose continued work is so meritorious that even his enemies consider him eminently capable to act in the dual capacity. H. W. HUNTINGTON.

*Editor Forest and Stream:*

I see no good reason why a judge at dog shows should not write his own report, or, in other words, be his own critic. If he is considered honest and capable enough to judge his classes, he should certainly be able to send in a report of the dogs he judged, conforming with his judgment of same.

Judges make mistakes, and often enough too, but if honestly made all we can do is to consider that no one is infallible. There has been to my certain knowledge a lot of funny judging done, some of it at our last New York show, and one of these days I intend putting some strong facts in shape and sending it for publication. There has been entirely too much fuss made over some of our judges. This will spoil a good man oftener than benefit him.

AL. G. EBERHART.

CINCINNATI, O., Aug. 24.

*Editor Forest and Stream:*

If the judges explain in their reports why they awarded prizes to certain dogs I think it all right, because it is instructive to the owners, but I disapprove judges writing and not signing their names and praise in glowing terms the work of the judge. The reports in the *American Kennel Gazette* I approve of. JOHN E. THAYER.

LANCASTER, Mass., Aug. 27.

*Editor Forest and Stream:*

In regard to whether judges should be their own critics or not, I should most decidedly say no. Judges should no more criticise their own work than exhibitors judge there own dogs. GEO. W. LOVELL.

MIDDLEBORO, Mass., Aug. 27.

## HANDSOME.

IT is not often that a well bred dog is honored with a biography, although lengthy pedigrees are compiled and photographs taken of many that are unworthy of the time and trouble. It is rarer still for the exploits of a cur to appear in print, although many curs are valuable and of great service to their masters. All of us have met with animals of this race which were, so to speak, ill begotten in every sense of the word, yet possessed of traits stamping them as much above the average, in canine sagacity, and recommending them to our consideration as factors in the movements and undertakings of sportsmen and hunters.

Handsome was the property of my friend Ben S., and in the position he filled as follower and often forerunner of his master, frequently came under my notice in the many trips taken by Ben and I. These trips, the memory of which transports me twelve to sixteen years into the past, were made by us in our search for game and were among the pleasantest of my youthful days of hunting. This unpedigreed cur of doleful aspect and sneaking manners was by all odds the most uncouth and misshapen creature it has ever been my experience to gaze upon. From this lack of redeeming qualities in his personnel, his master in a moment of grim humor had dubbed him Handsome, a name which clung to him during life and which even now, after the faithful animal has lain under the sod for some years, causes one to smile, at the memory of his gaunt figure and generally ridiculous appearance.

The mother of this peculiar cross was a foxhound of some pretensions as a hunter, but the sire's pedigree was shrouded in obscurity of such density that its elucidation was finally given over. As this evidence of mesalliance grew up from puppyhood, the conjectures as to his suspected lineage were all proven fallacious by the appearance of a decidedly shaggy though scanty coat of a dark grizzly and tan color, which hung from his skin in isolated tags.

Ben always maintained that his strongest evidence of a good strain lay in his voice and ears, "for you see," he would continue, "his ears are just like his mother's, and you ought to hear him bellow when he gets after rabbits." In features it would be as impossible to describe Handsome by a pen picture as to attempt an anatomical relation and sketch of the joining of the wing of an angel with the shoulder; an absolute impossibility from want of precedent. No other dog ever had quite so elongated a jaw; no canine before or since possessed an eye of equal depths of melancholy; no specimen of the race owned so woebegone an expression of countenance as did Handsome. In general appearance, aside from his pathetic expression, he failed to inspire the beholder with confidence. He might be wise from experience, judging from his facial interpretation, but his entire makeup failed to heighten one's opinion. He was angular, ragged, thin, slab-sided and crooked-legged.

Handsome's chief peculiarities lay in his singularly drooping ears and tail. They were long, with a decided droop, suggestive of many whippings, and as they were stuck full of burrs and brambles over half the year, usually had the appearance of a collection of door mats hung about him.

This remarkable animal had a gait that was the crowning splendor of magnificence, and at first sight one wondered how he maintained his perpendicular. He always moved sideways and on a slow trot, and dragged his feet, which were so big they hardly passed each other. If he increased his pace he much resembled the movements of the carriage horse which the grand marshal of the day borrows to ride on the Fourth of July in the procession, and which forges sideways before admiring crowds. However, you must not think that this 30lb. cur, without a redeeming trait in personal appearance, was good for nothing. On the contrary, he was a good hunter and faithful friend, in addition to which Ben said he was an excellent "skyoudle" to keep bread from molding. MORRIS GIBBS.

## THE PSOVIE—BORZIE IN AMERICA.

THE following is another translation from the *Journal of the Hunt*, of interest to those who own this breed of dogs:

The Americans, as the FOREST AND STREAM communicates to us, have been entirely disenchanted as to the Psovoi dog without any cause whatever, let us add, on our part. The matter is this: Mr. Paul Hacke and Dr. Grimes imagined from some cause or another that the Psovie-Borzie in Russia serve especially for the extermination of the wolves, which they strangle without the least assistance of man. In addition they have convinced credulous people that the jaws of the dogs have a capacity of shutting spasmodically on the wolf till he is strangled.

To show people how the Psovois exterminate wolves, two dogs were slipped on a wolf, one a cross breed of a deerhound, the other a Psovoi, Pospeck (of what Russian kennel is not said). The first to attack was the deerhound; he struck the wolf with the chest and passed by. After this Pospeck reached the lying down wolf, but when the wolf showed his teeth he gracefully skipped by; deerhound returned to the wolf, looked at him and ran away, but Pospeck pushed (pulled) the wolf several times. Seeing this a certain Mr. Rae put a bullet into the wolf. Dr. Grimes explained the action of Pospeck by saying that he was used to take a wolf by twos and the deerhound did not help him. Mr. MacDougall did not say anything but shot his dog then and there, only remarking, "I bought him for wolf-baiting (hunting), and was cheated." The other hunt also ended in a fiasco. The wolf used for the hunt was a tame one, as the original said, but as it happened this tame one had been for all that a wild wolf for eight months and was about a year and a half old. A boy led the wolf by a rope into the field, took the rope off and ran away, the wolf remaining on the spot and following him with his eyes. But when he saw two dogs speeding toward him he hardly moved from the spot. The onslaught of the dogs astonished him, and when he turned toward them one of them desisted right away and turned back, the second threw himself on him and pushed him, which he returned, and this light pushing forth and back continued on both sides until they took the wolf away. After this Dr. Grimes undertook to show how Psovois strangled a wolf, at the same time accepting two bets of $100 each that his dogs would strangle the wolf. The following day the hunt took place in the same locality and with the same already experienced wolf. As the "stranglers" appeared, two male Psovois, Zloeem, a dark brown from the Duke Galitzin, and Asmodei, whose pedigree we do not know. The first to reach the wolf was Zloeem, who caught him near the "shoulder" (probably the neck), and threw him, but tore again loose; the wolf righted himself and threw himself on the coming Asmodei. Then the dogs began to push from both sides, but the wolf tore himself away and ran, followed by the dogs. But when Zloeem caught him from behind he turned and catching the dog threw him 6ft. in the air. After recovering from the onslaught Zloeem again started to attack the wolf, together with Asmodei, but neither one nor the other dog took him up, and after five minutes both of them stopped and wagging their tails followed the judge's horse. On all questions Dr. Grimes only answered that the dogs did not fullfil their mission and that he could find no excuse for their behavior.

As to the wolf, he was bought there and they gave for him instead of $15, which sum he had cost his owner, $200. Dr. von Hummel and H. C. Lowe, who bought him, explained that the object of this purchase was a speculation: they would exhibit the hero wolf, his mate, a fox-terrier, and the boy who looked after the wolf, at the American dog shows. The result of this hunt was a complete disillusion, says the American journal, as it was supposed that the Psovois were bloodthirsty dogs who devour the wolf.

*Stock-Keeper* remarks on this head very rightly that only in America they imagine that the Psovoi-Borzoi is an "exterminator of wolves," whereupon all Russian hunters only shrugged their shoulders, and that such amateurs like Mr. Hacke and Dr. Grimes should not endanger the propagation of such a splendid breed as the Psovoi-Borzoi and can only provoke ridicule.

It is to be regretted that no good coursing dogs with a good handler happens to be in America, and more to be regretted that the Americans do not trouble to occupy themselves with Psovoi dogs. Still this trouble can be remedied and a very opportune time for it will be the coming exhibition in Chicago. Probably there will be found Russian hunters who will bring to this fair good and sportive dogs, providing themselves with an experienced huntsman.

## BEAGLE HANDLERS.

*Editor Forest and Stream:*

From experience derived as secretary of the National Beagle Club during the last two years as well as from correspondence which has recently come to hand, I am led to believe that many are deterred from entering and running their dogs in our trials because of the difficulty in procuring efficient and reliable handlers. To all such I would say that if they will write either to the secretary, Mr. H. V. Jamieson, Melrose, Mass., or to myself it will be a pleasure to us to put them in communication with parties who are thoroughly conversant with the training and handling of beagles both for the field trial and bench show, and who will do so at moderate prices. Intending exhibitors can thus send their dogs to the trainers, who are located not far from where the trials will be held, and rest assured that their dogs will have the best of care that experience can suggest.

F. W. CHAPMAN, President National Beagle Club.

MELROSE, Mass.

## SOUTHERN FIELD TRIALS DERBY ENTRIES.

*Editor Forest and Stream:*

Inclosed find list of entries to the fifth annual Derby of the Southern Field Trials Club. There are 10 pointers, 1 Irish setter and 52 English setters, all whelped in 1891.

ENGLISH SETTERS.

ROXIE (F. T. Myles), black, white and tan bitch (Jean Val Jean—Queen Ella Noble), March 27.

FAY (F. T. Myles), black, white and tan bitch (Dan—Princess Belton), April 10.

MODOC (F. T. Myles), black, white and tan dog (Dan Gladstone—Princess Joy), May 21.

BEV. S. (F. T. Myles), blue belton dog (Tennessee Dictator—Tennessee Livy), July 10.

MAY GATH (F. T. Myles), blue ticked bitch (Jolly Gath—Lulu), May 6.

PAUL DOMBEY (H. S. Bevan), white, black and tan dog (Chance—Nettie Bevan), June 4.

PET GLADSTONE (W. T. Hunter), bitch (Gladstone's Boy—Gladstone's Girl), March —.

JEAN MEDA (Will Wilson), white, black and tan bitch (Jean Val Jean—Andromeda), April 23.

ESMERALDA (Blue Ridge Kennels), black, white and tan bitch (Cincinnatus—Canadian Queen), May —.

LIATH ADAMS (J. A. McCorgo), black and white bitch (Dave B.—Kate), March —.

ONWARD (D. C. Jones), black, white and tan dog (Toledo Blade—Sees II.), Oct. —.

PROCTOR KNOTT (Blue Ridge Kennels), black, white and tan dog (Gath's Hope—Dashing Lady), Jan. 6.

HOPE'S MINT (Blue Ridge Kennels), orange and white dog (Gath's Hope—Dashing Lady), Jan. 6.

LANCIERS (Blue Ridge Kennels), orange, white and tan dog (Gath's Hope—Dashing Lady), Jan. 6.

DICK POX (Blue Ridge Kennels), black, white and tan dog (Chance—Countess Rush), April 8.

LADY BROOKS (Blue Ridge Kennels), black, white and tan bitch (Chance—Countess Rush), April 8.

MISS WRAY (Blue Ridge Kennels), blue belton bitch (Gath's Mark—Mollie Belton), July.

DOT ROGERS (P. Lorillard, Jr.), black, white and tan bitch (Roderigo—Gladstone's Girl), March 3.

ROD'S SUE (P. Lorillard, Jr.), black, white and tan bitch (Roderigo—Gladstone's Girl), March 3.

ADDIE T. (P. Lorillard, Jr.), white, lemon and tan bitch (Roderigo—Maggie Gladstone), March 3.

MAIDEN MINE (P. Lorillard, Jr.), white and lemon bitch (Vanguard—Georgia Belle), Jan. 8.

GLADEOLA (P. Lorillard, Jr.), white, black and tan bitch (Blade—Estelle), Jan. 15.

SPIKE'S GIRL (P. Lorillard, Jr.), white, black and tan dog (Chance—Spike), May 25.

SCHLEY (P. Lorillard, Jr.), black, white and tan dog (Chance—Lufra), May.

GAIETY (Royal Robinson), black, white and tan bitch (Lone Jack—Gay Rhœbe), Feb. 13.

DESSIE HOPE (P. T. Madison), lemon and white bitch (Gath's Hope—Stocking), May 9.

ANDREW WHITE (M. F. Rogers), black, white and tan dog (Jean Val Jean—Mary Anderson).

RAP EYE DAN (Miss Helen McCreary), white and black dog (Ben Hill—Dolly S.), May 9.

APOLLO HILL (J. Shelly Hudson), black, white and tan dog (Ben Hill—Dolly S.), May 9.

TIM TREZEVANT (Pat. Henry), dog (Roderigo—Gladstone's Girl) March.

DIRECT (J. W. Shriver), black, white and tan dog (Gun—Victoria Laverack), Aug.

CLEO (J. W. Shriver), black, white and tan bitch Gun—Victoria Laverack), Aug.

AULD CLOOTIS (N. B. Nesbitt), white, black and tan dog (Dick Boudhu—Shena Van), July 9.

KINGSTON (Avent & Thayer's Kennels), black, white and tan dog (Chance—Bessie Avent), May 30.

HAMLET (Avent & Thayer's Kennels), black, white and tan dog (Chance—Bessie Avent), May 30.

LOCHINVAR (Avent & Thayer's Kennels), black, white and tan dog (Chance—Bessie Avent), May 30.

SAMIS (Avent & Thayer's Kennels), black, white and tan dog (Chance—Bessie Avent), May 30.

CHEVALIER (Avent & Thayer's Kennels), black, white and tan dog (Jean Val Jean)—Lucy Avent), June 7

SHADOW (Avent & Thayer's Kennels), black, white and tan bitch (Jean Val Jean—Lucy Avent), June 7.

MISS JUNO (Avent & Thayer's Kennels), black, white and tan bitch (Roderigo—Juno A.), Aug. 11.

HOPE'S PRIDE (Manchester-Watrace Kennels), liver and white dog (Gath's Hope—Georgia Belle), Aug. 21.

RANGER B. (Manchester-Watrace Kennels), liver and white dog (Vanguard—Georgia Belle), Jan. 8.

SPORT (Manchester-Watrace Kennels), liver and white dog (Vanguard—Georgia Belle), Jan. 8.

PINK (Manchester-Watrace Kennels), black, white and tan dog (Vanguard—Georgia Belle) Jan. 8.

TOLEDO SUE (Manchester-Watrace Kennels), black, white and tan bitch (Toledo Blade—Bess S.) April 16.

—— (W. P. Conner), black, white and tan dog (De Soto—Zuda M.), Feb. 23.

—— (C. L. Stewart), black, white and tan bitch (De Soto—Zuda M.), Feb. 23.

—— (Whyte Bedford), black, white and tan dog (De Soto—Ruth), July 27.

NAPOLEON (J. W. Barker), black, white and tan dog (Roderigo—Hazel Heny), December.

REX THE KING (Jackson Denmark Kennels), black, white and tan dog (Lad B—Phyllis), Jan. 2.

LILLIAN RUSSELL (Jackson Denmark Kennels), black, white and tan bitch (Philip Gladstone—Lark), May 15.

GALE NOBLE (H. K. Devereux), black, white and tan bitch (Breeze Gladstone—Katie Noble), March 21.

SPOT CASH (H. K. Devereux), black, white and tan dog (Vanguard—Georgia Belle), Jan. 8.

RUBY BLADE (R. B. Morgan), black, white and tan bitch (Toledo Blade—Zula C.).

IRISH SETTERS.

ELPHIN II. (Glendyne Kennels), red bitch (Tyrcunne—Kinovara), May 21.

POINTERS.

DON PASQUAL (W. N. Kent (liver and white dog (King of Kent—Vickerey's Daisy), Aug. 25.

LADY MIGNONETTE (J. R. Purcell), black and white bitch (Dick Swiveller—Countess Bang), Feb. 3.

LADY PEG (W. T. Hunter), bitch (King of Kent—Lass of Bloomo), March 20.

GEORGIA SUND (M. F. Rogers), black and white bitch (Adam's Ale—Bessie Pope).

KENT ELGIN (T. T. Ashford), black and white dog (King of Kent—Vera Bang), March 2.

RIDGEVIEW BEPPO (Graphic Kennels), liver and white dog (Beppo III.—Revelation), February.

BERMY LASS (Ed Gordon), liver and white bitch (Earl of Kent—Charlotte), June 21.

CONSCRIPT (Charlottesville Field Trial Kennels) black and white dog (King of Kent—Hops), June.

JINGO (Charlottesville Field Trial Kennels), liver and white dog (Mainspring—Queen II.), May.

T. M. BRUMBY, Sec'y.

The Irish Setter Club trials will be held Sept. 13 and following days on the moors of Cookstown, County Cork, Ireland. Judges, I. Small and Capt. W. Arbuthnot Gresson.

# DOG CHAT.

### Rochester Dog Show.

The premium list of the fall show to be given by the Rochester Kennel Club in connection with the Western New York Agricultural Society, Sept. 27 to 30, has been received. It is a model of simplicity, and the only numbers the exhibitor has to keep before his mind are 5 and 3, which represent the number of dollars put up by the club as prize money in every class provided—challenge as well. Although in common with other members of dogdom, we cannot indorse the action of the Rochester people in their late "dog in the manger act," still they deserve the thanks of exhibitors for not providing a puppy class in any breed. Whether this arises from motives of economy or humanity it matters not, the fact remains that the puppies won't be in it. Spaniels have classification No. 1. Several cash prizes are given, among which Mr. Bellin, the judge, gives $5 for best in each open class and the third prize in open dog, bitch and novice classes in wire-haired fox-terriers. The Irish setter winner in the open dog class, will get $3 extra, through the kindness of Messrs. Selhaar and Warren. Mr. T. S. Bellin will take all non-sporting breeds, and the sporting classes will devolve on Mr. J. Otis Fellows, who also fills the role of superintendent. This is not a wise arrangement nor one that will allow Mr. Fellows to do justice to himself. It is beyond the physical possibility of any man to be in two places at once. We are expressing our views simply in the interests of justice to exhibitors, for if there is any man whom we would like to see benefit by such an arrangement it is "Uncle Dick." There is, however, a saving clause in this affair, we notice that Mr. Harry Yates will be assistant superintendent. Entries close Sept. 15 with Dr. O. S. Bamber, 75 Rowe street, Rochester, N. Y. Judging will commence Wednesday, Sept. 28, at 10 o'clock, and as all dogs must be in the building on Tuesday A. M. this gives Mr. Fellows time to arrange matters. Dr. O. S. Bamber, secretary of the Rochester dog show, announces later that a special of $2 will be given by fanciers as a third prize in the smooth fox-terrier open dog, open bitch, novice dog and bitch classes. He also calls attention to the fact that those holding bench show tickets are entitled to all the "fun of the fair," which includes races, competitions for hunters and four-in-hands.

### The Beagle Trials.

The beagle trials are assuming more inportance every year, and since the initiative was taken in 1890, sentiment has largely given place to business methods, and few dogs will be entered "just to fill up," as was the case at the first trials. It will not be long before professional handlers and trainers will crop up whose business it will be to see that their charges come well-trained and in proper condition for the work to be done. This all shows a progressive spirit and is to be encouraged. At the same time we should like to see a little more sportsmanship displayed. If men who keep beagles simply for show purposes and therefore look upon their stock more or less from a business point of view, have their opinion as to whom they will show under, all well and good. In the field, however, an etiquette obtains that should inspire every beagle owner with a different feeling. In the field there are so many untoward happenings and, contrary to a bench show, the animal itself is so much more the master of the situation, that this very uncertainty should appeal to the sporting temperament of the owner and lead him to enter his dogs for the pure love of the sport and not with the idea as to whether such and such a judge will be inimical to his chances of winning. If a man has a good field beagle he should not be afraid to run his dog under any two judges, provided of course, those chosen are capable of recognizing good work when they see it, and the beagle club committee is not a body which would choose certain judges unless they were fully satisfied as to their ability. Let there be no cry of cliqueism or favoritism and especially in an underhanded way. If a beagle owner thinks he will not receive justice or has not received justice, let him state his case and there are any amount of men on the grounds who will be able either to refute or indorse his criticisms. Run your dogs like sportsmen and don't be deterred by the idea that one or the other of the judges favors certain strains of beagle to the disparagement of others. We do not believe it.

### Railroad Jack.

Those dogmen who attended the Albany and Toledo shows some time since where he was exhibited were all interested in Railroad Jack, the apology for an Irish terrier that is so well known to every express messenger and baggage "smasher" on the roads from New York to Chicago. A couple of months since he took a trip to Cuba in company with some member of the fraternity. He was sent to Jacksonville last month and since then he has been traveling in the South and Southwest, passed on by one road to another, finally reaching New York last Wednesday, where he held a reception at the American Express office, and some 500 people "shook him by the hand." Jack had his trunk along; and this was almost as much of a curiosity as Jack himself. Originally a strawberry basket box, it now contains an assortment of material that would puzzle others than Jack to know what to do with. Every trainman and admirer on the roads seems to have contributed something, for among the articles were umbrellas, a box of cigars, pipes, tobacco, a knife over 2ft. long, two pistols, a pair of handcuffs used for slaves at Harper's Ferry during the War, a silver medal marked with a lone star and inscribed "Texas Jack," and a lot of other things more ornamental than useful. He left New York for Albany, his "native" city, on Wednesday afternoon. He was dressed in a tag which read, "In bond from New York." When he arrived at Albany he greeted his old friends in the depot and then started off into the city, probably to see old friends of his own kind. His trunk is covered with tags which tell an eloquent tale of his wanderings. For instance, on July 27 he was at Andad Suarez, Mex., and C. H. Schaffer, a customs broker, took him across the Rio Grande into old Mexico.

### Toronto Dog Show.

Mr. Stone informs us that entries have commenced to pour in for the Toronto dog show, Sept. 12 to 15, and the indications are that it will be the most successful ever held. The show now ranks among the first in America, and exhibitors both in the United States and Canada are very desirous to secure a win at Toronto. The fair itself being an unusually good one the fixture is always popular. The diplomas donated by the Canadian Kennel Club for competition among the members will be very handsome and well worth winning. Exhibitors are reminded that there are special passenger rates to Toronto. Entries close Sept. 1.

### Heavy Bonds for a Dog.

An interesting dog case of mistaken identity has just been decided, at least for the time being, in the Second District court of Newark. A Mr. Hammesfahr was positive a certain Irish setter belonged to him and another, Murtha, was equally positive that he had a just right to the dog. Hence the suit. Hammersfahr lost his dog on June 21 and advertised for it on June 28. Murtha owned a dog which had been lost a year, but a day before the advertisement appeared his dog returned home. Hammesfahr found out about Murtha's dog and then claimed it as his own. Murtha refused to give it up and the other brought a charge of grand larceny against him, besides taking out a writ of replevin and furnishing a bond of $11,000, which was demanded by Murtha's counsel. Then Murtha replevined the dog on his own account and the other man's counsel insisted that a large bond be given. Murtha's counsel said they could go to any extent; Hammesfahr then said he would be satisfied with $50,000, and Murtha qualified in $61,000, $50,000 for the dog and $11,000 to cover Hammesfahr's bond. While the dog was in the jurisdiction of the court the constable had a sleepless time of it, thinking of the heavy responsibility he had assumed, and built a structure especially for the dog. The trial resulted in testimony which favored Murtha as the owner and judgment was given in his favor. The end is not yet, for Hammesfahr intends to appeal, and the case may resolve itself into a repetition of the famous Western "calf case."

### A Musical Dog.

A very unique and amusing trial developed out of a suit of replevin for a dog brought by Dr. E. T. Brady against John A. Levi, in Justice Shannon's court in Kansas City, Mo., the other day.

Both parties claimed the ownership of the dog, and after several witnesses had been examined on either side the judge was at as great a loss to decide the question of ownership as at first. Dr. Brady's attorneys, however, stated that they could prove the claimantship beyond doubt by the recognition of the dog for Mrs. Dr. Brady, and she was accordingly summoned. The dog immediately jumped from his place in the prisoner's dock and showed with every demonstration of canine joy his recognition of his mistress. In consideration of the adverse testimony this was still not convincing to the judge, so Mrs. Brady agreed to give a last indisputable proof of the dog's ownership.

She stated that if she would sing a certain song the dog, in response to his training, would join in with her in his dog fashion and voice and sing the song through. This she did, and at the first words of the song the dog leaped for joy and fulfilled his part of the duet, to the astonishment of the spectators and the court.

No further evidence was taken, and the dog returned home with Mrs. Brady by order of the court.

### Grand Rapids Dog Show.

The premium list of the above show, to be held Sept. 19 to 23, issued by the Western Michigan Kennel Club, is before us. For an inaugural effort we must say the prize list is quite a good one, but we can scarcely compliment the management on the division of money. Mastiffs, great Danes, deerhounds, greyhounds, foxhounds, Irish and Gordon setters, collies and bloodhounds are given the Blodgett and bronze medals in the challenge and $8 and $4 in the open classes. St. Bernards are put off with the same challenge prizes, but only $6 and $3 in open classes. Other breeds have various moneys ranging from $5 and $3 to $3 and $2, but scarcely according to importance. Pointers and English setters have $10, $5 and $3 in the open classes with the same medals as above in challenge classes. The sporting classes are well cared for with specials. The National Greyhound Club gives several medals, as well as the Collie Club. The show is held under A. K. C. rules and entries, fee $2, close Sept. 10, and should be addressed to H. Dale Adams, Galesburg, Mich. Roger D. Williams will judge greyhounds, deerhounds, bloodhounds, Psovois, foxhounds, whippets, etc. Frank C. Wheeler will take all non-sporting classes, and on John Davidson devolves the task of sorting out the winners in the sporting classes which include great Danes.

### An Interesting Trio.

"For several years I resided at Bromley, Kent, in rooms, as a bachelor, "says a writer in *Illustrated Sporting and Dramatic News*," and when I first went there the landlady had a rabbit and a kitten, which lived in the house. I took my collie with me and he soon was used to the rest of the family. I objected to the rabbit coming into my room as it used to eat the newspapers, and therefore whenever I went in and heard the rabbit there, I used to say to Scot the collie, 'turn him out,' whereupon he would look under the sofa, and when he found the rabbit used to go after him and chase him out. If the rabbit got away from the chairs and tables, but would not go through the open door, Scot would guide or force him out with his nose. I never saw Scot offer to bite it. I have often seen collie, cat and rabbit all lying in front of the fire on the rug in the winter—rather a funny trio. Many friends of Scot's will remember the performance with the rabbit, as Scot used to have to perform the difficult feat of driving the rabbit out of the cover provided by chairs, table, sofa, etc., for their amusement."

### Brooklyn Dog Show.

The Brooklyn show people are out with their list of judges for the November show. It looks almost like a new draw to the average exhibitor, and as they say new brooms sweep well we hope the result will be satisfactory to all:

T. S. BELLIN—Bedlington, black and tan, bull, Dandie Dinmont, Irish, Scotch, Skye and Yorkshire terriers, bloodhounds, bulldogs, dachshunds and miscellaneous.

E. M. OLDHAM—Chesapeake Bay dogs, Clumber, cocker and field spaniels.

MARTIN DENNIS—Collies.

H. W. SMITH—Deerhounds, greyhounds and psovois or Russian wolfhounds.

W. TALLMAN—English, Irish and Gordon setters, pointers.

AUGUST BELMONT—All fox-terriers.

A. H. HEPPNER—Great Danes.

W. WADE—Mastiffs and Newfoundlands.

M. H. CRYER—Poodles, pugs, schipperkes, Italian greyhounds, toy spaniels and toy terriers.

A. M. HUGHES—St. Bernards.

H. W. LACY—Foxhounds and beagles.

### Unsound St. Bernards.

That a change will come over the methods of judging St. Bernards in the near future we are firmly impressed. Mr. W. O. Hughes-Hughes is striking in the wedge of common sense that we hope will make itself felt. At the last meeting of the English St. Bernard Club he gave notice of the following motion to be brought forward at the next meeting: "1. That in the opinion of this committee a St. Bernard which shows unsoundness in any respect ought to be disqualified by the judge at a dog show from receiving any prize or commendation whatever. 2 That in the opinion of this committee a St. Bernard is unsound which has in the slightest degree bowed forelegs or cowhocks." This, if carried into effect at once, would put a stop to the pretensions of a good half of the winning dogs of to-day, and this we cannot hope for at present. Still, if judges would pay a little more attention to the symmetry of the whole and leave size alone, in a year or two we should see a vast improvement, and owners would not be so liable to have that sinking feeling of shame when they walk out with a dog whose legs describe pothooks in the earth as he strolls along.

### Kingston Show.

The judges for Kingston are W. Tallman, who, as stated before, will have most of the classes; Andrew Laidlaw is down for spaniels and Dr. Mills for mastiffs, St. Bernards, great Danes, Newfoundlands, etc. An excess baggage certificate will be issued with every identification ticket and the express companies will do as well as usual.

### A Dog Without a Brain.

According to the *Weider Medical Presse*, at the last meeting of German neurologists, held in Baden Baden, Prof. Goltz, of Strasburg, reported a most remarkable experiment. He cut out, in two operations, almost the entire cerebrum of a dog, leaving the cerebellum and a small portion of the base of the cerebrum. The animal lived for fifty-one days after the last operation, and then died of pneumonia. The remarkable part of the experiment was the influence it had on the dog, who, a few hours after the operation, raised himself on his hindlegs, put his paws over the side of the box, and looked inquiringly around. He could walk, eat and drink, and would chew any food that was placed in his mouth. Waking and sleeping alternated naturally. He was restless before feeding, but afterward became quiet and slept. A slight touch would awaken him from sleep. Hearing, taste and smell were, of course, absent.

### Smuggling Dogs.

That many good dogs are smuggled into this country very few will deny. We need not revert to the genteel evasion that goes on under the "for breeding purposes" plea. Last Saturday, however, the customs officers dropped on a man named James Doyle, an oiler on the s.s. Nevada, who tried to smuggle a Skye terrier and two Prince Charles spaniels. The dogs are valued at $75 each. Besides the animals, five dozen dog collars, two dozen dog brushes and other similar articles were found in Doyle's quarters. With the almost prohibitive rules now in force regarding importation of dog breeding stock there are likely to be a good many canine *sub rosa* importations.

### Sympathy in a Dog.

A butcher residing at Brodick, in the Isle of Arron, told me that he had two collie dogs at the same time, one old and the other young, relates a writer in the *Spectator*. The old dog became useless through old age and was drowned in the sea at Brodick. A few days afterward its body was washed ashore, and it was discovered by the young dog, who was seen immediately to go to the butcher's shop and take away a piece of meat and lay it at the dog's mouth. The young dog evidently thought that the meat would revive his old comrade, and thereby showed remarkable sympathy in aid of, to him, the apparent "weak."

That Mr. Mortimer has "landed with both feet" in the dog world is amply proven by the interesting article *Stock-Keeper* publishes in the issue Aug. 19. A capital pen and ink sketch is furnished showing our "impressario," as some one had it, with one foot in England and the other in America, just "landing." It is clever and a good likeness. Mr. Mortimer's visit to England should be of inestimable value to him in the judging ring, for we agree with the above journal when it infers that he is thoroughly "up to date" in dog show matters, has seen the latest styles of winners and talked with the men who are making the history of dogdom on the other side, a condition enjoyed by no other man in this country. Fashions change in dogs as well as in other less important matters.

When a child dies in Greenland the natives bury a live dog with it, the dog to be used by the child as a guide to the other world. When questioned in regard to this peculiar superstition they will only answer: "A dog can find his way anywhere;" and we should think would do his level best to get out again.

Canadian fanciers will be pleased to hear that there is a movement on foot to start a kennel club in Montreal, Canada. The dog show last fall seems to have furthered the idea, and the then secretary and others are now anxious to start a club on the proper lines. There is no reason why a good kennel club should not be started in Montreal. There are many fanciers there, and it should be a good show town. A local paper says: "There is plenty of room for improving our kennel interests in Montreal, and the principal drawback seems that we are too bashful to make ourselves known to the doggy world."

The Toronto Kennel Club is an active body. They will move next month into their new quarters in the new Odd Fellows Hall. The Lieutenant-Governor of Ontario has promised to become a member, and the club has been incorporated under the laws of Ontario.

The president of the Beagle Club writes us that he was more than pleased with his trip to Maine, where he secured a place, as we mentioned in last issue, for the raising and training of his beagles superior to any he has yet seen. Deer, wildcats, foxes, coons, rabbits, etc., abound, and it is needless to say the range is unlimited. When he gets things fixed, as he has engaged an experienced man to break and train his dogs, he will have quarters for a few others whose owners may not be able to give their dogs such advantages at home.

The only "German" does not come out of his shell of silence very often—unless it be show time. He tells us in a recent letter that he intends doing the Canadian shows, and as he will have time to run a dog or two there for some other exhibitor, any one wishing to avail himself of this chance should do so. We all know the care Mr. Hopkins takes of his dogs when on the circuit and that he is reliable.

Messrs. Charles Diffenderffer and T. J. Sheubrookes, two leading members of the M. K. C., called on us Monday morning on their way to Atlantic City. They tell us that the M. K. C. will surely hold a show in Baltimore next year, and whisper very mysteriously of a spaniel that the former has invested in. Under what classification of the Spaniel Club it comes could not be ascertained, but that it is a No. 1 dog we were fully assured.

"If you have any regard for suffering humanity, refrain from mentioning in columns of FOREST AND STREAM that I have any pups for sale, or else I will be compelled to secure the services of a type writer. Announce to the public that all my pointer pups are sold, and that FOREST AND STREAM was an important factor in disposing of them." So writes Mr. R. Leslie of Lynn, Mass.

The Southern Field Trials Club must be congratulated on the excellent entry secured for their fifth annual Derby. As will be noticed, the English setter is still strongly intrenched, but we trust that the few pointers entered, which by their breeding show that they come from the right sort, will, in spite of all odds, give a good account of themselves. Mr. Bishop's solitary Irish setter has a heavy burden to bear, but for the honor of the country she has recently come from and her previous reputation, we hope that her owner's pluck will be rewarded. The English setters can take care of themselves or others for them.

The freedom of the Adirondacks would be considered ample exercising ground for any dog. If the report in the Auburn paper is true, that Kemp, "the dog fancier of the Adirondacks," has sold Dr. Conant-Sawyer a St. Bernard pup three and a half months old and weighing 80lbs., it would seem as if the question as to the best climate and country for breeding St. Bernards was solved.

New advertisements continue to fill our business columns we notice this week that C. T. Brownell has Gordon setter pups for sale; E. S. Everett, broken setter; E. Leach, English setter bitch; John N. Lewis, choicely-bred English setter pups; W. H. Chapin, pointer puppies; Matern Pointer and Setter Kennels, six well-bred pups; H. B. Vondersmith, Gardon setter pups. Training dogs, J. M. Whaite and C. W. Ellis. Wants—E. K. C. and A. K. C. stud books.

## SKIN DISEASES OF THE DOG.

DR. A. J. SEWELL writes another interesting article on this subject in the English *Kennel Gazette* and as it applies to questions as to treatment that we are continually receiving from readers of FOREST AND STREAM its publication may be of benefit to some poor tortured animal. Dr. Sewell says: "Several articles by my pen about canine skin diseases appeared in different numbers of the *Kennel Gazette* during last year, but no mention was made of that particular form of cutaneous disorder called Pityriasis versicolor, the subject of the present paper.

"This disease, like follicular mange, is confined almost entirely to puppies, by which I mean dogs under twelve months of age; it sometimes occurs in puppies as young as two months, but it generally commences when the dog is about four months old, which is the time the teeth are being changed, and the system, as a result, seems somewhat below par.

"I do not mean to say that adult dogs do not suffer from this complaint, but it is of a most rare occurrence and they do not form one per cent. of the cases.

"Pityriasis versicolor is of a contagious nature, but all dogs that come into contact with the disorder do not contract it more than they do follicular mange. Some are more susceptible than others, but if a healthy pup is put to live in the same kennel with one suffering from the disease it is almost sure to be transmitted.

"Dogs of all breeds are more or less liable, but of the two kinds, the long and smooth-coated, the latter seem more susceptible; at any rate, one sees more cases among the short-coated varieties; and dogs with a white coat seem more subject to the disease than those of other colors.

"Pityriasis versicolor is due to a vegetable parasite, which can only be seen with some difficulty with a microscope; it consists of a number of tortuous tubes, many of which branch at right angles.

"However, the disease is so very characteristic that the aid of a magnifying instrument is scarcely required to diagnose a case.

"*Symptoms.*—Small bald patches, about the size of a three-penny-piece [ten cent piece], which have a tendency to be circular, appear in different parts of the body, legs and head. During the earliest stages the spots are very small, in fact are scarcely noticed even upon a smooth dog when one is standing in front of the animal, more especially when the patient is a dark-colored one, but when standing behind the dog, and looking as it were through the coat, the bare places may be observed.

"If the patches are carefully examined by parting the hair from the surrounding healthy cuticle, the diseased skin will be noticed almost circular, and nearly denuded of hair; occasionally there remain a few straggling hairs, but as a rule, these are broken off short.

"The surface of the skin is a dull greyish color, of a dry, scaly appearance, and covered with fine dandriff. Here and there upon some of the patches may be seen small red pimples.

"The patches of diseased skin, as just stated, are, as a rule, at first small, but without the parasite is destroyed they increase in size until they become as large as half-a-crown, or even bigger. Now and then one sees a case where the whole head is covered with the disease; this has been caused by the disorder spreading from several centers and meeting.

"The same may happen on the body or legs, and then, of course, it loses its circular form.

"There is considerable irritation—more so in some cases than others—accompanying pityriasis, but nothing near to the same extent as is noticed in ordinary mange.

"*Treatment.*—This is now a simple matter, but at one time, when I used to use cooling lotion, with the idea of relieving the irritation, also sulphur ointment, which is one of the most useful remedies for general skin diseases, the attack very often used to continue for months, whereas since I have dressed the affected parts with the sulphur and lime lotion I find the complaint yields to treatment in most cases in about a month. The lotion should be made as follows:

| | |
|---|---|
| Slaked lime | ¼lb. |
| Powdered sulphur | ½lb. |
| Water | 2qts. |

"The lime and sulphur should be mixed together and then boiled with the water in an earthenware vessel until the fluid is reduced to about one-half. Set aside to cool, and when cold pour off the clear fluid, which should be kept in a well corked bottle.

"The dog, before being dressed, should have a thorough washing in tepid water, in which a little common soda has been dissolved.

"The lotion should be applied with a somewhat stiff brush, daily, to all the affected parts, not only to the bare places, but also to the apparently healthy skin, for at least half an inch outside the margin of the diseased skin, so as to insure the whole of the cutaneous structure likely to be attacked being dressed.

"This is most important, for, if the remedy, whatever it may be, is otherwise used, it will be found that, while the pityriasis is being cured in the center of the spot, the disease is extending at its borders

"When a person has neither the time nor convenience for making the sulphur and lime preparation, a bottle of Spratts' mange lotion, which answers the same purpose, should be obtained.

"With the idea of preventing the spread of the complaint, once a week I recommend the patient should have a bath in a warm solution of sulphurated potash, made of the following strength: One ounce to every gallon of water.

"This is to be used in addition to the above lotion, which should be applied only locally.

"When the disease is dead, new hair soon commences to appear on parts that were bare, and to stimulate its growth I advise that the dog should be dressed all over, twice a week, with cocoanut oil, but the lotion should not be discontinued too quickly, for if that be done there is sure to be a return of unfavorable symptoms.

"As to internal remedies, arsenic is useful, and the solution of arseniate of soda is about the best preparation.

"For toy terriers, give from one to two drops.

"Fox-terriers, and other dogs of similar size, from two to four drops.

"Collies, etc., from three to six drops.

"St. Bernards, etc., from four to eight drops.

"The minimum doses are for puppies four months old, and the maximum doses for pups ten months or older. Between these ages the medicine should be given proportionately."

## BAD FORM.

*Editor Forest and Stream:*

Mr. Donovan notes my entry of my mastiff Ealderman at the Toronto show, and while I, personally, have not the faintest objection to the fact being ever so widely known, I wish to suggest to Mr. Donovan and to all show officers, that it is bad form to announce in advance that any dog is to compete at any show. I remember well that many years since I had a bitch come in use just before a Pittsburgh show, and was uncertain whether I had better ship her to Boston for service or await coming of a dog to the Pittsburgh show, and on inquiry of Mr. Lincoln whether any mastiffs were entered, found him very reticent about the matter, although finally on my representation of the case, he advised me, in very strict confidence, that a certain dog was coming, and I kept the bitch for this dog, securing the owner's consent to the service. Exceptional circumstances may make it proper to divulge entries in advance, but the presumption is always very strongly against the propriety of so doing.

I again assure Mr. Donovan that I have no shadow of objection as far as I am concerned, but am merely calling attention to a dangerous custom that seems growing.

W. WADE.

HULTON, Pa., Aug. 13.

## SNAKE AND DOG FIGHT.

A MOST exciting fight, says the *Indian Daily News*, between a bull mastiff and a snake about 4ft. 5in. long, apparently of the dhamin species, was witnessed early last Friday morning by a number of persons residing in a house in Entally. The gentleman in whose house the occurrence took place keeps a large poultry yard, and the snake intending no doubt to make a meal of one of the fowls or ducks, was stealthily crawling into the yard, when the birds, scenting an enemy, began to crow and cackle and flutter about in their alarm. The snake had just caught a duck when the bull mastiff came running to the spot attracted by the noise, sprang upon the snake, and seized it close to the head. Acting on the defensive now, the snake released the duck and coiling itself round its antagonist endeavored to crush it. It compelled the dog to roll over; but the latter refused to quit his hold, while with his hind paws he struggled to tear the coils off him. This he partly succeeded in doing, and regained his feet, but the reptile once more coiled round him, and it appeared now as if the dog would be strangled, the folds of the snake forming a double ring round the mastiff's neck. The wriggling of the snake and the frantic struggle of the dog were now almost terrible, and were all the more intensely watched from the fact that no help could be rendered to the plucky dog, who never relaxed his grip. Both combatants rolled over a second time, and continued struggling for fully five minutes, while the dog pawed up the ground all round, and at last managed to make a slit about a span long in the skin of the snake by means of his claws. This was the beginning of the end. The dog once more threw off the coils and rose to his feet. Releasing his grip for a moment he made a dash at the head of the snake, and completely crushed it. Having disabled the snake so far, he tore the snake's body till the reptile was disemboweled. After a severe contest, extending over a quarter of an hour, the brave dog gained a complete victory. Strange to relate, the mastiff, with the exception of a large swelling in the inside of his mouth, sustained no injury, and appears to be doing well.

## THE CREDIT IS DUE TO THE BREEDER.

*Editor Forest and Stream:*

It is not my usual custom to rush into print, but there has been a good deal said of late in the beagle line as to whom belongs the credit of bringing out good dogs, the buyer or the breeder.

As one of the oldest breeders, I wish to briefly state my views in the matter. "Uncle Dick" in his letter to FOREST AND STREAM of Aug. 25, seems to hit the nail on the head when he says, that to the breeder belongs the glory. While the buyer should receive his share of credit for showing his speculative judgment in buying good dogs, the breeder should be entitled to most of the glory for producing the same. For instance, a careful breeder will study the disposition, breeding, and also the good and bad points of his bitches, and will then select a stud dog who will most likely suit them in all points, and past experiences tell me that the result will usually be gratifying. That is the way good specimen dogs are bred, and I think the breeder who produces them should receive the glory. It is gratifying to me to state, that two of Mr. Kreuder's best beagle dogs were bred by me.

GEORGE LAICK.

TARRYTOWN, N., Y. Aug. 27.

## DOGMATICS FROM DOGDOM.

It is astonishing what a close resemblance there is in the appearance of famous dogs and ones not famous.

—§—

The man who buys a dog and pays before seeing him learns a whole lot after.

—§—

The number of quarrels a bone contains depends on the number of dogs about.

—§—

Barking dogs will sometimes bite; also barkless dogs.

—§—

Because a greyhound carries a long face it does not follow that he is a sad dog.

—§—

What is considered an amiable discussion among dogmen would be considered a battle royal among other fraternities.

—§—

I once bought a watchdog, and then had difficulty in accumulating property for the dog to watch.

—§—

The dog that the policeman would destroy he first makes mad.

THE CYNIC.

## IS SCORING DOGS POSSIBLE OR FEASIBLE?

*Editor Forest and Stream:*

Scoring dogs is possible, but not feasible. It has been tried and abandoned many times years ago. If you will publish that little picture that you drew years ago, "Point Judging Beagles," it will nip all such nonsense in the bud. Poultry has been scored by points, but no large shows do it now. Comparison is the only true test for dogs, poultry or anything else. I could a tale unfold about scoring dogs, but do not care to inflict your readers any more than possible.

"UNCLE DICK."

## GREAT DANES.

*Editor Forest and Stream:*

I am not very familiar with dog shows and the classification of the different breeds of dogs, but just now, being the owner of a solitary Great Dane or what I am led to suppose is one, I would like to know whether this handsome and intelligent animal is considered under the head of "sporting dogs." My friends tell me he is not, but as I believe this breed is known in some countries as a boarhound, I should think that ought to settle it.

GERMAN DOGGE.

WOODSTOCK, Can.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

### BRED.

☞ **Prepared Blanks sent free on application.**

*Jennie D.—Daybreak.* Thos. Dunn's (Providence, R. I.) English setter bitch Jennie D. to N. McIntosh's Daybreak (Roy Monarch—Blue Jennie), Aug. 17.

### WHELPS.

☞ **Prepared Blanks sent free on application.**

*Sarah.* E. Brooks's (Hyde Park, Mass.) Dandie Dinmont bitch Sarah (Border Jim—Fan), Aug. 23, five (two dogs), by his King o' the Heather.

*Lady Flute.* R. W. Pope's (Gardiner, Me.) beagle bitch Lady Flute, Aug. 18, six (four dogs), by his Royal Hunter.

*Flossy.* C. V. Griffith's (Anderson, Ind.) pug bitch Flossy (champion Kash— ——), Aug. 9, four (three dogs), by Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora).

*Mabel E.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Mabel E. (champion Kash—Lady Thurman). Aug. 22, six (three dogs), by their Patsy Bolivar (Eberhart's Cashier—Flossy II.).

*Gladys.* Eberhart & Kinnie's (Cincinnati, O.) pug bitch Gladys (Sir Loris—Phyllis II.), Aug. 23, five (three dogs), by their Spokane (champion Kash—Lady Thora).

*Primrose.* Dr Nicol's (Cookstown, Ont.) beagle bitch Primrose (Brittle Pearl), Aug. 14, three (one dog), by his King Krurger (Sport Bannerman—Virgie).

*Jill.* Dr. Nicol's (Cookstown, Ont.) cocker spaniel bitch Jill (Doctor—Lucy), Aug. 4, nine (three dogs), by his Bambo (Bob Obo—Nina).

### SALES.

☞ **Prepared Blanks sent free on application.**

*Happy Thought.* Silver fawn pug dog, whelped July 23, 1892, by Happy Toby out of Lady Alma, by Eberhart Pug Kennels, Cincinnati, O., to F. A. Davies, Pittsburgh, Pa.

*Satan.* Silver fawn pug dog, whelped Aug. 30, 1891, by Spokane out of Sara Bernhardt, by Eberhart Pug Kennels, Cincinnati, O., to Wm W. Weeks, Bridgeton, N. J.

*Kildare—Rose Sarsfield whelp.* Red Irish setter, by Oak Grove Kennels, Moodus, Conn., to David Laughlin, Utica, N. Y.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.*

READER, Detroit, Mich.—I have an English mastiff whose ears are sore, caused by flies. Please inform me what will cure them and also prevent the flies from settling on them again. Ans. Rub some oil of tar on the spot, when dry put more on.

A. S. L., Buffalo, N. Y.—Please give extended pedigree of Countess of Devonshire. Ans. By Bruce out of Wiltshire Kate, by Monarch out of Nora, by Marquis out of Bell; Monarch, by Lang out of Rhona; Bruce, by Don out of Countess, by Lang out of a bitch of Mr. Lang's; Don, by Lang out of a bitch of Mr. Lang's. Breeder, J. L. Bulled, England.

W. A. D.—Should the nose of a dachshund be black or flesh-colored? Ans. It all depends on the color of the dog. If a black and tan, the nose should be black; but if red, it is a matter of choice. If black, it enhances the dog's appearance somewhat. Yes, the ears should be long enough to lap over the nose.

CONSTANT READER, New York City.—See advice to "F. T. A." Syringe the sheath out with warm water three times a day, and then use the following lotion:

| | |
|---|---|
| ℞ Zinci sulph | gr. v. |
| Plumbi acet | gr. iii. |
| Carbolic acid | m. v. |
| Glycerine | 3ss. |
| Pulv. acacise | gr. viii. |
| Aq. ad | ʒvi. |

M. P. T. lotis.

Inject a tablespoonful each time and hold it in the sheath for a minute or two.

F. T. A., Sharon, Conn.—I have a liver and white setter dog, some five years old and a fine worker. He is fat and feels lively, but he has had two or three turns of bleeding from the sheath during the past six months. He has not been hurt to my knowledge and has no weakness of the back or hips, and why he bleeds I cannot see. For the last two weeks he has seemed to be very much constipated; at any rate, seemed to be in pain when the bowels wished to act. Will yelp and draw his hinder parts on the ground as if it hurt him to have a passage. Does the constipation cause the trouble? What is the best physic to administer? Ans. Better take the dog to a veterinarian, who could examine the parts to see if there are any lesions, the result of injury or disease; he might also examine the rectum. You do not say whether he passes water freely. Give a tablespoonful of castor oil with 10 drops of tincture of hyoscyannis. Keep the parts clean and give the following pills: Ergotine grs. 3ss; gallic acid, ʒi; to make 12 pills. Give one three times a day.

# Canoeing.

ONE of the pleasant features of the meet has been the abundance of music, not strictly classical, perhaps, but none the less appropriate. The three cornets made lively music; not only at "colors" and "taps" and for marching, but at the camp fire. The two drums, too, gave martial air to the camp, and one of the pleasantest frolics of the meet was the wild march by torchlight over the entire point, to the music of the drums and cornets. The Bulwagga camp boasted a real piano, but it was not of general use, being non-portable. The eight or ten guitars, banjoes and mandolins in camp made a very good orchestra for dancing and singing, as well as for instrumental music at the camp-fires.

Fortunately "Comrades" was forgotten this year, but the other "spielers"—"Maggie Murphy," "Annie Rooney" and "Joe"—were on hand, in company with "Mary Green," and even the disreputable Mr. "McCluskey" found his way in with them.

The A. C. A. meets have been remarkable for the odd and attractive songs which have come in from year to year, some being undeservedly forgotten. In 1884 there were the two French Canadian songs, "Alouet'é" and "Boule Roulant," both very taking airs; also the old catch, "Hop Aloug, Sister Mary." A year later Dr. Neidé brought to camp a shanty song of more than usual merit, "Rolling Down from Old Mohea," which has since been forgotten, though deserving of preservation. A favorite song in 1886 was "Ring, ring the Banjo," sung by Mr. Andrews, of the Rochester C. C. In 1888 Mr. Lundberg, of the Mohicans, came to Lake George and captured the camp with his magnificent voice and the charming song "Necken." The Jessup's Neck meet of 1889 will long be remembered for its famous "Coon Band" of three darkies with their "Watermelon Growing on the Vine," still a universal favorite in camp, as well as for the popular "Cock Robin."

The present meet has brought out more music than usual. Mr. Howard Gray, of the Vespers, has helped out every camp fire with some good comic songs; Mr. Moffatt, of the Yonkers C. C., has sung a number of ballads, though his taste for comic songs has, for some reason declined since 1890, and the "Wail of Toe" was not heard once, though often demanded; Mr. J. R. Lake, of the New York C. C., brought to camp a rousing shanty song, "Bound for Australia," which has been sung, hummed and whistled everywhere, lending good aid in all the camp work. Messrs. Francis, of the Bulwaggas, brought some good college songs to the camp-fires and lent good aid in all choruses. The chief musical feature, however, was the singing of Mr. C. B. Asbenden, of the Newton Boat Club, the fortunate possessor of a fine baritone voice. His singing of "Annie Laurie" won the praise of all who heard him, and the little song "Fraulein," which was demanded on every occasion, is one of the quaintest and daintiest of airs ever heard at a meet.

THE work of the various committees this year has been so carefully done as to call for no complaint or criticism. Messrs. Gibson, Huntington and Dorland in particular have managed their respective committees in a way never done before, and the races have been run on time, with no protests or unfinished business; the transportation has been most satisfactory, and Mr. Huntington has been on the ground from the first day to the last, attending to the camp floors and lumber supply and the general management of the camp.

THE various comments and criticisms which the FOREST AND STREAM in common with canoeists has made on previous meets have been met by the statement that the average canoeist is a chronic kicker who pays but a dollar a year and wants everything in return. That this is untrue is shown by the present meet, at which there has been hardly a complaint from anyone, even under the trying conditions of the rainy weather. The fact that the officers had made an earnest and successful effort to secure all practicable advantages for the campers, was appreciated by all; and such work and discomfort as is incidental to all camping was accepted cheerfully as a part of the fun. That grumbling which has been heard in other years over defective transportation or poorly managed races was absent this year, not because everything was absolutely perfect, but because all arrangements were as good as could reasonably be expected.

THE incidental entertainments which have been an interesting feature of every camp since Mr. Seavey joined the A. C. A. in 1884 have all been surpassed by the number and quality of those given this year. The old fellows will remember the first affair, the Indian war dance and tableau on the hill at Grindstone, in which little Sob took a star part. From that time on Mr. Seavey has been the recognized head of all camp frolics, including the famous "ball" at Bow Arrow Point in 1887, the "Great Triple Aggregation" at Stave Island in 1888, the minstrel show at Jessup's Neck in 1890 and the great sea serpent and impromptu tableaux here last year. The greatest of all of these was the Stave Island circus, an entirely impromptu affair, but excellently managed. The two entertainments this year were more elaborate, being planned long in advance. The "As You Like It" tableaux were worthy of a far larger audience and of more than one solitary performance, being most artistically produced. The illumination and storming of the fort were also on a most elaborate scale, and would have attracted attention under any circumstances, being all the more remarkable when produced for a single night in the woods. With these two were the camp-fire of the Bulwagga C. C. with the best musical programme ever given at a meet; the three making a series of performances which will probably be unequalled for a long time, although it is the wish of every good A. C. A. man that "Seavey may manage all our shows, for a hundred years to come."

THE two facts which stand out most prominently in connection with the 13th annual meet of the American Canoe Association are that it has been an unqualified success, and that this success has been due primarily and principally to Com. Winne. The able and efficient work of every committee has been an important factor, but from first to last, from the meeting of the executive committee last November until the A. C. A. flag was lowered for the last time in camp last week, the Commodore has worked unceasingly over every detail. The weather of the first ten days was most discouraging, threatening a failure of the entire meet; but through it all the Commodore was as bright and cheerful as ever, all over the camp, with a pleasant word here and a laugh at the rain there, leading in one project or another to keep the camp alive and the canoeists amused. The perfect working of all details of transportation, camp location and other matters which have given so much trouble in previous years, bears testimony to his executive ability; but beyond this he has done much for the social life of the meet, bringing the men together and making of the camp one large party of intimate friends.

There are two very difficult tasks which fall to the lot of every commodore during the meet at which he presides. One of these is to keep the camp alive, to amuse and interest every one, and to mould the whole party of over two hundred, many of them new men and strangers, into one friendly and sociable body. The other task is to restrain the more turbulent spirits who bring disorder to every meet, and to keep them within bounds which shall not infringe on the enjoyment of the majority of those present.

Com. Winne has proved equal to both tasks; he has taken the lead in every entertainment, and has made the headquarters what it should be, the central point of the whole meet and camp.

THE quiet and order which has prevailed in the present camp is in marked contrast to some previous years. The first experimental outbreak after the style of last year, led by men who from their positions should know better, met with such prompt action on the part of the Commodore that it was not repeated, and the result was that such fun as prevailed after taps at 11 P. M., was so subdued as to cause little disturbance to those who wished to spend a part of the night in sleep.

### A Lazy Cruise for Recreation.

SMYTH proposed it. Ward suggested the destination—the Atlantic Highlands. Vaux moved that a sloop be chartered to take the canoes and duffle across the Bay and bring them back. Stevens engaged the sloop, and he and Plummer purchased the "prog." Mac, Lake and Schieffelin simply agreed to go. Raoul said he would sail over in his own boat and camp with the party, and he did. Ward could not get his catboat off the shore, where she grounded in a squall, and therefore missed the fun and unfortunately for all—himself included—had to stay at home over the glorious Fourth.

Friday evening just at sunset the 40-ton sloop Grover Cleveland dropped anchor off the Bensonhurst pier and Captain Mack came ashore to the New York C. C. float in his yawl to report ready for orders.

The club house presented a busy scene. Old camp kits and shore tents were being overhauled, and the racing canoes were put in cruising trim. Few regatta day visitors would have believed that the house contained any cruising outfits, since their many visits there had revealed to them nothing but large sails, 5ft. sliding seats, and purely racing canoes. It must be confessed that the word *cruising* has rarely been heard spoken in the club house of late years, and since the ante South Beach days no cruising has been done by the members or from the club house except by the veteran Dr. Curtis—who is now off for a month—and young Raoul who has never had an attack of racing fever.

There was no wind at 8 on Saturday morning and therefore the five who were on hand took things leisurely, and by easy stages ferried the duffle out to the Grover and got their canoes on deck. Raoul left the house at 5 in the morning to sail to the camp in Marguerite, Lake and Schieffelin could not leave their offices in time to sail down on the sloop, but were to go by train later in the day, and therefore their canoes and camping things were put aboard the Grover with the rest.

A light breeze sprang up at 10 o'clock, S.S.E., and dead ahead. Everything was on board and ready for the voyage. The anchor was lifted, the jib set and the sloop headed as near south as she could point. The day was perfect, hot sun and cool breeze, and the men could not have enjoyed the sailing more if they had been on the deck of the finest yacht.

The steward started a fire in the cabin stove a little later on and prepared a meal for the captain and crew, including a big batch of hot biscuit, a large part of which he offered to the passengers, and they were not slow in accepting the kindness. The stove was turned over to the two cooks of the party as soon as captain and crew had dined, and a delicious meal was served up to those on deck, thus making the first hole in the camp stores.

The tide was high at 1:30. At 2:30 the sloop ran hard and fast aground on the highest flat in the Horseshoe, a mile off shore. By 3 P. M. the canoes were all afloat and all the camp duffle was stowed in the yawl alongside ready for the voyage up the Shrewsbury to the camp ground that had been settled upon beforehand. All sailed, even the yawl, and worked to windward up to the Central R. R. drawbridge. There a very strong ebb current was encountered and the yawl carried away her centerboard by striking a bar. Plummer and Smythe had gone ahead above the draw. Mac, Stevens and Vaux kept near the yawl, their base of supplies. A council of war was held, and it was decided to get a shore meal before proceeding further. While the men were dining Plummer and Smythe returned and then it was decided to camp nearby as it was getting late and the crew had to return to the sloop to help Capt. Mack get the Grover off the flat at the next high tide.

The only Republican in the party deliberated some time early in the day before he consented to board a transport having such a name, and was jubilant when the sloop ran aground, and he could get in his "I told you so."

Running down before the wind the canoes skirted the shore at the mouth of the river, and a mile below the bridge on the shore of the bay a fine sand beach was found. The canoes were beached less than half a mile from a house where it was evident fresh water could be obtained, and the camp things were taken ashore from the yawl, and the work of pitching tents began. It was dark before the two tents were up and the cots and blankets placed in them ready for the night. Plummer put a small tent over his canoe and slept in it.

After the heavy work was done a camp-fire was started and a refreshing beverage brewed over it, just as a like tipple used to be made on Grindstone Island.

Probabilities were talked over and it was agreed that Raoul had reached the camp ground on Pleasure Bay before dark, and that Lake and Schieffelin, coming down by train, had found him and would camp with him over night, and not finding the rest of the party, all three would sail down the river next morning in the Marguerite looking for the main camp.

Exactly this happened. The Marguerite made her appearance before 11 o'clock and then the party was complete. Lake and Schieffelin went out to the sloop and got their canoes and pitched their tent. As a stiff gale of wind was blowing, the rest of the party was content to stay ashore and rest. The day was intensely hot, and swimming proved to be the most satisfying diversion.

After dinner the west showed manifest signs of a heavy squall and thunder shower. It was fine watching the storm gather and the heavy clouds gradually spread out to the north and east. Ample warning of the coming trouble was given, and the old campers heeded the signs in the sky by securing their tents with strong guy lines and long pegs driven far down into the heavy sand. Rubber blankets were spread over the things in the tents, oilers and sou'westers were fished out ready to put on at a minute's notice. When the storm broke it did no damage, although it was by far the most violent experienced in this vicinity thus far this year.

Those who were at Jessup's Neck in 1890 that first Sunday of camp will appreciate what a heavy thunder squall means to campers. The men did not stay in their tents, but in oilers and with bare feet remained outside to be prepared to repair damages quickly and satisfactorily if any accident happened. The tents stood the test and remained firm, leaking so little that nothing of any account got wet. Dry wood had been stored away, and when the heavy part of the shower passed over, a fire was started and a royal dinner cooked and eaten just as darkness shut in. The rain kept up in a half-hearted way till nearly 10 o'clock; but with a good camp-fire and comfortable tents it mattered not to the campers what the weather might be.

One of the fellows had a bad habit of going out at inconvenient times. The owner had been using it pretty constantly for some time, either carrying it about with him, or leaving it on the ground to mark the spot where some useful article had been temporarily placed. While carrying this lantern late in the evening the owner was seen moving about the beach in a way that indicated that he was in search of something. He visited every spot where his things had been placed at different times, and was heard to mutter strange incantations meanwhile. Finally he exclaimed, "Confound that lantern; it's out again, and I can't find it." A roar of laughter greeted this remark, and he was asked if he expected to find it by the light in his hand. He then admitted that "it was one on him"—and his name was Vaux. Before 11 all were asleep.

At about 1 A. M. the wind shifted, the sky cleared and a violent wind squall from the west struck the camp, driving sand, sticks and beach-drift before it, which hammered on the canvas and awoke the sleepers, who at once supposed another rain squall was upon them. The wind was even more severe than during the thunder squall, and blew the hot coals from the slumbering camp-fire along the beach, emitting sparks as they went, which threatened destruction to tents, sails and canoes. Water had to be hastily thrown over the fire to prevent a conflagration. The large tent occupied by Lake, Schieffelin and Plummer blew about in such a violent manner and made such a noise about it that sleep for them was impossible, even after they felt certain it was not in danger of blowing away. Not until 4 A.M., when the wind moderated somewhat, did they go off to sleep again. The others had no trouble.

Monday morning was in every way the glorious Fourth. The sky was clear, the air cool, not a cloud to be seen and a strong west wind was blowing, which kicked up a heavy sea, as it had the full width of the bay for its sweep. After a very elaborate breakfast, which took time to prepare and dispose of, the wind dropped somewhat and the canoes were launched for a little sailing.

The tide was low, but rising, and the canoes often ran aground and had to be pushed off the flats. Stevens's canoe Kismet draws about 10in. of water and therefore he had more trouble than the rest. At one time his keel touched and he luffed up, and being within 10ft. of the shore stepped overboard to wade in. Imagine his surprise and the mirth of those who were watching him when he did not find bottom with his feet, but lost his balance and plunged in head over ears. He happened to hit upon a deep hole and was unmercifully laughed at for his misplaced confidence.

The boy of the party—Schieffelin—kept the others in constant fear of their lives while he celebrated the Fourth in the true old-fashioned way, firing giant crackers near the tents and canoe sails. Then he shot at a mark with a long-barreled revolver, the muzzle of which had a bad habit of raking the entire camp from time to time. Peace of mind was not restored till his last shell had been exploded. Part of his kit consisted of two heavy, long, sharp, bowie knives. These he did not carry about with him but dropped on the sand, innocent of sheath, wherever it happened to suit his convenience. As the fellows were walking about with feet bare, there was constant danger of stepping on these villainously murderous weapons. As luck would have it he only succeeded in cutting himself in the hand. The single serious wound of the entire three days was inflicted by a mild and usually harmless tent peg which came in contact with a bare toe moving at a high rate of speed along the beach in order to enable its owner to see the sunset.

Smythe remarked Monday morning when some one called his attention to his gloriously sunburnt face, that if he expected to keep his present skin he would have to rivet it on.

After dinner tents were struck, the canoes and yawl—which came off from the sloop—launched and loaded, and the voyage to the transport began. By 3:30 all was on board and a start for home was made. The wind had died away almost entirely, and the Grover only drifted "as idle as a painted ship upon a painted ocean."

Supper was served on board, and by 8 o'clock the sloop was within half a mile of Norton's Point. Then the wind died out entirely, or came in puffs from any and all directions, and a strong ebb tide set the vessel out toward the open sea. Four hours of drifting ensued, beguiled by song and story, and then a gentle puff carried the Grover around the Point into Gravesend Bay and out of the tide. The anchor was dropped off the pier at 12:30, and by 1 A. M. the canoes, camping things and men were all in the club house and the cruise was over.

The present indications are that the cruising fever has set in, and if the readers of the FOREST AND STREAM never hear of a New York man racing again they will know the reason

ONE OF THE CRUISERS.

### Detroit Boat Club.

ON Sept. 19 and 20 an open canoe meet will be held on the Detroit River, under the auspices of the Detroit Boat Club. The events will be:

Paddling races—1, ½ mile, single; 2, ½ mile, tandem; 3, ½ mile, paddling upset; 4, ¼ mile, tandem, standing; 5. ½ mile, single blade, with turn; 6, ½ mile, club fours; 7, hurry scurry.

Sailing races—8, 3 miles, limit measurements; 9, 3 miles, no limit; 10, combination, sailing and paddling.

Any canoeman who is a member in good standing of a recognized canoeing association or club will be eligible to compete in any of these events. Suitable prizes will be offered for each event. A. C. A. rules will govern measurements and races. It is earnestly requested that all who purpose entering any of these races will signify their intentions at the earliest possible date.

### New York C. C. Regatta.

The fall regatta of the New York C. C. will be held at Bensonhurst, Gravesend Bay, Saturday, Sept 3. Paddling, sailing, swimming and other races; gymnastics, tricks and other contests. Members of the A. C. A. and of canoe clubs in the vicinity, will be welcome. All races open to all comers. Sleeping accommodations, in the club house, will be provided for those canoemen who come from other clubs. Meals can be had at the pier, near by. Ferry every half hour from the Battery to Thirty-ninth street, South Brooklyn; train from there.

### A. C. A. Membership.

THE following gentlemen have applied for membership in the A. C. A.: Northern Divison: J. Dakers Paterson, Montreal. Central Division; Abram Barker and W. E. Bailey, Seattle, Wash.

# Yachting.

### Corinthian Y. C. 4th Annual Sweepstakes, Aug. 22.

NEWPORT, R. I.

THE Corinthian Y. C., of New York, has this year shared the luck of nearly all clubs in the way of small entry lists, the fleet of eight or ten starters in its former sweepstake races having shrunken to three. The race, too, has been less exciting than usual from the fact that the positions of the three yachts composing the present 46ft. class had already been finally settled by the races of the New York Y. C. cruise, at least so far as first place is concerned.

In the three previous years it has so happened that there have been questions of supremacy undecided by the earlier racing, and the Corinthian sweepstakes, with its fair and neutral course, and with every yacht specially overhauled for it, has been accepted as the final test. This year the concluding races of the cruise at Marblehead left no room for question as to Wasp's superiority over both Gloriana and Harpoon, the only important issue being between the latter two for second place, and even this question excited comparatively little interest after the heated discussions of last year, owing to the important changes in the yachts, owners and skippers.

There is little doubt that Harpoon is a decided improvement over last year's Beatrice, but it is a more difficult matter to gauge Gloriana's present performance with that of 1891, and in the present race this difficulty was increased by the fact that her trim had been changed by the removal of some 1,500lbs. of lead from her keel, to compensate in part for the added immersion caused by over a year's soaking of the hull.

The race was much the same in all its conditions as in the other three years, being sailed over the same triangular course, 25 nautical miles, and in a moderate S.W. wind, there being, however, but one prize, the $300 sweepstakes with a sum added by the club. The course was off Newport, starting and finishing off the Brenton's Reef Lightship, the first leg, 8½ miles, being in the direction of Point Judith. The starters were:

| | Owner. | Designer. | Helmsmen. |
|---|---|---|---|
| Wasp | Archibald Rogers | N. G. Herreshoff | Capt. Chas. Barr |
| Gloriana | Dr. W. B. Hopkins | N. G. Herreshoff | Capt. John Barr. |
| Harpoon | Messrs. Adams | Edward Burgess | Chas. F. Adams. |

The wind was light from the north early in the day, finally settling in the S.W., and when the regatta committee, Messrs. E. B. Clarke, Chas. Stewart Davidson and W. H. Plummer, with Mr. George A. Cormack, reached the start on the steam yacht Sapphire, they set the signals for the usual course, the first leg S.S.W.

There was a ten minute preparatory interval after the first signal, at 12:25, and three minutes in which to cross after the starting whistle, at 12:35. All three swung club topsails, Wasp alone carrying a baby jibtopsail. On board Wasp was Mr. Rogers and Mr. Hereshoff; on board Gloriana were Messrs. Royal Phelps Carroll and Hugh Norman, and on board Harpoon were Messrs. Sharp and Sigourney Butler with her owners.

Wasp was close by the line and went over within 12s., Gloriana being 42s. later. Harpoon laid back and waited almost the full limit, being timed at 12:47:42. All crossing on the starboard tack, they stood off shore for about a mile, when Wasp tacked, followed by Harpoon, and headed in for Narragansett, leaving Gloriana to stand on some distance further before tacking after them. The wind was very light at the start, but increased gradually, Wasp leaving Harpoon all the time. When Gloriana and Harpoon met, after the former's long tack off shore, which happened as the two were nearing Point Judith, Harpoon had the starboard tack and Gloriana was forced to bear away a little, Harpoon having thus gained 2m. on her.

The weather mark was turned:

| | Elapsed. |
|---|---|
| Wasp | 1 47 48 |
| Harpoon | 1 52 28 |
| Gloriana | 1 55 11 |

The second leg was run with booms to port and balloon jibtopsails set, Harpoon setting her spinaker to starboard when a couple of miles from the second mark. All jibed at the mark, the times being:

| | Elapsed. |
|---|---|
| Wasp | 0 59 52 |
| Harpoon | 1 03 01 |
| Gloriana | 1 05 35 |

With a freshening breeze Wasp reached for the finish, still making a gain on the other two, the times at the line being:

| | Elapsed. |
|---|---|
| Wasp | 1 01 09 |
| Harpoon | 1 02 20 |
| Gloriana | 1 10 47 |

The official times were:

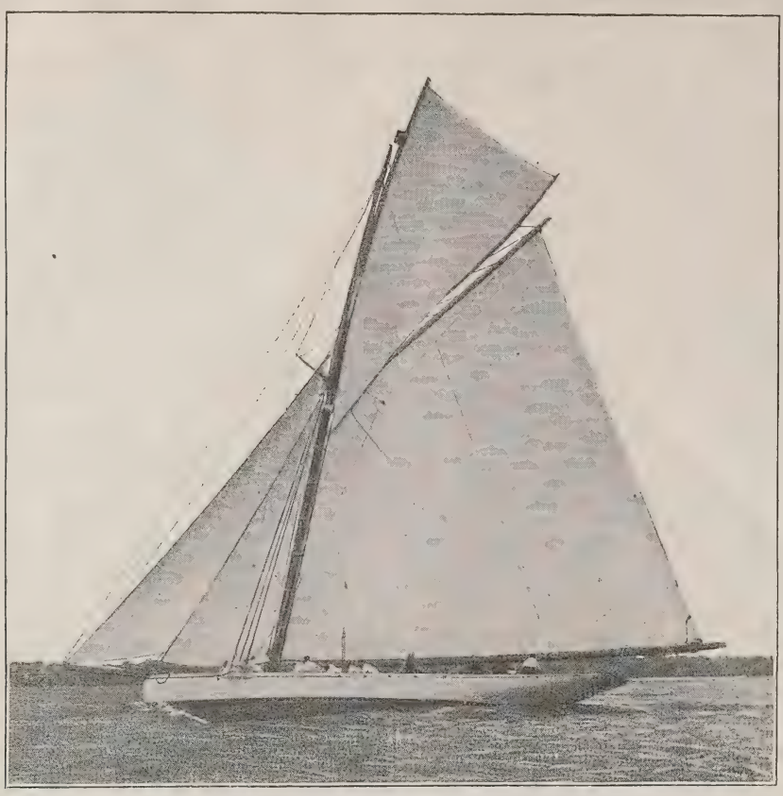
| | Start. | Finish. | Elapsed |
|---|---|---|---|
| Wasp | 12 35 12 | 4 24 01 | 3 48 49 |
| Harpoon | 12 37 42 | 4 35 26 | 3 57 44 |
| Gloriana | 12 35 54 | 4 38 27 | 4 02 33 |

Neither of the yachts was measured before the race, but fortunately the finish was so decided that no question can arise over the corrected times. Admiral Belmont was on board of Ituna as the guest of Mr. Morgan. The steam yacht Linta, Mr. Walter Luttgen, carried the representatives of the press, Fleet Captain M. Roosevelt Schuyler being in command. A number of steam and sailing yachts were present to witness the race.

### Fall River Y. C., Aug. 23.

FALL RIVER—MOUNT HOPE BAY.

THE open regatta of the Fall River Y. C. was sailed on Aug. 23 in a light breeze, the times being:



| | Elapsed. | Corrected. |
|---|---|---|
| **FIRST CLASS.** | | |
| Verena, Providence | 2 03 00 | 2 02 45 |
| Mariquita, Providence | 2 05 11 | 2 05 11 |
| **SECOND CLASS.** | | |
| Hattie, Fall River | 2 28 23 | 2 25 03 |
| Lorita, Marion | 2 19 42 | 2 19 42 |
| Composite, Fall River | 3 00 15 | 2 35 17 |
| **THIRD CLASS.** | | |
| Pigeon, New York | 2 32 11 | 2 32 11 |
| Mabel Gertrude, Fall River | 3 01 51 | Not meas. |
| Onysia, New York | 2 32 40 | 2 32 33 |
| Flight, Marion | 2 25 27 | 2 22 23 |
| Hector, Mattapoisett | 2 30 30 | 2 25 25 |
| Annie, Fall River | 2 39 54 | 2 28 21 |
| **FOURTH CLASS.** | | |
| Cocheco, Providence | 1 42 51 | 1 42 25 |
| Curlew, Providence | 1 41 41 | 1 39 23 |
| Olivette, Fall River | 1 42 15 | 1 38 22 |
| Gymnote, Cataumet | 1 34 53 | 1 34 53 |
| Ahedine, Providence | 1 39 13 | 1 37 45 |
| Maud, Providence | 1 41 54 | 1 38 30 |
| Victor, Providence | 1 37 26 | 1 35 08 |
| Alice, Nayatt | 1 40 45 | 1 35 45 |
| Catspaw, Newport | 1 41 56 | 1 39 51 |
| **FIFTH CLASS.** | | |
| Doris, Monument Beach | 1 45 23 | 1 44 26 |
| Unknown, Swansea | 1 44 00 | 1 38 19 |
| Viobrara, Newport | 1 53 10 | 1 49 22 |
| Patience, Fall River | 1 45 09 | 1 45 09 |
| Hesper, Fall River | 1 43 44 | 1 40 31 |
| Daisy, Wareham | 1 42 52 | 1 40 01 |
| **SIXTH CLASS.** | | |
| Marianna, Fall River | 1 45 14 | 1 43 09 |
| Alice W., Fall River | 1 44 38 | 1 44 38 |
| **SEVENTH CLASS.** | | |
| Midget, Fall River | 58 14 | 56 45 |
| Dido, Fall River | | Not measured. |
| Madchen, Fall River | 54 39 | 54 39 |
| **EIGHTH CLASS.** | | |
| San Jose, Fall River | 1 07 02 | 1 05 18 |
| Marietta, Fall River | 1 04 39 | 1 04 33 |
| Marie, Fall River | 1 10 08 | 1 10 08 |

The winners were: First class, Verena; second class, Lorita; third class catboats, Flight first and Hector second; fourth class, Gymnote; fifth class, Unknown; sixth class, Daisy; seventh class, Dido; eighth class, Marietta.

Prizes: First class, silver ice pitcher valued at $30; second class, pair Lemaire's field glasses; third and fourth classes, first $20, second $10; fifth class, $15 and $8; sixth class, $10 and $5; seventh and eighth classes, $5 and 3.

### Dilemma and El Chico.

ON Aug. 22 a private match was sailed in connection with the Corinthian Y. C. sweepstakes between the two Herreshoff fin-keels Dilemma and El Chico, the former being the first of the type, built last fall, and now owned by Mr. Gouverneur Kortright, who sailed her. El Chico was sailed by her owner, Mr. H. Maitland Kersey. The course was over the windward leg of the Corinthian triangle and return, 16⅜ miles, the start being made just after the 46 footers crossed. Dilemma led by nearly 8m. at the weather mark, increasing her lead some 2m. on the run in, and winning easily; her time for the 16⅜ miles being 3.54.04.

CORSAIR. DESIGNED BY ARTHUR E. PAYNE.

## British 40 Raters.

THE largest and finest class of yachts yet built under the length and sail area rule of the Y. R. A. is the 40 rating, nearly equivalent to the American 60ft. lwl. class. Above this class are a few large yachts of various sizes, Iverna 118 rating, Metor (Thistle) 116, Valkyrie 77, Yarana, now Maid Marian, 62, and several of 60 rating; but the largest class with sufficient yachts to make a strictly class race is the 40 rating. A number of good boats have been built for it within the past five years, Deerhound, Creole, Castanet, Thalia, Reverie and others; but the new boats of the year have proved themselves more than a match for the best of the old ones.

The accompanying pictures show the three, Queen Mab, Varuna and Corsair. The former is the most noted of the three, not only from the fact that she is the most successful, but because she is the largest racing yacht yet built in England with a centerboard, not including one or two yachts, such as Iverna, which have tried and discarded a small fin. Queen Mab was designed by Mr. Watson and built by Henderson & Co., of Glasgow, her waterline being just under 50ft. and her sail area about 4,000sq. ft. Lloyd's Register is discreetly silent as to her beam, but we understand that it is about 16ft. or 17ft. more than Genesta and Galatea, 20 to 25ft. longer. She has a centerboard of Delta metal weighing 3½ tons. The hull is of composite build. Varuna is a sister ship by the same designer and builders, but a keel craft, and narrower. She has been by no means as successful as Queen Mab.

The third yacht, Corsair, is the first large racer built by Mr. Arthur E. Payne, one of the most successful of British designers in the smaller classes. Thus far she has shown very well, though not up to Queen Mab. How much of the latter's success is due to her centerboard is as yet an open question here, as nothing is known as to the extent to which the board is used. In some of the smaller British racing yachts the centerboard has been tried this year only to be discarded, and one authority states that Queen Mab is now sailing with the board permanently housed, though we cannot vouch for the truth of the statement. The most noticeable feature of each of the yachts is the long, full bow.

## The Freak Protest.

THE regatta committee of the Eastern Y. C. has rendered the following decision in the appeal of Mr. John B. Paine against the disqualification of Freak in the race of July 28:

REGATTA COMMITTEE, EASTERN YACHT CLUB, BOSTON, Aug. 25.—At a rehearing of the Alpha-Freak protest, held Aug. 23, the regatta committee have revised their previous decision, and now unanimously decide that the sail carried to port by Freak and Pyxie on the second leg of the second round of the race on July 28 was, to all intents and purposes, a spinnaker. They therefore disqualify the Freak and Pyxie. They refer to an English decision attached in confirmation of their finding. The committee are also of the opinion that the sail carried by Freak and Pyxie as above, if not a spinnaker, was a second jib, which is not allowed under racing rule 11. The committee have heard Freak's side of her protest against the other boats for booming out their jibs, and have decided not to allow said protest, as no rule is infringed, William S. Eaton, Jr., Chairman; R. D. Sears, P. T. Jackson, Augustus N. Rantoul, Henry H. Buck, Secretary of Committee. Regatta Committee E. Y. C.

The official summary of the race is as follows, Alpha beating Freak by 4 seconds:

SPECIAL RACE.

| | Length. | Allowance. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Alpha | 23.70 | 4 03 | 4 19 59 | 4 15 56 |
| Freak | 25.76 | 0 54 | 4 16 54 | 4 16 00 |
| Catspaw | 26.24 | 0 18 | 4 19 10 | 4 18 52 |
| Reaper | †24.03 | 3 36 | 4 24 36 | 4 21 00 |
| Vanessa | 24.03 | 3 36 | 4 28 31 | 4 24 55 |
| Thrush | † | . . | 4 24 50 | . . |
| Exile | †26.30 | 0 09 | 4 28 16 | 4 28 07 |
| Tadpole | †25.57 | 1 12 | 4 45 34 | 4 44 22 |
| Sirocco | 26.42 | Allows | 4 44 54 | 4 44 54 |
| Pyxie | 24.96 | 2 06 | 4 50 43 | 4 48 37 |
| Koorali | 25.06 | Withdrew. | | |

† Owner's measurement. ‡ Not measured; about 27.17.

Freak and Pyxie are disqualified for carrying spinnakers.

The prizes are awarded: First, to Alpha; second, to Catspaw; third, to Reaper.

## Seawanhaka Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.

THE third race for the Rouse & Wetmore cups and the Breese handicap prize was sailed on Aug. 20 off the mouth of Oyster Bay Harbor. The times were. Start 12:55 from the gun:

| | Center Island Buoy. | Lloyd's Buoy. | Bell Buoy. | Center Island Buoy. | Finish. | Elapsed. | Cor. |
|---|---|---|---|---|---|---|---|
| Nameless | 1 19 15 | 2 05 03 | 2 52 23 | 3 10 29 | 4 08 03 | 3 13 08 | . . . . |
| Dodo | 1 19 20 | 2 11 48 | 2 55 06 | 3 11 26 | Did not finish. | | |
| Pyxie | 1 19 45 | 2 05 42 | 2 52 00 | 3 07 45 | Did not finish. | | |
| Meteor | 1 19 31 | 2 06 37 | 2 52 24 | 3 06 13 | Din not finish. | | |
| Nadjy | 1 19 55 | 2 10 17 | 2 54 54 | 3 10 36 | Did not finish. | | |
| Rose Marie | 1 19 35 | 2 13 46 | 3 52 22 | 3 08 15 | 4 14 36 | 3 19 36 | 3 19 36 |
| Martha | 1 22 09 | Did not finish. | | | | | |
| Trinket | 1 22 20 | 2 07 44 | 2 53 52 | 3 11 15 | Did not finish. | | |
| Indolent | 1 20 24 | 2 12 12 | 2 53 10 | 3 07 55 | 4 26 20 | 3 31 20 | 3 30 20 |

Nameless wins Rouse & Wetmore cup; Rose Marie wins Breese handicap.

## Larchmont Y. C.

THE annual oyster boat regatta of the Larchmont Y. C., was sailed on Aug. 27, over the Captains Island course in a light N. E. wind, the following boats finishing, out of 19 starters:

CLASS 1—CABIN SLOOPS, 35FT. AND OVER.

| | Elapsed. | Corrected. |
|---|---|---|
| Jennie R., A. L. Ford | 5 38 00 | 5 29 22 |
| Tosco, H. Pausch | 5 59 21 | 5 50 51 |

CLASS 2—CABIN SLOOPS UNDER 35FT.

| | | |
|---|---|---|
| Claudia M., A. L. Ford | 5 18 46 | 5 13 16 |
| Amateur, W. A. Lewis | 5 33 51 | 5 25 51 |

CLASS 3—OPEN SLOOPS, 30FT. AND OVER.

| | | |
|---|---|---|
| S. C. Bond, A. A. Bond | 5 30 58 | 5 30 58 |
| Stella May, H. C. Smith | 6 10 24 | 6 09 56 |

CLASS 4—OPEN SLOOPS UNDER 30FT.

| | | |
|---|---|---|
| Jennie A. Willis, J. A. Willis | 5 07 23 | 5 07 23 |
| Agitator, C. T. Wiggins | 5 43 32 | 5 40 54 |

CLASS 5—CATBOATS.

| | | |
|---|---|---|
| Uncle Dan, W. Fordham | 5 40 56 | 5 40 56 |
| Delphine, A. L. Smith | 5 57 49 | 5 55 34 |

On Sept. 3, the full regatta will be sailed, with prizes in all the club classes and a special handicap prize for three starters in the 46ft. class. On Sept. 13, a race will be sailed, open to schooner yachts only, for a special prize known as the "Larchmont Cup of 1892." The prize winners on the recent cruise were as follows:

July 9—Larchmont to Black Rock: Atlantic, Gevalia, Dare and Nymph.

July 10—Black Rock to Shelter Island: Atlantic, Gevalia, Clara and Nymph.

July 13—Shelter Island to Newport: Atlantic and Agnes.

July 15—Newport to New London: Dauntless, Gevalia and Dare.

July 17—New London to Shelter Island: Magic and Katrina.

## Plymouth Y. C., Fourth Regatta, Aug. 22.

PLYMOUTH, MASS.—CAPE COD BAY.

THE fourth regatta of the Plymouth Y. C. was sailed on Aug. 22 in a light but freshening breeze, the course being 9 miles. The times were:

FIRST CLASS CATS, OVER 20FT.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Wave, W. B. Spooner | 20.01 | 2 34 27 | 2 00 00 |
| Ariel, H. H. Sears | 21.07 | 2 32 57 | 2 00 22 |
| Future, W. T. Whitman | 21.08 | 2 36 13 | 2 03 45 |
| Percy Allen, V. D. Bacon | 21.03 | 3 40 55 | 2 07 56 |
| Nobscusset, Luther Hall | 24.06 | 2 40 32 | 2 11 10 |
| Curlew, H. Lawton | 22.09 | 2 37 13 | 2 05 59 |

SECOND CLASS CATS, UNDER 20FT.

| | | | |
|---|---|---|---|
| Attempt, G. W. Shiverick | 17.11 | 2 30 11 | 1 52 38 |
| Nancy Hanks, F. W. Maglathlin | 16.06 | 2 44 03 | 2 04 13 |
| Leda, C. P. Blinn | 17.11 | 2 44 48 | 2 07 18 |
| White Swallow, E. W. Watson | 18.09 | 2 43 49 | 2 07 31 |

THIRD CLASS SPRITSAILS.

| | | | |
|---|---|---|---|
| Old Honest, J. C. Dawes | 16.10 | 2 33 38 | 1 54 22 |
| Fairplay, G. B. Bartlett | 16.10 | 2 40 30 | 2 01 14 |

| Spray, C. F. Bradford | 16.10 | 2 46 20 | 2 05 37 |
| Mystery, T. S. Diman | 14.11 | 2 53 04 | 2 10 19 |
| Puritan, C. D. Craig | 16.11 | 2 51 24 | 2 12 16 |
| Peerless, A. Holmes | 16.04 | Withdrawn. | |

FOURTH CLASS GAFFSAILS.

| | | | |
|---|---|---|---|
| Two Stars, H. M. Jones | 16 06 | 2 41 08 | 2 01 18 |
| Aphrodite, A. G. Fay | 16.08 | 2 42 40 | 2 03 07 |
| Thelma, T. C. Holmes | 15.07 | 2 51 23 | 2 09 55 |
| Sachem, J. Gardner | 16.10 | 3 08 09 | 2 28 43 |
| Abbie D, G. Morton | 17.11 | Withheld. | |

## Quincy Y. C. Open Regatta, Aug. 13.

QUINCY, MASS.—BOSTON HARBOR.

ON August 13 the Quincy Y. C. sailed an invitation race, open only to yachts enrolled in clubs which have adopted the length and sail area rule. The wind was quite light at the start, but increased to a good breeze later. Alpha sailed a fine race with Vanessa, the former leading for a time, but being passed by Vanessa toward the finish. The times were:

FIRST CLASS.

| | Elapsed. | Corrected. |
|---|---|---|
| Beatrice, John Cavanaugh | 1 58 30 | Not meas. |
| White Fawn, A E Jones | 2 04 46 | 1 55 44 |

The judges were S. S. N. Small, W. B. Bird, Loring Sears, A. L. Hill, R. K. Rice.

VARUNA. DESIGNED BY G. L. WATSON.

## To Boston in a 25-Footer.

WE are indebted to Mr. Oswald Sanderson, owner of Pyxie, for the following log of her recent cruise from Larchmont to Boston, where she will race during the present week. Pyxie is the fourth yacht designed by Mr. Gardner for the 25ft. sailing length class, and is the shortest of the four, her dimensions being: L.w.l. 23ft. 8in., beam 7ft. 8in., draft 6ft. 7in., lead keel 5,000lbs. The 12 miles from Nausett

Light to Highland Light was made in 1h. 30m. or at a speed of 8 knots, very good speed for the rig, trysail and jib The performance of the yacht in rough water was most satisfactory. Mr. Sanderson was accompanied by a Boston pilot, Capt Kidder, and one hand:

*July 16.*

10:30 A. M.—Got under way from moorings in Larchmont Harbor; wind W.N.W., fresh breeze. Set stormtrysail and No. 1 jib. Head tide in Sound.

11:30 A. M.—Captain's Island abeam.

12:15 P. M.—Stamford Light abeam.

1:15 P. M.—Sheffield Island Light abeam. Wind freshening and sea rising, yacht jumping and throwing some spray, but taking no heavy water aboard.

2:05 P. M.—Penfield Reef abeam, blowing strong breeze and squally; yacht making good weather; fair tide.

3:52 P. M.—Stratford Point abeam.

5:30 P. M.—New Haven Light abeam. High sea running; very difficult to keep yacht on her course, owing to her being tossed around by sea just abaft beam. Wind hauled N. by W. and commencing to moderate.

6:22 P. M.—Brantford Beacon abeam. Took in trpsail, set whole mainsail; sea going down.

7:13 P. M.—Falkner's Island abeam.

8:00 P. M.—Wind freshening; stowed mainsail snug for night and set stormtrysail. Sea moderate.

10:23 P. M.—Little Gull Island abeam. Tide just turned against us, causing lumpy sea to make. Wind N.W. moderate.

11:57 P. M.—Race Rock abeam. Hauled up for Point Judith. Wind N.W., moderating fast. Smooth sea outside Race.

*July 17.*

12:30 A. M.—Watch Hill abeam. Wind very light. Set mainsail and No. 1 silk balloon jib.

4:50 A. M.—Point Judith abeam. Squared away for Vineyard Sound, spinaker to port. Wind very light S. E., swell rolling in.

7:35 A. M.—Sakonet Light abeam.

9:30 A. M.—Sow and Pigs Lightship. Wind light W. by S.; strong head tide. Lowered mainsail to secure gaff jaws, which showed signs of giving way. During time this work was being done, boarded lightship, got some pepper and salt and left them New York papers.

10 A. M.—Finished repairs to gaff and made sail. Steady W. to S. breeze and strong head tide. Set spinaker to port.

11:10 A. M.—Gay Head abeam. Took in spinaker and jibed ship. Wind hauling W.S.W.

1 P. M.—Nobska Light abeam. Took in light jib and set No. 1.

3 P. M.—On course for Cross Rip Light vessel, strong S.W. breeze, yacht traveling very fast, light following sea. Gaff jaws broke in pieces, so that repairs were quite impossible. Lowered and stowed mainsail and set storm trysail.

5 P. M.—Tide turned dead ahead for us, causing sea to rise and break badly. Wind strong, S.W. breeze. Yacht making good weather.

6 P. M.—During lull in wind a sea boarded us, filled cockpit and washed fore and aft, causing boom to jibe, but fortunately checked full force and did no damage.

7 P. M.—Pollock Rip abeam. Hauled up for Chatham. Wind strong S.W., blowing over port quarter. Yacht throwing much spray, but taking no heavy water aboard.

8:30 P. M.—Chatham Light abeam. Hauled up for Nausett Light. Wind abeam. Sea smoothing fast.

10:30 P. M.—Nausett Light abeam.

Midnight.—Highland Light abeam. This makes the speed from Nausett to Highland Light eight knots.

*July 18.*

3:05 A. M.—Race Point abeam. Light breeze and strong tide rip.

6 A. M.—Wind very light and yacht not carrying good helm to windward. Took in trysail and tried effect of hoisting mainsail and throwing peak over quarter lifts to hold sail up as well as possible. While it made a sack, still it had effect of taking away nearly all lee helm. Set small silk balloon. Stood close hauled on port tack. Wind N.W.

9 A. M.—Wind very light, hardly steerageway.

Noon.—Dead calm.

2 P. M.—Light W.S W. breeze, slipping along, four knots.

3 P. M.—Wind hauled W. by N., freshening, still close hauled. Port tack, Minot's Light on port bow, about five miles off.

5 P. M.—Passed Boston Light. Tacking up the Bay. Wind good W. sailing breeze.

6 P. M.—Arrived off Jeffries Yacht Club. Moored to spare mooring. Time of passage 54 hours.

## St. Lawrence Skiff Racing Association.

CLAYTON (N. Y.) REGATTA.

THE fourth race of the 1892 series for the championship pennant of the St. Lawrence Skiff Racing Association was sailed at Clayton, N. Y., on Aug 26, and was started in a northeasterly gale. Out of nine entries there were but five starters, viz: St. Lawrence, of Gananoque, Ont.; Sunrise, of Clayton, N Y.; Bertha, of Clayton, N. Y.; Shamrock, Gananoque, Ont.; Akahe, of Prescott, Ont.

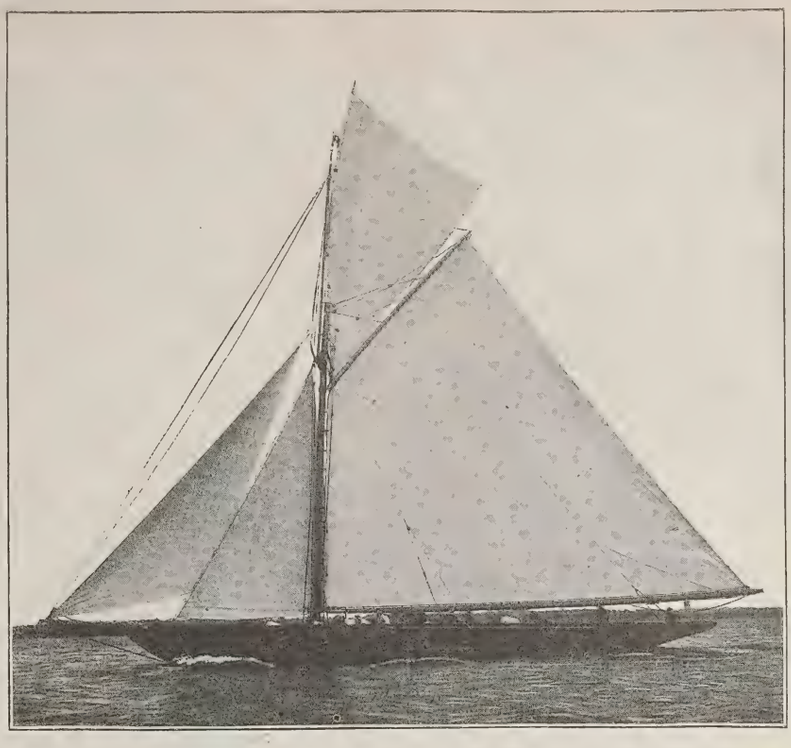
In the first round both St. Lawrence and Akahe carried away their mainmasts, leaving Shamrock with a long lead, which was gradually lessened until the last round, when Bertha passed her and won by 4m. 50s., Shamrock second and Sunrise third. Time over 15 miles triangular course, Bertha 2h. 35m., Shamrock 2h, 39m. 50s, Sunrise 2h. 43m. Clayton thus taking first and third prizes.

The second race was for the regular St. Lawrence River fishing skiffs, with spritsail, 12 sq. yds. limit, patent folding centerboards and no rudders. Clayton again demonstrated her superiority over the Canadians and won easily, America beating the Gananoque boat Ether by nearly 10m. over a six miles course.

## South Boston Y. C., Aug. 13.

CITY POINT—BOSTON HARBOR.

THE final championship races of the South Boston Y. C, were sailed on Aug 13, only the first and second classes competing, the third class having completed its racing in the previous regatta. The times were:



FIRST CLASS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Climax, W. P. Taylor | 26.00 | 2 03 03 | 1 35 11 |
| Quisett, M. F. Kelly | 25.08 | 2 04 24 | 1 36 11 |
| Violet, H. J. McKee | 33 08 | 2 00 59 | 1 59 59 |
| Stanley, W. L. Colson | 26.00 | 2 04 46 | 1 36 52 |

SECOND CLASS.

| | | | |
|---|---|---|---|
| Good Luck, John Farrell | 21.08 | 2 02 21 | 1 29 05 |
| Awilda, John Blight | 24.06 | 2 01 13 | 1 30 50 |

The judges were C. McKenna, John Crawford, Wm. Allerton, Com. Morrill and N. B. Stone.

QUEEN MAB. DESIGNED BY G. L. WATSON.

## Beverly Y. C., Aug. 20.

THE 190th race of the Beverly Y. C., the second Buzzard's Bay championship, was sailed Aug. 20 in a strong N.N.E. breeze, all the boats but Gymnote carrying more or less reefs. Course for first and second classes, 10¼ miles; special class, 8¼; fourth class, 5.

In first class Violet had it all her own way. In second Mist got off first and led round Pine's Buoy, but Gymnote passed her before reaching Bird Island, where Mist jibed inside her and got almost on even terms. In the reach to Scraggy Neck Gymnote spun out a minute's lead. Beating home Mist pointed closer and gained a trifle at first, but on last tack Gymnote held a better wind.

Race in third class was close and exciting, all the boats reaching Pine's together, where Tycoon ran into Cayuse and, it is claimed, bothered the others.

First round was made in following order: Tycoon, Sippican, Doris, Phenomenon, Cayuse, Daisy. At this point Doris managed to foul judges' boat and lost a good deal.

In fourth class Fin and Edith started, the latter drawing out. All the boats seem afraid to race Fin.

FIRST CLASS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Violet, Toby Club | 27.06 | 1 50 47 | 1 41 13 |
| Whisper, S. M. Weld | 28.00 | 1 56 55 | 1 47 50 |

SECOND CCASS

| | | | |
|---|---|---|---|
| Gymnote, W. E. C. Eustis | 27.04 | 1 47 02 | 1 37 18 |
| Mist, G. H. Lyman | 27.04 | 1 48 11 | 1 38 27 |
| Lestris, Joshua Crane, Jr. | 26.04 | 1 51 35 | 1 40 49 |
| Widgeon, Moses Williams, Jr. | 26.10 | 1 53 53 | 1 43 38 |

THIRD CLASS CATS.

| | | | |
|---|---|---|---|
| Tycoon, J. L. Stackpole, Jr. | 23.01 | 1 32 55 | 1 21 16 |
| Sippican, W. H. Davis | 23.01 | 1 34 46 | 1 23 07 |
| Doris, J. Parkinson | 23.02 | 1 35 56 | 1 24 22 |
| Phenomenon, D. L. Whittemore | 23.00 | 1 36 49 | 1 25 05 |
| Cayuse, F. W. Sargent | 22.09 | 1 37 03 | 1 25 04 |
| Daisy, Howard Stockton | 21.01 | Withdrew. | |

FOURTH CLASS.

| | | | |
|---|---|---|---|
| Fin, L. M. Stockton | 17.01 | 1 04 50 | 53 18 |
| Edith, G. G. Van Rensselaer | 19.04 | Withdrew. | |

Winners: Violet; Gymnote, Mist; Fin. Sippican protests Tycoon for fouling Cayuse—not yet decided.

The protest Koorali *vs* Magpie in race of Aug. 1 was decided in favor of Koorali, and Mr. Robbins at once offered to sail a race for it. This was sailed Aug. 11 at Nahant over a 10-mile triangular course, boats racing on the owners' length. Magpie led to windward, but Koorali outran her:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Koorali, R. C. Robbins | 23.00 | 2 37 03 | 2 42 50 |
| Magpie, H. G. Otis | 22.04 | 2 38 31 | 2 43 38 |

The protest of Freak *vs.* Alpha in race of July 29 was allowed, that of Alpha *vs.* Freak was not.

This gives first prize in special class and third class sloops to Freak, second prize in each to Catspaw, third prize in each to Exile.

## Hobb's Hole Y. C., Aug. 13.

THE first regatta of the Hobb's Hole Y. C. was held off Plymouth, Mass., on Aug. 13, being sailed in a light S. E. wind. The times were:

FIRST CLASS—CATS.

| | Elapsed. |
|---|---|
| Moondyne, A. J. Shaw | 1 46 46 |
| Sigrid, Watson & Lootz | 1 47 18 |
| Wave, W. B. Spooner | 1 50 33 |
| Wanderer, A. M. Watson | 1 50 38 |
| Leda, C. P. Blinn | 1 54 33 |
| Nemo, M. F. Carll | Withdrew. |
| Triture, M. T. Whitman | Withdrew. |

Moondyne won special prize for best elapsed time.

SECOND CLASS—SPRITSAILS.

| | |
|---|---|
| Fair Play, G. D. Bartlett | 1 46 58 |
| Mystery, P. S. Dimon | 1 50 41 |
| Puritan, C. D. Craig | 1 54 23 |
| Gypsy Girl, W. Steel | 1 58 44 |
| Orisis, J. Watson | 2 03 02 |
| Alice, Horace Drew | 2 04 26 |
| Pilgrim, C. Bartlett | 2 11 07 |
| Watermelon, W. W. Burgess | 2 04 03 |
| Vigilance, Charles Rogers | 2 08 31 |
| Jessie, L. Morton | 2 07 45 |
| Sarah, Frank Rogers | 2 11 22 |

THIRD CLASS—GAFF SAILS.

| | |
|---|---|
| Old Honesty, J. C. Daves | 1 53 32 |
| Mignon, Damon Brothers | 1 54 43 |
| Spray, C. F. Bradford | 1 58 15 |
| Abbie D., George Manter | 1 59 13 |

## Ruffle Bar Y. C., Aug 24.

JAMAICA BAY.

THE annual regatta of the Ruffle Bar Y. C. was sailed on Aug. 24 over a 10-mile course, in a strong southeast breeze and rough water, the times being:

| | Elapsed. | Corrected. |
|---|---|---|
| Editha | 2 05 15 | 2 03 15 |
| Aggie | 2 09 52 | 2 10 00 |
| Flyaway | 1 58 31 | 2 00 30 |
| Mazeppa | 1 59 30 | 2 01 00 |
| Erminie | 2 12 06 | 2 11 06 |
| Gypsy | 2 03 58 | 2 02 50 |
| The Jap | 2 01 16 | 2 00 40 |
| Grace | 2 14 30 | 2 10 30 |
| The Elm | 2 04 05 | 2 05 00 |

Flyaway wins first prize, Jap second and Mazeppa third. The judges were Messrs. Righter, Clarkson and Moore.

## Corinthian Y. C., Aug. 13.

MARBLEHEAD, MASS.—MASSACHUSETTS BAY.

THE second championship regatta of the Corinthian Y. C., was sailed on Aug. 13, in a light S. S. E. wind, the times being:

SPECIAL CLASS.

| | Handicap. | Elapsed. | Corrected. |
|---|---|---|---|
| Jane, C. W. Parker | 15 | 2 42 10 | 2 27 10 |
| Bob, E. Harding | 20 | 2 47 22 | 2 27 22 |
| Bath Bun, E. D. Jordan | 20 | 2 51 06 | 2 31 06 |
| Nancy, H. Taggard | 15 | 2 48 42 | 2 33 42 |
| Kraken, Percy Chase | | 2 34 57 | 2 34 57 |
| Thais, E. Richardson | 20 | 2 55 26 | 2 35 26 |
| Oimara, D. H. Holden | 15 | 2 50 28 | 2 35 28 |
| Edith, F. M. Wood | 5 | 2 42 26 | 2 37 26 |
| Shingle, E. W. Hodgkins | 30 | 3 08 45 | 2 38 45 |

SECOND CLASS.

| | | | |
|---|---|---|---|
| Susie, W. W. Keith | | 3 07 24 | |
| Ione, J. S. Poyen | | 3 12 22 | |

THIRD CLASS.

| | | | |
|---|---|---|---|
| Freak, J. B. Paine | | 2 46 50 | 2 46 50 |
| Reaper, H. B. Benson | | 2 57 37 | 2 57 04 |

FOURTH CLASS.

| | |
|---|---|
| Koorali, R. C. Robbins | No race. |

Koorali did not finish within the time limit.

## Hull Corinthian Y. C., Aug. 20.

HULL, MASS.—BOSTON HARBOR.

THE second championship race of the Hull Corinthian Y. C. was sailed on Aug. 20 in a strong N.E. breeze, the times being:

JIB AND MAINSAIL CLASS.

| | Start. | Finish. | Elapsed. |
|---|---|---|---|
| Undertaker, F. C. Walsh | 3 20 00 | 4 22 33 | 1 02 33 |
| Caprice, R. W. Bird | 3 20 00 | 4 37 59 | 1 17 59 |
| Coot, F. T. Murphy | 3 20 00 | 4 45 45 | 1 25 45 |

CAT RIGS—18 TO 21FT.

| | | | |
|---|---|---|---|
| Madge, W. H. Thayer | 3 25 00 | 4 47 49 | 1 22 49 |
| Majorie, M. C. Bouve | 3 25 00 | 4 53 16 | 1 28 16 |

15 TO 18FT.

| | | | |
|---|---|---|---|
| Mab, John Shaw | 3 30 00 | 4 54 00 | 1 24 00 |
| Primrose, H. M. Faxon | 3 30 00 | 4 56 55 | 1 26 55 |
| Don, W. H. Shaw | 3 30 00 | 5 02 27 | 1 32 27 |

OPEN CLASS—15FT. AND UNDER.

| | | | |
|---|---|---|---|
| Phyllis, W. A. Comey | 3 25 00 | 4 03 56 | 28 56 |

Judges: H. O. Stetson, H. B. Wakefield and F. H. Smith, Jr.

The corrected times are not known, the boats not having been measured.

## Hull Y. C., Aug. 12.

HULL, MASS.—BOSTON HARBOR.

THE Hull Y. C. sailed a race on Aug. 21 for the 21-footers, in two classes, and for the 18ft. cats, the wind being very light from the west. The times were:

FOURTH CLASS.

| | Elapsed. | Corrected. |
|---|---|---|
| Alpha, Brown, Dunne and Hunt | 1 21 10 | 0 57 27 |
| Catspaw, C. A. Prince | 1 22 39 | 1 01 15 |

SPECIAL CLASS.

| | | |
|---|---|---|
| Vanessa, A. Bigelow, Jr. | 1 23 50 | 1 00 48 |
| E. D., James McIntyre | 1 39 32 | 1 15 21 |

FIFTH CLASS.

| | | |
|---|---|---|
| Madge, W. H. Thayer | 1 28 25 | 1 04 21 |
| Magpie, H. G. Otis | 1 30 12 | 1 05 33 |
| Koorali, R. C. Robbins | 1 29 30 | 1 05 43 |
| Typhoon, C. H. Taylor | 1 29 40 | 1 06 14 |
| Opeechee, W. P. Barker | 1 31 20 | 1 06 49 |

Judges: James R. Chadwick, Franklin Adams, E K. Friend, E C. North and W. A. Carey.

## Winthrop Y. C., Aug. 27.

WINTHROP, MASS., BOSTON HARBOR.

The second championship race of the Winthrop Y. C. on Saturday, was sailed in a heavy northeast gale, the times being:

FIRST CLASS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Mattie, H. Hutchinson | 28.01 | 1 31 55 | |

SECOND CLASS.

| | | | |
|---|---|---|---|
| Tramp, Cann and Maxwell | 25.00 | 1 40 40 | |
| Erminie, S. H. Cann | | withdrawn. | |

THIRD CLASS.

| | | | |
|---|---|---|---|
| Magpie, C. P. Pike | 20.03 | 1 33 00 | 1 06 22 |
| Harrie, L. T. Harrington | 23.00 | 1 34 00 | 1 10 16 |

FOURTH CLASS.

| | | | |
|---|---|---|---|
| Florrie, G. C. Leighton | 18.05 | 0 47 00 | 0 24 31 |
| Scud, L. S. Meston | 17.00 | 0 48 00 | 0 24 50 |
| Mattie G., W. A. Garrett | 19.09 | 0 46 45 | 0 27 06 |

Judges, Com. J. Stearns Cushing, C. H. Studley and L. S. Meston.

## Lynn Y. C. Expert Cup, Aug. 13.

LYNN, MASS.—LYNN HARBOR.

THE fourth race for the expert cup was sailed by the Lynn Y. C. on Aug. 13 in a very light air, the times being:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Black Cloud, E. H. Taylor | 30.04 | 2 32 34½ | 2 03 42½ |
| Astrea, R. M. Benner | 26.00 | 2 25 20 | 2 03 52 |
| Irene, H. P. Armstead | 28 02 | 2 25 46 | 2 06 34 |

Black Cloud now holds two legs, Astrea and Irene one each.

## American Y. C., Aug. 13.

NEWBURYPORT, MASS.

THE third and final race of the American Y. C. was sailed off Newburyport on Aug. 13. The championship having been decided in the first class, only the second class boats started, the times being:

SECOND CLASS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Wizard, C. Cartwright | 14.06 | 1 35 55 | 1 11 44 |
| Scout, J. Besse | 18.11 | 2 02 55 | 1 38 04 |
| Pert, Knight Brothers | 16.06 | 2 19 53 | 1 56 57 |
| Sunday, L. Balch | 15.02 | 2 29 13 | 2 05 37 |

Wizard wins the second time, taking the first prize, with Pert second.

## Ocean Waves.

THE highest waves, as might fairly be expected, are met with in the lone Southern Ocean along the 40th parallel of south latitude, where they have a good fetch and but little land in the way. Scoresby, more used to narrower northern waters, marvelled at the high waves he saw, while a passenger on board the Royal Charter, between the Cape and Australia. The height of the waves is said to vary in the several oceans, and exact measurements tend to prove that exaggeration is not wanting in popular descriptions, whether poetry or prose. An encyclopædia of repute gives 20ft., as the maximum altitude of ocean wave summits, whereas Dumont d'Urville asserted that he had met with one which was 100ft. in height from trough to crest! In January, 1875, Captain Kiddle, of the steamship Celtic, when in 48° N., 40° W., found from reliable observations of several waves, that their mean height was no less than 70ft., with a velocity of twenty-five knots an hour. The late Admiral Fitzroy, of "Weather Book" fame, had previously measured waves of this stupendous height; and quite recently the Hon. Ralph Abercromby, a very careful observer, used to seawork, has measured waves nearly 50ft. high. It would appear that from 30 to 40ft. is about the average height of ocean waves in a storm; but, as we have pointed out, exceptional waves certainly do occur, and these may be quite 70ft. high, as recorded by such eminent authorities as Kiddle and Fitzroy.—*Nautical Magazine.*

## YACHT NEWS NOTES.

We are indebted to the Quincy Y. C. for a copy of the club book for 1892

Thyra, steam yacht, has been sold by F. R. Lawrence to John A. Aspinwall for $10,000.

WE are obliged to leave over this week a number of reports of yacht races, with other news matter.

The report is current that Mr. Royal Phelps Carroll has ordered a 90ft. schooner from the Herreschoffs for next year's racing.

Marblehead Harbor was treated to a very severe storm on Saturday, a number of small yachts being driven ashore, but without serious damage.

INTREPID, schr, has been sold by Lloyd Phœnix to Thos. L. Watt for $22,000. She was built in 1878 from a design by A. Cary Smith, and has long enjoyed the reputation of one of the finest cruising yachts in the American fleet.

A movement which has been on foot for some time for the consolidation of the Corinthian Mosquito Fleet and the Corinthian Navy, has lately been perfected, and the two organizations will in future be known as the Corinthian Mosquito Fleet. The terms proposed by the Corinthian Navy, the adoption of its burgee, and the carrying out of the scheme of port stations and of lectures during the winter, were accepted by the Mosquito Fleet, and several officers of the Navy were elected to the board of the C. M. F.

Labor Day will see some close competition in the American Model Y. C. for a cup offered by Park Superintendent De Wolff, and the winner will have to do some fast sailing to secure this valuable prize. The first, second and third class yachts will race for the cup in this manner: Each class will sail over the course for the best two out of three in heats, the winners in each class to meet in a final race in heats, best two out of three. This will evidently bring out the crack yachts of each class and will no doubt be the most interesting race of the season. The first class first heat will be called at 9:30 A. M. sharp.

# Rifle Range and Gallery.

## Now for Fun at Sea Girt.

AWAY back when the rifle-shooting season first opened and when the New Jersey State Rifle Association first began to discuss plans for its second annual fall meeting, Brig.-Gen. Bird W. Spencer expressed confidence in the belief that the meet would be a big success and that the matches, especially those for teams, would draw big lists of entries. The meet does not open until next Monday and even at this writing the expectations of the general are sure to be more than realized. A FOREST AND STREAM representative visited the magnificent range at Sea Girt on Tuesday and in a conversation with Gen. Spencer the latter stated that while he had all along felt assured of a successful meeting the outlook promised far more than he had anticipated.

The programme as originally issued had awakened great enthusiasm both in New Jersey and other National Guard circles; in fact, it has been the absorbing topic wherever military rifle shooting was cultivated. Even away up in Maine the Sea Girt shoot has engrossed the attention of all National Guardsmen and the Governor as well. The result is that that far-away State has held a series of competitive shoots and has chosen 15 of its representative marksmen to travel to Sea Girt, where they will shoot in the Interstate and Hilton trophy matches, as well as the regimental match of the N. J. S. R. A., both the First and Second regiments being represented.

Pennsylvania, too, which for some time has confined its team shooting to its own soil has caught the fever and will be represented by a team of fifteen fine marksmen, all members of the crack 13th regiment, which has the reputation of being the strongest shooting organization in the State, having qualified every one of its 900 members last year. The contingent will shoot as a State team in the Interstate and Hilton trophy matches, and six of its men will also shoot in the Regimental Team match.

From the District of Columbia comes the glad tidings that thirty-two of its militiamen will spend the week at Sea Girt, that twelve of this number will shoot for the Interstate and Hilton trophy matches, and that both the 1st and 2d regiments will enter teams for the Regimental Team match.

New York will put in a strong team for the Interstate and Hilton trophies and for the Regimental Team match the strong shooters of the 23d regiment will try their skill and nerve.

New Jersey will enter a good team for the interstate and Hilton trophies, while for the Regimental Team match each of its six regiments will enter

There are two matches restricted to teams of six men each from regiments of the New Jersey National Guard. The first of these is called the New Jersey National Guard match, open to teams of six men from any regiment in the State, ten shots each at 200 and 500 yds., and two skirmish runs of twenty shots each. The other is the Columbia Trophy match, open also to teams of six men each from any regiment in the State, the conditions providing that each man shall make four skirmish runs of twenty shots each. In each of these matches teams will be entered by the First, Second, Third, Fourth, Sixth and Seventh Regiments. Last year's contest was won by the Seventh Regiment team.

The Regimental Team match is open to teams of six men each from the regimental, battalion and separate company organizations of New York, Delaware, Pennsylvania, Maryland, Maine, Connecticut, District of Columbia and New Jersey. The conditions are ten shots at 200 and 500 yds. and two skirmish runs of twenty shots each. The teams in this match, so far as entered, are as follows: New York, Twenty-third Regiment; Maine, First and Second Regiments; Pennsylvania, Thirteenth Regiment; District of Columbia, First and Second Regiments; New Jersey, First, Second, Third, Fourth, Sixth and Seventh Regiments. This gives a grand total of twelve teams. In the above three matches the firing at known distances will be done on Wednesday, Sept. 7, and the skirmish runs will be made on Thursday, Sept. 8. There will be a preliminary practice at known distances on Monday and at the unknown distances on Tuesday.

The contestants in the Interstate match for the "Soldier of Marathon," and the Hilton Trophy match to be shot on Friday, September 9, will represent New York, Maine, Pennsylvania, District of Columbia and New Jersey.

The match for the Wimbledon cup, thirty shots at 1,000 yards, will be shot at 7 A. M. on Friday, September 9.

In addition to the above team contests there will be the following individual re-entry match, open from Monday to Saturday inclusive.

N. J. S. R. A. Members' match, five shots at 200 yds, for a gold medal.

Kuser match, seven shots at 500 yds. for a Maynard rifle with two barrels, and two cash prizes.

All-comers' Military match, five shots each at 200 and 500 yds. for thirteen cash prizes.

Perrine Memorial match, five shots each at 200 and 500 yds. for the Perrine medal. This is open only to the officers and enlisted men of the N. G. N. J.

The Kuser and All-comers' are open to all, as is the Schuetzen match, seven shots at 200 yds. on the Standard American target (11-inch black) for any rifle without restriction as to weight or trigger-pull. In this match military rifles will be allowed four points on each string of seven shots. Three scores will count in this as well as in the Kuser match. The Schuetzen match offers sixteen cash prizes.

The camp is all prepared for the reception of the teams, the most of whom will arrive on Sunday. The District of Columbia and Pennsylvania teams will reach Sea Girt on Saturday, while the Maine team is expected to-day. The State of New Jersey provides every man with a floored wall tent, cot, two blankets and camp stools, free of charge. The tents are pitched in groups of eight so that each team will be by itself. These tents are pitched convenient to the range as well as Greason's restaurant, where the teams will be furnished with meals. There is plenty of good soft water for washing purposes, while drinking water is procured from an artesian well 700ft. in depth. The ocean is only three minutes' walk from the camp, so that the visitors will have ample opportunities for surf bathing. Below is a list of the men who will represent Maine and the District of Columbia.

Maine team: Col. E. C. Farrington, inspector of rifle practice; Lieut. Col. W. S. Choate, 1st Reg.; Maj. L. S. Chilcott, 2d Reg.; E. J. Cram, Co. G, 1st Reg.; W. F. Cummings, Co. G, 1st Reg.; Corp. P. B. Guptill, Co. G, 2d Reg.; F. A. Guptill, Co. G, 2d Reg.; H. F. Willey, Co. G, 2d Reg.; Sergt. Geo. Emery, Co. A, 2d Reg.; Sergt. E. A. Robertson, Co. A, 2d Reg.; W. A. Paul, Co B, 2d Reg.; W. W Cookson, Co. B, 1st Reg.; Lieut. J. A. Fairbanks, Co. F, 1st Reg.; Corp. D. W. Lovejoy, Co. F, 1st Reg.; E. M. Smith, Co. B, 2d Reg.

District of Columbia team: Corp. Maurice Appleby, Co. B, 3d Batt.; Capt. James E. Bell, I. R. P., 2d Reg., Capt. W. L. Cash, I. R. P., 1st Reg; Col. Cecil Clay, 2d Reg; Corp. C. W. Dickey, Engineer Corps; Lieut. F. L. Graham, Engineer Corps; Lieut. Geo. H. Harris, I. R. P., 2d Batt.; Priv. C. L. Himebaugh, Co. C, 1st Batt.; Sergt. A. O. Hutterly, Engineer Corps; Com. Sergt. C. H. Laird, 2d Reg; Sergt. T. T. Page, Co. A, 6th Batt.; Priv. S. R. Rollins, Co. D, 3d Batt.; Col. Sergt. S. D. Rozramel, 2d Reg.; Sergt. Russell, Co. D, 3d Batt.; Corp. R. B. Smythe Engineer Corps; Lieut. James M. Stewart, I. R. P., 3d Batt.; Priv. S. B. Wetherald, Engineer Corps; Priv. G. B. Young, Engineer Corps. The team will also be accompanied by Maj. J. M. Pollar, inspector general of rifle practice: Lieut. T. S. King, 5th Batt., Priv. A. S. McClain, 6th Batt., and Priv. S. I. Scott, Engineer Corps. Over a dozen other District militiamen will also spend the week at Sea Girt and shoot in the individual contests.

C. H. TOWNSEND.

## Guelph Rifle Association.

GUELPH, Aug. 24.—The annual meet of the Guelph Rifle Association was held to-day. Weather was good, and with several Bisley men there a high grade of shooting was the rule. The leading scores stand:

First match, open to all members, 200yds., 7 shots, kneeling position, Snider rifle:

| | | | |
|---|---|---|---|
| E Skedden | 32 | Chas B Crowe | 29 |
| H Berry | 30 | Sergt Fairburn | 29 |
| John Ogg | 30 | Lieut Conboy | 28 |
| Major Orchard | 29 | R Rennie | 28 |
| W S Russell | 28 | J W Gilchrist | 28 |
| W G Wright | 28 | Adjt McDonald | 28 |

Second match, open to members who never won a prize at Toronto or Ottawa; 200yds., 7 shots, Snider rifle, any position:

| | | | |
|---|---|---|---|
| T Grice | 35 | H Bartram | 29 |
| F Holton | 31 | G A Sleeman | 29 |
| J A Coyne | 30 | J Smith | 29 |
| T Bertram | 28 | W Keffer | 28 |

Third match, open to all members; 500yds., 7 shots, any position, Snider rifle:

| | | | |
|---|---|---|---|
| George Sleeman | 33 | M D Mercer | 31 |
| Chas Armstrong | 32 | W Conoby | 31 |
| William Harp | 31 | C E Sleeman | 31 |
| J Crowe | 30 | W S Russell | 30 |

Fourth match, open to one or more teams of three member of any rifle association, military corps or organization of any kind. Scores made in first and third matches count. Berlin Rifle Association first, $10:

| | | | |
|---|---|---|---|
| N S Young | 55 | G Wright | 56 |
| W S Russell | 58—169 | | |

Victoria Rifle Club, Hamilton, second, $7:

| | | | |
|---|---|---|---|
| E Skedden | 51 | F A Bertram | 51 |
| H Bertram | 57—169 | | |

First Brigade Field Artillery, third, $5:

| | | | |
|---|---|---|---|
| John Ogg | 55 | Chas Crowe | 56 |
| John Crowe | 57—168 | | |

Toronto Rifle Association, fourth $3:

| | | | |
|---|---|---|---|
| Mercer | 58 | Rennie | 56 |
| J K Fairbairn | 53—167 | | |

Guelph Rifle Association, fifth, $3:

| | | | |
|---|---|---|---|
| Chas Armstrong | 55 | John Goldie | 52 |
| W Conboy | 59—166 | | |

Fifth match, open to all members, 600yds., 7 shots, any position, Snider rifle:

| | | | |
|---|---|---|---|
| J Limpert | 31 | C E Sleeman | 28 |
| J K Fairbairn | 26 | | |
| H Bertram | 31 | W S Mercer | 28 |
| John Crowe | 25 | | |
| G Armstrong | 30 | W Orchard | 28 |
| J Wagner | 25 | | |
| Chas Crowe | 29 | Wm Harp | 27 |
| J W Griffith | 24 | | |
| E Skedden | 29 | John Ogg | 27 |

## The Massachusetts Rifle Association.

BOSTON, Aug. 17.—The Massachusetts Rifle Association held its regular weekly shoot at its range to-day with very unfavorable weather conditions. The attendance was good. Messrs. Sydney, Paine, Brigham, Law and Bell won association medals. Below are the scores made to-day, distance 200yds., standard American target:

Bronze and Silver Military Medal Match.

Won on 10 scores of 40 or better:

| | | | |
|---|---|---|---|
| S C Sydney | 44 44 43 42 41 41 43 41 43 44 | | |
| S Paine | 40 42 42 40 42 40 42 43 45 40 | | |

Silver Eagle Pistol Badge.

Won on 10 scores of 88 or better:

| | | | |
|---|---|---|---|
| Louis Bell | 88 88 91 92 94 88 88 88 89 91 | | |

All-Comers' Off-Hand Rifle Match.

| | | | |
|---|---|---|---|
| S C Sydney | 82 | O Moore | 73 |
| B E Hunter | 63 | | |
| S O Merville | 74 | A S Hunt | 72 |
| A Ballard | 60 | | |
| M T Day | 73 | D Martin | 65 |

All-Comers' Rest Match.

| | | | |
|---|---|---|---|
| H L Willard | 103 | R J Snow | 102 |
| A Ballard | 89 | | |
| J French | 102 | S A Wise | 99 |
| S B Sampson | 82 | | |
| W P Thompson | 102 | O Moore | 93 |

Eagle Badge Match—50yds.

| | | | |
|---|---|---|---|
| L Bell | 95 | O Moore | 87 |
| J B Hobbs | 82 | | |
| M T Day | 92 | | |

All-Comers' Pistol Match—50yds.

| | | | |
|---|---|---|---|
| *J B Fellows | 88 | S O Sydney | 83 |
| A D Stevens | 78 | | |
| *L R Avay | 83 | D Martin | 80 |
| J B Hobbs | 77 | | |

* Revolver.

## Canadian League.

THE five matches of the Military Rifle League of Canada have been shot, but with a number of protests to be considered no announcement has been made of winners. The shooting was by teams at 200, 500 and 600yds., seven shots per man each distance. The ten leaders in the fourth and fifth shoots stood as follows:

| Fourth shoot: | | Fifth shoot: | |
|---|---|---|---|
| 95th Batt, No 2 Co | 886 | 96th Batt, 1st team | 736 |
| Amherst R A | 852 | 10 h Batt, 1st team | 785 |
| 13th Batt, 1st team | 826 | 59th Batt, 1st team | 782 |
| 82d Batt, 1st team | 799 | 63d Batt, 1st team | 770 |
| 2d Batt, 1st team | 796 | Halifax G A, 1st team | 769 |
| 95th Batt, No 2 Co | 913 | Prescott R A | 841 |
| 49th Batt, 2d team | 894 | 96th Batt, No 1 team | 832 |
| 82d Batt, No 1 team | 851 | 13th Batt, 2d team | 814 |
| 7th Batt, 1st team | 849 | Charlottetown Engineers | 813 |
| 45th Batt, 1st team | 849 | 13th Batt, 1st team | 811 |

## Garden City Rifle Team.

THE Garden City Rifle Team met for their weekly contest Tuesday evening, at Burley & Erickson's shooting gallery, 146 South Halstead street, Chicago. Conditions were: 25yds, 25 shots each, open sights, free off-hand position, Massachusetts paper target. Possible 300 points:

| | | | |
|---|---|---|---|
| H S Burley | 276 | G O Misga | 263 |
| John Polites | 257 | | |
| W J Gibbs | 275 | Mrs L Thornton | 261 |
| Roy Taylor | 255 | | |
| A McBean | 270 | J C Martin | 260 |
| W Frisbie | 255 | | |
| Al Sorensen | 268 | F Erickson | 259 |
| Ed Pierce | 254 | | |
| R McBean | 266 | H. | |

## The Canadian Military Gazette.

WITH the issue of Aug. 15 the *Canadian Militia Gazette* becomes the *Canadian Military Gazette*. The change will materially enlarge the scope of this excellent periodical. Militia matters will as before occupy the chief attention, but military matters of a professional sort will be given more space and the whole field of British and foreign topics carefully covered.

## New Jersey Rifle Shooting.

MILLER RIFLE CLUB, Hoboken, N. J., Wednesday, Aug. 24. The scores of to-night are below. The conditions were ten shots, off-hand, sporting target, possible 250:

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| George Schlicht | 25 | 28 | 25 | 25 | 25 | 24 | 24 | 24 | 24 | 22 | 243 |
| F Kloepping | 25 | 25 | 25 | 25 | 24 | 24 | 23 | 23 | 22 | 22 | 238 |
| A Mayns | 25 | 25 | 25 | 24 | 24 | 24 | 23 | 23 | 23 | 20 | 236 |
| J H Kruse | 25 | 25 | 25 | 24 | 24 | 24 | 23 | 23 | 23 | 20 | 235 |
| D Miller | 25 | 25 | 25 | 25 | 24 | 23 | 23 | 23 | 21 | 21 | 235 |
| E Fischer | 25 | 25 | 24 | 24 | 24 | 23 | 23 | 23 | 22 | 22 | 234 |
| L Sohl | 25 | 25 | 25 | 24 | 24 | 23 | 23 | 22 | 22 | 21 | 234 |
| L Vogel | 25 | 25 | 25 | 24 | 24 | 23 | 23 | 23 | 21 | 21 | 234 |
| F Lell | 25 | 25 | 24 | 24 | 24 | 24 | 23 | 23 | 21 | 20 | 233 |
| W Forkel | 25 | 25 | 24 | 24 | 23 | 23 | 23 | 22 | 22 | 21 | 232 |
| R Zoch | 25 | 25 | 25 | 24 | 24 | 23 | 22 | 22 | 21 | 21 | 232 |
| H Seltenreich | 25 | 25 | 24 | 24 | 23 | 23 | 23 | 22 | 22 | 20 | 230 |
| H B Murphy | 25 | 25 | 24 | 23 | 23 | 23 | 23 | 22 | 21 | 21 | 230 |
| T J Carracher | 25 | 25 | 24 | 24 | 23 | 23 | 23 | 20 | 20 | 19 | 227 |
| H Vanderheyden | 25 | 24 | 24 | 24 | 23 | 23 | 22 | 20 | 20 | 10 | 220 |
| F Kammel | 25 | 25 | 23 | 23 | 22 | 22 | 21 | 20 | 18 | 18 | 218 |
| F Dunsteadt | 25 | 24 | 23 | 21 | 21 | 20 | 20 | 19 | 18 | 18 | 210 |

Medal shooting will be inaugurated on the first Wednesday in October. This is a feature which keeps the members' interest in club affairs at a white heat during the winter season, and therefore serves to also keep up a big attendance at the weekly shoot and meetings.

The Lady Miller Rifle Club will soon resume its regular weekly shoots at headquarters, 423 Washington street, Hoboken.

The Palisade Rifle Club holds its regular weekly shoot at headquarters, 354 Palisade avenue, Jersey City Heights, every Thursday evening. Shooting for several handsome gold class medals helps to draw a large percentage of the members to the regular weekly practice.

The Hoboken Rifle Club, Captain "Bill" Dilger, will this week purchase a Ballard rifle.

George Roedel lost a fine .22 Ballard rifle last week, some one helping himself to it while George was absent. Mr. Roedel was a member of the late Standard Rifle Club, of Hoboken. No clue as to who the thieves were has been picked up.

## Rensselaerwyck.

ALBANY, N. Y., Aug. 22.—The following scores were made to-day at Rensselaerwyck Range, shooting at 600 yds. on Creedmoor second class carton target. Weather conditions were favorable, no wind, and a clear, bright light:

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Wm C Gomph | 6 | 6 | 5 | 4 | 3 | 4 | 6 | 4 | 5 | 5 | —48 |
| | 4 | 5 | 6 | 6 | 5 | 6 | 4 | 4 | 4 | 5 | —49 |
| | 6 | 6 | 4 | 6 | 5 | 2 | 4 | 4 | 4 | 5 | —46 |
| Chas P Frey | 6 | 5 | 5 | 5 | 5 | 5 | 6 | 6 | 6 | 5 | —54 |
| | 6 | 4 | 4 | 4 | 4 | 5 | 5 | 5 | 5 | 6 | —48 |
| | 5 | 5 | 5 | 6 | 5 | 0 | 6 | 4 | 3 | 4 | —43 |
| Oliver Akin | 6 | 5 | 5 | 4 | 4 | 6 | 3 | 5 | 4 | 2 | —44 |
| | 4 | 6 | 3 | 5 | 0 | 2 | 4 | 4 | 5 | 5 | —38 |
| | 5 | 2 | 5 | 4 | 4 | 3 | 4 | 2 | 4 | 4 | —37 |

*Aug. 23.*—The following scores were made to-day at Rensselaerwyck range, shooting at 600yds., Creedmoor second-class castor target. Weather conditions were favorable: L. Gieger 50, 56, 55, 53; Major Chas. H. Gaus 54; Wm. C. Gomph 52, 49, 49; Charles P. Frey 46, 47, 55; Ben Allen 30, 31, 42; O. Aiken 29, 28.

## A. Lischke Rifle Club.

JERSEY CITY, N. J.—At the shoot of Aug. 19 six members scored over 210 on the 25-ring target at 110ft., as follows:

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Lischke | 24 | 24 | 24 | 24 | 23 | 23 | 23 | 21 | 21 | 19 | —226 |
| Schulte | 24 | 24 | 24 | 23 | 22 | 21 | 20 | 19 | 18 | 17 | —212 |
| Scharli | 25 | 25 | 25 | 23 | 22 | 22 | 21 | 21 | 21 | 20 | —225 |
| Reicherz | 25 | 24 | 24 | 23 | 22 | 22 | 22 | 22 | 16 | 15 | —215 |
| Dyroff | 25 | 23 | 23 | 22 | 22 | 22 | 22 | 21 | 18 | 16 | —214 |
| Steidel | 25 | 24 | 23 | 23 | 23 | 22 | 22 | 22 | 22 | 21 | —227 |

OTTO SCHULTE.

# Trap Shooting.

All ties divided unless otherwise reported.

### FIXTURES.

If you want your shoot to be announced here send in notice like the following:

September.—Rocky Mountain Sportsmen's Association annual tournament, at Denver, Col.

September.—Conneaut (O.) Gun Club tournament.

Sept. 1-3.—Uniontown (Pa.) Gun Club tournament.

Sept. 1-5.—California State Sportsmen's Association tournament, Shell Mound, Oakland, Cal.

Sept. 5.—Frankfort (N. Y.) Game and Fish Protective Association, first annual tournament.

Sept. 5.—Muncie (Ind.) Gun Club amateur tournament.

Sept. 5.—Beaver Falls (Pa.) Sportsmen's Association tournament.

Sept. 5.—Central Gun Club tournament, at Gantzler's Grove, Elizabeth, N. J.

Sept. 5.—Roseville Gun Club tournament, Bloomfield avenue, Newark, N. J.

Sept. 5.—Hartford (Conn.) Gun Club tournament.

Sept. 5-7.—Pier Gun Club tournament, at Atlantic City, two days at targets, last day at mud hens.

Sept. 6-8.—Central Illinois Sportsmen's Association annual tournament, at Jacksonville, Ill.

Nov. 23-26.—Milwaukee (Wis.) tournament, targets and live birds.

May 23-25, 1893.—Knoxville Gun Club tournament, $1,000 added to purses. Also valuable merchandise prizes.

# DRIVERS AND TWISTERS.

We have just received a pleasant letter from Roger Van Gilder, secretary of the Knoxville (Tenn.) Gun Club, in which he states that at the regular meeting of the club on Aug. 13 it was decided to claim May 23, 24 and 25 for the 1893 tournament of that club. This will be the twelfth annual tournament run by this popular and enterprising organization, and judging from the present outlook it will far eclipse any previous effort, successful as they have been. The club will add $1,000 to its purses and will also offer several hundred dollars worth of merchandise prizes. They firmly intend to make this "the gentlemen's shoot" of 1893, where every shooter can win money if he shoots well. The conditions will be such as to induce all the cracks of America to enter with no fear that they will be handicapped to lose, the obnoxious "expert" rule being a dead and buried issue with this club. Mr Van Gilder states, and justly too, that the "expert" rule is an outrage upon the shooters, who can not possibly stand up with some of the semi-experts and amateurs of the present day.

* * *

Another conflict of dates, this time between the Interstate Manufacturers' and Dealers' Association and the Saratoga Gun Club. The former announces its Auburn shoot for Sept. 20, 21 and 22, while the Saratoga Gun Club claims Sept. 20, 21, 22 and 23. In all reason the

Saratoga club should have the right of way. Away back in the early spring the Interstate Association announced that its tournaments would be held during the second week of each month. For several weeks the list of fixtures in the various trap papers have stated that the Interstate tournament at Auburn would be held the second week in September. If held the second week the dates should be Sept. 13, 14 and 15. Taking it for granted that the schedule of the Interstate Association was O. K. the Saratoga Gun Club claimed the dates named above and now the Interstate at Auburn is slated so as to conflict. It would, be graceful for the Interstate Association to change its datee.

* * *

The events during the Pier Gun Club tournament at Atlantic City, N. J., will be as follows (each day's events being the same): No. 1, 10 singles, $1 entry, rapid firing; Nos. 2 and 3, 10 singles, $1 entry, expert rules; No. 4, 15 singles, $1.50 entry, gun below elbow until bird is thrown; No. 5, 20 singles, $2 entry, rapid firing; No. 6, for ladies only, at 10 singles, $1 entry; No 7, 15 singles, expert rules, both barrels, $1 50: No. 8, 5 pairs, $1 entry; No. 9, team of two race, rapid firing, 15 singles, $3 per team; No. 10. 10 singles, $1 entry, *Sporting Item* rules. Third day, Sept. 7, "Mud Hen Day. Everybody goes out mud hen shooting, and the man that gets the most birds will have the biggest bag of game." Shooting will begin at 9 A. M. on Sept. 5 and 6. The shoot will be held on Young & McShae's pier, 1,400 feet out in the Atlantic Ocean.

* * *

The chances are that as soon as the present series of team shoots of the New Jersey Trap Shooters' League are completed a new series will be started. And here we would suggest that during the next series the rules prohibit any one man from shooting on more than one team during the series. Where this is allowed it is an easy matter for clubs to dish up the "places" to suit themselves, as the majority of the better shots are members of from one to half a dozen clubs. Another thing that should be done is to arrange for one or more individual contests, say one at 25 singles, and one at 30 singles and 10 pairs. A percentage of the entrance money could be retained until the close of the series and then be awarded for the first to the fifth best aggregate scores in four-fifths of the events.

* * *

If some of the progressive managers of tournaments care to attract a big field of shooters, let them offer a purse of $100 for a contest between teams of ten men each from New Jersey, New York, District of Columbia, Delaware, Maryland and Connecticut. Charge the teams only for the targets they shoot at; let the winning team take the entire pot, and let it be expressly stipulated that each man must be a resident of the State he represents. The money spent by these team men in sweepstakes during a tournament would more than offset the $100 given by the management. What is the matter with running such a contest during the tournament of the Wilmington (Del.) Gun Club?

* * *

A large number of valuable merchandise prizes are offered in the programme of the Frankfort (N. Y.) Fish and Game Protective Association for its Labor Day tournament. The events in order will be at 10 targets, 10 targets, 15 targets, 10 targets, 15 targets, 5 live birds, 15 targets, 15 targets, 7 live birds, 20 targets, team race, 4-men team, 21 targets per man, and 10 targets. For the best average in events Nos. 2, 3, 4, 5, 7, 8 and 10 there will be awarded the Association badge, designed and manufactured by C. M. Rich, and valued at $25. The man making the poorest average will receive one shaving ticket, value 10 cents. Kingbird targets and traps will be used, and "Crutty" will be chief hustler.

* * *

Target shooting in the South is booming at a great rate and scarcely a week passes but one or more clubs come into existence. Harrisonburg, Va., has fallen into line, having formed a club with twenty enthusiastic members. The officers are: H. V. Strayer, President; E. W. Sullivan, Vice-President and Captain; S. B. Loeb, Secretary and Treasurer; G. Baugher, Keener of the traps. The other charter members are William Schultz, Winfield Liggett, Edward Purcell, Jr., John Sullivan, John Snyder, J. Grumline, W. A. Herron, George Hassman, Robert Eastham, P. J. Lamb, C. Staples Chas. Matthews.

Anent a world's trap tournament in Chicago in 1893, what an opportune time that would be to decide upon the champion live-pigeon shooter of the world. In our judgment the proper way to arrange such a contest would be to have a contest at 500 live pigeons per man—100 each day for 5 days—$250 entrance fee, bird money to be deducted from the pot and the entire balance to go to the winner as follows; he to receive $1,000 in cash and a trophy emblematic of the world's championship, said trophy to cost whatever amount may be left in the pot after paying for birds and paying winner his $1,000.

* * *

"Too many shoots on a programme; too much driving under the rapid-firing system, and too much partiality in the matter of handicapping," said a prominent shooter a few days ago, "are what cut down the attendance at the later day tournaments. Let the tournament managers make a rule not to have more than 150 shots fired by a competitor in a day; let them have about four events a day shot under the old style, 'five-targets-down-rule,' and let them impose their handicaps strictly on the shooting ability of a man and you will see a better attendance."

* * *

Lewiston, Maine, Aug. 24.—The Androscoggin Gun Club team No. 1 won the first prize in the State gun club tournament at Lewiston today by a score of 168. Bath Club team No. 1 won second, score 156; Richmond Club third, 151; Freeport Club fourth, 146; Androscoggin No. 2 and Bath No. 2 were tied, score 132. Five men in each team shot at 50 birds apiece. The referee was C. E. Thurlow, of Auburn; judges, George Gay, of Boston, and P. F. Cobb, of Richmond; scorer, R. A. Foster, of Auburn. The Androscoggin Club has held a State championship for four years.

* * *

The following is a list of the officers and members of the West Side Gun Club, of Topeka, Kan.: Pres., A. H. Piety; Vice-Pres., W. N. Hall; Sec'y and Treas., N. D. McGinley; J. W. Mowers, W. B. Hansen, R. M. Gage, C. C. Baker, W. A. L. Thompson, A. C. Davis, Robert Thompson, J. C. Clark, F. W. Willard, L. Biscoe, W. C. Knox, E. L. Dibert, A. B. Marsten, F. H. Foster, Charles Humole, T. W. Bean, W. E. Sterne, C. W. Newell, C. E. Wickham and C. P. Wiggin.

* * *

All to take place on Labor Day, Sept. 5: Maplewood Gun Club, Maplewood, N. J.; Frankfort (N. Y.) Game and Fish Protective Association; Muncie (Ind.) Gun Club, Beaver Falls (Pa.) Sportsmen's Association, West End Club, Newark, N. J.; Central Gun Club, Elizabeth, N. J; Pier Gun Club, Atlantic City, N. J.; California State Sportsmen's Association, Oakland, Cal.; Roseville Gun Club, Newark, N. J.

* * *

The fifteenth annual tournament of the St. Paul (Minn.) Gun Club, to be held on Sept. 6, 7 and 8, will undoubtedly draw a big crowd, as the prizes are very valuable and numerous. Among the general average prizes for those who shoot in all regular events during the three days are cash prizes of $40, $35, $30, $25, $20, $15 and $10, shooting suits, fishing rods, gun cases, and other merchandise prizes.

* * *

The Maplewood (N. J.) Gun Club announces an open to all tournament on Labor Day, beginning at 10 A. M. The programme comprises eight 10-target events, 50 and 75 cents entry; four 15-target events, $1 entry; one 25-target event, $2 entry, and an event for two men teams, 15 targets per man, $2 entry per team. The shooting will be under the Keystone system.

* * *

Frank Mason has resigned his position as Eastern correspondent for the *American Field* and has assumed the position of traveling man for *The Mayflower*, a horticultural monthly. Frank was immensely popular with the trap shooters throughout the country, and we know they will all unite with us in wishing him success in his new field.

* * *

It is nearly time to agitate a movement looking toward a world's championship tournament to be held in Chicago during 1893. An affair of this kind should be taken in hand by some well-known and reliable club in or near Chicago. Who will be first to take steps looking toward the booming of such an affair?

* * *

The following scores were made at the shoot of the Pastime Gun Club, of Detroit, Mich., at 20 bluerock targets each: T. Olfs 14, R. Schmidt 18, P. Gross 18, C. Kaiser 11, H. Scheberly 12, A. Tournier 18, W. Buesser 17, E. Schwenk 17, F. Herberz 18, H. Mandt 12, R. Schwenk 11, J. Repp 13.

* * *

At the shoot of the Passaic City (N. J.) Gun Club on Aug. 20, Kevitt broke 29 out of 30 bluerock targets, Wise 25, Jelleme 22, Vermorat 23, Abbott 22, Coeman 20, Shaw 20, McGee 21, Kelly 20, Hall 19, Gaston 19, Bowes 19, Lemoge 18, Campbell 17, Hemion 17, Van Winkle 15, Reid 12.

* * *

Father Time Harry Rainbow Thurman came to New York on Monday to see the boys off for New London. And what a long face Harry did make when he stated that business would not allow him to take in the Keystone shoot.

* * *

At the monthly club shoot of the Roseville Gun Club, of Newark, N. J., on Aug. 25, B. A. hist won the club medal on a score of 21 breaks out of 25 targets shot at. This club will hold an all-day's tournament on Sept. 5.

Will some of our readers kindly inform us where and at what price English sparrows may be procured? We receive many inquiries from parties who wish to procure a supply of these pugnacious pests to shoot from the trap.

* * *

Harry Thurman expects to see a big attendance at the tournament of the Pier Gun Club at Atlantic City on Sept. 5 and 6. On the 7th he will give the visitors a chance to shoot mud-hens on the flats.

* * *

Hildebrant Fitz Gerald, gun editor of the Philadelphia *Item*, is to be married on Sept 14 to Miss Frances C. Lyons. The ceremony will take place at 12 o'clock in St. Mark's Church, Philadelphia.

* * *

In another column will be found a communication from a subscriber who advocates the substitution of the rifle and glass ball in place of the shotgun and "saucer."

* * *

The East Orange Gun Club will hold an all-day's open tournament in conjunction with the ninth monthly team shoot of the New Jersey Trap-Shooter's League, on Sept. 14.

* * *

The New Jersey State Sportsmen's Association at its coming tournament should introduce an innovation by shooting part of its target events under the old rules.

* * *

The tournament of the Central Illinois Sportsmen's Association will be held at Jacksonville, Ill., Sept. 6 and 8, and a very attractive programme has been issued.

* * *

The Peekskill Gun Club will publish its programme in a fortnight. Its tournament takes place on Sept. 29 and 30 and Oct. 1, the third day being at live birds.

* * *

The Allentown (Pa ) and Newark (N. J.) Gun Clubs are said to have arranged for a team shoot at live birds on Oct. 20, the shoot to take place at Rittersville, Pa.

* * *

R. H. Breintnall, of the Essex and South Side Gun Clubs, of Newark, N. J., will start on Monday for a month's trip through the Yellowstone region.

* * *

Miss Jennie Smith and Richard Mahon shot a match at the Morristown Driving Park at 50 targets each, Miss Smith breaking 25 and Mahon 24.

* * *

The New Jersey State Sportsmen's Association for the Protection of Fish and Game will hold a tournament at Marion this fall.

* * *

It is "Happy Jack" Elliott and not Milliott who will try conclusions with oarsman James Pilkington in a live bird match this month.

* * *

The Central Gun Club, of Elizabeth, N. J., will hold a live bird shoot for a gold medal at Gantzler's Grove on Labor Day.

* * *

The Saratoga (N. Y.) Gun Club offers $2,000 in guaranteed purses for its grand tournament on Sept. 20 to 23 inclusive.

* * *

The new handbook of the Ideal Manufacturing Company, of New Haven, is a daisy. It is the production of J. H. Barlow.

* * *

The final shoot for the champion medal of the Red Oak (Ia.) Gun Club took place on Aug. 16, the winner being W. H. Evans.

* * *

Ohio shooters will have a chance to enjoy some sport at Tiffen next Wednesday, Thursday and Friday.

* * *

The Hartford (Conn.) Gun Club is out with a programme of a tournament to be held on Labor Day.

* * *

There will be a live-bird shoot on John Erb's "Old Stone House" grounds in Newark, N. J., on Labor Day.

* * *

Now that Harry Squires is home again some novelties in the way of advertisements may be looked for.

* * *

Chicago clubs, come to the front and center and give us details for a World's tournament in 1893.

* * *

The red "V. L. & A." shell seems to have the call among shooters out Chicago way.

* * *

The Bray's Bayou Gun Club, of Kentucky, will celebrate its anniversary on Sept. 4.

* * *

The Massachusetts Rifle Association is making a great feature of its trap department.

* * *

Treadway's "Comfort Recoil Pad" is making friends among the shooters.

* * *

The Newark Gun Club will hold its monthly shoot at John Erb's on Sept. 8.

* * *

Keep your eyes open for full information as to "How our daddies did it."

* * *

The Auburn Interstate will be a two days' shoot, Sept. 20-21.

* * *

Auburn will use kingbird targets during the Interstate shoot.

* * *

Joseph Erhard, of Atchison, Kan., was in town last week.

C. H. TOWNSEND.

## The Manor Club.

LIVINGSTON MANOR, Aug. 22.—The match at clay pigeons was shot off on the grounds of the Manor Club to-day and was won by Mr. Allan Nichols, of New York, with Mr. Avery Smith second and Ellis Livingston third. Mr. Smith is the smart Canadian shot, and would have won the match if he had possessed the amount of nerve that the New Yorker showed. Three hundred people witnessed the shooting and were well repaid, as some of the birds were only brought down by the most remarkable of fancy work. Mr. Nichols again and again forced applause from the onlookers by his clean, phenomenal shooting. Although making the best score ever made on these grounds and winning the match easily, Mr. Nichols does not receive the cup—it being a condition of the gift that it must be won by a resident of the county; it therefore goes to Mr. Livingston, the donor, Mr. Smith residing in Canada. The birds were flown from the new traps, and Colonel Harding had charge of that branch of the sport. The referee was Mr. Joel Palmer, while the score was kept by that well-known crack shot Mr. C. W. Otis, of Albany. Club rules prevailed, the score being as follows:

| | |
|---|---|
| Allan Nichols | 1111111111111111111011111—24 |
| Avery Smith | 1101111101111111111111101—22 |
| E Livingston | 1111111101101111111110010—20 |
| Arthur Smith | 1111011011111100111100111—19 |
| John Hamilton | 1110011101011011111111110—19 |
| Gordon Gordon | 1100011111111111111100011—19 |

The shoot-off for fourth honor was won by Mr. Gordon, who beat Mr. Hamilton a bird. Before the match Master W. Benton, nephew of the president of the club, fell from the little pier into 20ft. of water; the cries of his companions brought the tennis people from the courts on a run, and the boy was gallantly rescued by the subsequent winner of the pigeon match, Mr. Nichols, who sprang into the lake without hesitation and, none too soon, got the lad to the ladders. Mr. Nichols blushingly disclaimed the charge of heroism brought against him and stated that the only regret he felt was that he had an hour previously borrowed some tennis shoes from the president, which were ruined by their bath. Mr. Nichols drove back to his father's home carrying the conviction that the club people had used him too well, but they think they have seldom entertained so good a shot or so fine a fellow.

R. W. NEWTON, Sec'y.

## Fond du Lac.

FOND DU LAC, Wis., Aug. 27.—Enclosed please find scores of our regular shoot to-day at twenty-five bluerocks. High wind was blowing and scores are nothing extra.

| | | | |
|---|---|---|---|
| A H Lewis | 19 | A R Keating | 12 |
| W J Hamilton | 14 | S Burtis Amory | 13 |

A. H. Lewis, 2 pairs, 3. A. R. Keating, 5 pairs, 6.

A. R. K., Sec.

## Massachusetts Trap Work.

WALNUT HILL, Aug. 23.—The usual gathering of trap-shooting experts reported at the cosy club house of the Massachusetts Rifle Association to-day, and after freely discussing one of Range Master Kendall's "standard" lunches, proceeded to the main business of the occasion—the fourth contest in the gold coin match.

With best possible conditions and weather the scorers were called upon to record some excellent efforts in this event, and a glance at the summary of the day's shooting will show how stubbornly the contest was fought to its conclusion.

The association has offered a very valuable list of prizes in this series of competitions, and any place among the winners, from the top to bottom of the list, is well worth securing. But the real sportsman trap-shooter gives but little thought to the value of the trophies for which he competes, he they gold coin or valuable merchandise, for he finds his keenest enjoyment in the discomfiture of his rivals.

In to-day's competition the struggle for "the head of the column" resulted in favor of Mr. Black, who succeeded in killing 28 out of a possible 30 birds in the match, this being one point higher than has thus far been reached by any other competitor in the series of contests, and giving possession of the champion medal till the next shoot. The summary of the day's shooting is as follows:

Gold Coin Match.

Twenty birds Keystone system, and 10 birds from five traps, unknown angles: Black 28, Snow 27, Barrett 26, Hosmer 25, Climax 24, Stone 23. Smith 22, Nichols 20, Swift 19, Stagg 17.

The minor events were:

Five targets, unknown angles: Goldthwait, Hosmer and Snow, 5, first; Barrett and Black, 4, second; Stone, 3, third.

Five Keystone targets, Keystone system: Black, Barrett and Hosmar, 5, first; Swift, 4, second; Goldthwait and Snow, 3, third.

Ten Keystone targets, Keystone system: Black and Climax, 9, first; Hosmer, Snow, Stone and Maynard, 8, second; Smith, 7, third.

Five hub targets, unknown angles: Black, Barrett and Snow, 5, first; Climax, 4, second; Hosmer, 3, third.

Ten Keystone targets, Keystone system: Hosmer, 10, first; Black and Stone, 9, second; Smith, 8, third.

Three pair targets: Black and Climax, 6, first; Hosmer, 5, second; Smith, 4, third.

Ten Keystone targets, Keystone system: Black, 10, second; Barrett, Climax and Snow, 9, second; Nichols and Stone, 8, third.

Ten hub targets, Keystone system: Snow, 10, first; Barrett and Stone, 9, second; Smith, 8, third.

Ten Keystone targets, unknown angles: Black, 9, first; Barrett and Snow, 8, second; Smith, 7, third.

Five hub targets, unknown angles: Swift, Barrett and Hosmer, 5, first; Nichols, Smith and Stone, 4, second; Maynard and Black, 3, third.

Ten Keystone targets, Keystone system: Barrett, 10, first; Climax and Snow, 9, second; Hosmer, Maynard and Stone, 8, third; Goldthwait and Black, 7, fourth.

Nine hub targets, unknown angles: Barrett, 9, first; Black, Climax and Nichols, second, 8; Swift, 7, third; Hosmer and Paulson, 6, fourth.

Ten Keystone targets, Keystone system: Barrett, 10, first; Climax and Snow, 9, second; Black and Smith, 8, third; Stone, 7, fourth.

Five hub targets, unknown angles: Barrett and Stone, 5, first; Maynard, Smith and Snow, 4, second; Nichols, 3, third.

There were present at to-day's shoot a liberal number of visiting sportsmen from various clubs in New England, prominent among whom were Capt. Goldthwait and son and Mr. B. F. Smart, of Portland, Me.

The next shoot in the series, and the fifth competition in the gold coin match, will occur at this range Wednesday, Sept. 7.

## Team Shoot at Urbana.

URBANA, O., Aug. 21.—The following scores were made in the team shoot during the tournament of the Urbana Gun Club, nine men to a team, 25 targets per man.

Sherman Gun Club Team.

## Texas Targets.

AUSTIN, Tex., Aug. 27.—The second annual encampment shoot given by the Miller Bros. was a pronounced success, and has led to the organization of a very promising gun club. Inclosed find scores made yesterday afternoon. The wind being very high, prevented any fine scores being made.

First match, team shoot between sides chosen by Nalle and Durst, 25 single bluerocks:

| | | | |
|---|---|---|---|
| Petmeckey | 24 | Durst | 15 |
| Nalle | 15 | Jackson | 18 |
| Kappel | 16—55 | Basnett | 17—50 |

Second match, same as above:

| | | | |
|---|---|---|---|
| Nalle | 14 | Durst | 20 |
| Petmeckey | 23 | Jackson | 18 |
| Kappel | 13—50 | Basnett | 15—53 |

This closed shooting for the day. We will commence improving shooting grounds in a few days, and by Oct. 1 expect to have every thing in fine order.

JOHN DURST.

## Linden Grove Gun Club.

THE heavy rain of Friday, Aug. 26, was a great drawback on the attendance of the members of the Linden Grove Gun Club at Dexter Park, L. I. Only four shot for the club medal and best averages for the annual prize at the close of the season. J. Birmel and W. Cunningham tied with 6 each out of 7. The former withdrew in favor of Cunningham for the trophy. The score:

| | | | |
|---|---|---|---|
| J Birmel | 2211110—6 | F Wissenborn | 0120111—5 |
| C Horney | 0090001—1 | W Cunningham | 1012221—6 |

## Shooting at Jersey City.

THE monthly shoot of the Endeavor Gun Club was held at Jersey City on Aug. 20, each man shooting at 25 bluerock targets. The scores:

| | |
|---|---|
| Dr Fletcher | 0010010000101111100000010— 9 |
| Polhamus | 1100000000011100000000100— 6 |
| Fry | 1011100011111100101111100—16 |

| Creveling | 0101001010010010001000010— 8 |

## Big Tournament at Hobart.

HOBART, Ind.—Inclosed find scores made during the tournament of the Northern Indiana Shooting Association at this place. The attendance was not heavy, but everybody had their full share of sport and went away well pleased with the treatment they received:

No. 1, miss and out, 50 cents entrance: Lightner 4, Atkins 2, King 1, Grubbs 2, Bullock 0, Arnold 0, Ruble 0, Sayles 4, Feister 0.

No. 2, 10 singles, $1 entrance: Ruble 9, Grubbs 5, King 9, Sayles 8, Atkins 9, Lightner 8, Green 8, Bullock 4, Feister 7, Arnold 7, Coppins 6, Gruel 4, Ames 9, Reeder 8, Kingberg 4, Banks 5.

No. 3, 10 singles, $1.25 entrance: Ruble 9, Ames 7, Atkins 9, Reeder 9, Kingberg 5, King 8, Lightner 8, Gruel 9, Banks 4, Bullock 8, Sayles 9, Grubbs 8, Fiester 7, Green 8, Stratton 5.

No. 4, 15 singles, $2 entrance: Reeder 12, Kingberg 10, Atkins 14, King 9, Gruel 15, Ruble 14, Sayles 10, Lightner 10, Bullock 10, Ames 13, Banks 14, Feister 11.

No. 5, 10 singles, $1.25 entrance: Ruble 9, Reeder 8, Atkins 9, Sayles 5, Ames 9, Gruel 8, Green 6, Kingberg 5, King 7, Bullock 7, Banks 6, Strattan 1, Arnold 7, Lightner 9, Feister 9, Coppins 10, Grubbs 8.

No. 6, 3 pairs, $1 entrance: Ames 3, Gruel 4, Reeder 6, Ruble 3, Atkins 3, King 6, Banks 3, Lightner 4.

No. 7, 10 singles, $1 entrance: Stratton 4 Gruel 7, Ruble 10, Arnold 4, Banks 6, Reeder 9 Kingberg 8, Atkins 8, Lightner 10, Green 9, Feister 7, Sayles 6, Ames 9, Bullock 8, Grubbs 5, Coppins 9.

No. 8, 15 singles, $2 entrance: Lightner 14, Gruel 12, Reeder 14, Kingberg 10, Atkins 11, Banks 12, Feister 12, Bullock 12, Ruble 13, Sayles 13, Green 11, Ames 11.

No. 9, 10 singles, $1 entrance: Lightner 9, Reeder 8, Kingberg 5, Gruel 8, Atkins 9, Ruble 8, Ames 7, Banks 9, Bullock 9, Feister 9, Arnold 8, King 7, Coppins 10.

No. 10, 25 singles, entrance $3, $40 guaranteed: Sayles 15, Lightner 20, Gruel 21, Bullock 20, Green 16, King 19, Atkins 22, Reeder 22, Kingberg 15, Banks 19, Feister 18, Ames 22, Ruble 24, Coppins 20.

No. 11, 10 singles, $1 entrance: Gruel 8, Lightner 9, Green 7, Kingberg 7, Reeder 8, Atkings 8, Bullock 9, Feister 8, Ames 8, Strattan 3, Grubbs 8, Ruble 10, Coppins 9, Banks 6, Arnold 4, Stevens 3

No. 12, 10 singles, $1 entrance: Banks 8, Atkins 5, Gruel 7, Coppins 8, Bullock 8, King 8, Reeder 7, Stratten 1, Ford 3, Green 6, Smith 3, Ruble 9, Lightner 10, Kingberg 4, Feister 8, Ames 7.

No. 13, 15 singles, $1.50 entrance: Banks 13, Reeder 12, Gruel 13, King 13, Atkins 9, Ames 12, Kingberg 9, Lightner 10, Ruble 15, Bullock 10, Coppins 14, Feister 13, Green 11.

No. 14, 10 singles, $1 entrance: Ligtner 7, Gruel 10, Ruble 9, King 7, Bullock 9, Reeder 9, Feister 8, Ames 7, Banks 9, Strathers 2, Coppins 8, Green 7, Kingberg 5.

## Sparrow Shoot at Germantown.

GERMANTOWN, Pa., Aug. 24.—About twenty shooters from Philadelphia and vicinity met this afternoon on a farm near this place for a friendly shoot at the delusive English sparrow. Comprised in the party were Harry Rainbow Thurman of Germantown, John Rothaker of Norristown, Wm. Greenwood of Germantown, Wm. H. Wolstencroft of Frankford, R. E. Irwin and J. Frank Kleintz of Philadelphia. The day was delightful for sport and the party had an elegant lot of fun, the host doing all in his power to cater to their comfort and enjoyment.

About the time the supply of sparrows had been exhausted it began to rain, when Mr. Welch extended an invitation to the party to take refuge in his house, which was near by. The invitation was accepted and upon arrival at the house it was found that Mrs. Welch had prepared for them a splendid repast to which all did full justice. During the meal, as a matter of course, "match talk" was in order, and a number of contests resulted. Wm. Greenwood, the Germantown boniface, made a wager of $100 that he could furnish 100 live pigeons out of which lot Mr. Sivad could not kill 86 under Hurlingham rules. Sivad promptly covered Greenwood's stake and the match will take place on Wednesday, Sept. 7, at Fenwood (on the P. W. & R. R.), on the grounds of the Sportsmen's Club. Greenwood will put out a lot of birds that will puzzle the shooter.

Appended are the scores of to-day's sparrow contests:

First match, three-handed, 25 sparrows per man, 50yds. boundary, otherwise Hurlingham rules, 5 ground traps, 28yds. rise, loser to pay for birds:

| | |
|---|---|
| Sivad | 2111111111101111212121 10—23 |
| Wolstencroft | 0201111010212201121110102—18 |
| Armstrong | 2112111100220010211111—20 |

No. 2, 10 birds, $2 entry, birds extra, three moneys, otherwise same as above:

| | | | |
|---|---|---|---|
| Thurman | 1112110212— 9 | Wilson | 0112101121— 8 |
| Kleintz | 2112211111—10 | Sivad | 1021001222— 7 |
| Wolstencroft | 1211011111— 9 | Greenwood | 1002201120— 6 |
| Irwin | 2221211022— 9 | Armstrong | 1231111002— 8 |
| Leam | 0000001002— 2 | Haddon | 1121112211—10 |
| Stravens | 0210002011— 5 | | |

No. 3, same as previous one:

| | | | |
|---|---|---|---|
| Thurman | 2111211211—10 | Sivad | 0112111111— 8 |
| Wilson | 1101211111— 9 | Haddon | 1110111111— 9 |
| Stravens | 1101101211— 8 | Irwin | 0001010011— 4 |
| Kleintz | 1001211111— 8 | Greenwood | 1111201210— 8 |
| Rothaker | 1010111212— 8 | Leam | 0023111111— 8 |
| Maher | 0011100111— 6 | Armstrong | 1120111120— 8 |
| Wolstencroft | 2111111111—10 | | |

Rothaker and Sivad divided ties on third. H. T.

## The World's Fair Tournament.

CHICAGO, Ill., Aug. 24.—President R. B. Organ, of the Illinois State Sportsmen's Association, is beginning to cast about for plans worthy of the next tournament of the Association, which should be a shooting event of greater magnitude than we have ever known. This tournament will probably last from two to four weeks. It may take a week to finish the State shoot. There will be shooters here from all over America and from all over the world. To make the tournament what it should be, a world's event, and one typical of America, there will be needed more money than the State Association could possibly give. The city and State will be buried under the nation and the world here next June. The June tournament will belong to Illinois only in the most slender connection. It will be and should be an American event. President Organ reasons as follows:

"There are 5,000 trap-shooting clubs in the United States," said he, "and these represent 80,000 shooters. I believe it might be well to issue a call to all the trap shooters of America to assess themselves a small sum per capita, say $1, for the purpose of a World's Fair tournament fund. One-fourth of this fund should be set aside for the purposes of game protection. Chicago is the point to which most of the illegal game is shipped in the West, and if this fund were well spent in Chicago and the tributary States much good might be accomplished. We should have left enough to offer the best purses ever shot for in America, if not in the world."

In order that this may not be taken for a local makeshift, President Organ will seek to have the coming tournament officially recognized as part of the Fair, with the officers and executive committee of the association delegated as the officers of the Fair for the purpose of perfecting the event to a point worthy of its surroundings and of the time. Plans of this nature will soon be pushed. Plenty of work remains to be done between now and June. E. HOUGH.

## Rifle Trap-Shooting.

*Editor Forest and Stream:*

I have been considering of late what I think would be a most agreeable change in the matter of trap-shooting. It is this: the use of the rifle instead of the shotgun. The objections to the use of the shotgun are these: the noise, recoil, expense, and I may add the unfairness of the contest. It is not the most accurate aim that always breaks a clay-pigeon, the really best marksmen often making a score below an indifferent one. I think if one makes the experiment he will find that at 40yds. the shot large enough to break invariably a clay-pigeon will generally be so distributed as to allow spaces in which the "pigeon" will not be touched. With this fact, the breaking is due more or less to good fortune. Again, some guns of the contestants are better than others, shooting stronger and distributing the shot more uniformly.

In shooting with the rifle I would go straight back to the old glass ball. Fashion goes a great way. I would rather see a black glass ball shivered to atoms, gleaming in the sunlight, than see a dozen clay-pigeons rent asunder. But tastes differ. However, the fashion is "pigeons," and it will be until the public see as I do, which may or may not be.

In the use of the rifle I would recommend one of accuracy, and for .32 short and long cartridge, length of barrel and stock just the same as the shotgun. I would suggest that the glass balls be larger than those used for shot in most cases, and thrown nearly straight upward, especially for ordinary marksmen. I feel sure that the sport would be more interesting and satisfactory than shotgun contests.

I wish to add this: That I do not believe that the clay-pigeon as shot at from the trap improves any one who is already a fair shot in the field. I have noticed that nearly all shooters pull trigger as the "pigeon" begins to go downward. He seldom aims at game in that course of flight, and the question is, does he not establish a habit detrimental to his shooting in the field? In the rifle shooting he can acquire the habit of "taking" the ball just as it attains its extreme height.

I'd like to hear from other shooters, for I really think it will come to this—rifle shooting at the trap. N. D. ELTING.

## New Utrecht Rod and Gun Club.

THE attendance of members of the New Utrecht Rod and Gun Club at Woodlawn Park, L. I., on Saturday, Aug. 27, was rather small on account of the close proximity to Sheepshead Bay race trace. R. R. Street and W. F. Sykes tied for the gold and silver medals in the club shoot at 20 targets each. The latter won on the shoot-off. R. R. Street won the silver medal as well as the live birds. The score: Club shoot:

| | | Handicap. | |
|---|---|---|---|
| C A Sykes | 00110100100010101111—10 | 0 | 10 |
| P Adams | 10110000101110010111—11 | 2 | 13 |

## Close of the Alameda Season.

SAN FRANCISCO, Cal., Aug. 14.—The Alameda County Sportsmen's Club held its final shoot of the season yesterday at Oakland track.

Besides the regular members who took part in the shoot were some invited guests, who did even better than the club members. The birds provided by Trapper Rice were good and strong on the wing and in consequence the shooting was not as good as usual.

There were four handsome special prizes for the sportsmen who grassed the most birds. The first, a beautiful fan, was won by Mr. Osborn; Bolander, Colwell and Haskell took the remaining prizes. The cup, a handsome silver goblet, lined with gold, and with an excellent cut of the club's shooting quarters on the Sonoma marshes engraved on one side and the initials "A. S. C." on the other, will be handed in the near future to the member who made the best aggregate score of the season.

Among the members are several excellent field shots, who are now patiently awaiting the day when it will be lawful to bag wild fowls. The result of yesterday's shoot is as follows:

Alameda Sportsman's Club, final shoot of the season, Oakland track, Aug. 12:

| | | | |
|---|---|---|---|
| Haskell | 021111211210—10 | Mathew | 0712111220?— 9 |
| Morrison | 100002122211— 8 | Colwell | 2212111110—10 |

## McDowall's Toronto Tournament.

TORONTO, Aug. 13.—The two days' tournament given by Mr. McDowall on Stark's grounds closed to-night. The weather was fine, there were plenty of shooters and the scores ran high. There was a team of 12 men from the Oshawa Gun Club, and the team match was a most interesting one between the visitors and the Toronto Gun Club. The scores in this stood:

| Oshawa Gun Club Team. | | Toronto Gun Club Team. | |
|---|---|---|---|
| Cassels | 0011101?01111001000—10 | George | 1110110110111111001—14 |
| Mackie | 1110111111110101110—15 | Bugg | 1100101101010010010l—10 |
| Vanzant | 1011101000000110111—11 | Simpson | 1011111011111101111—17 |
| Sykes | 1111111100111111111—18 | McDowall | 1101111110111011111—17 |
| Mothersill | 1111011111111101110111—17 | Henry | 0111111111111110111—18 |
| T Hast'gs | 1111111111010111101—17 | Blea | 1111111010110111111—18 |
| Campbell | 1101111101111101011—16 | Emond | 1011101111110111111—17 |
| Miller | 0111011111010000101l—13 | Cox | 1111111111111111111—20 |
| J Hastings | 1111111010111100l—15 | Poulton | 1011011001111111101—14 |
| Sanlter | 1011111011111001111—16 | Pearsall | 0111111111111101111—18 |
| Everson | 1110100001010011101—10 | Sloper | 1110110011111100101—15 |
| Finney | 0111101111011111001l—15 | Bayles | 1101010110001001101l—11 |
| | 173 | | 188 |

Another interesting event was the 50-bird match, in which the scores ran: Charles 48, Emond 46, Skip 45, McDowall 42, Henry 46, Campbell 48.

Twenty matches in all were decided during the meeting and prompt distribution made of the liberal prizes.

## Shooting at Claremont.

THE diamond-badge shoot of the New Jersey Shooting Club took place at Claremont, on August 27, the conditions being twenty-five targets per man. Gus. Greiff, Von Lengerke & Detmold's shooting representative, tied with F. Compson on 23 each, and a stubborn contest followed, the tie being shot off at ten targets each. In the first round both men were evidently rattled, as they broke only six each. On the second round they both broke straight. On the third and final round the "boy" nerved himself up and broke straight while Compson lost three, this giving Greiff the medal for the third time. The scores:

| | |
|---|---|
| Perkins | 1111110111101101111110001—19 |
| Gus Greiff | 1111011111111111111110111—23 |
| J H Richmond | 1111111111110001111111O—21 |
| A Bigony | 1011111011111011111110001—20 |
| A Pope | 1101001110011001100100000—11 |
| F Compson | 0111111111011111111111111—23 |
| W Smith | 0110101110011001111010l0—15 |
| W Purdy | 1111100111111111111101110—20 |
| L Vredenburgh | 1001110010.0111101101111—18 |

The tie shoot:

| | | | |
|---|---|---|---|
| Greiff | 1001011101—6 | 1111111111—10 | 1111111111—10 |
| Comp-on | 1010111001—6 | 1111111111—10 | 0111111110— 7 |

The following sweeps followed. Nos. 1, 2 and 5 at known angles: No. 3 at unknown angles; No. 4, expert rules, all at ten targets:

| | 1 | 2 | 3 | 4 | 5 | | 1 | 2 | 3 | 4 | 5 |
|---|---|---|---|---|---|---|---|---|---|---|---|
| F Compson | 8 | 9 | 8 | 6 | .. | Gus Greiff | 9 | 10 | 8 | 8 | |
| Perkins | 3 | 5 | 5 | 5 | 8 | Craft | 7 | 9 | 8 | 7 | 6 |
| J H Richmond | 10 | 10 | 8 | 8 | 6 | A Pope | .. | .. | 5 | .. | .. |
| W Smith | 8 | 7 | 4 | .. | .. | | | | | | |

## Shreveport Rod and Gun Club.

SHREVEPORT, La., Aug. 23.—The second annual shoot of the Shreveport Rod and Gun Club opened to-day at the fair grounds. Among the visitors were L. J. Barthelemy and H. B. Febiger, of New Orlean; D. O. Bowles and T. W. Hemingway, of Jackson, Miss., and A. H. Gopper, of Marshall, Tex. The first event, 7 bluerocks, was won by Barthelemy, of New Orleans; second divided between J. Elstner, M. C. Smith, M. C. Elstner and Wells; third, Enders and Furman.

Second event, 10 single bluerocks, won by Barthelemy; second, Wells, Henry and Bowles; third, Hemingway.

Third event, 15 single bluerocks, handicap: First, Enders; second, Jenkins, third, Furman; fourth, J. Elstner.

Fourth event, 5 double bluerocks: First, Jenkins; second, J. Elstner; third, Wells.

Fifth event, 20 single bluerocks: First, Jenkins; second, Barthelemy and Hemingway; third, M. C. Elstner; fourth, Bowles.

Sixth event, 15 single bluerocks: First, Barthelemy, Hemingway, M. C. Elstner, Furman and Enders; second, Smith; third, Henry.

Rain somewhat interfered with the shooting.

## Harrisburg Protests the Keystones.

HARRISBURG, Aug. 26.—*Editor Forest and Stream:* During the Pennsylvania State Sportsmen's Association shoot at Reading, Pa., a protest was entered against the Keystone Shooting League's team of six men competing for the team championship of the State, the moment they stepped to the score. The protestant claiming that two of the members of said team having already shot for the trophy in the team of the Philadelphia Shooting Association, and by allowing these men to shoot again it would clearly violate all established precedent, and was decidedly antagonistic to the sentiment conveyed by the possessors of the trophy. While there was no clause printed in the programme governing this particular point, it was deemed by the donators of the trophy to be as needless to insert such a clause as it would have been for the givers of the live bird and inanimate target trophies to state that no man shall compete twice in the same day for their respective trophies.

For the Keystone Shooting League to claim the trophy on a technicality gives the protestants a right to use the same method in defending their position. By reference to article 8, page 24, of the by-laws, it will be seen that no person shall be permitted to contest for prizes who is not eligible according to the constitution, and it shall be the duty of the clubs that are now members of the association or may hereafter become a member, to forward to the secretary a complete roster of the *bona fide* membership of their club, and immediately upon the election of any new member or members, their names shall be forwarded to the secretary and it shall be his duty to enter the same upon the State roster, and any name that does not appear upon the State roster and in the list of membership of his club, shall not be eligible to contest for any prize or prizes offered by this association, etc., and that none might be ignorant of this law the secretary on Feb. 23 issued and mailed to the secretary of every organization then a member of the State Association the following:

"DEAR SIR—In compliance with the by-laws adopted at Reading, Pa., Jan. 20, 1892, I write to inform you that it will be necessary for you to forward to me at your earliest convenience, a list of your officers and bona-fide members as follows: P. O. address, name of club, date of organization, name of president, vice-president, secretary, treasurer, captain and a full and complete list of your bona-fide members. (Signed), J. H. WORDEN Sec'y, P. S. S. A."

In response to this communication I received from J. C. Shallcross, secretary of the Keystone Shooting League on March 22, what he purported to be a full and complete list as per request, and the same was registered upon the State's roster, and as the names of Messrs. David and Treadway do not appear on the roster of said Keystone Shooting League, and as late as July 10, I received a communication from James Wolstencroft, captain of the North End Gun Club, officially apprising me of the fact that the North End Gun Club had on June 29 changed its name to that of the Keystone Shooting League with no change of officers or members, verifying the roster to July 10, 1892, which would disqualify both men as by reference to the constitution, Article 4, Sec. 2, page 16, reads as follows: "No shooter will be considered eligible to compete for any prize offered by this association except he be a member of this association, a bona-fide member of a club or association that is also a member of this association, and he shall have been a member of said club or association and a resident of the State, one month prior to the time fixed for the State shoot," which in this case was Aug. 9, the team is disqualified beyond any question.

It was agreed by the parties interested, namely, the Keystone Shooting League, of Frankford, Philadelphia, and the Harrisburg Shooting Association, of Harrisburg, to state the facts to the trap editors of the *American Field*, FOREST AND STREAM and *Shooting and Fishing*, and abide by their majority decision. In conclusion I wish to state that the protest is entered only in the very best of feeling and to obtain a decision from those who undoubtedly mould the opinion of hundreds of shooters, certain that such decision will be based on what is best for our favorite sport, and one that shall establish a precedent governing all future contests of like nature, not only for our own State but the shooters of the United States, and a decision coming from such a source cannot help but be decisive of what constitutes a *bona fide* club team. Yours fraternally, JAMES H. WORDEN, Sec'y Penn. S. S. Assn.

[In regard to the eligibility of a man to shoot we decline to give a decision, as that is a matter which should certainly be decided by the Pennsylvania State Association. In reference, however, to the matter of one man shooting on more than one team we must adhere to the position we took in our article on the Reading shoot, that if the rules do not prohibit a man from shooting on more than one team, he cannot be prevented from shooting on any number of teams, "precedent" or "sentiment conveyed," have absolutely nothing to do with the rules governing a match. The printed rules, and these alone, should obtain in all cases. We therefore decide that, so far as this question is concerned, the Keystone Shooting League is entitled to the trophy. We do not, however, wish to be placed upon record as approving of allowing one man to shoot on more than one team. To this practice we have always been opposed. In order to prevent this, however, it should be distinctly stated in the printed rules governing a contest that "no man shall shoot on more than one team." Unless the rules so state a shooter may suit his own sweet will as to the teams upon which he shoots.—TRAP EDITOR.]

## Castalian Springs Tournament.

DURANT, Miss., Aug. 24.—Lowering skies and murmurings of thunder ushered in the big shooting tournament at Castalian Springs to-day. The weather was decidedly unpropitious. Notwithstanding dark clouds and occasional heavy showers of rain, opening day was a success, and from present indication the tournament will be a brilliant one. The prize list is big, the competitors numerous, and the attendance of visitors very large. Scores of people are present from all parts of the State, half a dozen other States having also sent their champions.

The tournament is being held on the grounds of the celebrated Castalia Springs, by special invitation of Col. D. A. Outlaw. The site chosen is a grand one. It is a couple of hundred yards from the hotel and cottages of the famous resort. On three sides hills covered with park-like groves of trees rise, sheltering the shooters from heavy winds.

The little valley is covered with close-cut sward. A barbed wire fence incloses the place of competition. Out toward the front are the traps. Directly behind the shooting line is the grand stand and the stand reserved for competitors. On the left are judges, scorers and secretaries' tents.

Throughout the grounds were thronged with spectators. Ladies were numerous, although the weather prohibited any display of dazzling toilets.

Promptly at 9 o'clock this morning the opening gun was fired by Mr. Sam Shackleford, the general manager of the tournament. From that time until noon shooting continued, interrupted only by occasional showers. At 2 o'clock the shooting recommenced, and the weather being finer was uninterrupted until 7 P. M. Owing to darkness the seventh match was not concluded.

On the whole the shooting was excellent. The light in the morning was dull. In the afternoon it became lighter, but never too bright. Toward the close of the day there was an ideal shooting light. Seven possibles were made. Of these five were in the live pigeon match. A shoot-off was necessary, and Blount succeeded in coming off victor, killing four straight.

## Atlantic Rod and Gun Club.

THE regular monthly shoot of the Atlantic Rod and Gun Club was in spite of the rain a fair one, the birds were good flyers when started at the first part of the shoot, but as soon as the sun came out they got up very fast and the misses became more frequent. Each member shot at ten birds, club handicap, under modified Hurlingham rules. For the Newton diamond badge and first prize, a good race took place between C. E. Morris, R. Dwyer and G. Mohrman. C. E. Morris won. Another good race took place between five of the members for the second prize, but on account of the birds giving out the money was divided the same with the other ties. The score:

| | | | |
|---|---|---|---|
| D Monsees | 1122110122— 9 | P Hageman | 1101112221— 9 |
| J Voorhees | 0112121121— 9 | C Furgueson, Jr. | 1111111c12— 9 |

Lauterbach won class A medal, W. Northwood won class B medal, Dr. Hodson won class C medal. H. C. BROWN, Sec'y.

### The Hackettstown Tournament.

THE third annual tournament of the Hackettstown (N. J.) Gun Club opened at 9 o'clock on the morning of Aug. 23 under very favorable weather conditions and with a fairly good attendance. The grounds of this club are situated about a mile from the D. L. & W. depot and command a number of fine views. The shooting was done from 5 traps under the rapid-firing system, bluerock targets being used, these being thrown from expert traps. James L. Smith had made careful arrangements for the shoot and everything went along smoothly. A fly the whole length of the score protected the shooters from the sun.

Among those present on the opening day were Chas. M. Hedden, R. H. Breintnall and Ferd. Van Dyke, of Newark; W. R. Drake, of Maplewood; M. H. Ruppell, of Milford; E. D. Miller, of Springfield; J. Warren Smith, of Orange; John Riggott, of Rockaway, and Gus Greiff, of New York. The events in order were as follows: No. 1, 10 bluerocks, $1 entry; No. 2, 15 bluerocks, $1 50; No. 3, 10 bluerocks, $1; No. 4, 20 bluerocks, $1 50; No. 5, 15 bluerocks, $1; No. 6, 20 bluerocks, open to teams of two men from any club, $2; No. 7, 10 bluerocks, $1; No. 8, 15 bluerocks, $1.50.

The scores are appended:

| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | Total. |
|---|---|---|---|---|---|---|---|---|---|
| Van Dyke | 9 | 14 | 10 | 20 | 10 | 18 | 10 | 14 | 105 |

Extra No. 1, 10 singles, $1 entry: Van Dyke 10, Baxter 10, Drake 10, W. Smith 10, J. Smith 9, Miller 9, Riggott 8, Decker 8, Morford 8, Hedden 7, Brickner 7, M. H. R. 6, Malone 4.

Extra No. 2, same: Van Dyke 10, Greiff 9, W. Smith 8, Drake 7, Hedden 7, Breintnall 7.

Extra No. 3, same: Van Dyke 10, Drake 10, Miller 10, M. H. R. 9, Hedden 9, Greiff 9, Breintnall 7, Baxter 7, Riggott 7, W. Smith 6.

Extra No. 4, 15 singles, $1 50 entry: Miller 15, Van Dyke 15, Brickner 15, Morford 14, Greiff 14, Breintnall 14, W. Smith 14, J. Smith 13, Baxter 13, M. H. R. 13, Drake 12, Decker 11.

Extra No. 5, same as No. 4: Hedden 15, Miller 15, W. Smith 15, Greiff 15, Breintnall 15, Decker 14, Brickner 13, W. Smith 13, Strader 12, Baxter 11, M. H. R. 11.

*The Second Day,*

as usual at tournaments of recent dates, drew out a very slim number of shooters, the only new comers being George S. Atwater, of New York; Eddy Collins, of West Hoboken, and Dr. Utter, of Chatham. Some splendid work was done during the day, E. D. Miller being in particularly fine fettle and breaking 219 out of 225 targets, some of the events being under expert rules. The events of the day were in order as follows: No. 1, 10 bluerocks, $1 entry; No. 2, 10 bluerocks, $1 entry; No. 3, 15 bluerocks, $1 50 entry; No. 4, 20 bluerocks, $1.50 entry; No. 5, 10 bluerocks, $1 entry; No. 6, 20 bluerocks, $2 entry, open to teams of two from any club; No. 7, 15 bluerocks, $1.50 entry; No. 8, 10 bluerocks, $1 entry. The results:

| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | Total. |
|---|---|---|---|---|---|---|---|---|---|
| Atwater | 10 | 9 | 12 | 17 | 10 | 19 | 14 | 9 | 100 |
| Breintnall | 10 | 10 | 12 | 18 | 9 | 19 | 15 | 10 | 103 |
| Smith | 10 | 10 | 14 | 20 | 8 | 20 | 14 | 7 | 103 |
| Greiff | 7 | 9 | 13 | 18 | 7 | 20 | 12 | 9 | 95 |
| Utter | 8 | 8 | .. | .. | 10 | .. | .. | .. | .. |
| Miller | 9 | 10 | 15 | 18 | 9 | 20 | 15 | 10 | 106 |

### Guelph Against Galt.

GUELPH, Aug. 25.—This afternoon a friendly match was shot here at bluerocks between the Galt Shooting and Fishing Association and the Guelph Trap and Game Club. A large number of people witnessed the shooting. Although the Galt men could count such men as Wayper, Thompson, Gress and Krupp, they came out 4 ahead. Score:

| Guelph. | | Galt. | |

## Great Sport in North Carolina.

GREENSBORO, N. C., Aug. 27.—The trap shooters of the South turned out in force on Aug. 23 and 24 to encourage the jolly members of the Greensboro Gun Club, who put forth their maiden effort at running an open tournament. The town of Greensboro has innumerable attractions for visitors, including electric railroads, Belgian block pavements, a steel plant costing $110,000, splendid waterworks, magnificent drives, two first-class hotels, the Greensboro Female College, with 250 handsome pupils, the State Normal Industrial School for white girls, the State Colored Normal School, large tobacco interests, and last but by no means least, a large number of pretty girls. J. F. Jordon & Co. are the leading tobacco men of the town, their business representing the handling of over 3,000,000lbs. of fine leaf tobacco annually. They occupy a five-story warehouse.

The shooters put up at the McAdoo House, where they were handsomely entertained. Among the visitors were William Tell Mitchell, of Lynch Station, Va.; Sommer Van Gilder, of Knoxville, Tenn.; Messrs. Anthony, Todd, Howell, Justice and Stokes, of Charlotte, S. C.; Nelson, Darwin, Durphy, Moorman and Cleland, of Lynchburg, Va.

The management of the tournament was in the able hands of E. L. Gilmer and J. Fonda, who did some tall hustling during the two days. On the first day Sommer Van Gilder, the hustling Knoxville expert, went into the box and performed the duty of secretary and cashier until he had broken two men, Messrs. Winslow and Porter, into the business. His work was highly appreciated by the Greensboro boys. Once they caught the run of the work Winslow and Porter pleased everybody. The town of Greensboro has a population of about 10,000, and nearly the entire population were interested in the shoot. The shoot was a big success from start to finish, and the club members are to be congratulated upon the good showing on their first attempt. On the opening day the entries reached 29, and on the second day ran up to 32.

Below are the scores of the several events:

*The First Day's Shoot.*

No. 1, 10 singles, $1 entry: Experts: Mitchell 8, Jordan 9, Van Gilder 9, Barnett 7, Gilmer 6. Amateurs: Dodge 9, Howell 8, Anthony 9, Durphey 8, Coachman 8, Bours 8, Fonda 7, Justice 7, Nelson 9. Moorman 7, Cleland 8, Todd 10, Stokes 7, Carson 8, Dorning 7, Lusk 9, Wolcott 8, Joyce 8, Daniel 8, Tate 8, Withers 7, Glenn 7.

No. 2, team shoot, 20 singles:

GREENSBORO AFTERMATH.

Sommer Van Gilder with his Smith ejector and V. L. & D. shells formed a combination hard to beat.

W. T. Mitchell: "If every man could shoot as well with his gun as he can with his mouth, what shooters we would be!"

After the shoot the boys packed up their traps and tagged them "Knoxville, Tenn., May 23—25, 1893."

Fonda, of the local club, says he has borrowed some of Mitchell's nerve.

Auburn-haired Gilmer said nothing but shot "away up in G."

Winslow and Porter formed a good combination in the office.

Gilmer and Fonda are great on the hustle.

Jordon can outshoot any man in the South with coat, collar and cuffs on.

For a first attempt this was a great shoot.

All Greensboro will go to Knoxville next May.

Wolcott, of the Charlotte team, skipped from town without claiming his sixth average prize—a coffin. The boys put his name and address on it, prepaid the charges, and sent it by express. While this cost the boys $2 the joke will cost Wolcott many times that amount before the season comes to a close.

Joyce, of the Greensboros, made several straights by shooting his celebrated "Cabinet Beer" under the belts of the boys.

Tell the boys you received these tips from U. No.

## The Marmont Tournament.

MARMONT, Ind.—Below will be found scores of the Chadwick tournament, held at Culver's Park, on Lake Maxinkuckee, one of the most beautiful lakes in our State. Mr. Culver's place is the prettiest on the lake, there being several flowing mineral springs on his grounds. Mr. Parker, manager of Culver's Hotel, did the correct thing by the shooters. Among the visitors were Rolla Heikes, of Chicago; Dr. Britain, of Indianapolis; C. W. Grubbs, of Montgomery Ward & Co., Chicago, and N. Long, of Lafayette, Ind.:

Shoot No. 1, 10 singles: Heikes 9, Britain 9, Elliott 8, Tomason 8, Thomson 8, Lewengood 9. Fugart 5, Chadwick 6, Hatke 5, Long 3, Quinn 3.

No. 2, 10 singles: Elliott 10, Heikes 10, Britain 10, Long 5, Thomson 7, Lewengood 8, Chadwick 5, Hatke 7, Fugart 7.

No. 3, 10 singles: Heikes 10, Britain 10, Long 8, Townson 8, Ellipitt 10, Thomson 8, Hatke 9, Lewengood 7, Fugate 8, Quinn 2, Chadwick 0.

## The Griffen Gun Club Wins.

GRIFFEN, Ga., Aug. 20.—The long-talked-of match between the Griffen Gun Club, of this place, and the Columbus Gun Club took place at Columbus yesterday, and our boys were treated in royal style by the home club, who held a barbecue and picnic in connection with the shoot. The match was for a gold medal, which now graces the manly breast of our handsome captain, R. J. Andrews.

The conditions were 15 singles and 5 pairs of targets per man the teams comprising 15 men each. The scores:

| Griffen Gun Club. | | | |
|---|---|---|---|
| D J Bailey | 1000101010010000— 5 | 11 10 11 10 10—7—12 | |
| R J Andrews | 1111111111111111—15 | 11 10 10 11 11—8—18 | |

The singles were shot before and the doubles after dinner.

GRIFFEN.

## Sweepstake Shooting.

Several members of the Glenmore Rod and Gun Club had a big day's sport at Dexter Park, L. I., on Wednesday, August 24. The stakes were nominal but the losers of the first team race had to pay for the dinner and in all the others the losers paid for the refreshments and birds. They all had an enjoyable day's fun. The scores:

No. 1, 15 birds:

| | |
|---|---|
| M Haydon | 0101111120010l0— 9 |
| D Jones | 1020101212221l1—12 |

# Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. F. R., Hackensack.—A nesting quail, because lying close, and also not moving about, naturally gives off less scent than in other seasons, and for this reason is more difficult for a dog to discover.

J. H., Jr.—When you order your gun explain fully what it is to be used for, and state your own weight and build, and then leave it to the makers to give you the best gun for the purpose and best adapted to you. Have the left barrel modified choke and the right cylinder.

E. B. D., Block Island.—Kindly tell me of some good place where I can go next month for a couple of weeks' fine fishing for big weakfish and striped bass. Anywhere within 300 or 400 miles of New York?—Ans. We cannot advise you with certainty for most fishing is variable, but some excellent fishing has been had on the Jersey coast, at Belmar, and elsewhere.

C. W. McC., Cascadeville, N. Y.—There is a difference of opinion among guests here as to a question of some interest to several, some asserting that the game laws have been amended so that trout cannot be taken even in the Forest Preserve after the first day of September, others maintaining that within the preserve fishing may continue up to the 15th. We appeal to you to decide this question. Ans. The Adirondack trout law is uniform with that of the rest of the State. The last day of the open season was yesterday, Aug. 31.

J. W. G. D., Blooming Grove Park.—1. Please give the game laws for Pike county, Pa. Why are they not in the *Book of the Game Laws?* 2. Do you know of any good map or maps of Pike and Monroe counties, Pa., and where they can be obtained and at what price? The maps on large enough scale to show roads and water courses. 3. Do you know of any way to catch small eels (5 and 6in. long) for bass bait out of a large-sized lake? Ans. 1. Open season for deer between Oct. 1 and Dec. 1; squirrels, Sept. 1 and Dec. 15; gray rabbit, Oct. 15 and Dec. 15; wood or summer duck, Oct. 1 and Jan. 1; woodcock, July 4 and Dec. 15; quail, Oct. 15 and Dec. 1; ruffed grouse, Sept. 15 and Dec. 15. The law is given on page 140b of the *Book of the Game Laws.* 2. We can supply it, price $4. 3. We cannot tell you, but perhaps some reader may.

J. B., West Park, N. Y.—1. Is it illegal to put racks in a black bass stream? Several are put in every fall in a fine black bass stream near here. Can they be stopped and how? Large numbers of fine bass are caught in this unsportsmanlike way. 2. When is the law off on squirrels and partridges? 3. What number shot is the best for all-round squirrel shooting? 4. Do you think there is any advantage in having a trained squirrel dog? If so, what breed is the best, or is any cur equally good? Ans. 1. The law forbids catching black bass save by angling. Apply to your district game protector, James McMillan, Broadhead Bridge. 2. Law is now off on squirrels and partridges, and last day of open season will be Dec. 31. 3. For squirrels use No. 6 shot. 4. Use a cocker or a fox-terrier or a dachshund; a cur will do practically, and a squirrel dog, like a poet, may be of humble origin and born, not made, but you will find more satisfaction in having the company of a dog of some breed.

## ARISTOCRAT

Ch. Plinlimmon ex Lady Adelaide.)

Winner of forty first and special prizes, including five first and four specials this season, won almost consecutively. The tallest and heaviest son of Plinlimmon. He is the sire of Lord Courtenay, winner of second prize at the late St. Bernard Club show, Birmingham, also Baronet, winner of over forty prizes and specials, and numerous others. The above named progeny proves him to be one of the most successful stud dogs of to-day.
Fee $50.

YOUNG KEEPER
(Keeper ex Surprise, by Guide.)

This young dog has a massive and typical head. This with his superb breeding should be of especial value to bitches weak in that respect.
Fee $25.

(Ch. Graphic—Lady Vinnie.)
Champ. Ossining.
(Ch. Robert le Diable—Countess Nellie D.)
For stud fee, list of winnings, etc., address WM. H. HYLAND, North Tarrytown, N.Y.

In the Stud. Fee $25.

## WHYTE B.,

By Roderigo—Florence Gladstone.
Divided 3d, Southern Field Trials.
Broken dogs and puppies of strictly pure Llewellin breeding always for sale. The blood of my kennel is the bluest of the blue.
HERBERT S. BEVAN, Lamar, Miss.

BULL-TERRIER AT STUD:
CHAMPION CARNEY,
(A.K.C.S.B. 24,986).
To a limited number of approved bitches.
TUBBY HOOK KENNELS,
Inwood, New York City.

## TYNE.

Gath's Hope ex Daisy F.
He is a big, fine fellow, and a brother to Daisy Hope and Daisy Hunter. Is a grand fielder and cuts his work out like the rest of his ilk. Has more Campbell blood than any setter in stud. Will be my All-Age dog for this year's trials.
Fee, $35.00.
JOHN A. HUNTER, Bloomington, Monroe Co., Ind.

## At Stud.

The blue belton setter BOW BONDHU (17,852), winner of several first prizes, by Gus Bondhu ex Bo Peep, she the dam of the noted field dogs Antonio and Chance. Is a fine field dog and an A 1 retriever. Will be allowed all the bitches he can get. Fee $15. Address for cut and stud card, V. L. BOSSA, New Canaan, Conn.

## SPRATT'S PATENT

DOG SOAP.

## Teufel the Terrier;

OR,

The Life and Adventures of an Artist's Dog.

Told and illustrated by J. YATES CARRINGTON, and written by CHARLES MORLEY, a friend of Teufel's.

A book which has had wonderful popularity in England. Paper. Price, 75 cents.

### *THE FOREST AND STREAM SUPPLEMENT.*

THE first one of the portraits of American wild animals is given to-day as an extra sheet supplement of this number. It is Mr. E. E. Thompson's drawing of the Panther. The creature is represented as sighting a deer; and we need not point out that the drawing is full of life and strength.

Others of the series will be printed as follows: Oct. 6, the Ocelot; Nov. 3, the Canada Lynx; Dec. 1, the Bay Lynx.

It will be noted that the present supplement is designated as "FOREST AND STREAM Wild Animal Series.—V." It is the fifth in a series, four of which have from time to time been printed in this journal, and which have been reprinted separately; and the four are sent by mail, postpaid, for the nominal price of 10 cents for the set. They are: Young Mountain Sheep or Bighorn, the FOREST AND STREAM'S Grizzly (in the Central Park, New York), American Elk and Group of American Elk.

### *THE NEW ARMY RIFLE.*

THE Army Small-Arms Board has made a choice of a new magazine weapon which is likely to create a vast amount of criticism. The mere fact that it is a foreign arm, invented by a European and already in use, will stir up a lot of patriotic resentment in many quarters. It has so long been a cherished American whim that our mechanics could lead the world in inventive skill, and particularly in the line of small-arms, that it comes with somewhat of a shock that a board wearing United States blue should not see everything good in the work of a Yankee inventor, and not quite so much that was excellent in a rifle bearing foreign patent marks. But it should be remembered that a rifle talks an international language; that the whizz of a rifle ball sounds the same in every ear. The choice of a rifle is a sort of mathematical problem, and if the new Danish arm gave the best total its choice followed as a matter of fact. Abroad the hunt for an effective rifle is intensified very much by the knowledge that others are hunting in the same field, and that when the worst comes to the worst the best hunter is likely to be the sole survivor. An hundred tests and experiments in arms, in ammunition and methods, are made abroad to one trial on this side of the ocean in any of these directions, and it is only natural that success should be theirs when competition brings the arms together.

The new weapon must needs be an excellent one to gain the place which the Springfield now holds in the favor of the American wearers of the blue. That arm has been treated so well and responded so successfully that it has gained a very high rank as an arm of precision. To be sure it is a single-loader, but so easy of manipulation is it that in such skillful hands as those of our army experts have grown to be, the results have passed far beyond what is reported from the other side. Twenty shots per minute effectually placed can be secured from the Springfield, and yet in a recent test with the Lebel rifle in France, ten soldiers firing at a figure of a file of fifteen men at 300yds., less than 9 per cent. of hits were recorded, and the average was but 152 shots per man for the ten minutes taken to completely exhaust the strength of the shooters.

The marksmen of the U. S. Army will excuse the clumsiness of the "K. J.," provided it shoots well. The fighters of the line will accept it if it shows that it is a serviceable lead distributer in a pinch, but it must first of all down the Springfield before the Army affection will turn to it from the present neat trap-door breechloader.

In the mean time it will be in order for the American inventors to explain what they have been about all these months since the magazine board went into existence in December, 1890. There is no intimation as yet that they have not had a fair field, and that they have not met with success can only be interpreted to mean that their offerings were inferior.

### *A DOG-DAY OUTLOOK.*

TO ANY one who is interested in dogs and has watched the steady progress and advancement of the different breeds, the present state of kennel affairs must be a pleasing one. There is no fictitious boom, but all the time a steady advancement toward a perfection of form and increase in value in the animals we own. While the year 1892 has not, so far, produced any dog more than ordinarily good, if we except the mastiff Beaufort's Black Prince, the general excellence is noticeable. The English setter probably holds pride of place as a general favorite, especially with sportsmen, but the St. Bernard is running a good second. Notwithstanding the serious losses incurred by some of our St. Bernard breeders last year, we are pleased to see that far from being disheartened, their kennels contain more of these noble dogs than ever, though we believe the time for paying large prices for English dogs has passed, and home products will receive more attention. Greyhound enthusiasts are very active in the interests of their favorites, and the coming coursing meetings are eagerly anticipated by devotees of the leash. Somehow we hear very little of the collie as a fashionable dog, but that there is a steady demand we are assured by prominent breeders. The Collie Club might do good for this breed if they would exert themselves a little and carry out their proposed sheepdog trials. The beagle element is doing good work for the merry little hound, but for the best interests of the work perfect harmony must exist among the workers, and all should put their shoulders to the wheel and make the trials and show in October the success we hope for.

No one who loves the terrier for his gameness and the sport he affords can but be pleased to see the advancement made in bull-terriers, fox-terriers, and especially Dandie Dinmonts and Scotch terriers, as well as the Bedlingtons, several high class exemplars of these breeds having been imported this year. The quaint little dachshund is also bound to take a more prominent place in our shows next year than in the past, and the different breeds of toy spaniels have received several valuable recruits recently. In common with others who admire the noble mastiff we deplore the fact that, despite a club which claims to have the best interest of the breed at heart, popular interest has dwindled, and though good dogs are raised by several kennels, they are not seen in public to the extent that they should be.

At no period in the history of "dogdom" in this country have the field trials commanded so much attention as this year. Several new clubs have sprung into existence and every stake so far has met with a gratifying entry. There is only one drawback that we foresee in this—the lack of trainers and handlers. There are good men in the business, but not yet having made public reputations they are to some extent deserted in favor of those who are more popular—as winners. Consequently the latter get more dogs than they can possibly attend to properly, and some one has to stand the eventual loss.

The only cloud that mars the clear sky in the kennel world is the attitude of one part of the kennel press. That criticism is necessary and beneficial we all admit, but private antagonism and public spirit cannot go hand in hand. Such writings serve no public good—only harm—for they deter good men from entering the fancy and frighten others out of it who can be ill spared. Right will assert itself, however, eventually, and such guerilla tactics will meet their own reward.

### *A FAMILY GROUP.*

FROM the crest of a hill, higher than any of its neighbors, may be seen the wide prospect of the rolling plain. Near at hand the swells rise one after another in succeeding waves which lessen in the distance until at last far away the land seems flat. On the yellow prairie the winding course of a far-off stream is clearly marked by the dark green of the fresh-growing vegetation which stands along its banks. Scattered over the nearer plain are yellow and white moving forms—antelope, feeding or at rest. The wind blows freshly and bends the prairie grass, rattling the seed pods of the tall weeds, and now and then catching up the light dust in miniature whirlwinds—the Indians' ghosts.

From the crest of this hill a hunter, who should creep up to his position with caution and lie there looking through the grass, would see a pretty sight—a family of antelope.

The old buck lies by himself, a little to one side. His head is held low, his eyes are half closed, and his whole attitude speaks of entire security. The task of watching for danger he leaves to his wives, little dreaming that within easy range is the deadly tube that has so often dealt out death to others of his kind. The does and the young are by themselves, the elders for the most part lying down, while the kids are walking about, feeding and playing. Some of the old does are on their feet, however, now taking a bite of grass or standing perfectly still steadily staring away over the plain at some distant object that they cannot quite make out. Others move about as if seeking a comfortable spot to lie down, and in doing this walk up the hill toward the watcher, who lowers his head still closer to the ground.

They are all clean cut and graceful figures, but daintiest and most graceful of all are the little kids. They are old enough now to have lost the stilty ungainliness which marked their earliest youth, and are marvels of lightness, quickness and beauty. As they race about in their play, their light feet seem scarcely to touch the ground and their slender legs move so fast that they cannot be seen. Now and then, as some scent or sound imperceptible to grosser senses comes to them, they stop and all stand with raised heads and quivering nostrils, while the white hair on the rump of each rises till it stands on end and also seems to expand from side to side. For a moment they stand like tiny statues; then, their suspicions allayed, one starts, and then another, till all have resumed their romp. At last tiring of this, some of them lie down close to their dams, while others begin to feed, or, by nosing their mothers or butting them with their tiny heads, try to persuade them to rise and give them suck.

But if some curious or uneasy old doe walks too far up on the hill and detects the strange form lying there prone upon the ground—in a moment all is changed. The doe makes a few rapid bounds—each antelope is at once upon its feet—the old buck utters his curious barking cry of alarm—and in a close group they bound away. Before they have gone a hundred yards, they stop and turn to look, and now, if the watcher needs meat, is the dangerous moment for the old buck. If the rifle cracks he may fall never to rise again.

### *OUR COLUMBUS NUMBER.*

THE FOREST AND STREAM of Oct. 20 (the day before the Columbus celebration) will be a special Columbus number. The contents, both text and illustrations, will relate largely to the age of Columbus, and will be as interesting as unique.

SOME one suggests that in dubbing our political convention halls "wigwams" we are reverting to the usage of savages. Another example of the fantastic use of words is that of "camp" to describe a certain type of Adirondack summer home. The so-called camp is often an expensively built and luxuriously furnished establishment, as much like a camp as a vestibule train of cars is like a piny-woods cart drawn by a steer.

# The Sportsman Tourist.

## A CAMPER'S DIARY.

JULY 15.—Well, I've decided to go camping next month with Sam Andrews. Sam's a little old fellow, about thirty-five, but looks younger; not a bit particular about his grammar, never laughs at a joke nor makes one, but often gets unconsciously funny trying to say two things at once. He's a crank on camping, and likes to potter around the fire, they say, and make a pan of biscuit. According to his talk, "camping out" is just a halcyon time, but the old man went once when he was young and he says it's most all that's execrable. I'm going anyhow.

*July 21.*—The boys were up to-night to talk it over. Mack and Valentine are the other two. Four in all. Mack's a medium-sized chap about twenty-two, still beardless, without any deep lines of thought or care on his countenance. Looks as if he would be good-natured on wet days. Valentine's a student with side tabs and wears glasses. He's entirely innocent of the woods and never caught a fish, but he's reading up on those things, I haven't sized him up yet, but Sam says he'll fit in all right and won't be in the way at all. His expression is not exactly solemn, but rather wondering, as if he would like to laugh if he could only see the joke.

Well, we had a great time leaning over the table while Sam traced a pencil over the route on Farrar's map and lured us on a wonderful journey through Vacation Land. He spoke of the moonlight on the water sailing out of Boston on the Portland boat. He overlooked the dusty railroad trip, but enlarged on the charming, jolting, jogging journey on the buckboard stage between the mountains, and when he opened up the view of the lake his imagination carried us on till we sunned ourselves with him aboard the little steamer going north. He said we'd climb the mount "Old Ziscoss" and leave our names in a cairn on top, and get a noble vision there. He agreed to point out the Canadian Mountains and the Mountains of the Half Moon and Katahdin, and a myriad of lakes besides, and the forests on a thousand hills; but principally he talked of a silver river, Magalloway, in the wilderness with just us on her bosom in two canoes. He talked knowingly of "The Narrows" and "The Meadows" and "The Forks" and reverently of "Parmachenee," cautioned us if we read up on the subject to make allowance for Farrar's imagination, but it struck me first of all we'd better fortify ourselves against Sam's own eloquence. Valentine was deeply interested and inquired of Sam if he thought there was any prospect of his hearing a loon. He wanted to hear a loon crying in the night. Sam thought there was; he would almost guarantee it. He wouldn't guarantee to show me a deer though, standing out on a point, but he agreed to point out the tracks where the old fellows had stood a little before, and foot prints on the little beaches "thicker than leaves in Vallambrosa." The next meeting comes off at Sam's house, Aug. 10.

*July 30.*—Bought a big rubber bag to-day to hold things and a rubber blanket. The blanket has two little holes you can put a string through and tie around your neck. I don't mind if it does rain one day. Met Sam on the street to-day. He is having a hard time to get away. His employer is one of those old fellows who "never had a vacation in fifteen years; couldn't afford it." He didn't see how Mack could either. Mack told him he couldn't afford not to take one.

*Aug. 12.*—Met Sam night before last. Awful hot and we sat on the back piazza in shirt sleeves. I'm satisfied now that that fellow's a born camper. What do you suppose he had? A little fire on the concrete. A smudge, he called it, to keep away the bugs. The tent has come too. He had it up on the lawn Sunday. Says it will sleep four nicely. Then we turned to business. Had an important matter to discuss—grub. Sam read down his list by the light of the "smudge" and said, "I've decided to cross off tomatoes, three cans; too bulky." This brought a remonstrance from Mack and he wound up, "If you leave out tomatoes, you can leave out me." So Sam sighed and reinstated them. "All right," he says, "I'll give you a can for supper first night and I'll sink a can in the river to have coming back and that'll leave only one can to tote." The remaining list passed. Then Mack said, "Say Sammy, you're going to take along the camera, aren't you?" Sam shook his head, "No, those small ones are no earthly good. I wouldn't be satisfied with anything less than a tripod and that's too bulky for where we're going." Mack was disappointed and insisted that those were fine pictures that they got last year, "fine ones." "Yes," said Sam, winking at me, "you better look over those pictures Jeff, you'll find Mack looming right up in the middle with his arms akimbo. After you've seen the whole ten you may think to inquire 'I wonder where Sam is?'" Mack looked sheepish, so I came to his assistance and said, "I'd bet if Sam would bring the instrument along he'd capture the FOREST AND STREAM prize of twenty-five dollars." Sam was obdurate though and Mack says, "No use, Jeff. When he says 'no' like that he means it like a mule."

Then we drifted on to the subject of game. Mack wanted to buy a heavy rifle and get a deer. I argued that he couldn't hit a deer anyway, but by taking a shotgun or a little .22 we could get a duck or partridge now and then. We appealed to Sam. By this time he had dragged the tent out and had it spread on the piazza. He had laid in a lot of blankets and was making a roll of canned goods. He got us down on our hands and knees, and then said, "I'll cook anything you fellows bring to camp, but I don't go shooting much at this season of the year." "What's the matter, you 'fraid of the game law?" Well, no. Turn that corner in, Jeff, and roll hard. No, I don't stand much in awe of the laws of Maine, but I have some regard for the laws of Nature."

Well, we finally got that old tent bundle made and covered all over with rope and hard knots. Mack says, "So long as Valentine's not here I move we appoint him a committee on the spot to untie the tent bag at the first camp. Sam says, "Oh, I met him to-day. He's been reading a book by Dr. Mitchell. The doctor says, 'Don't forget to take along some raw onions.' I told him if the doctor ordered them we'd take a few. Some other author tells him not to cover his face all over with vile daub, but to wet the corner of his handkerchief with oil of lavender. He says he's going to have the laugh on the rest of us."

The question of fire-arms was reopened, but left unsettled. Mack remarked with a bloodthirsty gleam that he'd carry "something" on his own hook.

Sam says, "Say, you fellows better get this expedition subsidized and we'll fetch along a lot of troggers to lug the game and ammunition and camera and I'll march ahead with a white Stanley helmet and take pictures."

This was a parting shot as we were going out of the gate.

We start in a few days. JEFFERSON SCRIBB.

## THE STORY OF A COUGAR SKIN.

YES, I captured a cougar skin of considerable proportions when out on the Pacific coast, but I haven't said much about the occurrence because the circumstances were so unusual, so almost incredible, that I didn't wish to weaken the already rather slim confidence my friends have in me, by relating them. However, as cougar stories haven't been a very prolific crop lately, I will whisper my little story in your private ear, Mr. Editor, because you have seemed to convey an insinuation that if there was a story about this particular pelt, it would have to be manufactured. The pelt is on view, it speaks for itself. I am likewise situated. I have long desired to meet a healthy cougar in the flesh in his native wilds, provided I had a magazine gun in my hands, and the animal would let me have the drop on him, my kind of a drop. But I don't yearn as I did. I have lost a yearn, a yearn or a half or two yearns, and if my own wishes are consulted, the animal in question may have his flesh, health and native wilds all to himself. I shall not seek him out to stir him up. I once mooned around over Republican Mountain in Colorado all day in the snow with an old Gallagher carbine which I was very desirous to "let 'er go" at a big cat whose five-inch track was very devious, well defined and attractive, but the Felis very obligingly kept going and out of my way so that I am thankfully alive at this present time. I often think how awfully hot and cold it would have been up there toward the zenith if that disreputable old fusee had gone off uncertainly and that enraged puma had left my person scattered around over the rocks in strings, shreds and patches. It is worth shuddering over.

On a misty, rainy, gloomy, despondont, beautiful Oregon day last spring, I found myself very expectedly on the lower Columbia aboard a Union Pacific steamer, plowing the muddy waters of that noble highway between Portland and Astoria. The scenery was truly Oregonian and Columbian at that season of the year and probably quite a number of other seasons. Occasionally the shores, low-lying or more abrupt, could be seen, but for the most part the view was limited to the low-hanging clouds dropping their everlasting surplus in steady, depressing and monotonous drizzle, and to the irresistible flow of the mighty river. Occasionally a gull emerged silently from the wetness of the whence and as silently disappeared in the misty moisture of the hence. How lonesome and hungry, and damp and chilly and unsatisfied he looked. And I've no doubt he was. I shivered in sympathy. The steamer shivered too, and coughed with its lungs full of Oregon mist, and the passengers gathered around the radiator in the cabin, and radiated tobacco smoke and juice, read Seaside books, Portland papers, and discussed the latest phase of the perennial Astorian boom, which, with canned salmon are the principal products of Astoria, both well-preserved. Among the passengers was a Norwegian, Prof. Aamold by name, characteristically blonde and fair haired, a violin virtuoso, who, having completed his winter tour, presumably with satisfactory returns, had separated himself from his confreres of the troupe and with his precious violin, guns, rods, and pony was bound for a summering among the lofty hills and secluded valleys of this region, where he might breathe purer air than that usually served up in concert halls, lure the wily trout from his crystal retreat, or perforate the mighty grizzly or stealthy puma with his .45-90 Winchester. He had been here before and talked entertainingly of sport past and to come, for he was well-read, a fine conversationalist, a great admirer of, and a firm disciple of, Darwin, concerning whose views he conversed enthusiastically, and as a brother sportsman my heart warmed toward him and I sincerely hoped he might escape the raking claws of the tawny Felis, and the fatal hug of the horrible Ursus. His pony, a little, beautiful, intelligent gray, had, through the carelessness and mismanagement of the deck hands at Portland, tumbled into the river between the dock and boat and had been quite severely injured, and was of course an object of much solicitude, as he was to be the Professor's mainstay in his jaunts.

During the day we passed several long double lines of piles on either side of the river, between which men on loaded barges were dumping evergreen branches which were to be weighted down with stone to confine the current at bars and shallow places, for Uncle Sam was taking a hand in the improvement of the river for Portland's benefit. Along in the afternoon the boat pulled in to the little village or port of Klackallackum, for there was very little village to it, only a broken down wharf, a store and two or three houses, on the Washington side. The mail bag and a box of bottled beer were put off, the freight clerk or purser walked out the gang plank with considerable style, handed a bill to the storekeeper who was also postmaster and agent for the boat, walked back again, the mate cried up the speaking tube, "All gone, sir," the pilot rung the gong in the engine room, men on the wharf cast off spring and stern lines, the wheel, for she was a stern wheeler, backed water until ting-a-ling from the pilot started her ahead again, and we were once more under way down stream, while the half dozen dejected and lonesome-looking men on the wharf moved solemnly storeward with the beer, which might have been spelled the other way, judging from their motions. During the moment or two that we laid at the wharf I was standing on the upper deck leaning on the guards looking down on the festive and thrilling scene, when Prof. A. stepped to my side. "Do you see that gap in the hills back of town? Well, a fine trout stream comes down from the mountains through that gap, and flows rather sluggishly across the intervening mile or so, emptying into the river just below here. It's a wild country back there, as I happen to know, and you won't go amiss if you try the stream for fish." I thanked him, resolving if opportunity offered to visit the place and see what sport I could get out of it.

After a journey which would have been tedious but for the company of the Prof. and for whose entertaining conversation I was truly obliged and thankful, I reluctantly bade him good-by at Astoria as he led his pony across the dock; and not many moons afterward walked myself across the wharf at Klackallackum, with rod and basket bound for the Pilchuck, as I found its name to be. On inquiry, I ascertained that I could boat it almost, if not quite, to the gap or rough water, so after some search I found what was not the most graceful or lightest boat in existence, but which would float me at least, and which I hired for the trip. It was a fine day, that rare thing on the lower Columbia, and I give full credit therefor. I thanked my lucky stars that the fates had been so propitious, for nine days in ten I might have struck a solid day of wetness. I did not know what I had done to deserve such good fortune, but I accepted it thankfully and hoped that I might be a gratified recipient often. By that I don't mean to asseverate that a Californian or Arizonian in June would have called it such. The patient reader will simply understand that it did not rain. It was cloudy to be sure, but the clouds were not the low-lying, enveloping, reeky, sifting, depressing sort, but were, for the nonce, in a more etherial and light hearted mood, sailing aloft, solidly it is true, but almost persuaded at times to accede to the importunities of the sun and allow him to penetrate and lighten their dense folds.

I got a boy to dig me a *dernier ressort* of worms, for sometimes early in the season trout don't hunger for flies, and however great a stickler I may be for the only æsthetic lure, when the trout decline any and every shape and hue of manufactured loveliness, I am just stickler enough to stick on a barnyard hackle and secure enough belly fins to use either as fly or bait. With my worms, rod, and a grocery lunch of cheese, crackers, pickles and canned beef I loaded myself into the skiff, took up a pair of oars, the blades of which had lost the most effective part of their extremeties, and resembled long butter paddles as much as anything, put them between those aggravations of the oarsman, thole pins, and turned my bow up the quietly gliding and romantic stream, the euphonic Pilchuck.

A good deal of brush bordered the stream as I moved along up, back of which here and there were open fields, alternating with bits of woodland, and in the former all the air was quivering with the delicious song of the meadow lark, which is more prolonged and far sweeter to my ear than that of its Eastern congener, the song being suggestive of the mingled sounds of tinkling glass and steel accompanying the incomparable melody from the bird's throat. Bobolink's music is likewise suggestive. The larks were very numerous, and the delightful serenade I enjoyed already repaid me for the trip. Robins were arriving, and now and then a crow projected his black form against the dim clouds as he beat the air with heavy pinion, croaking a warning or greeting to some sombre-robed companion who sat on a distant tree and hoarsely acknowledged the salutation. Rounding a bend I surprised a little mink "projeckin'" around a bit of stranded drift, busy as he could be working out some scent; but when he caught sight of my movements he paused a moment as he endeavored to understand them, and then left a brown streak behind him, disappearing under the bank among the roots of a handy tree. Ducks of various kinds rose ahead of me with much alarm and splashing, circling around to the rear or going further up, and an occasional heap of drift or log detained me; but all the region was a *terra incognita*, and the delays and surmounting of obstacles were pleasant.

There were likely-looking spots for wetting a line in suggestive pools or still reaches of water by the side of a log or under the bank, but the rapid, tumbling, foaming stream as it dances in cataract or leaps in fall, pausing here and there in deep pool where the eddies circle and the foam flakes chase each other up stream only to be drawn into the current, to go whirling down again in a delightful "merry-go-round," has charms for me beyond any sluggish water, so I kept up the breeze and looked for better things. The country grew rougher as I proceeded, unbroken forest succeeded fields, the current grew swifter, and ere long the foothills rose from the banks and ran upward to the nearer low-lying mountains. Just in the entrance to the gap stretched a long, rather deep pool, where the stream took a long breath after its prolonged and rapid flight, and at the upper end, around a curve, I could hear a rapid, which told me my boating was over for the present. On the left hand about half-way up the pool the water was quite deep, and the bluff rose abruptly to a height of perhaps a dozen feet. I noticed before I reached this place that an old disused trail, formerly used probably by lumbermen, ran up from the lower ground, and presumably ran alongside the bluff on top. On the opposite side the pool just below this bluff, a bar or point of low-lying rocks ran out, and on it was a long pile of drift, some of the logs and limbs reaching out to quite deep water.

A little distance above there was a sharp turn to the left, and the current running around this shot across, striking the outer edge of a drift. Noting these facts as I worked along up, I decided to land on the trail side, as one naturally would, so I drifted back to where I could land easily and ran ashore, pulled the boat out and proceeded to put my rig together. And assembling an outfit at such periods as this is, to me, one of the most enjoyable moments of the day. With what joyful, satisfying expectancy one joints his rod, attaches the reel, threads the line, chooses with cogitation the cast. While the beautiful, clear, rushing waters harboring the handsome game, the pebbly shore or bolder rocky bluff, the pile of drift or overhanging roots from beneath the edge of which the swift fish darts upon his prey, the silence and solitude all yours surrounding you like a benison, the lovely vistas opening between boles of stately trees in silent watchfulness over all, are sweet and inspiring influences which make glad and peaceful the heart of the fisherman.

My Chubb lancewood soon stretched its willowy length before me, visibly achin' for the fray. A royal-coachman and brown-hackle were the last things on the string, and putting my lunch in my hunting coat pocket (and by the way, what satisfaction there is in a multi-pocket coat on a fishing trip), and giving an extra safe pull to the boat, so as to be sure of its whereabouts, I struck for the trail and meandered up stream.

As is the case in most, if not all, trout streams, the best holes couldn't be got at handily, which is nature's best protection, but by careful and quiet management,

ducking and crawling as exigency demanded, I found the fishing fairly good for so early in the season, but the fish were not as anxious for the fly as the wiggler, as I found out little by little. But they were numerously at home, and the soul-filling satisfaction at being on a stream not fished to death was simply intoxicating. How sleek and fat the supple black-spotted charmers were, to be sure, as they came to hand after a desperate little resistance, during which some of the larger ones tried the rod to seemingly the last ounce of endurance as they fought for the protecting log or bank, so near and yet so far. Perhaps I allow prejudice to somewhat bias my opinions, but it seems to me that the trout of the Pacific coast, as a rule, as far as my experience goes in Washington and Oregon, have not the same dash, vigor and fight in them that the Eastern *fontinalis* has. They are wary and wild as trout should be, but they don't seem to make the rod and fisher work as lively as Old Crimson Spots does. Still the difference will never prevent me from going for those Western fellows whenever I have opportunity.

A hundred yards or so above the bend spoken of below which I landed, I came to a stream emptying into the Pilchuck, which looked like a promising water for smallish fish, and I determined that if I packed a creel full when I returned I would test its capabilities, for I have often found that seemingly insignificant waters surprise one in abundance and size of fish, this particularly in trout fishing. Appearances are often very deceptive in this matter, though the fact mentioned may obtain chiefly in regions much fished. Often have I, in New England, left larger streams, with deep, promising, unsatisfying holes, for some quiet, modest little brook hidden largely by the long grass that hung in tangles over it as it threaded its silent way through some meadow, with difficulty dropping the worm through the network of stems, and weighted my creel with beauties whose velvety sides were as dark as the shadowy retreats where they lay cool and unseen when the day was hot.

I worked along slowly and enjoyably, as only the trout fisher can, taking a fish here and there with the feathery deception, and saving the spots where I could not cast well, for the worm or fin, on my return, for I knew some lurkers were warily balancing themselves on slow fins as they watched the lumbering monster in the upper world. As I ascended the scenery grew wilder. The mountain sides were more precipitous and the stream bed narrower, making fishing more difficult. But it was good to be there amid the solitude and grandeur, with a handsome trout coming to hand now and then, giving vigorous exercise for the resilient Chubb, and piling up more stock in memory's store-room. When the day wore along to the full and a vacant feeling beneath my "weskit" reminded me that I had provender in waiting, I chose a spot where the brawling stream spread itself a little over its rocky bed, and seating myself on a stone with my back comfortably against a stranded log, I stretched my tired limbs at full length and rested myself most enjoyably, wishing fervently that certain of my friends far away could be there to fill themselves full of this hour, as with pleasant chat we whiled away the noon, and touched elbows just a little closer with nature. Lunch over, I filled the brier root receptacle with comforting Lone Jack, and as the fragrant smoke floated upward and away in graceful shapes, I ruminated on fish and fishing, fishculture, propagation, depletion, protection, and kindred topics with which FOREST AND STREAM, far away in New York city, was weekly entertaining and enlightening its readers.

Memories of many other fishing experiences in widely separated sections of our land rose before me, and with this, that and the other I found myself nodding ere I knew it. I didn't think very favorably of that, away up there in the wilderness, subject to annoying interviews from Cascade fauna, without choice in the matter, so I roused myself, and with face down stream leisurely investigating likely water, taking some lovely fish out of the wet, and throwing back some right good ones which I should have been very glad to keep on some streams, I plodded boatward. There was one very trouty-looking hole that I couldn't get a fly on satisfactorily when I went up, and as I approached it on my return I determined to use all my skill to get some big fellows out of it.

I made a detour through the woods at one side, as we all have so often done, in order to obtain the best vantage. In doing so I had to cross some old logs, and carelessly stepping on one I slipped on some moss, tried to catch my footing, made it worse, and floundering and pawing the air went down in a scrambling heap, throwing my rod from me to save it, barking my shins, bruising my hands, nearly putting one eye out against a stub, uttering ejaculations more forcible than elegant and seeing my fish, from a burst-open basket, go flopping in several directions. Then I righted myself, sat down and rubbed my anatomy in divers places, with sundry grunts which seemed to take the edge off the pain, after which I corraled my trout, and proceeded to fish that hole with a worm, and took out some as handsome 1 and 2-pounders as ever waved a fin.

Well, time and a good many steps at length brought me to the little stream before mentioned, and although I had an abundance of trout, the desire to explore, innate in almost every one, led me to go up it a ways, which if I had not done this tale had not been spun. The stream flowed through a miniature cañon whose walls were for the most part steep and high, in places leaving little more than room for the stream. I found the fish plentiful, though small, in comparison to the average of those in the Pilchuck, and had not gone far before I concluded that I didn't want any more trout that day; so I stopped and proceeded to "knock down" my rig, and had just got as far as to unjoint the rod when, glancing carelessly up the ravine, my eye caught a movement among some low bushes a few yards ahead between the stream and rock wall. There was not cover enough for any large animal or I should probably have got out of the locality in haste.

OUT FOR SPORT.

FROM A PHOTOGRAPH BY A. G. MCFARLAND. (CALIFORNIA.)

(Forest and Stream Amateur Photography Competition.)

I walked forward as noiselessly as possible, and on nearing the bushes caught a glimpse of a tawny tinge, which moved as the owner apparently saw me, and in a moment I made out the shape of a cougar kitten, which, I concluded, had fallen from some den above, and it wouldn't, probably, be long before the dam would be on the trail. Several thoughts went through me in a hurry. Here was a chance for a flyer in zoology as good as I should ever have. The boat was not far away, the kit was small, not much, I judged, over a foot in length, and if I could once get aboard with it my chances for a safe outcome were good. I resolved to try for it. I glanced hastily around and above. Nothing in sight. So I took off my creel and coat, replaced the creel, and did it in a hurry, too, and, laying my rod on the ground in plain sight, I took my corduroy coat in both hands and cautiously approached the animal, which had remained motionless, either from being hurt or stunned by its fall, or from natural stealth. As I neared it it started up and tried to sneak off, but I was too quick for it, and spreading the coat out threw it over the kit, seized it, rolled it up as rapidly as possible and turning picked up my rod and was off. I am not so limber in my legs as I used to be and my wind is liable to peter out sooner than I'd like, but I believe I made as good time down to the mouth of that brook as any one could. How I did run! I fairly surprised myself. If I could have run like that on a track I could have captured the world's honors as a sprinter. But it makes a world of difference whether the incentive to movement is behind or ahead of you. Fortunately I made no misstep. If I had I believe I should have broken my neck. I looked back once or twice hurriedly where a slight turn gave opportunity without slacking speed, but nothing followed, to my great relief and encouragement. The kit struggled some and tried to cry, but I clutched it the closer and ran the faster, if possible, while the way that creel dangled and bumped around my body was punishing in the extreme. I thought it would disable me if I had to keep it up long. I expected every jump to hear the enraged scream of the old cat, but I splashed through the mouth of the brook and straightened out in the trail down the Pilchuck all safe, though it wasn't very straight or clear. Still it was a welcome trail and I knew were it led and that a hundred yards or so would take me to the boat.

As the engineers say, "I pulled her wide open," and although my heart thumped violently and my wind began to grow "powerful lackin'," my legs did themselves proud, and I soon noticed with gratification that I was nearing the bend at the head of the pool where my boat waited for me. I panted round this bend and was making fine time on the last quarter, when horror of horrors! There in the trail where it ran alongside the steep bank stood a full-grown cougar apparently as much surprised as I. Here was a fix indeed, a full period, a short stop to my progress in that direction. What did I do? What would you do? What would anybody do? There was only one thing to do, and it had to be done presto. I never stopped, but dashed off that bluff to the left with as big a leap as I could spur my legs to make, just as though the trail led that way. I never gave the cat another glance to ascertain what it thought of this episode. I hadn't time. Fortunately I struck the water feet first, and at once made for the swift current, diagonally crossing the channel. In my frantic exertions, half swimming, half wading in water nearly up to my shoulders I lost my grip on the coat, which, with the kit still inside, floated away toward the log drift, but before it reached it the kit in its struggles had emerged from the bundle, and floating and struggling with half smothered cries at length reached the jam just ahead of and a little below and clambered out. The moment I laid my hands on the first half submerged log I struck, I looked back and there, headed for me, a little distance from the opposite shore was that cat, now enraged by the cries of its young, making swiftly for my side the stream. It is commonly reported that cats won't take water, but you should have seen that cat swim. It was entirely too much at home in the water to suit me. I hadn't a moment to spare. I dare not run lest the cougar should pursue me regardless of the kit. My only hope was to find some weapon with which to smash the creature's skull before it could emerge from the water. Things seemed to be narrowing down to a very fine point. Hastily looking around I saw, a little higher up, a smooth handle of something sticking out of the debris, and running to it was rejoiced, if ever I was, to pull out a heavy handspike, left behind in some lumbering operations, and now washed down there, as I hoped, for my deliverance. I quickly threw off my coat, and with my heart in my mouth stepped down to where the kit was crouching, crying, and which the cat was rapidly approaching with danger in its eyes. I felt that I was trembling as the scene neared the finale, but my grip was tense and steady. The cat made a beautiful picture, I remembered afterward, as with powerful strokes it forged ahead, its long tail waving in the water from the vigorous motion of its hindlegs, all of which I should have admired had I been up a tree with a Winchester for company, but just now I had not time. I did not raise the weapon at once for fear the cat might veer off and land at some place not so favorable to me, but when it got within two or three feet of the logs I raised the stick, seeing which the cat partially stopped and turned as if to go further up. This was my opportunity, and I put all the muscle I had been making for several years into the blow, striking the animal fairly on the head with such force that I must have crushed its skull, and the huge cat ceased motion, quivering as it lay, while again and again I brought the stick down upon its head until I knew I had crushed it to a pulp, and the limp carcass with a lashing of its tail and convulsive working of its limbs floated down a little distance, lodging against a limb of a tree that protruded from beneath the water. If ever I was completely unnerved it was then, for it had been a mighty close call, and my limbs were about to double up under me when a terrific scream from the opposite shore fetched me all up standing again. There stood the mate of the dead puma, attracted to the place by the crying of the kit, and apparently preparing to come across to see about matters, to which I seriously objected. I didn't want any more zoölogy or cougar fights. One was sufficient. There was only one way to prevent it, and that might not succeed, but I determined to try it, so quickly stepping to the kit which was cowering, crying, between two logs, where it had crept apparently half frightened to death at all this disturbance, and seizing it by the neck with my left hand, and by both hind feet with my right, which I gripped tightly so as to prevent any movement of its claws, I raised it, loosed my left, swung it round my head once, and with all the strength in me, let go. The little thing sailed through the air, turning end over end, and fell splashing into the water a yard or two from the other bank, where the old cat, wading in, seized it, carried it ashore, laid it down, licked it dry, giving me a glance now and then, and to

my heartfelt thankfulness and relief carried it up the bluff and disappeared in the bushes. Then I collapsed, and shook for some minutes like a man with a genuine case of Scioto River bottom "ager," and when I got through I was as weak as the cat in the water, and could scarcely have moved had forty cats come for me. But as soon as I could stand I went down the shore a ways to where I could wade the stream, crossed, got the boat, returned, realizing just then that the water was really very cold, went for the cat, which proved to be the dam, now resting harmlessly enough, got it, with some difficulty, into the boat, secured my creel, from which most of the fish had disappeared, the cover having been torn loose again during my violent race, found my coat trying to get loose from a snag in the edge of the current at the lower edge of the drift, and lost no time in putting distance between me and the eventful pool, making good time for some way and so warming my chilled blood, then easing up, landing at a convenient spot some distance from the Columbia, where I wrung out my wet clothes, and took the hide from the cat with my clasp hunting knife, which always goes with me in my outings, and which I was glad to have along on this occasion, for with a pocket penknife the job would have been onerous. As it was the task was quite lengthy owing to the lack of facilities for hanging up, and evening drew on as I tied the boat to its mooring at Klackallackum. Great was the wonderment at the little store where I waited for the night boat from Astoria for Portland, when I explained how I got my pelt, and from some of the questions asked I suspected that there was a sneaking belief that I had bought the skin from some hunter whom I had met, or found it where some grizzly had been having a violent argument with the wearer. I referred them to the carcass, however, as a clincher. In due course of time the whistle of the Thompson split the stillness of the night, and as soon as possible I was in a berth, having my wet clothes hung up by the steward to dry, so that when I awoke in the morning with the boat at her dock at Portland, I was in about as good plight as ever.

If any one finds a Chubb lancewood up the Pilchuck I should be very much obliged indeed to know it. It's mine—or was. I should like exceedingly to have it for association's sake.

This is the first time I have given to any one a detailed account of my adventure, and hesitate even now, as I said in the beginning, but being put on the defensive, though the story seems large, I must tell it as it is. It is no larger than the pelt that stretches its beautiful 8ft. by 6ft. in my hall, the admiration of all who see it. As I remarked, it speaks for itself. So do I for O. O. S.

## THE ADIRONDACKS.

THE season in the Adirondacks is closing, and before many months shall pass the numerous hotels where pleasure and recreation have abounded will be buried in the snow. Before that time, however, the customary raid will be made upon deer by border thieves and city millionaires, after which the great forest will pass to the keeping of trappers and guides. It will sleep the long winter away, to awaken to another season of animation, for each year adds largely to the throng of seekers after rest, recuperation and pleasure.

This has been a phenomenal season. The hotels of every class have been overcrowded and camps have been more numerous than in any previous season. Hotel rates were very generally advanced and other expenses correspondingly increased. The season is short at best, and the income of both hotel proprietor and guides is well earned. It is their harvest season; they must labor assiduously if they would reap sufficient of the golden grain to make life endurable during the long and dreary winter. As a general thing they do not miss their opportunity.

A great need of the Adirondacks is more well kept hotels. There are hundreds of choice locations which were opened up by Dr. Webb's railroad, and the investor can hardly go astray. The public seems determined to outrun the Park Commissioners in establishing a State park, and capitalists will find it advantageous to themselves to promote the present tendency. The State authorities seem to have gone to sleep, and it may be as well if they should remain in such a blissful condition, for hope of their accomplishing anything for the public welfare may be abandoned. This subject has been much discussed during the season, and the opinion prevailed universally that the State's neglect was unpardonable. A number of new hotels—some of them on a grand scale—are projected, and if they could be opened early next season they would easily be filled.

The fishing has been exceptionally good; probably more large trout have been caught than during any season for some years past. The cool weather prolonged the spring fishing, so that it was not necessary to depend upon spring holes for "luck." Deer are fairly plentiful. Since many of the guides became educated up to the fact that it was to their interest to preserve deer, there has been a slow but steady increase. In some parts of the forest there are gamekeepers who show some disposition to invoke the aid of the game laws in preventing slaughter; but nowhere are these officers so vigilant as to be deprived of much sleep. More is being done to-day for the preservation of deer by the owners of preserves and by guides than by the State. Of course there are short-sighted, lawless guides who have no desire to give aid to such efforts, and who seem to take special delight in their outlawry. And they are but very seldom made amenable to the law. When the law is enforced it is generally against some "city feller" who does no wrong in a month so great as some of these guides do almost every day.

Who among those so fortunate as to have a season of vacation, return home bringing more of health, vigor and new life than those from the Adirondacks? The pure air, laden with the healing qualities of vast areas of evergreens, the pearly water, the moss-covered earth, the perfect quietude, the perfect rest, the absence of care—all of these conspire with the other advantages which the forest holds exclusively to give new life, energy and ambition to him who went there worn down by his responsibilities and burdens. This is God's Garden of Eden to His children, a place where healthful blessings abound, where man and woman may be recreated if they will but comply with the terms which nature makes her conditions for restoring the wasted energies of life. D. H. B.

SYRACUSE, Sept. 5.

## NOTES ON THE PANTHER.

THE American panther (*Felis concolor*), from its wide distribution and abundance, is perhaps the best known of the cats of North America. It is almost as large as the jaguar, and from its color and its size has been termed the American lion, or in the Spanish American countries *leon*. Its ordinary names in the United States are: Panther, cougar, puma, mountain lion (Rocky Mountain region), California lion (Pacific coast), painter, and sometimes catamount, though this term is more usually applied to the smaller animals of the genus *Lynx*.

The panther is about seven feet in length, large ones going something over this, and of this length the tail occupies more than one-third. They weigh 150lbs., and one killed in the Adirondacks by Mr. Verplanck Colvin weighed 200lbs. They are short-legged and long-bodied, and measure at the shoulders only two feet or a little over. The general color is tawny or reddish, something like the summer coat of a Virginia deer, but not so red. There is a good deal of variation among them, some—the older ones, we have thought—being grayer, while the smaller and younger ones are more of a reddish cast. The muzzle, backs of the ears, and slightly bushy tip of the tail are black.

No one of the *Felidæ* has so great a range as the panther. It is found in Canada, and south through the United States, Central and South America to the parallel of 50° south latitude, and all through North America from the Atlantic to the Pacific coast it is or has been abundant. The encroachments of civilization, however, have greatly reduced its range. Even in recent years the panther has been common in the Adirondacks, and Dr. Merriam, writing in 1881, states that, as nearly as he can learn, about 100 panthers were killed in the Adirondacks between 1860 and that date. So also in Florida the panther was once abundant, but is now much less common than in former years. In the Rocky Mountain region, and on the Pacific slope, this species is still abundant in many localities. It seems to be more common to the north than to the south, and is more often heard of and seen in Montana, Idaho, Oregon and Washington than in Arizona and New Mexico. Even where most plenty it is not often seen, for it is a solitary animal, and from its quiet, stealthy habits is much more likely to see the hunter than it is to be seen by him. We have been told, however, by a man of unquestioned veracity, that once in winter he came upon five of these great animals, as he thought a family, the parents and three full-grown young. This is the greatest number that we have ever heard of as seen together.

The food of the panther consists mainly of large animals. In the West they kill a good many calves and colts on the range, and sometimes make a foray on a herd of sheep. We have heard of a case where a panther sprung on a mule, which at once threw itself on the ground and rolled its assailant off, and then springing to its feet attacked it with his heels and killed it.

In some parts of the mountains they are said to kill a great many of the white goats, which live in situations where they can be easily approached. No doubt, too, they kill many elk, mostly calves, though now and then they are known to attack and kill a full grown cow. In the Eastern and Southern States deer constitute a large part of the panther's food, while in Texas and the Southwest it preys on the peccary and in the tropics on the capybara, monkeys and the larger rodents. Further south the alpaca, vicuña and other large mammals fall a victim to its quiet approach.

It captures its prey by stealth, much as a cat does a robin, creeping quietly within springing distance, and then making one or two swift bounds. If the deer is alarmed and starts to run before the panther reaches it, the latter rarely pursues it, but gives up the chase and looks for another victim. In the Northern forests panthers often eat porcupines and specimens are not infrequently killed with quills in their forelegs, lips and jaws.

The leaping power of the panther is very great. Bounds of twenty feet are not uncommon. Dr. Merriam assures us that E. L. Sheppard, an Adirondack guide, has measured a leap over snow which measured 40ft., and another of 60ft., where the panther sprang from a ledge of rock about 20ft. higher than the ground where the deer was standing.

It is said that in winter, if a panther finds a deer yard, he will stay around it all winter feeding on the animals which live in it. In time of deep snows also, we are told that it will systematically pursue the deer, and that it then has no difficulty in overtaking them, as it can go on the snow much more easily than can a deer.

When the panther kills his game he endeavors to drag it away to some place of concealment where he can devour it at his leisure. When his appetite is satisfied he often attempts to hide the carcass, and heaps over it grass, leaves and brush, sometimes making a very neat *cache*. He returns to the carcass from time to time until most of the meat is consumed.

In the East and South the most usual method of hunting the panther is by means of dogs, which are easily taught to follow the track. The beast flies from the hounds, and when hard pressed climbs a tree, where the hunters find it and shoot it. It is said that in such situations it pays little attention to the hunters as they come up, but watches the dogs very intently. It is then an easy matter to shoot it. In the West, except, perhaps, on the Pacific coast, the panther is not hunted, though if come upon by accident it is of course killed. In the South the dogs are usually followed on horseback, but in the Adirondacks, where the hunting is done in winter, the tracks are followed by the hunters on snowshoes. The panther is a great wanderer, and sometimes it is not come up with for a week or ten days after the track has been taken.

The period of gestation of the panther is given as 95 days, and the young are born in the late winter or early spring, and number from two to four. They are blind at birth and at first are spotted.

It is greatly to be desired that more precise information should be had of the present range of the panther in the United States and Canada, and it is hoped that all who read this issue of FOREST AND STREAM will take the trouble to write out any notes that they may have on the range and comparative abundance of the species in the various localities. Such notes, which need not be long, but should be very clear and explicit so far as they go, may be addressed to the Natural History Editor, FOREST AND STREAM, and should be signed with the full name and address of the writer.

### The Panther's Ways.

A RECENT article in FOREST AND STREAM describes the habits of the cougar or panther as seen in the forests of northern New York, and I venture to add something further as to the peculiarities of this animal. From 1824 to 1849 my home was in one of the sparsely settled valleys of that region and I had frequent reminders of this beast, not only from hearsay, but from my own observation and that of an immediate neighbor.

The cougar (*Felis concolor*) was there called panther or painter and also catamount. Panther was the terror of the children of that region. The legendary "black beast" of the nursery, the bear, though plentiful enough with us, excited no such terror in our minds as did a suggestion that the painter might catch us. To scream like a painter was understood as the most terrific of all screams. In that comparison the pillars of Hercules were reached. But the boys of that region all became hunters as soon as they could carry a gun, and soon outgrew their fears. The stories of the ferocity and monstrous leaps of our panther suffered serious diminution under an actual and frequent observation of the beast.

Some of my earliest ideas about this animal came from being shown the carcass of a sheep lying in the crotch of a big birch tree and about 40ft. from the ground. There was snow on the ground, and it was plain to see that same animal had brought it from a well fenced yard just across the road from our house. In the yard one lamb lying a few yards away from the other sheep had had the top of its head knocked off by a blow from an animal which had leaped a long distance to strike the lamb and had done to it no further violence. Several sheep lay dead in the yard and partly eaten. Wolves and cougars had agreed in hunting together; but when it came to the repast the cat-like instinct of the cougar inclined him to take his share into the tree beyond the chance of interference.

Two cougars came one night into the pasture of a farmer, living a mile south of us, and killed five sheep, carrying the bodies a few rods into the woods, and after eating a part, buried the remainder very carefully with a cover of dry leaves and dirt. The farmer's boys set a bear trap and caught the male cougar the first night. My hunting dog had a habit, if I was not going to hunt, of going to this neighbor's to see if he could get his boys to go, and was there that morning in time to go with them to their trap. The dog finding the animal in the trap ran up to it, and got such a blow from its paw as sent him some yards away, and the panther snatched a piece of flesh from the dog's shoulder blade, leaving bare a piece of the bone as large as a half dollar; and in that plight he returned to me. That evening at dusk I was in the road half a mile from our house, where I had been to drive the cows to pasture, when the female mate of the captured cougar, starting apparently from the side of the mountain opposite to me and a quarter of a mile away, walked slowly along toward the place where her mate had been killed, and all the way, at short intervals, giving such terrific screams as I had never heard before, and as most decidedly hurried my pace toward the house, where I found the family standing in the front yard to hear the same alarming screams which had startled me. Part of her notes seemed those of anger and some of intense grief. For half an hour she continued her wailings and then was no more heard from.

Cougars rarely attack men, but are not easily frightened when confronted. Two of my father's log choppers had felled a pine tree at evening, and next morning approached it from the top intending to cut it into logs. On the butt of the tree they saw a large cougar lying, apparently asleep. The men agreed to give it a big scare and see how far it could leap. They ran along the trunk of the tree and gave a joint scream; the animal simply got up and faced them. They retreated, when the beast quietly got off the log and waded off through the snow.

A son of mine, traveling in Arizona, camped one night under some trees. After getting his coffee he lay down on his blanket by the fire. Then a cougar jumped down from the tree beside him and made off before the man could use his gun.

On a farm adjoining my father's was a family having two boys, at that time about eight and ten years of age. Driving their cows to pasture one morning, these boys found, standing under a pine bush beside the road, a female cougar with her half grown kittens. The old one seemed anxious to cross the road, but when she attempted to leave the bush, the boys, with stones, would drive her back. Finally the youngest was left to keep her in place while the elder boy went to the house to get their old single-barrel shotgun. Just as the lad returned with the loaded gun the beast with her family crossed the road in spite of the efforts of the eight year old boy, and the gun was not fired.

I saw a cougar in March leaping through deep snow and carrying in its mouth the head of a deer. I had no gun and it did not seem to notice me, though in open timber and 50yds. away.

When I was fishing on the North Platte River, near its source, the people at a ranch told me of twelve calves recently taken by a cougar from their corral. Two of our party went up the river to fish that day, the first after our arrival. In the first considerable bunch of alders we came to was the calf stealer asleep. He got up on to his haunches, but showed no desire to move further. We had no gun, and trout rods made but poor weapons, especially in the brush, so we retreated. It was too near dusk to admit of going to camp for our rifles and return, and we left him without further molestation.

Cougars, like all the cat species, hate dogs and will generally tree when pursued by a noisy pack of dogs, but sometimes get rid of the annoyance of a dog or two by giving them a taste of their claws. A hound of our neighbor had been sent on to a mountain near by to start a deer. After running the deer a few minutes he quit and came home somewhat crestfallen. This occurred again in the same spot, and one of the boys went with the hound to learn what was the trouble. The dog led him to a high perpendicular cliff, on top of which was a female panther, which the young man shot and wounded badly; and below in the loose rocks was found a nest of

kittens. They could not be got at without more help, and the entrance to the den was closed with a boulder, and no one returned to get them.

The common method of the cougar in killing large game is to creep up to it as near as practicable and then to reach it by a few vigorous leaps. They follow the trail made by a deer in the snow for a long distance to find it lying down, and a quick spring generally secures it. If not, and the chances of success are good, they will pursue for a mile or more.

After a deer gets over the first fright unhurt, if the ground of the race is not in favor of the pursuer, the cougar has all he can do to catch his prey. One very cold New Year's Day, in company with two older boys, I went to a place on the east side of Johnson's Pond, where we expected to find a dozen deer in yard. When we arrived there were no deer in sight, but tracks in the snow showed they had been recently alarmed and had escaped in all directions. We found that a cougar had crept into the yard that morning, and failing to secure one just there had singled out one and pursued it in direction of the pond. We pursued rapidly and found the deer was intending to cross to the west shore on the ice, then so covered with snow as to prevent slipping. It was a race for life with the deer—a fat two-year-old doe, but a good runner. The cougar's tracks ran parallel with those of the deer and two or three yards away. It was about a mile to the opposite shore and the deer cleared as much snow at a leap as did the cougar. But could it endure as long and spring as often as did the pursuer? If the deer could reach the thick cedars of that shore it was safe. When within a dozen yards of land we found the body of the deer, yet warm, with a part of one ham eaten out, and the tracks of the cougar leading from there to the thicket on shore. The deer had fallen dead and no struggle or movement of a leg had occured after it fell on the light snow. We supposed the cougar had struck the deer while in the air and broken its neck. But not so. We skinned and opened the deer. There were no marks of a blow on the neck or injury on the outside except the ham. On the inside some of the tallow had melted and lay in congealed drops. The deer had died of fright and overheat, the only instance of the kind I have ever seen, though I have dressed deer more than once that have been run down by dogs. We planned, in order to kill the cougar, that two should go round to open timber in the rear and I, as the youngest of the party, should, after a proper time, go into the cedars and drive the beast out. But it was too cold waiting on the ice and I went in too soon, and none of us got a shot.

I have found the cougar more plentiful in the mountains of southern California, Arizona and New Mexico than elsewhere. They not only do mischief among the sheep and calves, but show a great liking for colts and sometimes attack the jacks of pack trains, when tired at night, they are turned out to browse among the hills. Sometimes the jack beats off the cougar even after the poor pack animal has had his neck cut in a fearful manner.

The Apache Indians kill a great many cougars. Many of their arrow cases are made from the skin of this animal.

In the North and perhaps elsewhere they subsist partly on rabbits and porcupines. They devour porcupines as a cat eats a rat, beginning at the head and rolling over the skin as they go, until there remains only a skin turned wrong side out.

A cougar climbs a tree when frightened, by first striking the trunk of a tree as high from the ground as it can conveniently jump, then ascending until at the first strong limb running out nearly horizontally, it stretches itself out and waits its pursuer, or takes a sleep if it is not pursued. While often found on perches of this kind, I doubt if it springs upon its prey from such a position.

They have their young generally in some hole among rocks, where the mother cares for her kittens until about half-grown, when she travels with them and they begin to hunt for themselves. In one instance the nest was found in a thicket at the bottom of a steep ravine. The hunter shot the old one and his dog ran in and held one of the kittens until the hunter came, and found it too strong to be manageable, and so dispatched it with his knife.

When the hunter approaches a tree where the cougar has found his favorite perch on a limb, the animal lashes his sides with his tail and shows signs of an immediate intention to jump, but very rarely does he do so, even when wounded quite severely. In a case occurring recently, when a very large one which had killed many domestic animals in the neighborhood and finally killed a two-year-old steer, a young man treed it with his dogs and began shooting at it with his revolver. He wounded the beast several times. His ninth bullet found the life and it fell dead from the tree.

In the Northern States the cougar mates in the month of March. In other localities it may not be so.

So far as my observation extends the cougar has all the instincts of the domestic cat. Sly and cunning, the man who succeeds in still-hunting one and getting it is lucky as well as skillful. And I might appeal to the experience of any hunter who has pursued one for half a day in a large cedar swamp to bear me out in saying he has found himself hunted by the cougar more than half the time.

In the West the animal is known as mountain lion. Some differences are noticed between the Eastern and Western species. It should be so. The climate is different. The conditions and necessities of life are different. It is so with the Virginia deer, and with cattle and horses of the same breed on their removal across the continent. That the cougar should not in appearance be just the same as found on the almost bare hills of our Territories or the high grassy plains of South America as in the dark heavy forests of the Adirondacks and the North seems to me only perfectly natural. G. H. W.

IDAHO.

### New York Grouse and Woodcock.

WHITEHALL, N. Y., Aug. 18.—I find partridges very plenty this season, but on account of too much rain woodcock are scattered and hard to find. With a friend I bagged four partridges and three woodcock the 15th. I always enjoy a day's sport with any true sportsman who is a good wing shot and not careless with a gun.

### STILL-HUNTING WITH A CAMERA.

Mr. GEO. SHIRAS, 3d, of Pittsburgh, Pa., sends us some capital specimens of work done with the camera on wild game—deer and grouse—and writes:

PITTSBURGH, Pa., Aug. 13.—"It is with the sense of considerable satisfaction that I have noted the FOREST AND STREAM'S advocacy of the new field open to sportsmen by the use of the camera in photographing live game.

"As one of the pioneers in this new sport, is is a pleasure to welcome all new comers, which, to some extent, self-protection has prevented the devotees of the rod and gun from doing in the past. The close season has terrors no longer for the camera hunter, but, on the contrary, affords the best opportunities for successful snap shots with his new and noiseless weapon.

"Six years ago I began still-hunting the red or Virginia deer, with one of the so-called detective cameras, only to find that the experience gained in that period has been largely offset by the advance in photographic apparatus, so that at the present time the beginner can start on almost even terms with the few who may have preceded him in this branch of sport. Next season I hope to use with greater advantage the new methods for instantaneous work.

"My collection now consists of 32 pictures of deer, taken at distances ranging from 15 to 100ft. As a reminder of the many efforts, I have in addition about 100 plates,

DOE.

From a photograph by Mr. George Shiras, 3d.

(Forest and Stream Amateur Photography Competition.)

The photograph was taken July 1, 1892, 1 P. M. Camera just high enough to clear the grass, upon which the deer's eyes are riveted when taken. Distance 18 to 20ft. Note the odd effect the shadows from the ears give to throat and chest.

wherein deer can be faintly seen, the failure arising from innumerable causes, such as under exposure, improper focus, shadows, intervening brush, faulty shutters, "buck fever," and the like. The inclosed unmounted prints were all taken last month and are a fair average of past hunts. With one exception they were taken from the bow of a canoe, where the instrument rested upon a movable support, shoulder high and capable of being swung noiselessly at all angles, much after the manner of a swivel gun. The canoe was used on a small stream and along the shores of a grassy lake, the paddler obeying the signals of the camerist as to the proper maneuvering when the critical time arrived for "pressing the button." It is unnecessary to add that both parties, in such cases, must be experienced hunters of large game, or the opportunity of getting within 30ft. of deer would seldom occur. But that it can be successfully accomplished, and that frequently where game abounds near water courses, is well known, the only difficulty being that the actinic power of the sun requires the instantaneous exposure to be made between the hours of 9 and 4 on bright days, the interval in which wild game usually seeks the seclusion of the swamps or dense timber.

"On one warm night in June last year I tried the magnesium flash light upon seven different deer, the approach being made by the jack light and canoe, and in no instance was the picture satisfactory, although the deer in some cases were not over twenty feet away and seemed but little disturbed by the flash. This year the moon was full on my brief visit to Lake Superior, and I made no effort to try night hunting with the camera. I have a number of plates capable of indefinite enlargement, and if of interest to your readers the same are at your service.

"While the instantaneous pictures of large game must necessarily be confined to a limited number of very patient sportsmen, yet the photographing of large game after killed affords an invaluable souvenir in subsequent years. Then, too, the varied opportunities in camp make such an instrument the winner over both rod and gun, after the flesh pot has been put away and recollections and reminiscences must recall and recount the days gone by.

"The pictures of ruffed grouse were taken incidentally while deer hunting, and are not fair specimens of what could be done by any one making the proper offort.

"I am convinced your paper will be pleased and also the public by the new methods of illustration now afforded by the photographic processes. The day of wood cuts seems to have departed, and in their place is a substitute equalling the steel engraving in artistic effect and surpassing it infinitely in realism."

### ELOKOMON ELK.

*Editor Forest and Stream:*

The article: "Trouting on the Elokomon," in your issue of May 19, attracted to that country two genuine sportsmen from the far East. Soon after its publication your correspondent received numerous letters of inquiry from that prince of sportsmen, Dr. S. T. Davis, of Lancaster, president of the State Board of Health of Pennsylvania. The earnestness with which the Doctor went about the investigation, his close and careful inquiries regarding the character of the country, its accessibility, guides, supplies, etc., created some misgivings in the breast of him whom the Doctor had seen fit to place on his inquisitorial rack, and as the Doctor has remarked, he observed a manifest disposition to "hedge" in your correspondent. But the impetuous Doctor, in his eagerness to investigate the secrets about the headwaters of the Elokomon, was not disposed to listen to any suggestions about better or more accessible hunting grounds, and so, on Aug. 6 the Doctor and his "pard" Wm. S. Ellis, of Pottstown, Pa., were in Portland, Ore., where they stopped only long enough to pay their respects to their old friend Col. Milton Weidler and their obedient servant, the undersigned, on their way to the Elokomon country.

To-day they returned, and their exuberant praise of the Elokomon country, its game, its forests, its fish and its other agreeable attributes and pleasing rewards for so long a trip is truly gratifying to him who in a great measure is chargeable with their visit to this country. Among their numerous trophies none seems to please them more than the head and antlers of a gigantic seven-pronged elk, killed by Mr. Ellis about Monday, Aug. 21. (The Doctor will, on request, explain the apparent discrepancy between the day of the week and its chronological relation to the August calendar). But truly, it is a remarkable head, one that any sportsman would prize. The beard is black and about a foot long, and the general appearance indicates that Mr. Ellis secured the patriarch of the herd. When the Doctor, in his account of the tragedy, incidentally remarked: "We could easily have killed a dozen or more out of that herd, for the elk stood staring at us, evidently strangers to white man and his little gun, but we had all we wanted and killed no more," my admiration for such a manifestation of true sportsmanship could only find utterance in: "Doctor, that is not the way the natives hunt elk in the Elokomon country." S. H. GREENE.

PORTLAND, Ore., Aug. 27.

### ECONOMIC RICE CULTURE.

REFERRING to Mr. Ernest Thompson's monograph on wild rice and its propagation, recently published in FOREST AND STREAM, I will mention for the benefit of such of your Eastern readers as may not care to send to Wisconsin or Ontario for seed that the Hackensack marshes, close by New York, include many areas and patches of wild rice (locally known as wild oats, I believe), which will soon come to seed, and may now be distinguished by its light green color in contrast with the darker green of the cat-tail flags, among which it grows, in the small creeks and sloughs which border the drier land. Mr. Thompson has done well to refer his readers to the earlier volumes of FOREST AND STREAM for collateral information on the botany and culture of this valuable plant, covering pretty much the entire ground included in his admirable synopsis, Mr. Richard Valentine being then as now one of the foremost authorities on this subject.

Seven years ago, at the New Orleans World's Exposition, I took the pains to illustrate objectively the Indian method of gathering wild rice with canoes, being at that time superintendent of the frontier division of Minnesota exhibits, and it seems to me that a reproduction of the same at the Columbian Chicago Exposition would prove practically useful and interesting. A blanket is laid in the bottom of the canoe to receive the grains of rice which the squaws beat out from the bended stalks with heavy billets of wood. I showed not only this process, but the method of curing, and samples of prepared rice as well, much to the gratification of the mice in the exposition building. Mr. James H. Hallett, Indian trader at White Earth Reservation in Minnesota, can always furnish wild rice in quantity to order, parched or unparched. My opinion is that the feet of his clients are somewhat cleaner than those of most other bands, which is a comfort to know if the grain is to be eaten, for the approved aboriginal method of threshing is to tread out the grain *à la pied*. CHARLES HALLOCK.

### ONTARIO NON-RESIDENT LICENSE.

GAME AND FISH COMMISSION OF ONTARIO.—A. D. Stewart, secretary and chief warden, Court House, Hamilton, Aug. 30.—*Editor Forest and Stream:* By virtue of the amendments to the game acts passed by the Ontario Legislature at its last session, foreign sportsmen are now required to take out a license at a cost of $25 before they can hunt in the Province of Ontario.

The duck season opens this year on Sept. 1, and it may be that many foreign sportsmen who are in the habit of coming annually to shoot in Ontario, have forgotten the license fee to which I have referred.

I would be glad, therefore, if you will, by publishing this letter, or in such other manner as you may think best, draw attention to this fact in your widely read columns, in order that American sportsmen who intend visiting us may make the necessary arrangements and thus spare our wardens the unpleasant task of visiting them with the penalties provided by law.

I think I cannot do better than quote the section in the game act which refers to the above, and which reads as follows:

No person not a resident and domiciled in the provinces of Ontario and Quebec shall be entitled to hunt, take, kill, wound or destroy any moose, elk, reindeer, caribou or other deer, mink, otter, fisher, sable or any other game animal or bird referred to in this act, without having first obtained a license in that behalf; every such license shall be signed by the Chief Fish and Game Warden and countersigned by the Provincial Secretary or his deputy, and shall be in force for one season only, and shall be subject to the provisions of the game laws in force in the Province at the time the said license was granted. The fee to be paid therefor shall be $25 and shall be payable to the Provincial Treasurer to be applied toward the expenses incurred in carrying out the provisions of the game laws.

A. D. STEWART, Chief Warden.

## ON SAN PABLO SLOUGHS.

"JERUSALEM! What was that? Oh, yes. The alarm clock, boys, 3:30 A. M., and time to be up. Tumble out, all of you," and one of us, perhaps more keen for the hunt than the rest, arises, hastily lights the lamp and begins the preparation of breakfast.

There are six of us. We have an ark or house boat moored in one of the many sloughs leading from San Pablo Bay. Once a week in duck season we enthusiasts betake ourselves to the marshes in pursuit of game, and incidentally health and pleasure.

While breakfast is being prepared all but the self-appointed cook are busy getting into their hunting togs —canvas coats, rubber boots, overalls, corduroy caps, etc., from the most aristocratic part of the wardrobe. But when these things are supplemented with old clothes fit for the ragman, such as mud-stained trousers full of rents and innocent of buttons, vests without backs to them, and coats the original color of which is difficult to determine, our appearance is more easily imagined than described.

Ham and eggs, bread and butter and coffee, are hastily stowed under our various jackets, and then begins the general confusion incident to everybody collecting his gun, ammunition, decoys and canteen, and various other articles at the same time.

Finally all things are found, and as there are only three boats we pair off. When this part of the programme is decided comes the stowing of the boats. Decoys, blinds, ammunition, dogs, etc., are stowed away as neatly as possible, and then, as the morning is frosty, there is a good-natured contest for the oars. We have a long and hard row before us, and it is safe to assume that the oarsman will be in a healthy glow ere he reaches his destination. "Are all the other boats ready?" "Yes." We can hardly see the dim outline through the cold morning mist that has settled over the marsh. At last the remaining boats get away, and then begins the long journey to the points or ponds.

How still and dark it sems after we quit the ark and turn the skiff's bow into the main slough. We hug the shore so as to avoid the strength of the tide; and as we silently row along note the wild, weird music of the marsh. Here, as we pass a small gully, comes a faint, gurgling sob, as the receding tide pours through the labyrinth of small openings in the mud. Over there on the left, and ahead of us, we hear the shrill whistle of the widgeon; and now the loud splashing of the water and the sound of a hundred beating wings tells us that a flock of the beauties have spent the night in that sheltered bend we are now passing, and at this moment they are on their swift flight to the open shallow waters of the bay. We are just struggling with the oars past a jutting point, when overhead we hear the rapid but measured beat of a pair of sprigs. This stimulates us to greater exertions, as the birds have begun to fly and we should be at our stations.

X decides to shoot at a point and I shall try a pond today, for I have an idea that when the sun arises the wind will blow and consequently the ducks will seek the smooth water of a pond in preference to the comparatively rough water of the sloughs.

Now we come to the point where X disembarks, and after helping him set out his decoys in an irresistible triangle, I continue alone toward my favorite pond. I have rowed but a quarter of a mile when—bang! bang! goes his hammerless Parker, and as I am sure he has already begun to fill his duck-strap, my oars bend a little more and the hissing ripple at the bow of the skiff shows that she is carrying me to my destination as fast as I can go. Ah! Here I am, in a little slough, scarcely wider than the boat, and filled almost to choking with the long marsh tule. I force and push the narrow skiff through these, and after carefully hiding it amid the long grass I take my gun and other impedimenta and after five minutes' tramp through the wet grass arrive at my pet pond. I scare from it a large flock of teal but refrain from shooting until I have prepared the blind. This is made of woven tule grass and is 6ft. long by 3½ft. high. It is furnished with five or six sharpened sticks for holding it in an upright position when in use. I make my blind in a clump of reeds and arrange it in a semicircle with the growing rushes at my back. This makes a perfect hiding place and is alike secure from the eyes of wildfowl and wildfowler if care has been taken to have its color and form harmonize with its surroundings. The decoys I throw out in a little bunch where I know the water is shallow. I then ensconce myself in my blind and wait for my first shot.

I have not long to wait. Just as the mist toward the east is taking on a paler hue I hear a rushing through the air of wings, and immediately after the splash, splash, of two heavy birds as they drop into the further end of the pond. I must confess that my pulse quickens, that I grip my good old gun a little tighter as I strain my eyes to catch a glimpse of the birds. At last I discover two dark blotches leisurely swimming to my decoys. They are out of killing range, and it seems a very long time before they are near enough to fire at. I will admit that, unlike some mighty nimrods, I did not scare them up so as to get a wing shot with each barrel. No, I took a cool, deliberate and murderous aim, and when their forms got close together I fired and had the satisfaction of seeing one turn on its back, dead, and the other, after a few convulsive kicks, lie still. As the day got lighter I saw that two mallards, male and female, were the unfortunate pair. Then the fun began in earnest. There was a terrific beating of the air overhead and at my back. A large flock was coming toward me. I crouched in my blind. They are directly overhead and not 15yds. high. I look cautiously upward just in time to see the leading birds. Before they can get away I am up and on my feet. They bunch together and climb. Both barrels speak. One, two, three, four, five. Three come down stone dead. Two are wounded severely and will drop in the pond. As the flock passes away I see one linger behind, waver and turning in the fall dead to earth. I slip two cartridges in the gun, and after dispatching the cripples go after the last bird to fall. I have already marked it and am fortunate to find it not ten steps from where I thought it fell. The six birds were all sprigs—four males and two females.

Now, from the left, flying like an arrow of light, comes a single bird. He does not, or will not, notice my decoys. He scuds along with the wind. He has probably been shot at and has not recovered from the scare. Up goes my gun; I fire, but miss. I knew as soon as I pulled the trigger that the bird was safe, it was a bad miss and the first one of the day. But it was a single butterball and a difficult shot. I hope for better luck next time as a teal is just about to light in the decoys; I let go the left barrel, as the bird is far away, and have the satisfaction of seeing the shot tell.

Flocks and singles then pass. Some hover over the decoys and get raked from stem to stern. Some are so far away that the stinging shot accelerates their speed. Some light in the pond and never rise again.

I have had splendid luck and, as the flight is nearly over, think of returning to my friend. Now comes the delightful pastime of collecting decoys from a bottomless pond, for the ooze in my pet pond will not sustain anyone. I know this to be a fact and have already sufficiently demonstrated it. I finally embark again and join X. He has been more successful than I. He exhibits nine canvasbacks, eight widgeon, three teal and a dozen or more sprig and spoonbills. My bag was the lighter, but the enjoyment I felt was equally as keen as his.

We arrive at the ark and find a splendid dinner awaiting us. The other boys have been successful in various degrees. One has fourteen English snipe and three brant. He has been in a marshy field, a place undergoing the process of reclamation and full of pools of rain water.

Our dinner being dispatched we get into our city rigs, and taking the train for San Francisco arrive there at dusk. Tired and sleepy, we at last get home. But are we not repaid a thousand fold for the fatigue incurred, as we look back with pleasure to that splendid right and left we made, to the spoonbill killed dead in the air at 70yds. with our 12-bore, and indeed to the rank miss we made at Mr. Butterball.

How we dislike to see the gorgeous feathers of the mallard drake ruthlessly plucked out by the vandal hand of the hired girl, the plumage that we stroked so smooth when the bird fell to our gun. But he who wants roast duck must overlook a trifle like that.

We hope to have just such a day again and again. We may also be as successful next time; but whether we get as many birds or not, if we can only again experience that keen excitement born of the lore of the chase we will repeat again that life is worth living, and that he who sees naught but foolishness or lust of blood-letting in the shooting of wild fowl is one of the most abjectly miserable and pitiable specimens of mankind on the earth.

SAN FRANCISCO. JOHNNY SPRIG.

## AN ADIRONDACK TABLE-LAND.

SOMETIMES I get hold of a copy of your paper—may be it is in winter, and again it may be a summer number, but it is always filled with articles interesting to me. The fisherman, dog fancier, dog trainer, sportsman, traveler, trap or wild-bird shooter, or canoeist, each and all can find their especial hobby handled by one of their own mind. Now you who go a thousand miles to gratify your desires, let me tell you where I live and all about it, and see if you don't envy me a little. We are on a table-land in the Adirondack Mountains, that slopes northward toward the St. Lawrence River on the north and eastward to Lake Champlain, while peak after peak rises to the south and west of us until the blue sky only is seen. On clear mornings can be seen the beautiful Lake Champlain, dotted with islands, and over and beyond it the Green Mountains of Vermont, while to the north a white strip is the ever flowing St. Lawrence River and the glittering spires of Montreal, seventy miles away. When the wind is blowing right, to the northeast of us can be heard the shrill whistle from the busy locomotives of the Ogdensburg and Lake Champlain Railroad, and a streak of smoke indicates its route as far as Summit, when it passes over the divide and goes down hill to Ogdensburg and "all points west." To the southwest of us comes the same signal from the Chateaugay R. R.

The summer has nearly gone. Haying is late, and the other day while I was roaming near the wilderness that reaches south half way to your city several flocks of partridges sprung out of the grass and under the call of their mother hid in the thick woods. Dr. Morris's article struck me just right. What royal sport it is to bring them to bag! In the edge of the pasture timid deer come to lick the salt with the cows undisturbed. Let them live. To Mr. Pond we will say that out of season, at the hotels up further in the woods, "Adirondack mutton" is venison killed out of season. Here is a huckleberry rock, the bushes now loaded with berries; and there a roaring stream tumbles along from 'way up in the woods, and many a trout has been lured to his doom between here and the lake, four miles away. The old rotten stumps show that bruin has been hunting for a sour morsel that hides in them—pismires.

Speaking of bears, my friend Mike had a "scrap" with one last winter. He was out looking for them when his dog discovered a den with two in it. The dog drove them out, and one, a cub, ran away, while the old one made for Mike. Mike gave her his one load right in the head and put out one eye, but it made no difference with her. She kept advancing and Mike retreating. Finally he saw a handspike or lever used in rolling logs (for the scene of the struggle was where lumbering had been carried on the winter before), dropped his gun and picked up the lever. With that he proceeded to pound bruin over the head. He broke her front leg and finally caused her to back up. She kept backing till she fell off the ledge down about 10ft. Mike's dog jumped down on her and kept her engaged until he reloaded his gun, when he finished her. Mike said he was not afraid, but he has not been out alone since, and not then with a one-barreled gun.

When the frost drives the leaves to earth the partridges will be out in the clearings or on the edge of the woods. My experience is that in a country where foxes are as plentiful as they are here, partridges seek the depths of the deep woods, and only come out when the leaves are falling in the autumn. I have seen them at such seasons where they are never found at other times.

Now, my friends, what do you think of it? Deer, bear, foxes, wild strawberries, trout, huckleberries, partridges, wild ducks and hard work. If any of you want a gallon or two of pure bear's oil to grease your fine guns, Mike has it and he lives only four miles from me.

ADIRONDACK.

*The* BOOK OF THE GAME LAWS *has all fish and game laws of the United States and Canada. Price* 50 *cents.*

## CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

CHICAGO, Ill,, Sept. 3.—At this date nothing appears to contradict the earlier belief that shooting on prairie chickens and also at wildfowl in the Dakotas and Minnesota will be unusually good this fall. News begins to come in from parties who have been out, and thus far results have been good. The bulk of the news comes from North Dakota and northern Minnesota, and while South Dakota and lower Minnesota may be very good, I am sending most of my inquirers further north, where assurance is doubly sure.

Yesterday I telegraphed Mr. B. Waters, of FOREST AND STREAM, now judging the field trials at Morris, Manitoba, inquiring as to the chicken supply in the sections adjacent to Morris, which latter point is not far above the Minnesota line. To-day I received reply, "Chickens very abundant in Dakota near the boundary line." This confirms to the point of absolute safety the advice given last week to go up along the Great Northern road almost to the boundary line.

Mr. C. H. Warring, of Amsterdam, N. Y., arrived in Chicago this week, bound west on a chicken hunt. He was headed for Clarion, in Wright county, Iowa, but after some talk over the situation he concluded to go directly up to Morris, Manitoba, have a look at the trials, buy a good chicken dog there if he could, and then start in with his hunt this side of the line, either in Dakota or Minnesota. He left here cheerfully last Thursday, with some Eddie Bingham hand-loaded shells and a lovely pair of long striped socks, which he discovered over at Montgomery Ward & Co.'s. Mr. Warring has never seen a prairie chicken, but this does not give the bird any the advantage of him, for no prairie chicken has ever seen him. He has a very pleasant experience ahead of him, and, as he does not intend to return until October, his trip should be one of great interest in many ways, the more so as he should meet good duck shooting also.

Mr. Ray Tompkins, of Elmira, N. Y., writes inquiring if my game pocket man has moved away. "I was going up to see him," says Mr. Tompkins, "but if he has moved I will go where I was last year—Lakota, N. D. If you can write me whether or not he has gone, I will make arrangements immediately."

The game pocket man did not take the game with him. At Lakota, however, shooting can be found, though probably long rides will be necessary. Lakota is one of the points mentioned earlier in these columns as desirable.

Mr. W. Wilmot, of Chicago, is back from a very successful chicken and sharptail hunt near Larimore, N. D. He bagged nearly 200 birds, and reports ducks also in considerable numbers in the sloughs and pond holes. He found his shooting by going out from five to twenty-five miles from Larimore. He speaks very highly of the sport. Larimore, it will be remembered, was mentioned some weeks ago as a good place to go for chickens.

Messrs. Reuben Donnelly and Wallace De Wolf, of this city, start this evening for Lake Park, Minnesota, on the N. P. R. R., for a two weeks' trip after chickens, snipe and ducks. Last year they had very fair luck here, and this year should do better. If the ground does not suit them they will go up into the extreme northern part of the State. Mr. Alex Loyd, who was of this party last year and for years before, will not be with them this year.

Mr. Donnelly to-day was telling me of the dog he is taking with him on his shooting trip. "She is a tough creature," said he incidentally, "and has lots of nerve. I ran the wagon over her by accident not long ago, and she never whimpered."

This is in unconscious verification of my statement of last week, that a good chicken dog ought not to mind being run over with a wagon. I do not doubt that Mr. Donnelly has a good dog, and I am glad that he comes unasked to the support of my assertion. After that, I can read with perfect equanimity the following comment on this same point, which I have received to-day from Mr. O. H. Hampton, a well-known contributor to FOREST AND STREAM. Mr. Hampton says:

"About those chicken dogs of yours that enjoyed being run over with the wagon; don't you think it just possible that people who don't know much about dogs of those old days might doubt your statements? There are people in the world who have never seen a dog run over by a wagon. I don't doubt your statements in the least, for I had one of the dogs of that kind once. He didn't get run over by the wagon, but one December day he went out on the ice on the 'inlet' after a duck, and just after he got the duck the ice broke and the current carried him under and swept him down under the solid ice that covered the lake. Next April that ice broke during a strong gale. I happened to be on the bank watching for a shot at golden-eyes, when I saw something that surprised me. That same dog came swimming to me. I was not surprised at that, but I was surprised to see that he still had that duck in his mouth. After witnessing the above incident I can, of course, readily believe all you say about it not hurting dogs to be run over, but you ought to remember that everybody has not had opportunities to witness such things, and besides that you ought to remember that your reputation for undoubted veracity is not so well established in the minds of all people as it is in my own. Mind now, I'm not going to doubt any statement you may ever make about dogs, for I know 'em. I had a dog once that pointed a door plate for an hour, and when I went to see what was the matter with the dog I found that the name on the door plate was 'Partridge,' see?"

I am not going to doubt Mr. Hampton's story about his dog pointing the door plate, for I have heard of another man or two who owned the same dog—sort of a chestnut-colored dog, it was. As to keeping either a duck or a dog on ice all winter, I cannot see anything remarkable in that at all, although I will say that one of these modern dogs would probably have taken cold. I am glad to see the old time chicken dog easily sustaining its reputation. I used to have a dog that took to drink and never went to church. He was an awful tough dog.

A LITTLE ILLICIT.

The American Express Co. has, on request of Mr. Organ, issued a circular to all its agents stating that in any case of prosecution of the company as carrier of illicit game, the costs of the suit will be charged up to the agent accepting the consignment. This certainly should make the local agents careful. Yet in spite of this, last Friday the company notified President Organ that it had

a box of chickens consigned to Begley Bros., of South Water street. Investigation showed that the birds were packed in an egg-case. After taking legal advice Mr. Organ permitted the delivery of the birds, and the next day asked the firm what they had done with their prairie chickens. They disclaimed all idea of ever having any prairie chickens. They wouldn't think of such a thing. The fact of the little surprise being explained to them they weakened, and said they had given those birds away. Mr. Organ told them to get them and send them back to their consignor, J. H. Culp, of Lees, Ind. At last accounts the birds were handed back to the express company. No suit has been brought: rather a case of misplaced mercy it would seem.

I am told that my earlier expression, "the poor but honest South Water street man," has caused offense on the street in question. I am so sorry. If necessary, I can withdraw the terms.

A DIVINE'S THREE DEER.

The Chicago *Tribune* of this morning, Sept. 3, prints the following, which may or may not be correct:

"After two months of visiting and rest, the greater part of which was spent in the woods in northern Wisconsin, the Rev. Dr. W. Thomas, pastor of the People's church, has returned to the city. He reports splendid fishing and hunting, killing three fine deer."

Dr. Thomas is one of the best known divines of Chicago, perhaps the most popular. If he killed three deer in Wisconsin, he violated the law, which permits the killing of deer only between Nov. 1 and Dec. 1. I cannot think Dr. Thomas would intentially break this State law, even though he broke the sportsman's law of not killing a deer in the red coat. I have sent Dr. Thomas a copy of the *Book of the Game Laws*, in the earnest hope that he may find somewhat of benefit in its pages. We have to do a little missionary work in our business once in a while. I have also asked him for a statement on this matter, which I hope will come in the form of a denial. It is evident some one has blundered. A great many ministers of the gospel read FOREST AND STREAM. No man or minister was ever hurt by reading it, and I can see how upon occasion any man or minister might be helped by it. I am moved to add to the *Book of the Game Laws* several copies of FOREST AND STREAM, not for business reasons, but in the way of doing a good work.

OPENING DAY ON DUCKS.

Owing to the discouraging reports which came down from Horicon marsh just before the 1st, the party who went up for opening day was not so large by half as was expected. The reports proved ill founded, for the shooting was very good. Mr. Percy Stone again made top bag, his total being 40, of which 18 were mallards, 18 teal, 2 redheads and 2 pintails. The other bags were L. M. Hamline 29, C. B. Dicks 28, C. L. Hunter 18, Dr. H. C. Buechner 15, Col. C. E. Felton 8, J. Hale 4. Col. Felton took out two pushers with him, and went into the West Bay, where Mr. Stone and myself shot last year. He started to move out, but got tangled up in the many channels, and Messrs. Hamline and Dicks claim that they heard his signals and rescued him from his perilous position at 8 o'clock in the evening, after he had been lost all day. I have not yet heard Col. Felton's story of it. As usual, many birds were killed—not bagged. Messrs. Hunter and Dicks were especially unfortunate in this respect. The total for 7 shooters was 152 ducks, an average of 22 birds per gun. There are many young birds still in the grass, and numbers of snipe, though shooting at these will not be good until the flats are burned off. At the "upper club" marsh there were more shooters out, but no word is in from there yet.

Mr. Henry Ehlers yesterday, the second day of the season, killed on the Kankakee River above Diana Club, 52 ducks, mostly young woodducks. This was done in a run up the river of several miles.

The most remarkable bag of opening day, however, at least so far as known, was made by Mr. Mussey at Mak-saw-ba Club, where he has been putting in considerable time of late. Mr. Mussey made a night trip to Bogart's house, above the club house, got an early breakfast, and by 9 o'clock in the morning had in his boat 31 ducks, mostly wood ducks. He then put up his rod and went to fishing, and caught 12 bass, 5 of them smallmouths. Going down the river in the evening he killed 2 woodcock, and sailed into camp with a card up, "This is my Busy Day."

Mr. Organ, at the same club, got only 2 ducks and 2 bass, but didn't work very hard for either. Mr. Kinney bagged 2 ducks and 8 frogs. Mr. John Watson and Mr. Jack Wiggins bagged one duck, together, I am told. Mr. R. S. Cox and his friend Mr. Dole bagged 14 wood ducks and mallards, losing many that fell in a spotter-dock pond.

No word has come up from Hennepin Club, on the Illinois River, of any shooting on opening day, but ten days ago there was a very good and very early flight of teal in there, and some local bred ducks were moving. So says the veteran W. W. McFarland.

NORTHWESTERN DUCKS.

A letter to the shooter and author, Mr. W. B. Leffingwell, of Clinton, Iowa, from S. B. Carpenter, of Island Lake, N. D., says that canvasback, redhead, mallard, pintail and teal are abundant in the extreme at that point, and also that there are numbers of geese. The only advice given is to bring plenty of shells. Mr. Leffingwell is going, and he will take plenty of shells.

Mr. H. R. Summers, of Philadelphia, writes me in regard to a locality for a fall trip:

"I take pleasure in saying I have been a reader of the FOREST AND STREAM for many years. The issue of March 10 contains a copy of a letter from a settler living in a game country who would like to have some of the sportsmen come and stop with him. The question is arising in my mind where to go this fall to have a good time hunting, camping out, etc., which always improves my health. I have two places in view, one in Washington, one in Colorado. The chances are this season I will have to go by myself, and after reading over the letter I thought perhaps this might be a better place for me this season than the ones I have in view. What struck me very favorably was that they have a good garden, plenty of vegetables, milk, butter, etc. With settlers and stock raisers such things are generally minus. I am temperate, do not drink or get drunk at home, abroad or any other place. I inclose recommendation of Kennedy & Curtis, of this city."

This running an intelligence office is going to get me into plenty of trouble yet. I see Mr. Summers takes my remarks about the qualifications for that immortal game pocket *au grand serieux*. At any rate I very gladly told him all I knew. Still reasoning that, being naturally temperate, he could easily learn to do without vegetables, I advised him with a leaning toward Colorado or Washington. To my mind there is nothing so delightful as a trip among the mountains, and some of the very best of our remaining game country certainly must lie in the far Northwest, and where a visitor could get at it in four or five weeks.

Still another man wants a vacation; this time Mr. J. C. McDonald, of Chicago, who says:

"As an oldtime subscriber and occasional contributor to FOREST AND STREAM I take this liberty. In late September or early October I wish to spend about ten days, shooting and fishing. Would be satisfied with a few ducks, jacksnipe and a ruffed grouse or two. Quail, I suppose, would be out of the question in the localities that I have in mind, southern Wisconsin. A dozen or two black bass might be added to the above. Since 1885, with one or two exceptions, I have hunted and fished in the Grass Lake and Lake Marie sections, and you know how the shooting has fallen off in that neighborhood and how the summer resorter has come in. We wish a change and yet do not want to go far away. I have wondered if we could not get some sport in the Mukwanago section that you have written about. My wife usually accompanies me on my trips. We would prefer life at a farmhouse to tenting on the cold, damp ground. If you can help us out you will greatly oblige."

Mr. McDonald can find squirrels, rabbits and possibly a ruffed grouse or so, in the woods about Mukwanago. At the time of his visit he would be likely to find very good duck shooting on the "Mill Pond" and on Eagle Lake. At Potter's Lake, or the other waters mentioned in earlier issues descriptive of that locality, he should get good bass fishing, or at least the poorer sport of catching pickerel on the spoon. It is hard to get into a farmhouse, but there are several local hotels. Mr. Eugene Chafin, at the head of Phantom Lake, will rent him a tent or fix him up in the new kitchen building on the lake shore. That would be the best way to do. It is no good to go boarding when you go sporting. The cookery of the camp has a flavor of its own which money will not buy—not at a farmhouse mostly, anyhow.

The big sporting paper which helps people to pleasant and successful vacations is doing good in the world. I do not know of any paper which undertakes this, excepting FOREST AND STREAM, and the advice of most of them would be a shaky sort to follow. The FOREST AND STREAM "tips" are at least careful, and worth looking into, though disappointment may follow any advice, for any one of a dozen reasons. For my own part, I enjoy doing what little I can do in this line, and I should regret very much to be the cause of a spoiled trip or a wasted vacation.

DEER COUNTRY.

While on the Brulé River, above Stager, North Peninsula (on C. & N. W. Railway) last week, we saw a great deal of deer signs, found one runway, one watering-place and two licks. At Kearney's Spur, above Stager, there is a deer lick not 10ft. from the railroad track. Four deer had been at the lick the morning we left. A barrel of brine, poured here two years ago, made this lick accidentally. The deer have scooped out the earth a foot or two in depth. I should think it would be a simple matter to get a deer in that country in season. The natives through there have been shooting them all summer, chiefly by means of headlights at night. There are 10 deer killed out of season to one killed in season in Michigan and Wisconsin. Deer are unusually plentiful this fall. Perhaps this is due to the fact that last year the flies were not very bad, and so did not drive the deer into the lakes, where the summer butchers could get at them. Comparatively few deer are stalked in our north pine country. E. HOUGH.

## CURRITUCK BAY BIRDS.

NORFOLK, Va., Aug. 31.—I promised a few days ago to give you an account of our annual trip to Currituck for bay birds, and while the shooting has always been good, if possible, I think, we enjoyed this our third annual trip on the steam yacht Comfort more than any before. The weather was fairly cool and there were no mosquitoes. The nights were delightful and we slept the sleep of the just. The Comfort is a beautifully equipped steam yacht—110ft. in length.

We anchored about five miles from our shooting grounds, on Sunday afternoon at 5 o'clock. Having breakfast at 4:30 Monday morning, Aug. 29, we stepped on board the Ease, a new yacht 56ft. long, which runs fifteen miles an hour. In less than one hour we were on our shooting grounds. We shot two in a blind, and the result of the first day's shoot was as follows: Messrs. T. J. Hayward (Baltimore), with Captain Dorry, were high boat, having bagged 278 graybacks (dowitchers), yellow legs and plover. Messrs. H. P. Lucas (Baltimore) and W. S. Kimball (Rochester, N. Y.) had the next best score and counted in the wagon 217. Messrs. W. A. Marburg and E. L. Bartlett (Baltimore) shot 126. Messrs. Walter Johnson (New York) and C. Ridgley Goodwin (Baltimore) are good fishermen, and the latter can kill more canvasbacks at the Maryland Club in one day than any man who is a member of that institution. They killed 75. E. L. Bartlett, Jr., and T. Bert Hayward (Baltimore) brought in a bag of 113. J. B. White (Norfolk), who had the best blind, being located where the dowitchers fed, bagged 214. This was a total from 7 o'clock in the morning to noon of 1,022.

Our spirits were willing but flesh weak. So we only shot about two hours yesterday morning. E. L. Bartlett, Jr., and J. B. White were high boat, having bagged 106, total for the morning 360. Grand total for the two mornings' shooting 1,382.

Our birds are all frozen (in perfect condition), and we are now on our way to home and friends' who will be glad to greet us. Of all our experience during the past ten years, we consider these trips the most enjoyable, in fact there is no such sport to be had in America to-day as our bay bird shooting at Currituck. YELLOWMEG.

### Minnesota Prairie Chickens.

THE Hallock (Minn.) *Enterprise* states that ducks and prairie chickens are very abundant in Kittson county this season.

### Black Game in Newfoundland.

HARBOR GRACE, Newfoundland, Aug. 25.—Replying to your inquiry, "If black game introduced some years ago has bred successfully and now furnishes shooting," I am sorry to say that so far as we know the experiment has proved a failure. They have rarely been reported and are not found in the haunts of the willow grouse; only two that I have heard of have been killed by persons in ignorance of what birds they were. Their natural habitat in Scotland and Norway is among thick woods, something like the haunts of your ruffed grouse, and even should they breed successfully they will never be the game bird that our willow grouse is; the latter is found in open barrens and low scrub, lies well to a dog and furnishes noble sport. Should black game become plentiful (now the special section protecting them has expired) they would be protected by Sec. 1 of the act of 1889 under the words "other grouse," as they are of the class with willow grouse, and could not be killed before Sept. 15 nor after Jan. 15. T. R. B.

### A Big Bull.

AT THE shop of Fred Sauter, the North William street taxidermist, we have recently examined the head of an unusually large buffalo bull. The animal, which, judging from the condition of the skin, was killed not very long ago, was evidently taken in winter and was just about in its prime. The horns are still sharp, but have begun to splinter a little at the sides. That the bull is an unusually large one is shown by the following measurements taken by the FOREST AND STREAM: Distance between tips of horns, measured from the inside, 28¼in.; circumference of horn at base, 14¼in.; length of horn, measured along outside curve from base to tip, 23in. The wide spread and great length of the horns is an unusual feature of this extremely fine head. This specimen is reported to have come from Montana, but details with regard to its capture are lacking.

### Kansas Shooting Outlook.

OTTAWA, Kan., Aug. 2.—The prospects for shooting in Kansas are very good this fall. I have lately returned from a trip West and saw considerable game, especially in the vicinity of Great Bend. Quail, plover and jack rabbits are numerous all over the State, but prairie chicken are very scarce. A friend writing from Woodson county says they are fairly numerous there. F. B.

### Nottaway County.

JENNING'S ORDINARY, Nottaway County, Va., Aug. 31.—We have had a very hot summer as well as an exceedingly dry one, though a dry summer means good on birds. Deer are very plentiful indeed, and they are getting more so every season. I was out after deer Aug. 29; killed a fine doe and a large size fawn; the doe weighed 120lbs. (gross). S. B.

### Illinois Prairie Chicken.

CHICKEN shooting commenced here Aug. 15, or before, in spite of the law and the fact that the birds were too small to shoot. When the law is out there will be but few birds for the law-abiding shooter. Quail shooting will be good as there are more birds than for years. EN AMI.

**Have You Got $3,000?**

I want a partner to invest the above sum in a sportsman's resort that will pay $5 000 every year net. Finest fishing and hunting in America. For particulars address D. A. PORTER, The Albert, Denver, Colorado.—*Adv.*

# Sea and River Fishing.

## SUSQUEHANNA BASS SCORES.

DURING the first ten days of August the bass fishing on the Susquehanna from Port Deposit to Harrisburg was fairly good. About Aug. 1 fishing along the river between Columbia and Port Deposit was very successful. Ferd Demuth and J. L. Porter caught 44 fine bass at Fites Eddy in one day and a half. Capt. Doble took 38 at the same place in two days. On Aug. 11 Mr. Porter caught 11 bass in the Conestoga. Early in the month the Tuquan Club, of Lancaster, spent a few days at York Furnace and made some tolerably fair catches. One day Johnnie Baumgardner had the misfortune to lose a fine leader and his hooks. The fish doing the mischief gave such a violent struggle to free himself that Johnnie declared to the rest of the boys that he had hooked the "daddy of them all," if he hadn't succeeded in landing him. The actions of the monster were carefully explained and ample reason given why the fish got away. So far all right, but in the very same place that afternoon Mr. H. C. Demuth concluded to try for Johnnie's "biggest bass in the river," and secured it, leader and all. It weighed just ¾lb., and Johnnie's heart slumped to his boots.

Aug. 11 Messrs. Augustus and Cliff Hipple caught 11 bass, which run very nice as to size, averaging about 1¼lbs. This was at Bainbridge. From the 11th to the 20th of the month there was no bass fishing owing to rains up stream, which made the water high and roily. On the 20th the fish commenced to bite again, and Barney Doyle caught 11, and A. Hipple 9. On the 22d Smith and Nagle took 16, Doyle 10, and Bare and Bean 7 in two hours' fishing. Aug. 23 Skeen and Bare caught 9 bass. Aug. 24 Bare took 10, Hipple 10, and McNeil 11. Aug. 24 Mr. Doyle went to the falls after "salmon" and caught 4, the largest of which weighed 3¾lbs. The others were small fish weighing but 1lb. each. On the 25th Messrs. Ruth, Kuntzelman and son fished the riffles below Bainbridge and brought home 43 bass. They caught 45, but lost two off the stringer. These parties were well supplied with bait, having secured about 500 minnows, catfish, crawfish, etc., the day before. Aug. 26 Squire McNeil caught 8 bass, one a 3-pounder. Mr. Bare caught 8, weighing 6lbs. The largest run 1¾lbs. Mr. Barney Doyle had been trolling for "salmon" for a week, off and on, and to-day, 26th, caught 16 small ones. They were caught with lamper eel and run very small, about 1lb. fish.

Aug. 27.—Rains up river, water muddy, no fishing. The best baits for bass during August were grass chubs. We tried catfish without success. The best fishing was in the riffles below town. BON.

WASHINGTON, D. C., Sept. 5.

## SALMON FROM THE OCEAN.

THINKING that probably the following would throw some light on the question, "Where do the salmon go to when they leave the fresh water streams?" I give it to you:

Two years ago this month my brother, while trolling for skipjacks from the deck of a schooner, twelve miles off this coast, hooked and landed a 20lb. Chinook salmon —a female. The lure was a bit of white cloth on a large hook.

One year ago Capt. Olsen, of the tugboat J. M. Colman, while still a fishing for groupers four miles off shore, hooked and landed a silver-side salmon on a codfish hook with a clam for bait. When he told me of the circumstance I immediately sent to Seattle for a Siwash or Indian salmon trolling rig, which I gave him and told him to try. This he did, hooking and landing one silver-side of about 15lbs.

Yesterday I met, at Sealand, Capt. Farrar, of the deep sea fishing schooner South Bend, who told me that three weeks ago while lying becalmed six miles off shore, to pass the time away he was fishing with four lines for groupers. A slight wind springing up the lines towed astern from five to ten fathoms off the bottom, in thirty-five or forty fathoms of water, when he hooked and lost a large black codfish. Then he hooked and lost at the vessel's side two royal chinook salmon.

Taking the hint he sent for some trolling spoons which he used with 4lb. sinkers, trolling about thirty fathoms deep in forty fathoms of water. He hooked thirteen chinooks all told, the majority of which escaped, as, through not being very well posted in trolling tactics, he had made the lines fast to the schooner's rail, causing the hooks to tear such large holes in the fishes' under jaws (they were all hooked on the outside of the mouth under the lower jaw) that when it came time to gaff them they, at sight of the gaff, made such desperate efforts to escape that they in several instances succeeded.

JIM MACK.

SHOAL WATER BAY, Wash.

## PENNSYLVANIA TROUTING.

LANCASTER CITY anglers found the trout fishing of the past season not so good as last year. Fishing Creek and Tuquan Creek, in the southwestern part of Lancaster county, furnished some very good sport. In these streams Messrs. Ferd. Demuth, J. L. Porter, John and Walter Griel, and Dr. Muhlenburg, all of Lancaster City, met with fair success. In Lititz Creek also the trouting was not up to the standard. In this stream last year Harry Howell caught 7 trout, the aggregate weight of which was 9½lbs. The largest weighed 1½lbs., and was presented to Mr. H. C. Demuth, secretary of the Pennsylvania Fish Commission.

A. C. H. had a singular experience last spring. He was fishing in the private waters of a club in central northern Pennsylvania, and had been trying for some time unsuccessfully to get a strike from trout playing at the surface of a pond-like portion of the stream formed by a dam. Having repeatedly cast in a choice variety of flies without any reward he decided to give the fish a rest and try them the next day. They were quite tame, did not leave the place, but would not take the flies offered. In thinking the matter over that night Mr. H. concluded that the next morning he would go below the dam and cast over and above it, as he could easily reach the fish from such a position. Keeping out of sight of the trout he cast over the dam, using two droppers beside the tail fly, and after a pretty struggle landed three of the fish at one time. Another cast was immediately made with the same result, but after that nary a trout would rise. The 6 fish were good plump fellows, about 8in. long, and as game as one could wish. They were artificially reared, and their cunning is said to be remarkable. The keeper feeds them and they eat greedily, but if a stranger offers them the food they will not taste it. By most of the anglers in this section it is thought that trout artificially reared are just as game as those found native in the streams, especially when one gets a strike from three at a time.

BON.

## POTOMAC NOTES.

ACCORDING to the Ninth Annual Report of the Woodmont Rod and Gun Club this organization continues to flourish. Its full membership is maintained and much has been done to improve the fishing waters of the club. During the year the following new members have been elected to fill vacancies: C. T. Sacket, F. C. Stevens, James D. Maher, Wm. B. Hibbs, James M. Green and Charles J. Singer. Mr. James P. Willett has recently succeeded Dr. Harban as secretary of the club.

The number of members and guests visiting the club house during the past year was 148; number of black bass taken, 877. Game killed: squirrels, 39; quail, 24; rabbits, 2; pheasants, 2; wild duck, 2; deer, 1. Five hundred yearling brown trout were received from the U. S. Fish Commissioner, besides 500 rainbow trout. These fish were all placed in Sideling Hill Creek. Twenty-five hundred small-mouthed black bass were planted in the Potomac opposite the club house.

The report of the treasurer shows the financial condition of the club to be very good, the balance of cash in hand being $1,092.25, an increase of $416.75 over last year.

Mr. Willett tells me that this year the management will pay especial attention to black bass and introduce as many as possible of these fish.

The members of the Helmet Fishing Club changed their plans and went to St. Jeromes, Md., instead of to Havre de Grace, as it was first intended. Taking the steamer Arrowsmith at Washington they went to Smith's Creek Landing, where they took wagons and crossed the point to St. Jeromes. Here the party was entertained by Capt. West, who was found to be a first-class host—never seeming to sleep and always on the lookout for something to add to the comfort and pleasure of his guests. Six members, several wives of members and several guests made up the party. A stay of eight days was made. Guide Haney proved himself reliable and capable. He was acquainted with the fishing grounds and always ready to do good service. The fishing was good; plenty of weakfish ("trout" here) were taken; they run rather small, out of ten taken one morning the largest weighed but 2½ or 3lbs. Spots and croakers were in abundance. Mrs. James and Mrs. McCathran accompanied their husbands on the fishing trips and were much benefitted by the air and exercise. Several novelties were sighted. Among others a large shark, which half stranded on an oyster bar at low tide, and a large sea turtle, estimated to weigh 300lbs. or more. Oysters were plentiful and of good flavor. The bathing at this point was found to be exceptionally good, and the party were well pleased with their trip to St. Jeromes and recommend it to all persons desiring to spend a few days on Chesapeake Bay.

From all accounts August has furnished poor fishing near this city. The river has actually been too low, and the weather too dry and hot for good black bass fishing. It is reported in one of the daily papers that a Georgetown man took some salt-water crabs last week at the rocks known as the Three Sisters, above Georgetown. Several black bass were caught off Riley's wharf, foot of Eleventh street, Sept. 2. These fish seem to be more numerous each year in the Potomac below Washington. They are more or less frequent about the Long Bridge and in the mouth of Four Mile Run, and are taken each spring in fish nets below Alexandria.

Messrs. Henry Weyl and W. G. Kent have just returned after a week's outing at Point of Rocks, Aug. 29, 30 and 31, the fishing was poor owing to low water. A thunderstorm on the 31st improved the conditions, so that on Thursday the fish bit well and 16 were taken. On Friday 14 and Saturday 34 bass were caught, the largest weighed 4½lbs. The only successful bait used was the young catfish, the bass would take no other. Fishing during September promises well.

BON.

WASHINGTON, D. C., Sept. 5.

## LENAWEE COUNTY BLACK BASS.

MY husband is of the opinion that women need a day of recreation and sport out of doors as well as men. In fact he thinks he has no luck if I am not with him, and I—well, it is rather lonesome when he is gone, so to settle the matter, we, with our little boy and two dogs, usually set off together. Our last trip was one of much interest. We started after dinner for Evans Lake, a beautiful little sheet of water about fourteen miles from home, and every mile of the drive has something interesting to see. It was a delightful day, not too warm, but a nice little breeze that made our little trip a pleasant one. It also helped us to drive with some speed, as we wished to get there by sundown, to fish in the evening. We were well-supplied with everything for a couple of days' sport—fishing tackle of every description from rod and reel to the little artificial minnow, camp chairs, rubber boots and everything convenient for outdoor sport, to say nothing of the large covered lunch basket, the contents of which I had been one whole day preparing, and a jug of lemonade. But, lo! before we reached the lake an unforeseen catastrophy deprived us of all that the next day.

When within three or four miles of the lake we stopped to eat our supper and to let the horse graze by the way for a few moments. My husband winding the lines around the whip socket jumped out and proceeded to do what he had done twenty times before—slap the horse and at the same time kill a large fly on his back. But this time the horse became frightened, and after kicking the dash board vigorously, which frightened her still more, started away on a run. She plunged first on one side of the road, then on the other, part of the time the buggy seemed to be on four wheels, but oftener on two. My husband being left behind had halloed to me to jump, being too far away to render me any assistance. All he could do was to follow as fast as he could and keep me in sight. After an exciting and dangerous flight I managed in some way to stop her, but not before the varied contents of the buggy except myself had been scattered and mingled with the dust of the roadway. We left the wreck of our lunch where it lay and again started for our destination, which we reached at dusk, the accident having delayed us some time.

So after a warm supper at the hotel, and with many cautions to our host and hostess not to fail to call us at sunrise, we retired to rest, and to dream of the black bass we were to catch the next day.

The next morning we were up with the sun and after a good breakfast with Mr. and Mrs. Clapp, who by the way, know just how to entertain their guests, we started for the boat. My husband pulled the oars while I took the rod, letting out about forty yards of line with a beautiful little red and gold artificial minnow on for trolling. Scarcely was my line let out before a sudden jerk and a fluttering around and another jerk told me I had a bass, and winding up my line carefully I gave the rod to my husband to land the prize. And indeed, it was a prize; a beautiful 2½-pound bass, just the right size for a tempting meal. After landing him safely and taking the oars I again let out the line with the same success, and now two beauties were in the bag on ice. The third one I felt sure was a larger fish than the other two; and I claimed the privilege of bringing it to land. But it was a struggle, as the bass evidently had no intention of leaving the water; it first glided under the boat, then down to the weeds, but it was hooked too well to escape, and after one last struggle I landed it in the bottom of the boat, and what a prize! and oh, the joy at landing a three-pound bass! That ended our trolling, and the three were caught in less than twenty-five minutes. Next we started for a point in the lake that had been pointed out to us by Mr. Clapp as good for perch fishing, and so we found it. The first one pulled up weighed one pound. Two more followed exactly like the first, then three more a trifle smaller, and the last a beauty weighing one and one-quarter pounds. Every one familiar with fish knows that bass or perch of this size are much more palatable than the large fish. But we could not complain; we had three nice black bass and seven beautiful perch, and might have had more I presume had not another incident occurred which deprived us of our bait. Our minnow bucket being tied to the boat and sunk in the water to give the minnows fresh water, suddenly snapped and went down into forty feet of water. So we were obliged to go to shore or fish with worms, of which we had plenty. And by the way, why does not some ingenious person go to work and invent a worm that will squirm to take the place of a real live one? Now, I do love to fish and I know how much time it takes for my husband to stop and bait my hook every few minutes, and I don't like to bother him just as he is interested in watching his rod. But I cannot, really and truly cannot, use a live worm. They are all right at first until you hook them and then they do string out so long, ugh! it maker me shudder, I had rather stop a runaway horse.

When we pulled up the beautiful bass we had fully intended to string them and send a picture of them to the FOREST AND STREAM. But long before we started for home my wrists, my arms and shoulders, as well as my fingers were swollen and pained me so from pulling on the horse the night before, that we gave it up. Glad to see the liniment bottle and bathed with the contents. But if this narrative does not tire your readers and we go again and meet with the same success, or better, we promise to send an exact picture and weight to be published in the dear old FOREST AND STREAM.

MRS. H. L. W.

## THE NEPIGON.

SAULT STE. MARIE, Mich., Aug. 22.—*Editor Forest and Stream:* Mr. Dabney Carr and his brother, of St. Louis, Mo., have just returned to this place from a sixteen-days' trip on the Nepigon River. They report the trout in great abundance, though somewhat lazy in rising to the fly, owing to the unusually hot weather. Dabney's largest trout weighed 4¾lbs. He reported one as having been caught by a Canadian angler that pulled the scales at 8lbs. It was, however, caught with a large herring minnow.

The Carr brothers used the eyed flies and think they have great advantage over the snooded ones. The eyed dropper, they state, stands at right angles with the leader and dances most beautifully along the surface of the water.

When fishing they each have a half dozen or more leaders mounted with flies, and when desirous of changing lines simply change for one of the prepared leaders, it being, they state, more quickly accomplished.

A hotel, it is rumored, is to be built next season at Camp Alexandria for the special accommodation of anglers. If this is done the famed stream will soon be depleted of its dotted beauties.

So far seventy-five rods have been on the stream this season, though a party of twenty, composed of men, women and children, were met at the station as the brothers were returning, eager for the sport the beautiful stream affords.

The Hon. Thomas A. Logan ("Gloan"), one of your old correspondents, is here taking in the exhilarating ozone with results most beneficial. He will probably take in the bass fishing at Sailors' Encampment on St. Mary's River ere he returns to his professional duties.

He owns one of the islands near the mouth of the river and expects to have a summer cottage erected on it for his next season's recreation. He feels like having a grand old time with nature once more.

P. E. Roach ("Ned"), my old "pardner," is also booked for the same place, and expects to catch a ton or two of the bronze-backers before he heads for his native heath.

Felix Nicola and Judge M. R. Doctney, of Cleveland, O., arrived here to-day prepared to deal out destruction to fin, fur and feather. They will seek the south shore of the great lake for their raid on the game.

ALEX. STARBUCK.

EAST SAGINAW, Mich., Sept. 1.—I have received to-day a letter from a friend, telling of a recent trip on the Nepigon. Omitting the mention of all trout weighing less than 1lb., he says that the party, which consisted of eight, took 214 fish, total weight 474lbs., or an average of nearly 2¼lbs. each. The largest fish was an 8-pounder, which is claimed to be the largest brook trout down in that stream. This old fellow was 25¼in. long, his tail fin measured 7in. across. It was said that he sulked for the first twenty minutes and then began a fight that was as ferocious as the runs of a fresh-run salmon hooked in a tender spot. He was brought to the net in forty-five minutes. This party was fourteen days on the stream, and reported a delightful time and the fishing simply grand. Of course the above score indicates that.

W. B. MERSHON.

## HARRISBURG BASS FISHERMEN.

FISH COMMISSIONER POWELL has sent us the following hints and points about black bass fishing in the Susquehanna River, gleaned by the Harrisburg *Telegram* from well known anglers of Pennsylvania's capital. As the best season for this enjoyment is now approaching, anglers will be glad to learn that prospects are bright for successful fishing in the river.

Alderman Fager is one of the exponents of fly-fishing. He prefers the fly because it saves the trouble of hunting and adjusting bait, and because a perfect imitation of the insects upon which the bass feeds will prove successful above all other baits. He fishes only in clear, shallow water, from 1ft. to 6ft. in depth, and watches his fly continually, in order to strike at the proper time. The very best time for fly-fishing, he says, is from an hour before sunset until dark. The alderman is always careful to keep out of sight and not to allow the shadow of his rod to fall on the water.

Mr. A. B. Tack has caught black bass in riffles by maonlight. He has fished for them successfully when it was so dark that he could scarcely see.

Mr. Fred W. Ebel has taken bass in water 1ft. deep, casting more than 30ft. He does not believe in the theory that the fish sometimes refuse to bite because they are not hungry; on the contrary, his experience leads him to think they are always hungry. Bass have swallowed both of his baits and then returned for more. He has known them to swallow his hook and then do the same thing for a neighboring fisherman. He once took a bass that had two hooks in its stomach. Mr. Ebel has invented a device for preventing the tangling of leaders in the water. By an arrangement of double swivels they are kept from twisting in casting.

There are some Harrisburg anglers who do not believe in artificial flies. One of them is Eugene Snyder, who has never caught a black bass with the fly nor seen one so taken. He has, however, captured thousands of bass with baits of various kinds. As early as 1876 he found the fish abundant at Collins, at the foot of Conewago Falls. He thinks there are fewer bass in the river than there were formerly, and attributes the falling off to spring floods that roil the water, destroy the spawning beds and carry many fish below the dam.

## OUANANICHE AT CINQUIEME CHUTE.

I DO NOT write of "once upon a time, a long time ago." I have nothing to tell of an outing taken ten years ago; it is of the present, the summer of '92.

At Lake St. John a generous and beneficent spirit has erected a hostelry, whither the footsteps of all anglers should trend, and whence they may depart in quest of the quintessence of angling. Truly may Hotel Roberval be called the Golden Gate, opening upon regions that are apparently inexhaustible, and where disappointment lurks not as the final end of fond anticipation.

Situated in the heart of the Laurentian ranges, Lac St. Jean is fed by rivers, the outlet of inland seas and great lakes, whose rushing torrents are increased by melting snows, bubbling springs and vernal floods; rushing onward from the lake, these waters pour through the Grand Decharge, down the far-famed Saguenay, through the St. Lawrence, into the sea.

From these rivers and the lakes, into which they broaden, legends have drifted down (magnified by the favored few who have sought him in his lair) tales of the ouananiche—of his superb courage, gamy ferocity and indescribable agility. Romance and fable have not tint or color enough to satisfy the imagination, to embellish the tales told by the guides, half-breeds and Indians around Point Bleu and Chicoutimi, or while loitering on the piazza at Hotel Roberval. "*C'est terrib'*," says Guillaume Tremblay, "how he leaps from the water when he is stabbed by the hook; *c'est incroyable*, how the line runs and runs; *un beau canot* to go after him; *un gros poisson, un beau ouananiche*"—and language fails, as Guillaume marks his length on the floor—on the paddle—or stretches his arms in the air. Calm and impassive Josef Simeon, half-breed—is really all Indian, ancient Montagnais all through, until he talks of ouananiche—*beau saumon*—then his face is wreathed with smiles, his eyes brighten, and the rigid, stern cast of countenance disappears. Contempt and disdain for the ouananiche of the Grand Decharge are there expressed most forcibly, but lead them to talk of Cinquieme Chute de Mistassini or Lac Tshotagama de Grande Peribonka, and what a panorama is depicted upon their stern and rugged countenance. It is all the joy of battle with a worthy foe, that is all. You would not then hear the ladies on the piazza of Roberval say, "Do not trust him, I am afraid."

Who is it who hath listened and has not had pulse and heart quickened with intense desire to determine for himself the grain of truth in these boastful tales.

Who, being a lover of the *Salmo salar* and having asserted without fear of contradition, "I would rather

MISTASSINI RIVER.
